You're 17, pay a rupee, to fight a space war in a video-games arcade. You're 17, are paid in hundreds, to prevent a war, forestall famine, contact Mars. Tuned in, computer addicts? An A-Z fact-sheet on job opportunities in computers — the Fourth Dimension you've never known.

He is 27 years old and his name is Steven Jobs. And there is Stephen Wozniak. He is 32 years old.

Between themselves, they created Apple, a personal computer, and started a revolution that has brought them fairy-tale success. While Wozniak did the designing, Jobs, with his entrepreneurial flair and instincts for the big score, sold the idea of a personal computer to hundreds of thousands, possibly millions, of Americans. After being in computer business for seven years, Jobs' Apple Computer Inc's sales figures for 1983 alone read an unbelievable \$583 million. And fast on Apple's heels, Jobs has come up with Lisa, a sophisticated version of Apple. Millions will spin into

billions and Lisa may well be the hostess at your next party—if you can pay the price.

Jobs is not the only computer whiz kid in the US. There are many others (though not with a success story as big as his) whose computer creations have become an indispensable part of man's life. No wonder the computer was declared Machine Of The Year by *Time* this January.

However, it seems unlikely that India may have any such success stories to relate in the near future. But Jobs or no Jobs, computers have made a beginning here and jobs are on the rise—with organisations looking frantically for trained personnel.

Manpower projections

There are nearly 4,000 computer

systems in use today in the country, whereas about a decade back, there were hardly 200 machines. But wait till you read about the future. A report of the panel on computer manpower development (*Electronics Information and Planning [EIP]*, November 1980) forecasts that around 755 large/medium computer systems and over 15,000 microprocessor-based systems will be installed in India during this decade (1980-1990). About 50 per cent of these are expected to be in the public sector, 30 per cent in educational and R & D organisations and 20 per cent in the private sector. As the situation stands today, the industry has about 2,500 computer men at present. And this demand is increasing at the rate of nearly 50 per cent per annum, which is the *highest* growth rate in any field so far. In fact, the *EIP* report anticipates a serious shortfall in the availability of trained computer manpower over the coming decade. It's no wonder then that so many of us are undergoing courses in computer programming today—it's one of the best-paying white-collar jobs doing the rounds of the appointments column.

The career

Let's first get to know the two channels of the computer industry—hardware and software. Hardware is a term given to the physical units of the computer which are visible and tangible, for example, the central processing unit and peripherals like printers, disk drives, visual display units, etc. Software in computer jargon relates to programme and design of files to make the hardware perform the desired functions. Hardware is something like a stereo system while the records can be called software. Career-wise, hardware is the making of a computer and software the working of a computer.

The computer industry requires both hardware and software personnel; but it's only in the latter that job opportunities abound. Unlike the West, the computer industry hasn't developed enough here to design and manufacture its own mini and micro (the fourth-generation) computers. Today, there are around 20 firms in the market for the purpose but they are actually 'kit-assembling' these

Amit Agarwal

the licence to 'manufacture' computers. And there are many more reasons to go. Yet, it's not exactly boom time for the Indian industry. It is still to come.

In the present scenario, the hardware man or woman is restricted to R & D and Maintenance (see chart on page 23). For the software man or woman the two most talked about jobs are those of computer programmer and systems analyst (for details see *Fact-Sheet*).

The institutes

As it's such a new industry, the employer's main problem is the lack of trained personnel. Unfortunately, only a minority of the technical institutes (for details turn to page 26) offer an engineering course in Computer Science (applicable to both hardware and software) and most of the pass-outs prefer to take jobs abroad which are easily available to them. Kanu C. Popat, Director of Tata Burroughs, mentioned that India did not have sufficient equipment to train personnel properly in information processing industry which is in considerable demand in software. It was no surprise either to read what M.R. Desai, a top-level executive of Bharat Gears, had to say to *Business India*: "It is a pity that nearly 7,000 students of Bombay University pass a programming course without any hands-on experience. At Bharat Gears I would not recruit students from such courses either at universities or teaching shops."

However, there is a proposal to start Computer Science courses, adequately equipped with computers, in all the technical institutions and also other courses concerning software in a number of universities in the near future.

Applications of the computer: It is essential in many fields, from medicine and management functions to games and music, even matrimonial bureaux. And let's not forget the personal computer. The way it has conquered the US market suggests that it won't be long before it comes knocking at our doors too. How would you like to awaken to the sound of soft music while your computer draws your curtains and makes your morning cup of coffee? And this is not fantasy, it really does happen in the US. Computers, no doubt, can do a great deal

THE COMPUTER STORY

G'BYE ENIAC, HELLO CHIP

If you and the computer were to take an exam together, by the time you start reading the first question, the computer would have solved the whole paper with each question answered correctly.

Scared at the thought of a small box mounted on a desk-top beating you out and out? But remember, while the computer can certainly beat you in speedy computations and calculations, *it can never think for itself and has to be told what to do*. Termed best as an intelligent idiot, the machine has relieved man of all those boring and monotonous functions by performing these for him mechanically, accurately, tirelessly and at a terrific pace.

Though most of us have heard of computers and perhaps even seen and used them, the workings of it remain an enigma for many. To get an idea of how a computer works, I talked to one of them.

Question: What is your name?

Answer: I have many names, one of which is GIGO (Garbage In, Garbage Out), given by you people. My actual name is XYZ 48C/Z.

Q: Please tell me about your various parts.

A: Basically, I have three units: the input device, the central processing unit (CPU) and the output device. My CPU is my core and I shall begin with it.

My CPU is itself sub-divided into three parts: the memory, the control unit and the arithmetic logic unit (ALU). The memory is my primary store room. Here I store your set of instructions known as programme, incoming data and outgoing results. Though my primary storage is fairly roomy and has nearly 1,00,00,000 locations, each of which can store one number or a word, it is obviously impossible to store all programmes and data of all jobs permanently here. So I stock up my primary storage only with the programmes and data of the job I am doing at that time. The rest of the programmes and data are kept in secondary storage devices to which I

can have immediate access, though it takes me a few milliseconds (10^{-3} sec) to retrieve information from here, whereas my main storage can furnish you with information within nanoseconds (one billion nanoseconds make a second [10^{-9} sec]). But mind you, where I lose a little in time I make up for it by providing cheaper and endless secondary storage space. The secondary storage may be magnetic tapes, magnetic disks or floppy disks. I use floppy disks since I like staying in fashion.

The arithmetic logic unit of my CPU performs all the calculations and logical operations. All these are done by a form of addition.

The control unit is the manager of my CPU. It directs all the operations within my system. It commands my input device to send data to the memory and on to the ALU. It also orders the results to be stored in the memory and has it sent to the output device. All your commands (vide the programme) are first perused and then executed by the control unit.

The input and output devices enable you to feed in data to me and give you the results after processing. One method is to have card-readers as input devices. Data is fed in through punched cards, i.e., using a special code (A=12 and 1, B=12 and 2, etc), holes are punched on rows of numbers printed on the cards. These cards are fed into a card-reader which senses the holes and transfers data to the memory. Magnetic tapes are also used to feed in data. The principle is analogous to that of a tape-recorder. Here, the data is typed in and the machine records the data on the tape directly.

The output device is a printer. As the reader head reads out information from the tape, the printer prints out the data. Magnetic disks which work on the same principle are also popular. A stack of several disks, known as a disk pack, is mounted on a vertical shaft and placed to rotate in a drive. Data is stored or retrieved by sensing

arms that move in and out.

I, of course, use the latest—the typewriter-TV screen combination known as visual-display terminal. You type in your data and the results are flashed on the screen. I also print out the results with my printer, which is capable of printing nearly 2,60,000 characters per minute.

Q: What is the form of addition you mentioned?

A: Being an electrical machine, I can only have two answers—yes and no, corresponding to on and off, i.e., carrying current or not carrying current. So I only use two digits, 0 and 1, to perform all calculations. This system is known as the binary system and I can only work with this system. I can do binary additions very fast. Multiplication, division and subtraction are also done through a form of addition in this system.

Q: If the only digits you work in are 0 and 1, how do you understand the programme that is fed in to you?

A: That's very easy. I have compilers which translate your programme language into my binary lingo so that I can understand your instructions and do your work. Afterwards, the results are re-translated into your language so that you can read your results straightaway.

Q: What is this programme language?

A: A programme refers to the set of instructions issued to a computer to complete a specific job. For example, I have been programmed to be interviewed by people like yourself.

Programmes have to be written in certain languages known as programming languages or high-level languages. BASIC, COBOL, FORTRAN and PASCAL are some of these languages. COBOL stands for Common Business-Oriented Language and is used primarily for business operations. FORTRAN is an abbreviation for Formula Translation and is used in solving scientific problems. BASIC, the acronym for Beginners All-purpose Instruction, is used for general purposes. My compilers translate two of these languages into my binary language and vice-versa. Computers may be programmed to operate in only one or two

languages. So, if you feed in a programme in FORTRAN to a COBOL machine, you will not get results. However, most of us can understand BASIC.

Since I cannot think for myself as to what is right and what is wrong, do not hold me responsible for any mistakes—it's the programmer who's the culprit. So don't blame me if I kiss your wife for you.

Q: How does one work on a computer?

A: The work to be done is broken up into progressive steps. For instance, the various steps in preparing a report card could be: "Print marks obtained in English. Print marks obtained in Mathematics. Print marks obtained in Physics. Print marks obtained in Chemistry. Add marks obtained. Add total marks. Compute percentage. Print results. Stop." These instructions are written out in an appropriate high-level language and fed into the computer. The commands are written within quotation marks and the machine recognises these and executes the operation. Programmes have to be written very accurately and even the smallest of mistakes can lead to big errors in results. So, the programmer tries his programme on the computer and only after he is satisfied that there are no mistakes, is the programme ready for use. The programme is then stored on a magnetic tape or disk—just as music is recorded on cassettes—to preserve and reuse them as and when the need arises. When the programme is fed into the input unit, the latter transfers it to the CPU, which carries out the instructions in the programme. The results of the processing are transferred to the output device which flashes it on to its visual-display terminal.

Q: Tell me something about your history in brief.

A: Our God was the 19th century English mathematician Charles Babbage who constructed a machine called the Difference Engine used for calculations. He further went and conceived the Analytical Engine (on the lines on which we run today in 1983) but was unable to design a working model of the same. My ancestor called ENIAC (Electronic Numerical Integrator And Calculator) was

born in 1946 at the University of Pennsylvania in the US. The first all-electronic digital computer, he was a huge guy weighing 30 tons and filled up an entire room. Moreover, he could not work for more than seven minutes at a stretch (lazy chap) when one of his 18,000 vacuum tubes would blow out. Besides, his intake was massive—nearly 1,30,000 watts of power.

Then, in the 1950s, transistors were invented which enabled my forefathers to restrict their sizes. They had a number of diodes, transistors and capacitors which were assembled on circuit boards interconnected by wires. But even they were huge and occupied a lot of space and involved thousands of connections. These were the second-generation computers and took 1 to 10 microseconds (10^{-6} sec) compared to the 0.1 to 1.0 milliseconds (10^{-3} sec) by their predecessors.

In the sixties, the silicon chip came into existence. Into this small chip, roughly equal in size to your fingernail, all required interconnections were made and many chips could be interconnected. These third-generation computers took only 0.1 to 1.0 microseconds to complete one operation.

As a fourth-generation computer, I have a large-scale integration (LSI) circuit. This means that all transistors and required connections have been made on a single LSI chip by a photographic process known as photolithography. This has greatly improved my performance, my looks and extended my capacity. My control unit and ALU have been put into a single LSI chip. Hence, I am also called a microprocessor. Some of the popular microprocessors in use today are the HCL 8C/2, Spectrum/31 (DCM Data Products), TDC-316 (ECIL), WIPRO Series 86, etc. I am a Lilliputian compared to the ENIAC. In the US and Japan, my next (fifth) generation is in the design stage. Those computers are expected to be equipped with an independent artificial intelligence.

Q: Thanks a lot for the information you gave me.

A: It has been my pleasure. Good Bye!

V. N.

The new S-850.

**Once again
Uptron proves
the No.1 can be
the least
expensive.**

The new

**India's No.1 Computer System.
And we can prove it.**

The new S-850 is clearly India's fastest computer in its range. Let's confine ourselves to the facts.

The No.1 should be less expensive.

Uptron's cost-effective approach to Microprocessors gave you the S-800 India's first computer to break the Rs. 10 lakh barrier. The S-850 gives you a similar cost advantage. India's highest performance at India's lowest price.

The No.1 should be faster.

Uptron's new S-850 is clearly India's fastest system in its range.

Fact: The S-850 boasts number crunching capability by using a peripheral Numeric Processor.

Fact: The S-850's novel input/output architecture results in a crashing of SORT times. It gives you a full floppy SORT in less than 4 minutes which makes it twice as fast as any other computer. Higher performance can be achieved with Winchester Disks for large volume assignments.

Fact: For the first time you are going to see a 600 LPM Printer actually print at 600 LPM.

The No.1 should protect your software investments.

Fact: Software represents a formidable portion of your investment in computerisation. In addition to BASIC, the S-850 gives you ANSI COBOL and FORTRAN which ensure that this investment is cost-efficient.

The No.1 should offer computer graphics.

Fact: Uptron's new S-850 introduces you to another valuable breakthrough: full Computer Graphics. It presents statistics visually. Its graphs and charts add life to management reports. It ensures instant assimilation of raw data.

UPTRON

The No.1 should offer Word Processing with optimum results.

Fact: Uptron's S-850 incorporates a Word Processor. Integrated with the Data Processing capabilities of the system. It is an optimum combination. The total package before, is Data Processing plus Word Processing plus Graphics. A comprehensive mix only Uptron can give you.

Incidentally, the Word Processor is available free compared to expensive WP systems being sold in India. Like we said, 'The No.1 is still No.1'.

The No.1 should incorporate User Friendliness: 'Queries' and 'Help'.

Fact: The S-850 offers you Dual Printer Support. Queries for adhoc information are now possible without having to stop a payroll or inventory printout. And you can do this without writing a complicated program.

Fact: The S-850 is supported by accurate documentation that makes it the easiest computer to operate. The system also offers 'Help'. It tells you which commands you should use, guides you through the learning process and enhances the all-round productivity of the programmer.

The No.1 should utilise superior technology for peripherals.

Fact: The S-850 utilises Double Density Double Sided Floppy Disks and state-of-the-art Hard Disks. More important, these assets come to you with a DC Drive that eliminates the problems caused by frequency fluctuations.

Fact: The S-850's printer supports Data Processing, Word Processing and Graphics. Superior technology at work again to give you a cost-effective solution. You don't have to waste money on 3 specialised single-purpose printers.

The No.1 should be committed to Customer Support.

Fact: The S-850 is backed by comprehensive services that follow suit including the availability of a wide range of software application packages.

India's finest 'structural fit'.

In the final analysis, Uptron's S-850 is India's No.1 computer system because it gives you a perfect structural fit between existing management systems in India, general exposure and the methodology adopted in utilising a computer.

You don't have to respond to its needs. It responds to yours.

UPTRON

to improve the quality of life. And now to some of the uses a computer can be put to:

Communications. Newspapers use computers to store up all major events and happenings. This way, any bit of information can be instantly looked up without having to go through years of clippings. The computer can also be programmed to edit stories and correct spelling mistakes.

Crime. The number of fingerprint records, records of jail sentences of criminals and the crimes committed is massive. These can conveniently be fed into the computer which can then give information about any criminal that the police require.

Domestic uses. Personal computers promise a great deal. School and office work can be done at home without going to either. Detailed information regarding bus and railway time-tables, a list of appointments made, etc can also be obtained. With the computer making an entry into the kitchen, we have automated ovens baking our favourite cakes and cookies, and may be preparing our dinner menu too in the future.

And you need not worry about being a bachelor all your life. Just feed in your particulars and what you expect in a person of the opposite sex and the computer will provide you with half a dozen names to choose from.

Education. Students are taught by the computer which has been programmed with lessons and problems. St Columba's School, New Delhi and Scindia School, Gwalior, have already acquired computers and are making use of them in imparting lessons.

Industry: The use of computers in industry is so vast that it seems impossible to do without it. Computerised robots now do all the dangerous and difficult tasks in industries. For example, a robot can be sent into a nuclear reactor to repair a cable or replace a part since it is not affected by the radiation.

Management: The key to good management is the ability to take quick and correct decisions as the conditions provide. The computer can assist in making vital decisions by providing relevant information and analysing the data

fed into it.

Meteorological services: By storing up the computer with vast details of previous years' rainfall, cyclones and storms, the weatherman can use it to predict the weather on the morrow.

Science: Doctors have used computers to diagnose illnesses and diseases, maintain information on patients, details of medical tests, etc. During surgery, computers have monitored the patient's condition and helped him stay alive.

The engineer has used the computer to try out his designs and then analyse it to detect all flaws and correct them.

In R & D, computers have helped greatly in delving deep into the mysteries of physics, chemistry, molecular biology and other sciences.

Warfare: The only use (or is it misuse?) of the computer which can blow up man himself. All major defences of the world now use missiles and bombs that are computer-controlled, making them very accurate and highly dangerous. Computer-controlled spy satellites and other electronic devices are also being extensively used in spying and espionage.

After all this, it must seem as though the computer has run through the world. It certainly has, but as a servant of man. And in

spite of its high degree of precision, it is not cent per cent errorless. Twice a computer's malfunctioning almost took the world to the brink of a nuclear war, which could've wiped out mankind from the face of the earth.

Prospects:

Errors or no errors, computer men are a very happy and contented lot in general. Says Pradeep Gupta, Managing Director, International Systems Services: "The future for computer men is indeed very rosy. One can go on rising in this field and even when one reaches the top of the organisation, one's pay packet continues to increase in size. The sky is the limit in this career for software." While the lucky ones join multinationals and become affluent in a very short while, the not-so-lucky get good jobs here, which earns them a very tidy sum.

Most of the men start their own consultancy service after gaining some years of experience in a firm. This practice has the distinct advantage of being one's own boss in addition to the large income. In fact, most of these self-consultancy services don't own computers. They do the requisite job on a hired computer, saving investing money on installation of the same. This way they get the best of both worlds.

FACT-SHEET

You don't have to be the 'brains of the class' to make it to a successful career in computers. The computer field being vast has room for everyone who thinks logically. Don't envy the toppers for joining the Computer Science course at the IITs—you too can do a programming course and start off as a programmer. That doesn't put you on par with the IIT man who will race ahead by leaps and bounds, but you should make allowance for the few extra grey cells he has in his head.

Institutions and courses: For the students passing out of school, the obvious opening is the four-year B.Tech. course in Computer Science—it includes both hardware and software—offered at the IITs at Bombay, Delhi, Kanpur, Kharagpur and Madras. Birla Institute of Technology and

Science (BITS), Pilani, is also well known for its B.Tech. degree in Computer Science. Besides these, College of Engineering, Waltair (Andhra University) and University of Bombay also run B.E. (Computer Engineering) and B.A. (Computer Science) courses respectively. Motilal Nehru Regional Engineering College, Allahabad, is the only REC that has a B.Tech. course in Computer Science (for details of some of these and other institutes see page 26).

Postgraduate two-year master's degree course in Computer Science is available at all the IITs, BITS and University of Bombay. Other reputed institutions and universities are the Indian Institute of Science (IIS) at Bangalore, University of Roorkee, Indian Statistical Institute, and Peranignar Anna University of Technology, Guindy

(formerly College of Engineering, Guindy) in Madras.

Due to the great demand of computer professionals and the inability to meet it, several research and training institutes are running post-diploma courses in Computer Science. Among these, the preferred ones are the Aligarh Muslim University, Aligarh; University of Bombay; University of Jadavpur, Calcutta; and University of Roorkee, not necessarily in that order.

Computer Science also forms a part of the study course of the post-graduate diploma programmes offered by the IIMs at Ahmedabad, Bangalore and Calcutta, and Indian Statistical Institute, Calcutta. It also figures in all engineering courses, Operations Research, B.Com. (Hons) and B.A./B.Sc. (Hons.) in Maths.

A three-year course in Master of Computer Applications (M.C.A.) was started last year in University of Delhi. Unlike Computer Science courses which deal with both hardware and software, this course is concerned only with software (systems analysis and programming). The main difference between this course and the Computer Science/Technology course is that systems programming in the B.Tech. course is substituted with systems analysis and application programming in the M.C.A. course. There have been proposals to start this course at XLRI, Jamshedpur; Jamnalal Bajaj Institute, Bombay and a few other places.

The National Centre for Software Development and Computing Techniques at the Tata Institute of Fundamental Research in Bombay, runs a one-year part-time course in software technology.

A one-year M.Phil. course in Computer Science is offered at the Jawaharlal Technological University in Hyderabad. M.Phil. and Ph.D. courses are also offered by the School of Computer and Systems Sciences, JNU, in New Delhi.

The Institution of Electronics and Telecommunications Engineers in New Delhi launched the first advanced-level Computer Science course of its kind in the country last year. This three-year course is geared to produce specialists in computer logic, software, hardware and diverse applications.

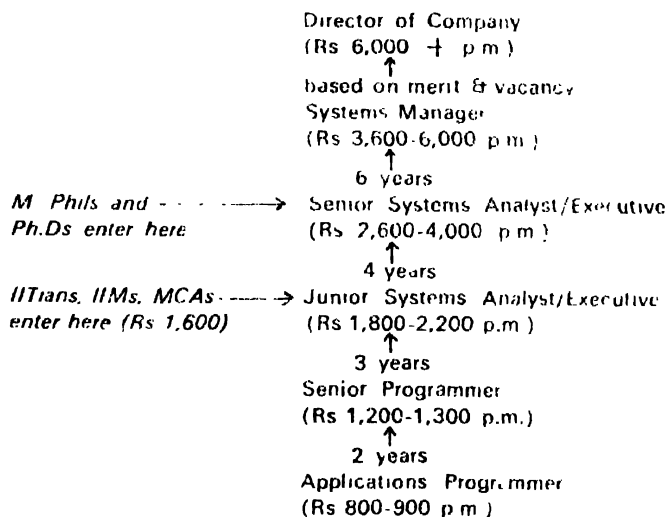

Private institutions which run programming courses have sprung

up everywhere by the dozen. The courses lasting six to eight weeks basically consist of teaching the student one or more high-level languages and programming so as to churn out new application programmers for the rapidly-expanding market. Though some institutes have done a commendable job in producing skillful programmers, a lot of money-making organisations have also mushroomed. It is worthwhile checking up on the institution before investing your hard-earned money on the course, because these institutes charge very high fees. Some of the leading institutions running

programming courses are the Computer Society of India (CSI) at its various regional chapters, International Systems Services (ISS), National Institute of Information Technology (NIIT), Institute of Electronic Data Processing (IEDP), Computer Maintenance Corporation (CMC), etc. Most of these award certificates at the completion of the course.

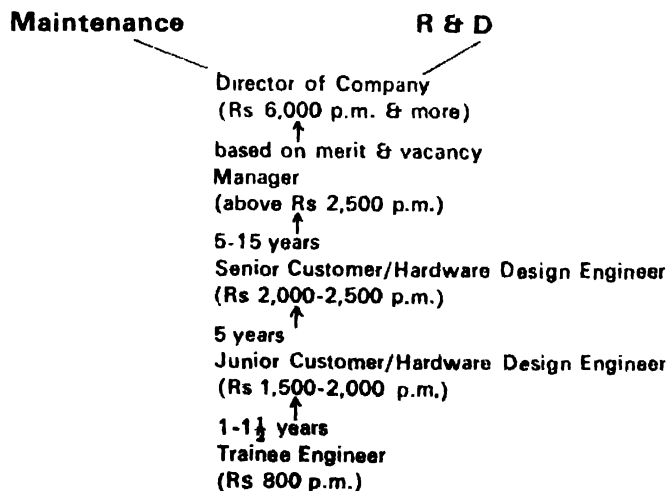

Advanced courses are also run by these institutions for people already in the computer field. The Administrative Staff College of India in Hyderabad runs a two-week course in Advanced Computer Systems, a one-week course in

SOFTWARE

Note: Annual increment is at least Rs 200 for each post. And the salaries are approximate.

Aim for a DEGREE

Bachelor's Degree in
Computer Science
Bachelor's Degree in
Computer Management

In affiliation with The International University
Missouri, U.S.A.

With a comprehensive approach to Computer
courses, these AMERICAN DEGREES open up job
opportunities for you in U.S.A., Europe, Japan,
Canada etc.

The Duration of both the courses is one
Academic year, starting in July/November

The emphasis is on Practicals carried over to
IV Generation Computers using the UNIX
System of training in every classroom

There will be approx. 150 Workshop sessions per
student per year

To ensure individual attention to every student
there will be only 35 students per Batch

HIGHLIGHTS OF ALL CSC COURSES

- * Practical Training on IV Generation Computers.
- * Competent EDP Staff.
- * Convenient Timings — Morning, Afternoon and Evening Batches.
- * Recognised by leading Indian and Multinational Companies.

RAJA CSC-129 83

Management Information Systems and a 12-week Computers and Management Programme. IIM Ahmedabad runs every year a three-month advanced course in Information Systems Analysis and Design.

Requirements and admissions: Requirements vary from institution to institution as also course to course. At the undergraduate level, the minimum qualification demanded is Class XII with Physics, Chemistry and Maths as the main subjects.

Admission to the IITs is through the Joint Entrance Exam. Only the top rankers (those coming in the first 150 or so) stand any chance of getting a seat in this much-sought-after course. While most of the institutions hold a tough admission test as the selection criteria, BITS bases its selection on the sole basis of marks obtained in the 10+2 exam or equivalent. Here again, only the toppers get the cake.

Most of the postgraduate diploma/degree courses in Computer Science insist on either an Engineering degree (in any discipline) or a master's degree in Physics or Maths. However, this norm is now slowly being relaxed keeping in view the various applications of the computer. Some M.Com. and M.A. (Economics) students have also found their way in.

Admission to these courses is based on academic record, performance in an aptitude test and personal interview. From this year, the IITs and IIS Bangalore will be organising the Graduate Aptitude Test in Engineering (GATE) for

admission to their postgraduate programmes. The test will consist of General Engineering or General Science papers (depending on whether the candidate is an engineering graduate or postgraduate in Science) and the candidate's main subject in his qualifying exam (B.Tech. or M.Sc.).

The M.C.A. course offered by Delhi University is open to graduates and postgraduates in Science, Commerce and Economics. However, it is necessary to have passed two papers in Maths or Mathematical Statistics at the graduate level. The initial screening is done through a comprehensive aptitude test consisting of Quantitative Ability, Deductive and Logical Ability and English Comprehension. Those clearing the test are called for personal interviews and final selection is done on the basis of performance in these two and the academic record.

If you don't wish to miss the chance of trying for any of these courses, watch out for their ads in the leading dailies. The months that usually bring admission news are Dec, Jan, Feb and March.

The private institutions that run programming courses have their own aptitude tests to judge the logical ability of the candidate. They refuse to admit students below a certain cut-off point and borderline cases are only admitted on the condition that the institution will not take responsibility in the student's placement or job. Though most of these institutions mention the basic requirement as a degree in any field with fairly

good marks, this is not a hard and fast rule and is often relaxed. The main requirement is the high fee which varies from Rs 600-3,000 for different courses from institution to institution.

Method of study: All the technical institutions rely on the classroom method of imparting knowledge plus practical work (hands-on experience) on the computer.

At the IITs, the student spends a majority of his time on Computer Science and Engineering. During the rest of the time, he also takes some courses in humanities, social sciences and basic sciences. He thus acquaints himself with problems in daily life and learns to correlate them to his field of study. The student's performance is continuously evaluated on the basis of class tests, quizzes, assignments, mid-semester and semester-end exams. In the pre-final/final years, the institute also arranges for the student a stint (summer placement practical training) in an industry or firm. This enables the student to familiarise himself with the environment he will be working in. The student also gets a stipend of about Rs 400-600 from the firm during this period.

Some programming institutes claim to have made headway with novel forms of teaching where computer and video-aided instructions supplement classroom teaching. These modern methods have been said to help the student to pick up much faster over the traditional methods. The retentivity is also claimed to be higher.

Correspondence courses too are offered by some institutions. For practical training, the correspondence students are asked to come to one of the institute's branches and get the feel of the computer. Yet, students have been complaining that time given to work on the computer is insufficient.

Recruitment: Prospective employers conduct campus interviews in most institutes in a bid to rope in the best and fresh talent. These interviews are normally held through the placement cell of the institute. The demand far exceeding the number of computer professionals that pass out, each student easily gets four to five offers which gives him the freedom to be choosy.

OPPORTUNITIES ABROAD

(Ten of the US universities that offer Master's and Ph.D. Programmes)

1. California State University, Chico, California 95929
2. University of California, Berkeley, California 94720
3. Colorado State University, Fort Collins, Colorado 80523
4. Florida Atlantic University, Boca Raton, Florida 33431
5. Purdue University, West Lafayette, Indiana 47906
6. University of Maryland, College Park, Maryland 20742
7. University of Nebraska, Lincoln,

Nebraska 68588

8. New York Institute of Technology, Old Westburg, Long Island, New York 11568
9. Stanford University, Stanford, California 94305
10. Washington State University, Pullman, Washington 99163

Note: Courses offered by these universities include Computer and Information Science, Information Science and Systems, Data Processing, Computer Programming and Systems Analysis. This list is arranged alphabetically and does not represent any priority ranking.

WHERE TO STUDY WHAT

(Some of the institutes/universities that offer computer courses)

1. A.V. Thomas Software Research Co Ltd, 22, Marshalls Road, Egmore, Madras-600 008
 - a. CBL, st, 12 w, —, C, —
2. Computer Centre, Aligarh Muslim University, Aligarh-202 001
 - a. PG Dip in CS, lt, 1 yr, 10, —,
 - b. Dip in EDP Machine Operation lt, 1 yr, 15, —, pt,
 - c. Dip in CP, lt, 1 yr, 10, —, pt,
 - d. FP, BP, CBL P & PAS P, st, 3 w each, —, C, pt
3. Bangalore Institute of Computer Applications, 75, 6th Main Road, Malleswaram (West), Bangalore-560 055
 - a. CBL P & FP, st, 1 w, —, —, pt
4. BITS, Pilani, Rajasthan
 - a. B Tech, lt, 4 yrs, —, C, ft,
 - b. M Phil, lt, 2 yrs, 4, —, pt,
 - c. M Sc, lt, 4 yrs, 15, —
5. Computer Maintenance Corporation Ltd, Power Bhawan 4/3/596/7A G, Tank Road, Hyderabad 500 001
 - a. World Trade Centre, Caffe Parada Bombay-400 005 (Languages, DBMS, etc - all st)
6. Dept for Computer Studies University of Delhi, Delhi-110 007
 - a. M.C.A., lt, 3 yrs, —, C, ft
 - b. B.E., st, 6 w, —, C, pt
7. Delhi Public College of Computations, 5-B, Puri Road New Delhi-110 005
 - a. CBL P, st, 4 w, —, C, pt,

number of job openings)—Preparing the documentation that describes the system of programming and its implementation. He is the principal link between the needs of the user and the implementation effort. He has to communicate the user's requirements to the implementers (programmers) and to the users the details of how these requirements are being satisfied.

Requirements: For the hardware man, apart from Computer Science, an Engineering degree, preferably in Electronics, is a must.

An Applications Programmer must be first familiar with the language, second have skill, and third have an appreciation of what makes an essential and effective programme. One need not be highly qualified for this job; high-school leavers can also be trained for the post.

A B.Tech. or M.Tech. degree in Computer Science is definitely desirable for a Systems Programmer but is not necessary for an Applications Programmer.

An M.Phil. or Ph.D. in Computer Science is directly absorbed as a Systems Analyst.

Placement and prospects: Programmers without a Computer Science background need not remain Programmers for the rest of their lives. With requisite experience (and aptitude, of course), they too can rise to the post of Systems Executive.

Admissions abroad: Students are admitted to universities abroad on the basis of the scores in the SAT (Scholastic Aptitude Test) and TOEFL (Test of English as a Foreign Language). Scores of the GRE (Graduate Record Examination) and performance in the undergraduate course are taken into consideration for admission to the postgraduate-level courses (list of some American universities on page 25). While very brilliant students with excellent records may manage to get scholarships or financial assistance, others may not get those and have to pay for their study.

Good job prospects abroad exist only for doctorates (Ph.Ds) in Computer Science. Outstanding postgraduate students, who have filled your forms for admission carefully but accurately, may consider these prospects and contact persons sending your applications. Ask them for your personal requirements and

Most of the companies that recruit computer scientists are computer manufacturers, consultancy services and industries dealing in electronics. Some of the popular names are Tata Consultancy Services (TCS); Tata Burroughs; Tata Engineering and Locomotive Company (TELCO); Operations Research Group (ORG), Baroda; Softek, Delhi; Engineers India Limited (EIL); Hindustan Computers Limited (HCL), Delhi; DCM, Delhi; etc. Computer Maintenance Corporation (CMC); ECIL, Hyderabad; BHEL; Regional Computer Centres in Chandigarh, Calcutta and Pune; and National Informatics Centre are the leading government agencies that recruit computer men.

Advertisements in newspapers are also another means of recruitment, mainly in the public sector. Selection is generally a three-stage affair—the preliminary interview, group discussion and a final personal interview. Quite often, the final interviews are held at the firm's headquarters. Some firms also conduct a short objective test before the group discussion to help in initial screening.

Private institutes and programming schools have placement bureaux which assist students in finding suitable jobs. Some of them organise proficiency tests at the end of their courses. The successful students are assured of the institute's assistance in finding them

The machine needs a man—and the man is you.

a job. Programmers are required in business houses, government departments, laboratories and educational institutions.

The Computer Professionals

Nature of work: Hardware where jobs are not many—**Junior engineer, design**—Designing and making of computers, proper utilisation of computer time.

Customer engineer, maintenance—looking after the various parts of the computer so that no snags occur and, if they do, to correct them.

Software where the demand is greater than the supply—**Applications Programmer** (about 2,000 openings a year)—Writing computer programmes for a small number of people over varying periods of time.

Systems Programmer (number of jobs range from 400 to 500 in a year)—Writing more complex and advanced programmes. The difference between an Applications Programmer and a Systems Programmer can be said to be that between a general practitioner and medical specialist. The Systems Programmer is concerned with the development and maintenance of programmes internal to the computer system which enable application programmes to be executed.

Systems Analyst (a sizable

THE REARMAMENT OF JAPAN

BY P.N. KUMRIA

Like Phoenix, a resurgent Japan has risen from the nuclear debris of World War II, when American 70-kiloton atomic weapons completely destroyed Nagasaki and Hiroshima. Prior to this, the Japanese empire had stretched from Manchuria to New Guinea and during the war itself, its army overran Burma and knocked out India's dream Imperial Japan had advocated the philosophy of a 'co-prosperity sphere' which visualised the economic domination of the Far East and South-East Asia. World War II destroyed all such ambitions.

Forbidden to expand their military power, the Japanese accepted the Potsdam Declaration of August 1945 and its post-war defence policy developed under Allied occupation. The basis of Japanese defence has been the Japan-US Security Treaty. It permits Japan to have a small army sufficient enough to repel small aggressions, while the US conducts all operations in Japanese territory and its surrounding waters and air-space. Till 1975, the Japanese defence expenditure was restricted to one per cent of the Gross National Product (GNP). This is the primary reason for the rapid economic growth of Japan. Starting with \$ 400 million a year, the US pumped in \$ 2,200 million into Japan during the 1952-53 Korean War. Without having to suffer the problems of balance of payments, the Japanese industry reached the take off stage and their per capita income doubled in a decade (1950-1960).

The new standard of Japanese defence could be explained, partly, by the island nation's strategic location, lying on the sea-lanes of the north Pacific and the city of Russia. Japan's four large volcanic islands—Honshu, Shikoku, Kyushu and Hokkaido—straddle the sea lanes emanating from the Persian Gulf and the Mediterranean through the Malaccan and Taiwan Straits to the Pacific. To the north,

the Gulf of Tartary and Kuril Islands lead to the Sea of Okhotsk, where the Soviet Pacific Fleet lies. While the Sea of Japan separates it from the two Koreas in the west, further west is the Yellow Sea washing the shores of mainland China.

Yet, shouldering Japan's defence expenditure has backfired on the US and its Western allies: it is its economic transformation, which has also given rise to fears amongst its neighbours. Japanese trade in the Asian free market is nearly \$ 75 billion and comprises a major part of its total overseas trade. It is 25 per cent higher than the Japanese trade with the US and three times the total of its trade with the EEC. Japan's joint ventures cover all fields including ship-building, energy production and electricity. What could not be achieved through the 'co-prosperity sphere' of the 1940s has already been surpassed by modern Japan. The technological miracle of Japan has resulted in collaboration and export of labour-intensive heavy industries to the developing nations. Already, the expanding Japanese industry imports over 20 per cent of the world's raw material. And it is growing.

The same is true for Japanese exports—disquieting the West in no small measure. Faced with the spectre of Japan capturing their traditional markets in the Third World, and dismayed by the positive deluge of its small cars, consumer electronics, etc, the US and Europe are erecting protectionist trade barriers. Even the USSR, once ready to buy Western technology, whatever the price, had projected a technological collaboration agreement in the mid-70s with Japan for the construction of a 6,400-km oil pipeline to the Pacific coast and a 11,200-km railway line from Moscow to Siberia. Thus, the unthinkable was fast becoming a reality: Japan's rapid economic progress could throttle Western industrial development.

Since the US security umbrella, resulting in Japan's abysmally low defence spending, was responsible for the country's economic miracle, Japan, now, is under increasing pressure to take on a greater burden of the US Far East defence system. There are, of course, other reasons for Japan's belated militarisation. First, Western—particularly Washington's—disillusionment with

China, which has never been a reliable ally on account of ideological differences and more so now because of the vexed Taiwan question. Second, the Soviet Pacific Fleet, estimated to consist of 80 warships, 120 submarines and backed by 75 backfire bombers and 500 interceptors, poses a threat to the US and Japan. Third, notwithstanding the current East-West nuclear debate regarding the deployment of 572 Pershing II and Tomahawk cruise missiles in West Europe, changed US perceptions visualise the north Pacific and the Indian Ocean to be of greater strategic significance than Europe, which has seen over 35 years of an enduring detente.

Japan, whatever the misgivings of its pacifist politicians and people, has thus been thrust to the centre of the world stage and has emerged as a power centre along with the US, the USSR, Western Europe and China. Its self-defence forces (SDF) are no more committed to repel limited aggression but have become powerful and capable of defending not only Japan but also South-East and Far-East Asia in conjunction with the US, South Korea and other South-East Asian nations who are collectively cooperating in economic spheres under the aegis of ASEAN.

Japan, which contributes over 41 per cent of the world's total ship-building, is poised to become a dominant naval power. The US naval forces belonging to the Seventh Fleet and located in Japan, are due for further strengthening in view of the changing balance of power. The army consisting of over 13 divisions, including one armoured division, is expected to play an important part. Japan's air force equipped with F-15s and F-4E aircraft will work in close coordination with the US air base at Misawa to provide greater punch to Japanese forces.

The fear of the growing strength of Japan, however, will always haunt China and South-East Asian nations, which had earlier fallen to its mighty military machine. Japan has been described as the unsinkable US naval aircraft carrier. Yet, its stake in the stability of the region will far outweigh any advantage that might accrue by up-setting the existing military balance in the region. □

J & K ELECTIONS SON RISES AGAIN

The first elections since the death of the lion of Kashmir, Sheikh Abdullah, were held on June 5. The elections were crucial for his son and heir Farooq Abdullah, whose political future depended on them. Although he was elected from the Ganderbal constituency and some other important leaders of his party, the National Conference (NC), and the Education Minister, Mohiuddin Shah, were returned to the Assembly, NC lost ground in some areas.

The June 5 elections were the seventh such polls to be held in J & K. The Assembly has 78 seats, of which 76 are elective. 42 are in the Kashmir Valley, 32 in the Jammu region and two in Ladakh. Technically, the Assembly has 100 seats, but the remaining seats are reserved for constituencies in Pakistan-occupied Kashmir.

The two main contenders in the present elections were the NC and the Congress (I). Both the parties contended all the 76 seats. Initially, the two parties hoped for a poll pact, but as soon as the coalition talks failed, they launched a vigorous election campaign. A peculiar feature of these elections was the unprecedented violence. The Pradesh Congress (I) headquarters building in Srinagar was burnt down by NC workers and instances of violence were reported from Anantnag, Shopian, Bijbehara, Chaudwara and Habba Kadal. There were other instances of violence in Srinagar. On the last day of the campaign there was stone throwing at an election meeting addressed by the Prime Minister. According to unofficial reports, more than 500 people were injured in pre-poll violence. Over 30 battalions of CRP and BSI were deployed to ensure free and fair elections. However, the CRP and the BSI proved inadequate and incidents of booth grabbing and intimidation of voters by NC workers were reported on election day. As a result of such incidents, re-poll was ordered in 18 polling booths in 10 constituencies.

The main reason for the violence appears to be that NC is not ready to accept any other party in the state. They did not stop short at arousing communal feelings in the electorate or wooing the Akalis for support. Despite

Abdullah during the J & K polls. Cub captures the Valley

their intimidatory tactics, they failed to win an absolute majority at the first go. The Congress (I), its arch-rival, fared very well in the Jammu region. As we go to press, the results read: National Conference—46, Congress (I)—25, Panthers' Party—1, People's Party—1, Independent—1.

BY-ELECTIONS MIXED LUCK

Congress (I) had mixed luck in the recent by-elections held in May for four Vidhan Sabha seats and one Lok Sabha seat. The only setback to Congress (I) came from the Kanakpura constituency where the Karnataka Chief Minister Ramakrishna Hegde scored a runaway victory over his nearest Congress (I) rival D. Linga Gowda. The vacancy in the constituency arose when P. G. R. Sindhia (Health Minister of Karnataka) vacated the seat he had won in the January elections for Hegde. Hegde, who was neither a member of the Legislative Assembly nor the council, and had to be elected within six months, won with a margin of 23,166 votes.

In the Yelburga constituency, the Congress (I) retained the seat when its candidate Subash Chandra Patil, defeated his nearest BJP rival Shanker Rao Deshpande by over 6,000 votes.

Congress (I) also retained both the Tikamgarh and Shajapur Vidhan Sabha

seats from Madhya Pradesh. In Tikamgarh, Yaduvendra Singh defeated his nearest rival Magan Lal Goel (BJP) by 12,486 votes; while Deep Singh Yadav defeated Laxmi Narain Patel (BJP) in the Shajapur constituency. The MP poll results were a serious setback to the BJP, which had hoped to win at least one of the two Vidhan Sabha seats.

For the lone Lok Sabha seat in Porbandar, Bharat Odedara of the Congress (I) defeated his Janata Party rival Chau Bhai Patel by over 51,000 votes.

On June 5, five Assembly by-elections were held in three other states—Rajasthan, Bihar and West Bengal.

In Bihar, the Chandi Assembly seat went to the Janata Party candidate Harinarain Singh who defeated Anil Kumar of Congress (I).

In West Bengal, the Jadavpur seat was won by Asoke Mitra (CPI-M) who defeated Sukumar Datta of Congress (I). The Garden Reach seat went to Fazle Ali Malla of Congress (I). In Rajasthan, the reserved constituencies of Dausa and Pindwara went to Radhey Sham Bansal (BJP) and Sumra Ram (Congress (I)) respectively. Both the parties have retained the seats.

VIJAYAWADA MEET ANOTHER UNITY MOVE

Ever since the Congress (I) came to power in 1980, efforts have been afoot to form a united front against it. So far these efforts have proved futile because of the inherent contradictions

The all non-Congress (I) opposition parties meet, convened by Andhra Chief Minister N.T. Rama Rao (NTR) at Vijayawada could, however, be the first step towards such a united front. The meet, held to mark the first annual convention of NTR's party, Telugu Desam, was attended by a galaxy of Opposition leaders including L.K. Advani (BJP), Ramakrishna Hegde (Karnataka CM), M.G. Ramachandran (Tamil Nadu CM), S. Baramula (Akali Dal) and C. Rajeswari Rao (CPI). As expected, they held the Congress (I) responsible for all the problems faced by the country.

Specifically, the authors suggest that the *de novo* expression of *huc* is related to the expression of the *huc* orthologs in other species, and this is related to the regulation of the *huc* gene in the *huc* orthologs.

That increasingly the trade union movement has considerable access to among the young party circles. If nothing else, the Stavisky scandal must make it clear that the party congress is ill to put its own hand in a pocket.

NHE attempted to do just that during the annual convention of the Telugu Desam. While discussing the problems of the party candidly, he denounced groupism and factionalism without a flinch and said this would not be tolerated. While surveying Centre-state relations, NHE proposed the setting up of a fiscal commission to transfer more resources to the states.

Just when the Centre had evolved a formula to resolve the Punjab tangle, the Akali leaders rejected it. First denying having received it, Akali chief Sant Harchand Singh Longowal

The Akali Dal has accepted the proposal put forward by the Janata Party leader, Charan Singh, to convene a joint meeting of all national opposition parties to explain the Dal's stand on its long-standing demands. The meeting is to be held shortly.

By ignoring its agitation, the Government requires a one-day action programme shortly before which they would stop all traffic and other government offices. The wide square of the movers of organizing special training in a camp of Andapur (Bihar). According to the government, it has no intention to force the army officers to train the people in the art of protecting themselves. Then the police (Karnataka) are being urged to keep the place of the action free of violence.

SC VERDICT A REPRIEVE FOR THE RAPED

In this context, the recent Supreme Court ruling in a rape case is most welcome: A man tried to assault two minor girls. While one managed to escape, the other was raped. The court judgment on the seven-year old case

The Division Bench comprising judges A.P. Sen and M.P. Bhakkar was of the view that corroboration might be essential to establish sexual offences in the Western society with its different social and moral behaviour. However, this is not a rigid rule where the victims are generally accepted in a society. To make the corroboration rule to be adding to the already the admissible and

ECONOMY

TROUBLED TIMES AHEAD

After a period of comparative price stability in 1982, inflation is again on the increase. Wholesale price index (WPI) reached a record level of 302.6 in May and inflation then was 9 per cent in one year. A rise of 2.4 per cent during the April 23-May 21 period has caused much concern in the Finance Ministry. If the trend continues, the rate of inflation at the end of the year may be around 20 per cent. It may still be lower than the highest ever rate of 22 per cent reached in December 1979.

Drought in the various parts of India has considerably worsened the economic situation. In northern India, the production has also been affected due to the non-availability of certain items like cement, coal and power.

Career & Competition Times: July 1983 31

...have deficit of Rs 200 crores. Fall in foreign aid as well as foreign exchange earning from the remittance of Indian firms settled abroad seem to be the major reasons for the fall in the balance of payments. For remedial measures will have to be taken by 1984 if the present situation is to be controlled.

ADB LOAN TO INDIA OPPOSITION FROM THE US

The proposal for a request for a loan from the Asian Development Bank (ADB) has presented a puzzle to the US Treasury Secretary. It has made it clear that the US will oppose any Indian borrowing from the ADB. The argument is that India is not in a position to service its foreign debt. The ADB is a regular member of the World Bank.

The ADB is a regular member of the World Bank. India had applied for a loan two years ago but the request was rejected. The ADB is a regular member of the World Bank.

The ADB is a regular member of the World Bank. India had applied for a loan two years ago but the request was rejected. The ADB is a regular member of the World Bank.

At the day-long meeting of the bank in Manila, ADB President Masao Fujita also raised objections against the Indian request. Many ASEAN countries are also with the US in opposing the Indian loan.

The US stance has justifiably annoyed Finance Minister Pranab Mukherjee because earlier on it had also voted against India's request for loans from the IMF and the World Bank.

India might still however get the loan because it has the support of several European countries like Britain and France. Also the voting power of those opposing India's loan application falls just short of the required 50 per cent.

NON-RESIDENT THREAT REAL OR FAKE?

Despite the five per cent ceiling on the total non residents' holdings in Indian companies, announced by Finance Minister Mukherjee, the take over phobia still persists in the minds of Indian industrialists. These fears have some substance because most of the big industrialists own a small percentage of the total shares of the companies. It is common knowledge that in the six big business houses in north India, the families controlling the companies hold on an average 3.33 per cent of the total shares. A non resident, by purchasing a mere 5 per cent of the shares, can easily ease out the man currently at the top.

Most of the Indian industrialists, as well as the FICCI and PHD Chamber of Commerce, want that the ceiling on non resident shareholdings be reduced to 2 per cent. But the finance minister has rejected this proposal. He does not feel that the fear of take over by non residents has any substance to it. He has assured the industrialists that the public sector financial institutions, holding a large percentage of a company's shares, will always stand by the good managements.

With this assurance and the five per cent ceiling, the possibility of a take over of the management of some companies by non residents may not seem real. However, how the public sector financial institutions actually behave is not certain. They have been vulnerable to political pressures in the past. The next few months will decide the future of some of the companies which are in the news recently.

Meanwhile, on May 17, RBI considerably modified the operations of the existing scheme of portfolio investment in

Indian industrialists planning their moves to outwit the non residents.

equity shares of Indian companies by non resident Indians. Under the permission, which is valid for three years, a designated bank can now purchase shares or debentures on behalf of its non resident client without obtaining RBI sanction for each transaction. This is valid upto one per cent of the equity capital of the company or one per cent of the total paid up value of convertible debentures in each series issued by the companies.

An important feature of the RBI notification is that it establishes a system of monitoring share transactions by non residents.

IMPORT POLICY LIBERALISED

The Commerce Ministry has considerably liberalised the 1983-84 Import Policy to facilitate import of technology and technical know how for export-oriented units. The fresh concessions to manufacturers producing goods for export will enable them to import technical designs, drawings and consultancy more freely.

The manufacturing units which export at least 25 per cent of their annual production for three years regularly will be allowed to import technical know how upto Rs 1 crore in value. They will also be allowed to import machinery which reduces raw material consumption or the cost of production by at least 10 per cent. These manufacturers can import machinery upto Rs 50 lakhs in value against their REP licence in a year without any need for clearance, essential certificate and other capital goods licensing procedures.

Units which manufacture exclusively for export can also acquire REP licences which can be endorsed for import of items of limited permissible lists and canalised lists in the Import Policy.

The Commerce Ministry has also increased the upper limit for allowing automatic import of technical know how, designs, etc against REP licences from Rs 10 lakhs to Rs 20 lakhs.

To encourage importers to use Indian carriers, it has been decided that the freight paid will not be debited to the import value. This concession would enable the licence holders to use the full value for import of goods, etc. only.

In response to a representation made by the newspaper industry, the ministry has restored the OGL facility for importing web-fed high speed, letter-press rotary and off set rotary printing machines. These machines have a speed of more than 35,000 impressions

(Continued on page 36)

WILLIAMSBURG SUMMIT JUST ANOTHER MEET

The Williamsburg Summit, held in the US, ran as per expectations and nothing concrete emerged at the end of the three-day (May 28-30) deliberations. In their joint statement at the end of the meet, leaders of seven industrialised nations of the non-Soviet camp—Britain, France, Japan, Canada, Italy, West Germany and the host country, the US—declared that they would study ways to promote international monetary reform and consider the possibility of convening a world conference for that purpose, as suggested by the French President, Francois Mitterrand.

The joint declaration also stated that the seven countries would pay special attention to the flow of official aid to poorer nations and provide agreed funding levels to the International Development Agency (IDA), which is the main source of concessional credit for the developing world. Though the American President Ronald Reagan did not specify any steps he proposed to take to reduce huge budget deficits and lower interest rates, the declaration promised that the seven countries will focus on achieving and maintaining low interest rates. It also pledged to halt protectionism and dismantle trade barriers.

Leaders of industrialised nations at the Williamsburg Summit. Talk, talk and talk

It further stated that the seven countries would "engage with understanding and cooperation in the forthcoming meeting of the UNCTAD in Belgrade".

In a joint statement on missile deployment, the seven countries called on the Soviet Union to contribute "constructively" to the success of arms control negotiations. It also warned that if the Soviet Union and the US failed to reach an agreement on limiting intermediate range nuclear arms in Europe, "the countries concerned will proceed with the planned deployment" of Pershing II and cruise missiles by the end of the year.

Although the main thrust of the 10 point declaration was to project the image of a united Western world, it was clear that a feeble attempt had been made to reconcile the differing positions of the participating countries. The missile deployment declaration had been watered down after much debate. Reagan had favoured a strong anti-Soviet stance. The statement, as it was finally published, may have been influenced by a Soviet statement which was issued around that time, warning that Moscow would take retaliatory measures if NATO powers proceeded with the proposed deployment of the Euromissiles.

On the economic front, the differences between the seven leaders ran much deeper. This was apparent from the fact that no specific or concrete proposal on policy was put forward. The major difference was between France and the US. French economy is in a bad shape and Paris blames Washington for this. The French feel that high interest rates in the US are attracting capital from all over the world, leaving very little for investment in France and other European countries. Mitterrand voiced this view and made it clear that the problem of unemployment would not be solved in Europe as long as the present flight of capital continued. He also called for a Bretton Woods (1944) type of global conference to establish a new monetary/economic order because he felt that the old system of fixed exchange rates and promotion of international liquidity was based on the universal acceptance of the strong dollar and on the willingness of the US to run virtually permanent deficits on its capital account.

Mitterrand also championed the cause of the developing countries and asked the Summit to give special attention before the UNCTAD-VI conference to problems concerning North-South relations. The US, however, put up a stiff resistance on many counts and the fact that the declaration was a compromise document is quite obvious. US-European differences over East West trade have been barely papered over and only lip service has been paid to the problems of the Third World countries.

MIDDLE EAST TENSION ESCALATES

Will there be another war in the Middle East? Shortly after a Lebanese-Israeli agreement was signed following several months of discussion, Israel began to send more troops into Lebanon, while Syria began to deploy new artillery and tanks on the other side of a tense frontline in the Bekaa valley. A Syrian jet fired an air to air missile at an Israeli reconnaissance plane over the Bekaa valley and later announced that they would stage large scale manoeuvres in the Bekaa. Israel too placed its armed forces on alert and began a partial mobilisation of its reserves. Although neither side wants

sponsible for increasing the tension.

Things could have gone more smoothly had the PLO cooperated. According to the INF agreement, Israel agreed to reduce its forces within eight to 12 weeks after the accord went into effect. But more than a year later, a number of Israeli troops remain in Lebanon, as members of eight Lebanese-Israeli joint supervisory teams. And there was a catch in the agreement: it was understood that Israel would withdraw its troops from Syria and PLO forces were to be removed from Lebanon. Syrian President Hafez Assad made it clear from the beginning that he had no intention of cooperation. He told US special envoy Philip Habib, who had made the Lebanese-Israeli accord possible, that he had nothing to say to him. The PLO too rejected the agreement.

The PLO meanwhile has been facing its own problems. PLO chief Yasser Arafat was confronted with an unprecedented rebellion within the ranks of his Fatah organisation in mid-May. Although it involved only a few hundred of the 15,000 to 18,000 PLO forces in Lebanon, it exposed the weakening structure of the organisation. The PLC members, led by Abu Musa, a veteran Fatah Colonel, are dissatisfied with some of Arafat's political decisions since last summer, especially the withdrawal from Beirut and his agreement with Jordan's King Hussein that the goal of peace negotiations should be some kind of a confederal relationship between Jordan and a lesser Palestine in Israeli-occupied West Bank and Gaza. The dissidents also accused Arafat of planning a withdrawal of the PLO forces from Lebanon, although this is by no means certain. On his part, Arafat blamed some 'Arab regimes', naming Libya and implying Syria, for instigating the mutiny. The trouble was centered in the Bekaa Valley where the Syrians have a lot of influence. The Libyans, reportedly, finance the dissidents while the Syrians give them political advice. Though the mutiny is now well under control, Arafat has got a jolt because, for the first time, his authority has been seriously questioned.

ARMS CONTROL POSITIVE MOVES

Significant preparations were made before the bilateral talks on intermediate nuclear forces (INF) resumed in Geneva in late May. The Soviet Union took the initiative again and offered to remove sufficient number of rockets from its western frontier so that the total number of warheads on the remaining missiles

French and British warheads. Although France and Britain, supported by the US, opposed the idea of including their independent nuclear forces in the INF talks, both sides seem headed for an agreement on the need to reduce not only the nuclear missiles but also the warheads they carry. US officials, however, have pointed out that the Soviet proposal did not aim at the destruction of excess SS-20s, but at moving them to the eastern part of the country where they could threaten China, Japan and South Korea.

In spite of all its qualms, the US will probably be easier to negotiate with now. If it appears intransigent, Moscow will be cast in a more favourable light. Furthermore, the anti-nuclear forces within the country are gathering strength. Although a nuclear-freeze proposal won approval after much debate in the House of Representatives, the National Conference of Catholic Bishops voted overwhelmingly for a pastoral letter which opposes retaliatory nuclear attacks and denounces any first use of nuclear weapons. Reagan is also under increasing pressure to achieve mutual arms reduction. Some Republican and Democratic senators have refused to vote for his MX missile programme without a more clear-cut arms-control strategy. Furthermore, a recent report of prominent US and European defence specialists recommended that NATO should increase both quality and quantity of its conventional forces in Europe and rely less on nuclear weapons.

YURI ANDROPOV CLIMB TO THE TOP

The relatively low-profiled Soviet Supremo Yuri Andropov appears to be slowly climbing up the ladder of power. In an article in *Pravda*, published in mid-May, Defence Minister Marshal Dmitri Ustinov referred to Andropov as the Chairman of the Defence Council for the first time. This means that Andropov now holds a post equivalent to Commander-in-Chief. Although the office of President still remains vacant, Andropov now occupies two of the three positions held by the late Leonid Brezhnev.*

One of the causes of Andropov's success may be a projected increase in the Soviet grain harvest. The last four harvests were scanty, ranging from 160 to 180 million tonnes. This year, the US Department of Agriculture has predicted that the Soviet grain harvest will increase by 14 per cent and will be around 200 million tonnes. The Soviet

*As per the latest developments, Andropov has also become the President.

230 million tonnes. The early increase is due not only to a mild winter and early spring, but also to the government-initiated 'food programme'. Under this, farmers throughout USSR have begun to form 'contract brigades' that reward members with cash whenever the production exceeds a pre-determined goal.

Meanwhile, on another front, the Soviet Union and the Babrak Karmal Government in Afghanistan launched a heavy attack on Afghan rebel regions in mid-May. Fleeing refugees called the joint offensive the heaviest since the 1979 Soviet invasion of Afghanistan. Western military analysts in Pakistan assessed the situation in the light of the forthcoming talks between Pakistan and Afghanistan which, it is hoped, would lead to the withdrawal of 1,05,000 Soviet troops now in Afghanistan. The analysts feel that the Soviets are trying to soften up their withdrawal routes north of Kabul. South of Kabul the picture is different. About 10,000 troops are reported to be in Ghazni, ready to seal off the border with Pakistan.

YUGOSLAVIA FUNDAMENTALISM TAKES ROOTS

Middle East is not the only area where Islam is taking a fundamentalist and militant turn. Yugoslavia appears to be the first European country to be affected by fundamentalism. The country has about four million Muslims who live in Bosnia and about half of them have begun to go the fundamentalist way. In Sarajevo, 11 prominent Muslims have been jailed for spreading 'hostile propaganda from positions of Muslim nationalism'.

Bosnian Muslims gained 'full' nationality status during President Josip Broz Tito's time. Tito felt that by granting them this he was ending the old struggle for control of Bosnia between the Serbs and the Croats. This, however, has led to the revival of Islam. Unlike Yugoslavia's minorities of Muslim Albanians and Turks, the Bosnian Muslims, who make up 40 per cent of its population, are slaves. The orthodox Serbs and the Catholic Croats, who make up 37 per cent and 20 per cent of Bosnia's population respectively, are worried that Bosnia would fall under Muslim domination. The Bosnian Muslims wield a lot of influence in the press, the universities and the publishing houses. They are slowly flexing their muscles now. For instance, local Muslims in Zavipovici, a town in central Bosnia, recently refused to accept the Imams named by the official leaders in Sarajevo, and elected their own.

FRANCE

STUDENTS IN REVOLT

Mitterrand's election victory two years ago has turned sour. On May 10, the second anniversary of his mandate, instead of public toasts and red flags, France saw student protests, riot police and clouds of tear gas. On May 24, students rioted again, this time against a government plan to reform university education. A new bill proposes to make universities more responsive to the needs of the economy by emphasising economic development and technology. By the time the bill has worked its way through the 1,000 amendments currently tabled, most of the students now protesting will be out of the universities.

The protests were, however, very different from the popular upheaval of May 1968 which had resulted in the fall of General Charles de Gaulle. The recent demonstrations were held in less than half of France's 77 universities, and only a small percentage of the country's one million students were involved. Students also lacked the support of unions and workers, who now feel that students belong to the privileged bourgeois elite class. They also have no links with merchants, doctors or farmers. The current state of protest is limited to special interest groups who want specific reforms.

In fact, the students are not the only special interest group which is protesting. Recently, there was a march by 10,000 shopkeepers and other small businessmen to protest against government price controls and other austerity restrictions. Farmers, too, are planning to renew their protest against the government's failure to secure higher prices for their commodities. While the 1968 upheaval was a popular one, the present problem is limited. However, the demonstrations have come at a bad time for the government which is facing severe economic problems.

IRAN

WAR ON ALL FRONTS

Iran is fighting a war not only against Iraq but also against Iranian Kurds who want autonomy. 'Kurdistan', or the land of Kurds, spreads across Iran, Iraq, Syria, Turkey and the Soviet Union. The Kurds of Iran have once again renewed their struggle for independence. When the Shah's regime collapsed in Iran in 1979, the Kurds felt that they had won their struggle for autonomy. They were disappointed, however, when Ayatollah Khomeini's troops took over the task of suppressing the Kurdish

rebels. Although the government regained control of the major cities by 1981, the countryside remained in the hands of the Kurdish guerillas.

After a massive government effort to capture the main roads in Kurdistan last year, the various guerilla factions decided to join hands. The nationalist Kurdish Democratic Party, the left-wing Komaleh organisation, the Iranian fedayin and mujaheddin guerillas and the Iraqi Kurds of the Patriotic Union of Kurdistan, who are engaged in a battle against Iraq's Baathist regime, have come together and at present about 10,000 guerillas are entrenched in the mountains of Kurdistan.

Fresh fighting began in March this year. The guerillas follow the strategy of hit-and-run attacks on Iranian groups isolated from their bases and avoid open battle against a better-equipped enemy. The government, in its turn, bombs villages in the hope of driving the guerillas further into the mountains. It has also started a blockade to prevent food and medicines from reaching the guerilla-held areas.

Meanwhile, the Red Cross has grave complaints about the war on Iran's other front. On May 10, it went public and denounced the grave and repeated breaches of international humanitarian laws on the part of both Iran and Iraq. In a memorandum, it accused both sides of killing prisoners on the battlefield and in prison camps and leaving the wounded to die. The situation was worse in Iran than Iraq. Red Cross officials have been obstructed in their work in Iran. Iraqi prisoners, registered months before, have often been reported to have been "killed in battle" when asked for by name. The Red Cross wants some country to volunteer to act as the protesting power for prisoners and foreign civilians in the war zone. So far, none has stepped forward.

SOUTH AFRICA

TERROR TACTICS

The South African Air Force attacked the Mozambican capital of Maputo on May 23 and destroyed a Mozambican missile base and several African National Congress (ANC) guerilla bases. The ANC, however, denied that it had any military facilities in Maputo and claimed that the South African Air Force had bombed a storehouse for food and clothing for South African refugees in Matola, a Maputo suburb.

Whatever the truth, it is a fact that the early morning strike killed a number of people. (Pretoria claimed that it had killed 64 people, while Mozambique said that it was an exaggerated figure.) Though

the conflict has been building up for some time, the immediate cause for the attack was a car bomb blast outside Air Force headquarters in Pretoria on May 20, which killed 18 people and wounded more than 200. On May 23, the ANC claimed responsibility for the blast. Earlier, too, the ANC had launched a similar attack in South Africa and the South African armed forces had crossed international borders in pursuit of the ANC. Last December, the South African troops went into Lesotho's capital, Maseru, and killed 42 people. The younger militants in the ANC claimed that many ordinary refugees had been killed in the Maseru raid. Since then, they have been pressurising the older leadership to give up their qualms about hitting civilian targets. The militants are mainly young blacks who left South Africa at the time of the 1976 Soweto demonstration in which more than 600 persons were killed. Because of their unforgettable experiences, they are moved less by moral arguments and more by political expediency.

The Maputo raid has demonstrated that South Africa has no qualms about attacking civilian targets. It is expected to step up its efforts against the neighbouring states who harbour ANC members. These states may forbid the overt establishment of ANC bases, but they will not deny sanctuary to refugees from South Africa. South Africa regards these refugees as terrorists and will not hesitate to attack the bordering states. A new stage in the South African conflict has, therefore, begun.

NICARAGUA

STRIVING FOR PEACE

Late in May, Nicaragua's Council of State voted to prolong the current state of emergency for a year unless fighting on its border stopped. Emergency, under which constitutional guarantees including freedom of the press are suspended, was declared on March 15, 1982, and has, so far, been extended on a month-to-month basis.

Worried about the state of affairs in their region, Mexico, Venezuela, Colombia and Panama decided to send observers to find out what was happening on Costa Rica's border with Nicaragua. Costa Rica itself wants a non-military peace-keeping force that would prevent anti-government Nicaraguan guerillas from using Costa Rica as a base and thus also prevent the Nicaraguan army from counter-attacking across Costa Rica's frontiers. Honduras has the same problem with Nicaragua, the country being used as a haven by anti-Sandinist

guerrillas. El Salvador's complaint, however, is that Nicaraguan Sandinists are supplying arms to guerrillas who are trying to overthrow the Salvadoran Government.

At present there are two suggestions about the way peace can be brought to the region. The first, supported by the US, El Salvador, Honduras and Costa Rica, suggests a comprehensive regional pact, involving the withdrawal of all foreign advisers, controls on the import of heavy weapons and a ban on aid for guerrillas. The second, put forward by the Sandinists, suggests that Nicaragua should reach frontier agreements bilaterally with Honduras and Costa Rica. It avoids the issue of El Salvador and opposes any regional pact or meeting.

Meanwhile, in May, there was a furor in the US Congress on the Central American crisis. In a major address to a special joint session of Congress, Reagan depicted the Nicaraguan Government as an unmitigated villain, accused it of exporting its Cuban-backed revolution and asked Congress for \$600 million in aid for Central America. Congress, scared by the reports of covert CIA activities involving the training of anti-Sandinist guerrillas, was not taken in. In fact, the House Permanent Select Committee on Intelligence recommended cutting off of covert aid to the guerrillas. However, the Reagan Administration is not likely to lose much ground: neither the administration nor the Congress wants to be held responsible for "losing" El Salvador and other Central American countries to left-wing groups, should such a thing occur.

THAILAND ARMY REIGNS SUPREME

The military continues to play an important role in the political affairs of Thailand. After a drawn-out deadlock resulting from the failure of any single party to gain majority in the general elections of April 18, four of Thailand's 14 political parties agreed to form a coalition government under Prime Minister Prem Tinsulanond, shortly after he had been reappointed to a four-year term by King Bhumibol Adulyadej. The new coalition partners are the moderate Social Action Party (SAP), the middle-of-the-road Democratic Party, the conservative National Democracy Party, and the ultra-rightist Prachakron Thai Party. The post-election deadlock had emerged as a result of inter-party wrangling between the SAP and the military-backed Chart Thai. While the SAP, which had won a

plurality of 92 seats in the 324-member lower house of Parliament, supported Prem from the beginning, the leader of the military-backed Chart Thai, Maj-Gen Pramam Adireksan, made a premature bid for the premiership. He was let down by the military and Prem succeeded in bringing four parties together in a coalition.

Prem himself is a former army general and the military establishment trusts him. Political analysts feel that he is the perfect link between the civilians and military. Thus, despite an apparently civilian facade, the military in Thailand will continue to involve itself in governmental affairs.

AFRICA HIT BY DROUGHT

From Mauritania in the west to Ethiopia in the east, from Chad in the north to South Africa in the south, the dark continent is in the throes of one of the worst droughts in several years. What is worse, few African governments are capable of dealing with the drought. They suffer from corruption, incompetence, high birth rates and low finances. In some countries, other troubles have added to the basic problem of crop failure. The continuing civil war in Ethiopia, guerrilla warfare in Mozambique and high procurement prices in Tanzania have helped to disrupt normal life.

Unlike the 'Big Drought' of a decade ago, almost the whole of South Africa is affected by drought this year. Levels in dams that supply water to power stations are dropping rapidly and this is bound to have an adverse effect on the hydel-power stations in heavily industrialised South Africa. Crops, too, have been affected. Last year's maize harvest was less than 9 million tons, and this year's crop is likely to be less than half of that. Instead of exporting maize, South Africa will import about 1.5 million tons of maize this year.

The world's weather, in fact, appears to have gone awry. Besides Africa, other continents, too, have been undergoing spells of drought and unseasonal rains. Australia passed through a period of severe drought last year which reduced wheat harvests from 16.5 million tons in 1981 to less than 9 million tons. In the South Pacific, sea currents are flowing the wrong way and Pacific islands have been hit by a series of bad cyclones. While the Philippines is facing drought conditions, Taiwan saw the heaviest rainfall during the last 85 years, in the first three months of 1983. The only silver lining is that there is no worldwide food shortage. The US, for instance, has

large surplus stocks. Problems may arise, however, on the question of distribution because those who need food do not have the money to pay for it.

UK

MAGGIE DOES IT AGAIN!

The British had extremes to choose from. The incumbent Prime Minister, Margaret Thatcher, had steered her Conservative Party far to the right during her term. Most of the election manifesto of the party, published on May 18, was taken up with retrospective self-congratulation. The Labour Party offered a platform that was more leftist than ever. The Social Democratic Party (SDP)/Liberals Alliance, which competed in general elections for the first time, added a new element to the campaign. Its platform proposed a more restrained programme of government spending to boost the economy, than the Labour Party.

Margaret Thatcher, however, appears to have gauged the pulse of the electorate correctly. A late-May poll conducted by the Market and Opinion Research International showed that the Conservatives had a commanding lead of 51 per cent over the Labour Party (29 per cent) and the Alliance (18 per cent). And the elections, which took place on

popular measures taken by the Thatcher Government, Britons still strongly favour a right-wing government. One of the reasons for this is that the alternative offered by the Labour leader, Michael Foot, was perhaps worse than the present government. As we go to the press, the Conservatives have swept the polls winning 397 seats, which is about four times larger than their strength in the last Parliament. Under Margaret Thatcher's leadership, they have gained a majority of 144 seats—the biggest for any leader since Clement Attlee of Labour defeated wartime leader Winston Churchill in 1945 with a 146 majority.

CURRENT EVENTS: National

per hour.

The manufacturer-exporters are obviously delighted by these measures of the Commerce Ministry.

TARAPUR POLICY

RISK OF RADIATION

Progress brings its own peculiar problems and hazards, and when these problems pertain to nuclear radiation, they become a cause for national concern.

The recent reports of excess exposure to nuclear radiation at the Tarapur Atomic Power Station (TAPS) has raised considerable dust. It has been discovered that some workers at TAPS face as high as 18,240 millirems exposure against the safety ceiling of 5,000 millirems prescribed by the International Commission on Radiological Protection (ICRP). Over 50 workers have received more than the 50 rems prescribed by ICRP over the past one year. Some are known to have received the annual permissible dose in just 20 minutes!

At a recent press conference, H.N. Sethna, Chairman of the Atomic Energy Commission, conceded that there had been certain cases of excess exposure, but also pointed out that they were very rare. Since its commissioning in 1969, there have been only 329 cases of excess radiation exposure and no death or disease has been caused by it. Annual medical check-ups are held for all workers to monitor their exposure to radiation. Also, workers are deployed as relay teams to minimise individual exposure to radiation. Sethna assured that safety of the workers would never be compromised and the necessary precautions were being taken.

DISASTERS

FIRES & QUAKES

On May 26, a severe earthquake struck along a 300-km stretch of Japan's west coast, killing 47 persons and toppling about 95 houses. It set off a tidal wave that swept 17 adults and 13 children into the sea.

Japan experiences about 10,000 earthquakes a year, most of them being minor ones. But Japanese seismologists have predicted a "big" earthquake in the near future. The last major earthquake, which measured 7.9 on the Richter scale, came in 1923. It killed over 1,00,000 people and destroyed most of Tokyo city. The recent

Meanwhile, non-availability of spare parts for TAPS is also causing much concern. Water pumps and other devices have to be replaced to prevent radioactive leakages which have developed due to faulty functioning.

Sethna's pronouncement has removed many apprehensions but still there is a need for a thorough enquiry. The working of this nuclear plant has always been shrouded in a cloak of secrecy. It is high time the misgivings about the place are removed once and for all.

JNU

VIOLENCE ON THE CAMPUS

Jawaharlal Nehru University (JNU), the centre of innumerable controversies and agitations, was once again in the news when 350 of its students were arrested in a police swoop over the campus. The police moved in at the instance of Lt Governor Jagmohan to free three JNU officials under *gherao* by students.

The trouble started when a student, Jalees Ahmed, was shifted to another hostel for his alleged misbehaviour with the warden's wife. The JNU Students' Union (JNUSU) protested against the action and reinstated Ahmed in his previous room after illegally breaking open the lock of the room. The students' union demanded an enquiry into the whole affair and the warden wanted strict action taken against the students.

After a prolonged verbal battle between the teachers and students, Vice-Chancellor Srivastava decided to take strong disciplinary action against the offenders and expelled N.R. Mohanty (President) and S. Mitra (Secretary) of JNUSU, and Ahmed.

The students were furious at this "arbitrary action" and *gheraoed* the vice-chancellor, the Rector, M.S. Agwani, and Registrar, N.R. Batra. Meanwhile,

was only two-tenths of a point less severe than the 1923 quake. Japanese experts predict the tremor was a harbinger of more to come. They feel that the next big quake will strike any time within the next 20 years in the region between Tokyo and Nagoya, Japan's most populated and heavily-industrialised area.

Around the same time, a man-made tragedy struck Egypt in the early hours of May 25. An accident in a storage room full of highly-inflammable butane gas caused an old steamer, named 'Tenth of Ramadan', to go up in flames on the River Nile. Some half of the 600 on board died.

S.B.

the JNUSU boycotted exams and obstructed other students also from taking them.

The police had to resort to drastic action because the three officials had been under *gherao* for two days without food and water. Initially, only 31 students were arrested. But soon the situation worsened with students going on a rampage. They indulged in an orgy of violence: ransacking the houses of the terrified teachers, breaking furniture and beating up a number of them. The students even tried to set fire to the warden's house, and to a number of cars parked within the campus.

There was a pitched battle between the police and students and more than 300 students courted arrest. Prohibitory orders were issued on the campus and the university closed sine die. The students were ordered to vacate their hostels within 48 hours. JNUSU contested the order in the Supreme Court but their petition was rejected.

However, the JNU drama did not end here. After a few days, it was discovered that of the 350 students arrested, at least 67 had escaped from Tihar Jail. Six jail officials were arrested as a consequence. Locating these students seems an impossible exercise because most of them had given fictitious names and addresses.

Chances of a settlement between the students and authorities seem dim with the vice-chancellor adopting a tough stand. Already, the three, involved in the controversy—Mohanty, Mitra and Ahmed—have been rusticated for three years from the university. Though JNU is scheduled to open on July 22, after the vacations, according to a fresh order from the vice-chancellor, the academic council of JNU has decided that there will be no admissions for the forthcoming semester beginning that month.

In preparing these tests we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam. Not easier, not harder, but just what you may expect. It is, therefore, a practical yardstick for charting your progress and planning your course.

Rating: Evaluate your performance on the basis of the following score-card:

| | | |
|-----------------------------|---|-----------|
| 100 questions in 60 minutes | — | Excellent |
| 80 questions in 60 minutes | — | Good |
| 60 questions in 60 minutes | — | Fair |
| 35 questions in 60 minutes | — | Poor |

Tips: 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

ARITHMETIC

BY R.P. GOEL

FOR POs, AAOs (LIC)...

This section goes as QUANTITATIVE APTITUDE in the Assistant Administrative Officers (AAO), LIC, Probationary Officers (PO), BSRB (Central Group) and RBI Officers (Gde 'A' Sc/St) exams, all to be held this month.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement.

- 1,250 mangoes were distributed among a group of boys. Each boy got twice as many mangoes as the number of boys in that group. The number of boys in the group was
 - (a) 25
 - (b) 45
 - (c) 50
 - (d) 625
- is greater than $\frac{1}{2}$ but less than $\frac{3}{4}$.
 - (a) $\frac{3}{8}$
 - (b) $\frac{4}{8}$
 - (c) $\frac{5}{8}$
 - (d) $\frac{7}{8}$
- Hari Singh sold $\frac{1}{2}$ of his estate, gave $\frac{1}{3}$ of the remainder to his son and $\frac{1}{4}$ of the balance to his daughter. His daughter's share values Rs 6,250. The value of the whole estate is
 - (a) Rs 18,750
 - (b) Rs 25,000
 - (c) Rs 75,000
 - (d) Rs 1,50,000
- The number $\sqrt{2}$ is
 - (a) A finite number
 - (b) An infinite non-repeating decimal
 - (c) Equal to 1.41421
 - (d) An infinite repeating decimal
- Half of 1 per cent written as

Prakash
Library

- a decimal is
- 0.2
 - 0.02
 - 0.05
 - 0.005
6. In a higher secondary school, there are 195 students in class XI, 252 in class X and 333 in class IX. The enrolment percentage of class XI is—per cent of the total of all three classes.
- 20
 - $22\frac{1}{2}$
 - 25
 - 30
7. A shopkeeper marks his goods to gain 35 per cent. But he allows 10 per cent discount for cash payment. His profit on a cash transaction is—per cent.
- $13\frac{1}{2}$
 - $21\frac{1}{2}$
 - 25
 - $31\frac{1}{2}$
8. A grocer mixes 26 kg of tea, which costs him Rs 20 per kg, with 30 kg of tea, which costs Rs 36 per kg. He sells the mixture at Rs 30 per kg, thus gaining—per cent.
- 2
 - 5
 - 6
 - None of the above
9. Tikam Singh purchased a certain quantity of wheat at Rs 150 per quintal. But 20 per cent of the wheat was wasted. He must sell the remaining wheat at Rs—per quintal to gain 20 per cent on his outlay
- 180
 - 187.50
 - 210
 - 225
10. If $a:b=2:3$ and $b:c=4:5$, then $a:c$ equals
- 10:12
 - 12:10
 - 8:15
 - 15:8
11. If $15:35::21:x$, x 's value is
- 9
 - 25
 - 49
 - None of the above
12. Rs 540 are to be distributed among Nisha, Lata and Prabha in the ratio 2:3:4. Nisha will get Rs
- 60
 - 120
 - 180
 - 240
13. In 30 litres of a mixture of milk and water, the ratio of the constituents in the above order is 7:3. To make their ratio 3:7, —litres of water must be added to the mixture.
- 10
 - 21
 - 30
 - 40
14. Harbans Lal and Nand Ram enter into partnership. Harbans Lal contributes Rs 3,000 for 7 months and Nand Ram Rs 5,000 for 8 months. A profit of Rs 1,350 should be divided between them in the ratio
- 3:5
 - 7:8
 - $\frac{7}{8}:\frac{5}{7}$
 - 21:40
15. The average of the first three numbers is double that of the fourth number. If the average of all the four numbers is 14, then the fourth number is
- 8
 - 14
 - 16
 - 21
16. The average age of two children in a family is 18 years. The average age of the two children with their parents is 32 years. If their mother is 8 years younger than their father, the father's age is—years.

- (a) 40
(b) 44
(c) 46
(d) 50
17. A sum of money doubles itself in 10 years at simple interest. It will be four times its value at the same rate of interest in—years.
(a) 20
(b) 30
(c) 40
(d) 50
18. Ram Gopal lent Rs 5,000 partly at the rate of 4 per cent and partly at the rate of 5 per cent per annum. The total interest after 2 years is Rs 440. To find the amount of money lent at each of the above rates, we should divide Rs 5,000 in the ratio
(a) 4:5
(b) 3:2
(c) 5:4
(d) 2:3
19. What sum of money will become Rs 1,352 in two years at 4 per cent per annum compound interest?
(a) Rs 1,200
(b) Rs 1,250
(c) Rs 1,275
(d) Rs 1,300
20. What is the sum due 5 years hence, the true discount of which, at 6 per cent simple interest, is Rs 210?
(a) Rs 790
(b) Rs 910
(c) Rs 1,000
(d) Rs 1,150
21. The present worth of Rs 4,410 due two years hence at 5 per cent compound interest is Rs
(a) 3,950
(b) 4,000
(c) 4,100
(d) 4,200
22. By investing Rs 2,520 in 3 per cent stock at 84, the annual

- income will be Rs
(a) 30
(b) 75.60
(c) 90
(d) 120
23. The yield on 4 per cent stock at 80 is— per cent.
(a) 2
(b) 4
(c) 5
(d) 6
24. Ramu and Deep can do a piece of work in 10 days; Ramu and Sohan can do it in 12 days; and Deep and Sohan can do it in 20 days. Ramu alone can complete the work in—days.
(a) 15
(b) 21
(c) 30
(d) 60
25. If 4 men or 7 boys do a work in 29 days, 12 men and 8 boys will do the same work in
(a) 7 days
(b) 8 days
(c) 11 days
(d) 12 days
26. Mohan Kumar is 8 km ahead of Ram Chand. The speeds of Mohan Kumar and Ram Chand are 4 and 6 kmph respectively. Ram Chand will overtake Mohan Kumar in
(a) 2 hr
(b) 1 hr 20 min
(c) 4 hr
(d) 48 min
27. Nitin Kumar drives his car to his office at the speed of 40 kmph and returns along the same route at the speed of 60 kmph. His average speed for the entire round trip is—kmph
(a) 45
(b) 48
(c) 50
(d) None of the above
28. A rectangle of area 50 sq cm is cut into squares of side 5 mm each. The number of such

- squares is
- (a) 25
 - (b) 100
 - (c) 150
 - (d) 200
29. A room 5.49 m long and 3.87 m broad is to be paved with square tiles. The edge of the longest tile which will exactly fit in the floor of the room will measure——cm.
- (a) 8
 - (b) 9
 - (c) 11
 - (d) 12
30. The sides of a right-angled triangle are $(2x+1)$ cm, $2x$ cm and $(x-1)$ cm. x is equal to
- (a) 4
 - (b) 5
 - (c) 6
 - (d) None of the above
31. The radius of a circle is decreased by 10 per cent. The area of the circle is thus decreased by
- (a) 5 per cent
 - (b) 10 per cent
 - (c) 19 per cent
 - (d) 20 per cent
32. Samir and Ravi have the same income. Samir saves 20 per cent and Ravi spends Rs 400 per month more than Samir. At the end of 4 months, Ravi finds himself in a debt of Rs 1,100. Their individual monthly income is Rs
- (a) 625
 - (b) 700
 - (c) 1,100
 - (d) 1,500
33. If the price of sugar rises by 20 per cent, a householder must reduce his consumption of sugar by——per cent so as not to increase his expenditure.
- (a) $12\frac{1}{2}$
 - (b) 15
 - (c) $16\frac{2}{3}$
 - (d) 20
34. If a item is sold at the cost price of 4 items of the same kind, the profit will be——per cent.
- (a) 25
 - (b) $33\frac{1}{3}$
 - (c) 40
 - (d) 50
35. A dealer bought 80 fountain pens of two qualities for a total sum of Rs 240. He paid Rs 3.50 each for the better quality pen and Rs 2.25 each for the ordinary quality one. The number of better quality pens bought by him is
- (a) 25
 - (b) 32
 - (c) 48
 - (d) 50
36. Of three numbers, the first is twice the second and the second is thrice the third. The average of all the three numbers is 100. The first number is
- (a) 106
 - (b) 150
 - (c) 160
 - (d) 180
37. All the faces of a cube with 4 cm edge have been painted. The cube is cut into smaller cubes, with one cm edge. Then the number of cubes that have been painted on none of their faces is
- (a) 4
 - (b) 8
 - (c) 16
 - (d) 27
38. A metallic cylinder, whose height is double the radius of its base, is melted and cast into spherical balls, with the radius equal to one-fourth of the height of the cylinder. The number of balls thus formed is
- (a) 4
 - (b) 6
 - (c) 8
 - (d) 12

EXAM JULY 82

GENERAL KNOWLEDGE

Questions published in this section appeared in the GENERAL KNOWLEDGE paper of the Special Class Railway Apprentices Examination held in July 1982. These are based on the candidates' memory as they are not allowed to take their question papers out of the examination hall. Though we have compiled these questions as close to the original as possible, we take no responsibility for any discrepancies.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement.

1. The slogan "Back to the Vedas" was given by
 - (a) Swami Dayanand
 - (b) Ramanujam
 - (c) Raja Ram Mohan Roy
 - (d) Swami Vivekananda

 - (a) Onam
 - (b) Pongal
 - (c) Mahashivratri
 - (d) None of the above
3. The US military aid to Pakistan was worth \$ _____ billion.
 - (a) 3.2
 - (b) 4
 - (c) 5
 - (d) 6
4. The Mediterranean type of climate enjoys
 - (a) Winter rains
 - (b) Dry summer and winter monsoon
 - (c) Wet summer and dry winter
 - (d) Rains throughout the year
5. The Green Revolution is associated with
 - (a) Dwarf variety of wheat
 - (b) Rice
 - (c) Pulses
 - (d) Sugarcane
6. The mineral found in the coast of Kerala is
 - (a) Carnallite
 - (b) Monazite
 - (c) Pitch blende
 - (d) Pyrochlore
7. Excess money in a country's economy leads to
 - (a) Inflation
 - (b) Deflation
 - (c) Increase in production
 - (d) Decrease in production
8. India has inadequate _____ for its development.
 - (a) Human resources
 - (b) Capital
 - (c) Power
 - (d) Raw material
9. Kushan Age is known for its
 - (a) Administration
 - (b) Culture
 - (c) Territorial expansion in China
 - (d) Trade and commerce
10. Tarapur is known for its
 - (a) River-valley project
 - (b) Satellite station
 - (c) Atomic power plant
 - (d) Steel plant
11. _____ refused to supply important raw material for Tarapur.
 - (a) The UK
 - (b) The US
 - (c) France
 - (d) W. Germany

12. The Arjuna Award is given for distinction in
 - (a) Sports
 - (b) Social service
 - (c) International understanding
 - (d) Community leadership
13. ----- was the recipient of the 1981 Padma Shri Award.
 - (a) Kapil Dev
 - (b) S.M. Gavaskar
 - (c) G.R. Vishwanath
 - (d) None of the above
14. ----- did the maximum for the spread of Buddhism in foreign lands
 - (a) Ashoka
 - (b) Kanishka
 - (c) Raj Raja Chola
 - (d) Harsha Vardhan
15. The first creatures to come to land from sea were
 - (a) Amphibians
 - (b) Reptiles
 - (c) Arthropods
 - (d) None of the above
16. The main objective of the Sixth Five Year Plan is
 - (a) Rapid industrialisation
 - (b) Self sufficiency in food
 - (c) Development of core industries
 - (d) Uplift of those below the poverty line
17. In meiosis cell division, the chromosome exchange takes place in the stage of
 - (a) Prophase
 - (b) Metaphase
 - (c) Anaphase
 - (d) Telophase
18. The First Battle of Panipat was fought between
 - (a) Babar and Ibrahim Lodhi
 - (b) Babar and Rana Sanga
 - (c) Akbar and Rana Pratap
 - (d) Marathas and Ahmad Shah Abdali
19. What is juvenile delinquency?
 - (a) Crime committed by minors
 - (b) Crime committed by the mentally retarded
 - (c) Crime committed by females
 - (d) Crime committed by old people
20. Juvenile delinquency is mostly found in
 - (a) Villages
 - (b) Urban areas
 - (c) Both villages and urban areas
 - (d) None of the above
21. Recently, a dual-pricing policy was introduced for
 - (a) Milk
 - (b) Sugar
 - (c) Cement
 - (d) Steel
22. The Palekar Award pertains to the
 - (a) Banks
 - (b) LIC
 - (c) Press
 - (d) Land reforms
23. Who formed the Indian National Congress?
 - (a) A.O. Hume
 - (b) Surendra Nath Banerjee
 - (c) W.C. Bonnerji
 - (d) Motilal Nehru
24. The Indo-Soviet Treaty was signed in
 - (a) 1955
 - (b) 1971
 - (c) 1972
 - (d) 1973
25. The Panchsheel was signed in the year
 - (a) 1954
 - (b) 1955
 - (c) 1962
 - (d) 1963
26. ----- is not a principle of Panchsheel.
 - (a) Non-aggression
 - (b) Non-alignment
 - (c) Non-interference in each other's internal affairs
 - (d) Peaceful coexistence
27. The Food for Work Programme

implies

- (a) Partial payment of wages through food
 - (b) Full payment of wages through food
 - (c) Creation of employment by increasing food production
 - (d) None of the above
28. The INSAT-1A was launched by
- (a) India with US funds
 - (b) India with its own funds
 - (c) The US, with its own funds, for India
 - (d) The US, for India, with Indian funds
29. The Perspective Plan is a — plan.
- (a) Short-term
 - (b) Long-term
 - (c) Annual
 - (d) Rolling
30. The WHO declared India free from smallpox in the year
- (a) 1977
 - (b) 1978
 - (c) 1979
 - (d) 1980
31. — laid the foundation for modern India's foreign policy.
- (a) Jawaharlal Nehru
 - (b) Mahatma Gandhi
 - (c) Sardar Vallabhbhai Patel
 - (d) Lal Bahadur Shastri
32. The Vedic culture was a gift of the
- (a) Aryans
 - (b) Indus Valley people
 - (c) Dravidians
 - (d) Mauryas
33. Packed food is becoming popular due to the
- (a) Fast pace of life
 - (b) Aggressive advertisements
 - (c) Fashion trends
 - (d) None of the above
34. — is called the 'meat of the poor'.
- (a) Black gram
 - (b) Groundnut
 - (c) Pulses

(d) Soyabean

35. Draupadi had five husbands; this denotes
- (a) Polygamy
 - (b) Polyandry
 - (c) Misogamy
 - (d) Exogamy
36. The objective of the IMF loan to India is
- (a) Rapid industrialisation
 - (b) Eradication of poverty
 - (c) Increasing agricultural production
 - (d) To overcome the budget deficit

37. Lech Walesa is Poland's
- (a) Foreign Minister
 - (b) Prime Minister
 - (c) Trade Union leader
 - (d) Defence Minister
38. Humidity is measured by a/an
- (a) Hydrometer
 - (b) Anemometer
 - (c) Barometer
 - (d) Hygrometer
39. — is a form of indirect taxation.
- (a) Civil tax
 - (b) Income tax
 - (c) State duty
 - (d) Sales tax

40. Which of the following cultures were influenced by the Greeks?
 (a) Vedic
 (b) Gupta
 (c) Gandhara
 (d) Indus Valley
41. D.D.T. is not being used as an insecticide because
 (a) Of its high cost
 (b) Of its toxic effect on humans
 (c) It destroys flora and fauna
 (d) Insects have developed resistance against it
42. Inflation can be checked by
 (a) Devaluation
 (b) Decreasing production
 (c) Increasing taxation
 (d) None of the above
43. The Festival of India was held in
 (a) London
 (b) Paris
 (c) New Delhi
 (d) Frankfurt
44. Mujahedeen-i-Khalq is a rebel organisation of
 (a) Iran
 (b) Pakistan
 (c) Afghanistan
 (d) Israel
45. Which vitamin is vital for vision?
 (a) A
 (b) B
 (c) C
 (d) D
46. Congress came to the Opposition in the year
 (a) 1969
 (b) 1977
 (c) 1978
 (d) 1979
47. Ajanta is famous for its
 (a) Rock temples
 (b) Cave temples
 (c) Cave paintings
 (d) Forts
48. The tremendous increase in India's population is due to
 (a) High birth rate
 (b) Early marriages
 (c) Infanticide
 (d) None of the above
49. New members are admitted to the UN by the
 (a) General Assembly
 (b) Security Council
 (c) Secretariat
 (d) Secretary-General
50. ——— was the recipient of 1981 Bharatiya Jnanpith Award
 (a) Amrita Pritam
 (b) Firaq Gorakhpuri
 (c) Syed Hassen
 (d) Imtiaz Ali Arshi
51. Scurvy is caused by the deficiency of Vitamin
 (a) A
 (b) B
 (c) C
 (d) D
52. In the 18th century, British contact with India led to
 (a) Import of foreign goods
 (b) Social reforms
 (c) Industrialisation
 (d) Urbanisation
53. ——— made significant contribution towards the abolition of sati?
 (a) Lord Canning
 (b) Ishwarchandra Vidyasagar
 (c) Raja Ram Mohan Roy
 (d) Gobind Ballabh Pant
54. The President is elected by the
 (a) Members of Lok Sabha
 (b) Members of Lok Sabha and Rajya Sabha
 (c) Elected members of Lok Sabha and Rajya Sabha
 (d) Elected members of Lok Sabha, Rajya Sabha and state Legislative Assemblies
55. A term of Rajya Sabha is for ——— years.
 (a) 2
 (b) 3
 (c) 5
 (d) 6

56. The difference between private and public sector is that the latter is motivated by
 (a) Rapid industrialisation
 (b) Creating employment

 (a) It was not being developed properly
 (b) It would destroy flora and fauna
 (c) It would be the biggest such project
 (d) It was involved in a border dispute
61. — is a non-economic factor in the development of a nation.
 (a) Population
 (b) Capital
 (c) Resources
 (d) Raw materials
62. Cyclones are winds blowing
 (a) In a clockwise direction
 (b) In an anti-clockwise direction
 (c) Clockwise in Northern Hemisphere and anti-clockwise in Southern Hemisphere
 (d) Anti-clockwise in Northern Hemisphere and clockwise in Southern Hemisphere
63. Lignite deposits are found in
 (a) Neyveli
 (b) Khetri
 (c) Raniganj
 (d) Jharia
64. Reservation of seats for weaker sections of the society is guaranteed by the
 (a) President
 (b) Prime Minister
 (c) Chairman of Rajya Sabha
 (d) Constitution
65. Which of the following planes are being imported to strengthen the Indian Air Force?
 (a) Mirage
 (b) Jaguar
 (c) MiGs
 (d) All the above
66. *Antyodaya* is related to the
 (a) Harijans
 (b) Muslims
 (c) Poor
 (d) All the above
67. The Indian Constitution took effect on
 (a) August 15, 1947
 (b) October 2, 1947
 (c) January 26, 1949
 (d) January 26, 1950
68. The largest metabolic organ of the body is
 (a) Liver
 (b) Kidney
 (c) Small intestine
 (d) Stomach
69. The philosophy of Karma is associated with
 (a) Hinduism
 (b) Islam
 (c) Jainism
 (d) Christianity
70. Balanced growth means
 (a) Overall development

- (b) Agricultural development
(c) Industrial development
(d) Increase of foreign exchange
71. Paracel and Spratley Islands, a cause of dispute between China and Vietnam, are located in the
(a) China Sea
(b) Yellow Sea
(c) Pacific Ocean
(d) None of the above
72. A cultivator is more prone to
(a) Cirrhosis of liver
(b) Hookworm infection
(c) Tuberculosis
(d) Lung abscess
73. Soil erosion is caused by
(a) Afforestation
(b) Deforestation
(c) Storms
(d) None of the above
74. Token money means
(a) Face value is more than material value
(b) Material value is more than face value
(c) Money given in exchange of foreign goods
(d) None of the above
75. Kaziranga animal sanctuary in Assam has been set up to protect
(a) Elephants
(b) Rhinos
(c) Flamingoes
(d) Tigers
76. The first Indian national party was founded in
(a) 1851
(b) 1857
(c) 1883
(d) 1885
77. The Bhakti Movement called for
(a) Union of Hindus and Muslims
(b) Building of temples
(c) Religious petition to the government
(d) Revival of Hinduism
78. Which of the following is in the private sector?
(a) TISCO
(b) Barauni
(c) Bhilai
(d) Rourkela
79. The Falklands dispute involved
(a) The UK and China
(b) Iran and Iraq
(c) The UK and Argentina
(d) The UK and Chile
80. In a parliamentary form of government, the
(a) Executive is responsible to the Legislature
(b) Executive is responsible to the Judiciary
(c) Legislature is responsible to the Executive
(d) Legislature is responsible to the Judiciary
81. The Tower of Silence is associated with
(a) Hinduism
(b) Islam
(c) Christianity
(d) Zoroastrianism
82. In which religion is the dead body left exposed after all funeral rites?
(a) Zoroastrianism
(b) Jainism
(c) Judaism
(d) Buddhism
83. — is the largest mammal.
(a) Elephant
(b) Whale
(c) Giraffe
(d) Rhinoceros
84. DMK is a/an
(a) Social service organisation of the south
(b) Leader of south India
(c) Political party
(d) Industrial organisation
85. Nitrogen fixation can be brought about by the cultivation of
(a) Beetroot
(b) Pulses
(c) Sugarcane
(d) Soyabean

86. Genetic study was extensively carried out on the
 (a) Tsetse fly
 (b) Fruit fly
 (c) Common fly
 (d) Mosquitoes
87. At the beginning of earth the atmosphere was composed of
 (a) An envelope of hydrogen and helium
 (b) Methane, hydrogen and ammonia
 (c) Water vapour, oxygen, hydrogen and nitrogen
 (d) Methane, ammonia, nitrogen and hydrogen
88. — is the author of *Arthashastra*
 (a) Kalidas
 (b) Panini
 (c) Kautilya
 (d) Varahamihira
89. — is the oldest Veda
 (a) *Yajurveda*
 (b) *Samaveda*
 (c) *Atharvaveda*
 (d) *Rigveda*
90. The — Amendment has brought about a major change in the Preamble
 (a) 40th
 (b) 41st
 (c) 42nd
 (d) 43rd
91. The recent Indian expedition to Antarctica was led by
 (a) Dr Madhuri R. Shah
 (b) Prof Satish Dhawan
 (c) Admiral O S. Dawson
 (d) Dr S Z. Qasim
92. Filmotsav-82 took place in
 (a) New Delhi
 (b) Calcutta
 (c) Madras
 (d) Bangalore

93. According to Gandhiji, satyagraha is a weapon of the
 (a) Freedom fighters
 (b) Weak
 (c) Strong minded
 (d) Poor
94. A solar eclipse is caused when the
 (a) Sun comes in between the earth and the moon
 (b) Earth comes in between the sun and the moon
 (c) Moon is at right angles to the earth and the sun
 (d) Moon comes in between the earth and the sun
95. Emphasis was laid mainly on agriculture in the — Five Year Plan
 (a) First
 (b) Second
 (c) Third
 (d) Fifth

EDITOR'S NOTE

All possible care is taken to check the information given in this supplement. But we do not take responsibility for chance errors or omissions. Authoritative corrections will be gratefully received.

TEST OF REASONING

BY LT COL I. R. MANCHANDA, former Dy. President, S. S. B.

VERBAL AND NON-VERBAL

This section forms an important part of the TEST OF REASONING paper of the PO (BSRB Central Group and Central Bank of India), AAO (LIC), RBI Officers (Gde 'A' Sc/St) and the SCRA exams, all to be held this month.

VERBAL REASONING

Time: 15 minutes.

Scores: 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer. 3. Then rate your score as under:

Excellent...23-25 Very Good...20-22 Good...18-19 Fair...16-17 Poor...Below 16

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement.

Directions: In questions 1-4, you are required to change the first word into the second by changing only one letter at a time. Each change must result in a meaningful word; words which begin with a capital letter, or are contractions, slang or obsolete, are not permitted. The number in brackets indicates the number of changes allowed.

Example: HOLD to HIPS (4 changes)

(i) HOED (ii) HOES (iii) HOPS (iv) HIPS

1. QUIZ to SLIT (3 changes)
2. SIPS to TAKE (4 changes)
3. BOOK to ROSE (5 changes)
4. PIPE to SONG (4 changes)

Directions: In questions 5-9, a capitalised word with some of its letters underlined is followed by four choices. You are required to form a meaningful word by using the underlined letters and then select from amongst the choices the one that gives the last letter of the word so formed.

5. D E M O N S T R A T I O N

- (a) A
- (b) E
- (c) R
- (d) S

6. I N C O N V E R T I B L E

- (a) E
- (b) I
- (c) O
- (d) T

7. Y O G H U R T

- (a) O
- (b) G
- (c) U
- (d) T

8. R E V O C A B L E

- (a) C
- (b) E
- (c) O
- (d) R

9. R E Q U I S I T I O N

- (a) E
- (b) I
- (c) N
- (d) T

10. Ram and Sham went to the race track, where Ram won Rs 175 on the first two races, winning Rs 27 more

on the second race than he won on the first. But he won Rs 16 less on the second race than Sham did. Sham won Rs—on the second race.

- (a) 7
- (b) 87
- (c) 107
- (d) 117

11. A basket has two-thirds again as many apples as the second basket. If the second basket has 10 apples less than the first, how many apples are there in the first basket?

- (a) 15
- (b) 25
- (c) 30
- (d) 45

12. A car moving at a uniform speed of 50 kmph is in front of another moving at 80 km ph. How many km apart are the two cars, if it will take 20 min for the slower car to be caught by the faster one?

- (a) 10
- (b) 12
- (c) 15
- (d) 18

13. Pique is to parsimony as resentment is to

- (a) Cuisine
- (b) Stinginess
- (c) Pasha
- (d) Partiality

14. Complete the series:

2, $5\frac{1}{2}$, 9, $12\frac{1}{2}$, ?

- (a) 16
- (b) $16\frac{1}{2}$
- (c) $20\frac{1}{2}$
- (d) None of the above

15. North is to south-west as east is to

- (a) North-west
- (b) West
- (c) South-west
- (d) South

16. If 6 men (equally able) can dig 36 holes in 12 days, how many men of the same ability

are required to dig 18 holes in 2 days?

- (a) 12
- (b) 15
- (c) 18
- (d) 24

17. Complete the series:

B X W D V U E U T H R Q O ? ?

18. If Ram is X, Sham is Y. If Sham is not X, Radha must be Z. Ram and Sham both cannot be X at the same time. Therefore, if Radha is not Z, which of the following statements must be true?

- (a) Sham is not Y
- (b) Ram is not X
- (c) Sham is X but not Y
- (d) Ram is not Y

19. When P is greater than Q, R is less than Q. But Q is never greater than P. Therefore, which one of the following statements must be true?

- (a) R is never greater than P
- (b) R is never less than P
- (c) Q is always less than R
- (d) No definite relationship can be established between P, Q and R

20. There is no substance harder than metal X. Therefore, which of the following must be true?

- (a) Metal X is the hardest of all substances
- (b) Metal X may not be the hardest of all substances
- (c) Metal X is harder than any other substance
- (d) There cannot be any other substance which is as hard as metal X

21. If 'BRIGADIER' is coded as 28, 44, 35, 33, 27, 30, 36, 31, then using the same code, decode 33, 31, 40, 31, 44, 27, 38.

22. If x out of y samples are of sub-standard quality, the percentage of standard quality samples is

- (a) $\frac{100(x-y)}{y}$
 (b) $\frac{x-y}{100y}$
 (c) $\frac{100(y-x)}{x}$
 (d) $\frac{100(y-x)}{y}$

23. Insert the missing number:

- (a) 84
 (b) 95
 (c) 96
 (d) 97

24. Trypanosomiasis is to meningitis as sleeping sickness is to
 (a) Infantile paralysis
 (b) Bilharzia
 (c) Cerebrospinal fever
 (d) Typhoid fever

25. Insert the missing number:

- | | | |
|-----|------|-----|
| 325 | (22) | 570 |
| 335 | (24) | 454 |
| 123 | (?) | 345 |
- (a) 16
 (b) 18
 (c) 19
 (d) 20

NON-VERBAL REASONING

Time : 10 minutes

Score : 1 mark for each question. No penalty.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement.

Directions : In questions 1-5, find out which one of the lettered figures will fit the empty box with a question mark.

1.

2.

3.

4.

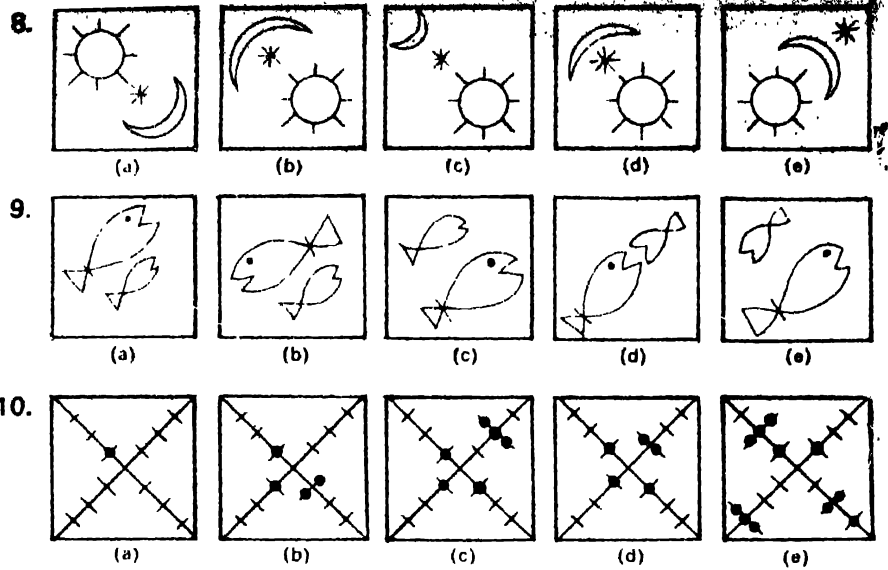

5.

Directions : In questions 6-10, there are five lettered figures in a row. Three of these are alike in some way, while the other two are different. You are required to find the two that are different from the others.

6.

Directions: In questions 11-20, there are four figures at the left, all alike in some way, and four lettered figures at the right. Find the figure at the right, which goes with those at the left.

Directions: In questions 21-25, one of the lettered figures is missing from the large figure. Find the figure which is missing.

23.

(a)

(b)

(c)

(d)

(e)

24.

(a)

(b)

(c)

(d)

25.

(a)

(b)

THE DIAMOND HUNT

How many diamond shapes are there in the figure below?

Answer

10 (Diamonds in this case are all squares).

From *IMPROVE YOUR I.Q.* by Glenn Wilson

FOR POs, AAOs, SCRA, IFtS...

This section contains questions on General Science which form an important part of the GENERAL KNOWLEDGE/AWARENESS paper of the forthcoming PO, AAO (LIC), SCRA, IFtS, Clerks' Grade and Bank Clerks' exams.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement.

17. 'Royal disease' is known as
 - (a) Sickle cell anemia
 - (b) Diabetes
 - (c) Night blindness
 - (d) Haemophilia
18. The twins which develop from a common zygote are known as ——— twins.
 - (a) Identical
 - (b) Dizygotic
 - (c) Fraternal
 - (d) Similar
19. The visible expression of a genetic trait such as hair texture in humans is known as
 - (a) Genotype
 - (b) Phenotype
 - (c) Homologue
 - (d) Homologous
20. If a child has blood group O, then his/her parents can have blood groups
 - (a) AB and A
 - (b) AB and B
 - (c) A and B
 - (d) AB and O
21. ——— is not an insect.
 - (a) Cockroach
 - (b) Grasshopper
 - (c) Spider
 - (d) Praying mantis
22. The headquarter of International Atomic Energy Agency is located at
 - (a) Brisbane
 - (b) Tokyo
 - (c) Vienna
 - (d) London
23. Which animal species is being protected in Kaziranga wildlife sanctuary?
 - (a) Tiger
 - (b) Great Indian Bustard
 - (c) Turtle
 - (d) Rhinoceros
24. The Sugarcane Breeding Institute is located in
 - (a) Cochin
 - (b) Saharanpur
 - (c) Bareilly
 - (d) Coimbatore
25. The headquarter of the UN Environment Programme is located in
 - (a) Rome
 - (b) New York
 - (c) Geneva
 - (d) Nairobi
26. The main constituent of gobar gas is
 - (a) Heptane
 - (b) Methane
 - (c) Propane
 - (d) Butane
27. Jhooming is
 - (a) A cultural dance of Andhra Pradesh
 - (b) Shifting cultivation
 - (c) A tribe of Nagaland
 - (d) None of the above
28. Loss of water from the aerial parts of plants is known as
 - (a) Evaporation
 - (b) Guttation
 - (c) Transpiration
 - (d) Imbibition

29. 'Operation Flood' is concerned with
 (a) Floods
 (b) Tides
 (c) Milk production
 (d) Rural development
30. The most suitable soil for cultivation of cotton is
 (a) Alluvial
 (b) Red soil
 (c) Lateritic
 (d) Black soil
31. — is not a bacterium.
 (a) Bacteriophage
 (b) *Bacillus subtilis*
 (c) *Pneumococcus*
 (d) *E. coli*
32. The pigment responsible for flowering is
 (a) Chlorophyll-a
 (b) Chlorophyll-b
 (c) Phytochrome
 (d) B-carotenoid
33. The energy currency for living cells is
 (a) AMP
 (b) ATP
 (c) ADP
 (d) GTP
34. The frequency of a pendulum in a clock
 (a) Increases with the length of the rod
 (b) Is independent of the rod length
 (c) Decreases with increasing length
 (d) None of the above
35. Carrot is a modified
 (a) Stem
 (b) Root
 (c) Leaf
 (d) Fruit
36. The Silent Valley project is a — project.
 (a) Hydroelectric
 (b) Thermal
 (c) Nuclear
 (d) None of the above
37. Who wrote the book *Silent Spring*?
 (a) Rachel Carson
 (b) Albert Einstein
 (c) Bertrand Russell
 (d) Alvin Toffler
38. The most abundant element in the earth's crust is
 (a) Silicon
 (b) Iron
 (c) Oxygen
 (d) Hydrogen
39. The region where two vegetation communities join is called
 (a) Lactone
 (b) Ecocline
 (c) Ecotone
 (d) Trutone
40. The — does not grow in size after birth.
 (a) Brain
 (b) Kidney
 (c) Eye
 (d) Liver
41. — grows in a desert habitat.
 (a) Aridophyte
 (b) Hydrophyte
 (c) Mesophyte
 (d) Xerophyte
42. Exchange of gases in leaves takes place mainly through
 (a) Lenticles
 (b) Leaf epidermis
 (c) Stomata
 (d) Chlorophyll
43. Where is the National Environmental Engineering Research Institute located?
 (a) New Delhi
 (b) Nagpur
 (c) Bombay
 (d) Bhopal
44. A micro-organism that is able to use CO₂ as sole carbon source for growth is a/an
 (a) Heterotroph
 (b) Autotroph
 (c) Chemolithotroph
 (d) Chemoorganotroph
45. Mycorrhiza is an association of
 (a) Algae and fungi
 (b) Fungi and actinomycetes
 (c) Fungi and higher plants

- (d) Algae and bacteria
46. Entropy is a measure of the
 - (a) Heat of the system
 - (b) Orderliness of the system
 - (c) Disorderliness of the system
 - (d) None of the above
 47. The process of successive accumulation of pollutants in the body of living organisms is known as
 - (a) Biomagnification
 - (b) Bio-accumulation
 - (c) Bio-acceleration
 - (d) Bio-ramification
 48. Night blindness is caused due to the deficiency of Vitamin
 - (a) A
 - (b) B
 - (c) C
 - (d) D
 49. Oxygen in the blood combines reversibly with
 - (a) Plasma proteins
 - (b) Haemoglobin
 - (c) Blood sugar
 - (d) Amino acids
 50. ———energy is most suitable for living systems
 - (a) Solar
 - (b) Potential
 - (c) Heat
 - (d) Chemical
 51. Rabi crops are grown during
 - (a) October-November
 - (b) February-March
 - (c) June-July
 - (d) August-December
 52. The word hormone means to
 - (a) Grow
 - (b) Decrease growth
 - (c) Control growth
 - (d) Stimulate
 53. Ultracentrifuge has a rpm of over
 - (a) 50,000
 - (b) 40,000
 - (c) 30,000
 - (d) 60,000
 54. When a compressed gas expands, its temperature
 - (a) Falls
 - (b) Rises
 - (c) Remains the same
 - (d) None of the above
 55. Low-temperature Biology is known as
 - (a) Cryobiology
 - (b) Thermobiology
 - (c) Syncology
 - (d) Aetiology
 56. Terrestrial organisms are largely protected from ultraviolet radiation from space by ——— in the atmosphere.
 - (a) Oxygen
 - (b) Ozone
 - (c) Carbon dioxide
 - (d) Nitrogen
 57. Forests which have leaf fall once a year are ——— forests.
 - (a) Rain
 - (b) Deciduous
 - (c) Pine
 - (d) None of the above
 58. The study of relationships between organisms and their environment is known as
 - (a) Teratology
 - (b) Geratology
 - (c) Ecology
 - (d) Limnology
 59. White Muscle Disease (WMD) in grazing animals is caused by the deficiency of
 - (a) Zinc
 - (b) Molybdenum
 - (c) Selenium
 - (d) Cobalt
 60. The major air pollutant in urban atmosphere is
 - (a) Carbon dioxide
 - (b) Sulphur dioxide
 - (c) Nitrogen oxide
 - (d) Carbon monoxide
 61. ——— are cold-blooded animals.
 - (a) Endotherms
 - (b) Isotherms
 - (c) Mesotherms
 - (d) Exotherms

ENGLISH

BY RAGHU BHATNAGAR & RAJUL BHARGAVA

FOR PO, SCRA AND IFtS EXAMS

This section is designed to help those appearing in the forthcoming PO exam of the BSRB (Central Group) and Central Bank of India, Clerks' Grade, SCRA and the IFtS exams.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of this supplement.

READING COMPREHENSION

1 Read the following passage carefully and answer the questions that follow by choosing the best alternative:

1. Human activities have certain peculiarities which have long-range negative effects on the environment and which prevent the rational utilisation of its resources. 2. Above all others, we would like to single out the effects of war. 3. The arms drive and other activities which are part of war preparations consume colossal material resources, among them a tremendous amount of natural wealth, including some natural resources of which there is an acute shortage on earth. 4. The arms drive absorbs the work of more than 20 million young people throughout the world who are both healthy and fit for any type of productive labour, and who instead serve in the armed forces, and more than 100 million people are used in production for war. 5. At least half the work being done by scientists in all countries goes into military research.

1. The word *certain* in sentence 1 means

- (a) not named or described but taken as known
- (b) not named or described but existing
- (c) named, but not

well-known

- (d) a limited quantity or number of

2. In sentence 2 the expression *all others* refers to

- (a) negative effects
- (b) human activities
- (c) certain peculiarities
- (d) its resources

3. In sentence 3 the author has

- (a) made a neutral statement
- (b) said something with a feeling of approval
- (c) pointed out the scantiness of natural wealth
- (d) illustrated the negative effects of human activities

4. The expression *arms drive* in sentence 4 means

- (a) transportation of armed people
- (b) attacking moves made by armies
- (c) well-planned efforts for producing weapons
- (d) need for fighting as part of human nature

5. The best heading for the above passage will be:

- (a) Some peculiarities of human activities
- (b) Rational utilisation of resources
- (c) Some negative effects of war
- (d) Best ways of using productive labour

SPOTTING ERRORS

II Read each sentence to find out whether there is any error in any underlined part. If there is no error, mark 'e'.

1. I remember having read some-
a b
where that the first satellite
was launched by Russians.
c d
No error
e
2. It is undeniably true that many
a
amongst us felt the whole
b c
building to vibrate. No error
d e
3. Do you insist that we meet at
a b
least once tomorrow to discuss
c d
about the subject? No error
e
4. Your latest servant's uniform
a b
both displeased my wife and
c
me. No error
d e
5. No sooner had she realised her
a b
blunder than she began taking
c d
corrective measures. No error
e
6. The tallest among them express-
a b
ed a keen desire to sit under
c d
the shade of a tree. No error
e
7. At that very moment they were
a b c
showing signs of growing ner-
vousness, isn't it? No error
d e
8. "He is too healthy," remarked
a b
the Captain, "and is best suited
c

to an army career. No error
d e

9. She has a remarkably kindly
a b
disposition who wins he
c d
friends wherever she goes
No error
e
10. One of her firmest belief was
a
that her friend shouted at he
b
with a view to making he
c
aware of her repeated lapses
d
No error
e

PREPOSITIONS

III Choose the correct preposition

1. During the last 10 years, her face has changed — recog-
nition.
(a) beside
(b) beyond
(c) besides
(d) above
2. Will you kindly look — her complaint?
(a) at
(b) about
(c) into
(d) upon
3. One of his weaknesses is that he is averse — all criticism.
(a) to
(b) in
(c) about
(d) against
4. If you persist — this folly, you will fail miserably.
(a) into
(b) at
(c) about
(d) in
5. She has been crying — mid-
night.
(a) from

- (b) since
- (c) before
- (d) after

USAGE

IV Fill in the blanks with the right word/phrase from the given options

- 1 Mrs Saxena is an old acquaintance of —
 (a) me
 (b) us
 (c) her
 (d) mine
2. February is the — month in the year
 (a) tiniest
 (b) smallest
 (c) shortest
 (d) fewest
- 3 They have questioned your judgment — ?
 (a) isn't it
 (b) have they
 (c) didn't they
 (d) haven't they
- 4 She — in the kitchen when I rang the door bell
 (a) was working
 (b) worked
 (c) has worked
 (d) had worked
- 5 My father helped me — with money when I lost my job
 (a) on
 (b) out
 (c) along
 (d) through

SPELLING

V Tick off the correctly spelt word in each set of four words

- 1 (a) horrendous
 (b) horendous
 (c) horrendus
 (d) horendus
- 2 (a) trenquility
 (b) trenquility
 (c) tranquillity
 (d) Trenquillity
- 3 (a) ramshakle

- (b) ramshakel
 - (c) ramshekile
 - (d) ramshackle
- 4 (a) continuum
 (b) continum
 (c) kontinuum
 (d) cuntinuum
 - 5 (a) tarmegant
 (b) termagant
 (c) termegant
 (d) termegent

SYNONYMS

VI Select the word which is nearest in meaning to the given word

- 1 NEOPHYTE
 (a) new convert
 (b) new ideology
 (c) new fashion
 (d) new disease
- 2 TEMPEST
 (a) heat
 (b) big forest
 (c) violent storm
 (d) bad temper
- 3 RAMBLE
 (a) unclear speech
 (b) pleasure walk
 (c) a card game
 (d) a creeper
- 4 SPECTRE
 (a) ghost
 (b) sight
 (c) face
 (d) look
- 5 LEVITATE
 (a) hang from ceiling
 (b) become hard
 (c) rise and float in air
 (d) exercise the body

ANTONYMS

VII Select the word which is nearly the opposite in meaning to the given word

- 1 QUIET
 (a) loud
 (b) noisy
 (c) crowded
 (d) busy
- 2 OPAQUE

- (a) clean
(b) clear
(c) transparent
(d) distinct
3. PEACE
(a) disturbance
(b) lawlessness
(c) violence
(d) war
4. COSMOS
(a) disorder
(b) chaos
(c) hell
(d) confusion
5. METICULOUS
(a) careless
(b) irresponsible
(c) inattentive
(d) general

SENTENCE COMPLETION

VIII Choose the best alternative

1. An osteopath is a person who
(a) practises any system of medicine that works
(b) practises witchcraft and black magic
(c) treats certain diseases by manipulating bones and muscles
(d) shows off his skill in treat

ing human diseases

2. Having fractured his leg, he cried out with
(a) sorrow
(b) pain
(c) regrets
(d) ache
3. Being close-fisted, he often
(a) spent lavishly on luxuries
(b) donated large sums to charities
(c) threw expensive parties to his friends
(d) grudged the Sunday parties in his house
4. A rhapsody is
(a) a musical composition in irregular form
(b) a poem lamenting the death of a dear one
(c) a small speech in praise of a ruler
(d) a one-act play satirising human follies
5. A puerile question is suitable only for
(a) a child
(b) an adult
(c) a girl
(d) a boy

NUMBER PYRAMID

Which would you estimate to be the greater sum of the figures on the left or that of the figures on the right?

| | |
|-----------|-----------|
| 987654321 | 123456789 |
| 87654321 | 12345678 |
| 7654321 | 1234567 |
| 654321 | 123456 |
| 54321 | 12345 |
| 4321 | 1234 |
| 321 | 123 |
| 21 | 12 |
| 1 | 1 |

Answer

Believe it or not they both add up to the same 1 083 676 269

Maxey Breaks in TESTS AND TEASERS

ANSWER KEY

ARITHMETIC

1. (a). Let the number of boys be x . Then $x + 2x = 1250$, which gives $x = 25$.
2. (c). $\frac{1}{1.7} = 0.583$ and $\frac{1}{1.5} = 0.688$. So the required fraction is $\frac{2}{3}$, which equals 0.625.
3. (c). His son got $\frac{1}{4}$ th of the estate. His daughter got $\frac{1}{4}$ rd of $\frac{1}{4}$ th, i.e., $\frac{1}{16}$ th, which values Rs 6,250. So the value of the whole estate is Rs 75,000.
4. (b). $\sqrt{2}$ is irrational and hence it's an infinite non-repeating decimal.
5. (d). 1 per cent $= \frac{1}{100}$, i.e., 0.01. So half of 1 per cent is 0.005.
6. (c). Total strength of the school is $195 + 252 + 333$, i.e., 780. The required percentage $= \frac{195}{780} \times 100$ per cent, i.e., 25 per cent
7. (b). Let the C.P. be Rs 100. Then M.P. is Rs 135. S.P. = Rs 135 - Rs 13.50, i.e., Rs 121.50. Hence, profit is $21\frac{1}{2}$ per cent
8. (b). Cost of first kind of tea = Rs 520 and that of the second kind = Rs 1,080. Then total cost = Rs 1,600 and S.P. = Rs 30.56, i.e., Rs 1,680
Hence, gain $= \frac{80}{1,600} \times 100$ per cent, i.e., 5 per cent
9. (d). Let the wheat purchased be x quintals. Then C.P. = Rs 150x. S.P. for $\frac{4x}{5}$ quintals is Rs $\frac{120 \times 150x}{100}$, i.e., Rs 180x
Hence, rate $= \text{Rs } \frac{180x \times 5}{4x}$, i.e., Rs 225 per quintal
10. (c). $a:b = 2:3$ or $8:12$ and $b:c = 4:6$ or $12:18$. Hence, $a:c = 8:18$
11. (c). $15 \times x = 35 \times 21$, which gives $x = 49$
12. (b). Nisha's share $= \frac{2}{2+3+4}$ of Rs 540, i.e., Rs $\frac{2 \times 540}{9}$ or Rs 120
13. (d). In the given mixture, milk = 21 litres and water = 9 litres. If x litres of water are added so that $\frac{21}{9+x} = \frac{3}{7}$, it gives $x = 40$ litres
14. (d). Total money contributed by Harbans Lal for 1 month = $7 \times \text{Rs } 3,000$, i.e., Rs 21,000, and by Nand Ram = $8 \times \text{Rs } 5,000$, i.e., Rs 40,000. So the ratio of profit = 21:40
15. (a). Let the fourth number be x . Then sum of first three numbers = $6x$. Therefore, $6x + x = 56$, which gives $x = 8$
16. (d). Total age of two children = 36 years and total age of children along with parents = 128 years. So total age of parents = 92 years. Therefore, father's age is 50 years.
17. (b). In the first case, $P = \frac{P \times R \times 10}{100}$, which gives $R = 10$ per cent.
In the second case, $3P = \frac{P \times 10 \times T}{100}$, which gives $T = 30$ years
18. (b). Let one part of Rs 5,000 be Rs x . For first part, interest = Rs $\frac{x \times 4 \times 2}{100}$, i.e., Rs $\frac{2x}{25}$.

For second part, interest = Rs $\frac{1500 \times 10 \times 1}{100}$

Then $\frac{2x}{25} + \frac{5,000-x}{10} = 440$, which gives $x=3,000$. So the required ratio is 3,000: 2,000, i.e., 3:2.

- 19 (b). Using C.I. formula, $1,352 = P \left(1 + \frac{4}{100}\right)^2$ or $\frac{11}{10} P = 1,352$, which gives $P = \text{Rs } 1,250$.

20. (b) We know that $T D = \frac{S D \times R \times T}{100 + R \times T}$

$$\text{Therefore, } 210 = \frac{S D \times 6 \times 5}{100 + 6 \times 5}$$

Solving it, we get $S D = \text{Rs } (7 \times 130)$, i.e., Rs 910

- 21 (b) Let P.W. be Rs 100 Amount due C.I. = Rs $100 \left(1 + \frac{1}{10}\right)^2$, i.e., $S D = \text{Rs } \frac{11}{10}$ If S.D. is Rs 4,410, its P.W. = Rs $\frac{100 \times 4 \times 4,410}{441}$ i.e., Rs 4,000

- 22 (c) By investing Rs 84, the income is Rs 3 So by investing Rs 2,520, the income will be Rs $\frac{3 \times 2,520}{84}$, i.e., Rs 90

- 23 (c) Here, by investing Rs 80, we will get Rs 4 So yield is $\frac{4}{80} \times 100$ per cent, i.e., 5 per cent

24. (a) Work to be done by Ramu and Deep in 1 day is $\frac{1}{12}$ th, by Ramu and Sohan in 1 day is $\frac{1}{15}$ th, and by Deep and Sohan in 1 day is $\frac{1}{20}$ th.

So work to be done by all the three together in 1 day is $\frac{1}{12} \left(\frac{1}{10} + \frac{1}{12} + \frac{1}{20}\right)$, i.e., $\frac{7}{60}$ th Therefore, in one day, Ramu will do $\left(\frac{7}{60} - \frac{1}{20}\right)$ th of the work or $\frac{1}{15}$ th Hence, he will complete that work in 15 days

25. (a) Work done by 12 men will be the same as that done by 21 boys 7 boys can do a work in 29 days The same work will be done by $(21+8)$ boys, i.e., 29 boys, in $\frac{7 \times 29}{29}$ days, i.e., 7 days

26. (c). Ram will cover 2 km more in each hour. He has to cover 8 km to overtake Mohan Kumar. He will do so in 4 hours

27. (b). Let one-way distance be d km Then total time taken = $\left(\frac{d}{40} + \frac{d}{60}\right)$ hr, i.e., $\frac{d}{24}$ hr and total distance covered = $2d$ km Hence, average speed = $\frac{2d \times 24}{d}$ kmph, i.e., 48 kmph.

28. (d) Area of a small square = $\frac{1}{4}$ sq cm Number of such squares formed = 50×4 , i.e., 200

29. (b). The edge of the longest tile is G.C.M. of 549 cm and 387 cm The G.C.M. of 549 cm and 387 cm is 9 cm

- 30 (c) Here the longest side is $(2x+1)$ cm, the triangle is right-angled By the Pythagoras theorem, $(2x)^2 + (x-1)^2 = (2x+1)^2$ Solving it, we get $x=0$ or 6, but $x=0$ is not possible

31. (c). Let x units be the radius of the given circle Its area = πx^2 .

New area = $\pi \left(\frac{9x}{10}\right)^2$, i.e., $\frac{81\pi x^2}{100}$. Then decrease in area is $\frac{19\pi x^2}{100}$ and its percentage = 19.

32. (a). Let the monthly income of each be Rs $5x$. Then Ravi spends Rs $(4x+400)$. So $20x+1,100=16x+1,600$, which gives $x=125$. Hence, the monthly income of each is Rs 625.
33. (c). Increased price of sugar = $\frac{1}{8}$ th of the original price. To keep the expenditure same, consumption of sugar should be reduced to $\frac{7}{8}$ th of the original. So, decrease in consumption = $1-\frac{7}{8}$, i.e., $\frac{1}{8}$ th of the original or 12.5 percent.
34. (b). S.P. of 3 toys = C.P. of 4 toys or C.P. of 3 toys + gain = C.P. of 4 toys. So gain on 3 toys = C.P. of 1 toy. Hence, gain per cent = $33\frac{1}{3}$.
35. (c). Using rule of alligation, number of better pens : number of ordinary pens = $300-225 : 350-300$, i.e., 75:50 or 3:2. So the number of better-quality pens = $\frac{3}{5} \times 80$, i.e., 48.
36. (d). Let the third number be x . Then the second number is $3x$ and the first is $6x$. So $\frac{6x+3x+x}{3}=100$, which gives $x=30$ and hence the first number is 180.
37. (b). Outside faces of the cube are painted. Let us remove the outer one-cm cubes from all the four sides. Thus, we are left with a cube of 2 cm edge, whose faces are not painted at all. It will give 8 cubes of one-cm edge.
38. (d). Let radius of the base of given cylinder be r units. Then volume of the cylinder = $\pi r^2(2r)$ cubic units, i.e., $2\pi r^3$ cubic units. Volume of a spherical ball = $\frac{4}{3}\pi \left(\frac{r}{2}\right)^3$ cubic units, i.e., $\frac{\pi r^3}{6}$ cubic units. So number of balls = $2\pi r^3 \div \frac{\pi r^3}{6}$, i.e., 12.

85.(b) 86.(b) 87.(a) 88.(c) 89.(d) 90.(d)
91.(d) 92.(d) 93.(c) 94.(d) 95.(a)

TEST OF REASONING (Verbal)

1. QUIT, SUIT, SLIT.
2. SAPS, TAPS, TAPE, TAKE.
3. LOOK, LOOT, LOST, LOSE, ROSE.
4. PINE, PING, SING, SONG.
5. (c), i.e., 'R' in MASTER.
6. (a), i.e., 'E' in EBONITE.
7. (d), i.e., 'T' in GOUT.
8. (d), i.e., 'R' in COVER.
9. (d), i.e., 'T' in INQUEST.
10. (d), i.e., Rs 117. Since Ram won Rs 27 more on the second race, he must have won $\frac{175-27}{2} + 27$, i.e., Rs 101 on the second race. Since this amount is Rs 16 less than the amount Sham won on the second race, Sham must have won Rs 117.
11. (b), i.e., 25 apples. The question implies that two-thirds the number of apples in the second basket is equal to 10. In other words, the second basket has $10 \times \frac{3}{2}$, i.e., 15 apples. The first basket will, therefore, have $15 + 10 = 25$ apples.
12. (a), i.e., 10 km. Since the two cars are moving in the same direction, the speed of the faster car relative to the slower one would be 80-50 kmph. Since the slower car is caught by the faster in 20 min, the distance between the two cars must be $30 \times \frac{20}{60} = 10$ km.
13. (b), i.e., stinginess. The relationship between pique and resentment is that of synonyms. A similar relationship exists between parsimony and stinginess. Cuisine means style of cooking, while pasha refers to Turkish or Egyptian officer of high rank.
14. (b), i.e., $16\frac{2}{3}$. The series follows the pattern: $\frac{2^2}{2} = 2$; $\frac{4^2}{3} = 5\frac{1}{3}$; $\frac{6^2}{4} = 9$; $\frac{8^2}{5} = 12\frac{4}{5}$, and, therefore, the next number should be $\frac{10^2}{6}$, which is equal to $\frac{50}{3}$, i.e., $16\frac{2}{3}$.
15. (a), i.e., North-west. South-west is 225 degrees in the clockwise direction from north. 225 degrees in the clockwise direction from east shall take us to north-west.
16. (c), i.e., 18 men. The question implies that 6 men will be able to

CORRIGENDUM

As was required in questions 9 to 13 of *Test Of Reasoning* (June '83), some of the letters in the capitalised words were not underlined. The same is done below and any inconvenience caused is regretted.

9. PATIELA 10. BARGAINING
11. REFRIGERATION 12. PERSONALITY 13. PREMATURE

dig 18 holes in 6 days. Since we want 18 holes to be dug in 2 days, i.e., in one-third of 6 days; the number of men required would be three times 6, i.e., 18 men.

17. KJ. Number the letters of the alphabet from A to Z from 1 to 26 and also number these from Z to A from 1 to 26. You will notice that when the second letter from the beginning is taken, the third and fourth letters are taken from the other side, i.e., BXW; similarly, when D, i.e., the fourth letter, is taken from the beginning, the fifth and sixth letters are taken from the other side, i.e., D V U. In other words, the letters are grouped in threes and written according to the pattern explained. Since O is the fifteenth letter from the beginning, it must be followed by the sixteenth and seventeenth letters from the other side, i.e., K and J.
18. (b), i.e., Ram is not X. If Radha is not Z, it means Sham is X. Since both Sham and Ram cannot be X at the same time, we can say that Ram is not X. Now if Ram is not X, it does not mean Sham cannot be Y. Therefore, choice (a) is incorrect. Choice (c) is also incorrect. Nothing prevents Ram from being Y and is, therefore, incorrect.
19. (a), i.e., R is never greater than P.
20. (b), i.e., Metal X may not be the hardest of all substances. When we say that there is no substance harder than metal X, we are not precluding the possibility of some other metals being as hard as metal X.
21. GENERAL. From the number code it is obvious that 27 stands for A, 28 stands for B, 30 stands for D, 31 stands for E and so on. Therefore, we shall get GENERAL.
22. (d), i.e., $\frac{100(y-x)}{y}$. The standard-quality samples must be $y-x$, since x out of y are of the sub-standard quality. When expressed in percentage the standard-quality samples, we get the answer.
23. (a), i.e., 94. In each of the first three triangles, the number in the circle has been obtained as under: $\sqrt{8+7+2(5)}=5$, $\sqrt{35+26+2(10)}=9$; and $\sqrt{39+75+2(15)}=12$. Therefore, 13 must equal $\sqrt{35+x+2(20)}$, where x stands for the question mark, i.e., the missing number. It, therefore, must be 94.
24. (c), i.e., cerebrospinal fever. Trypanosomiasis is the same as sleeping sickness, whereas cerebrospinal fever is the same as meningitis. The relationship is that of synonyms.
25. (b), i.e., 18. The digits outside the brackets have been added to get the numbers inside them.

ELECTED

M.G.K. Menon, noted scientist, as Foreign Member of the USSR Academy of Sciences. He has been Director of the

Institute of Fundamental Research, Chairman of ISRO, Chairman of the Science Advisory Committee to the Cabinet and a Member of the Planning Commission

India re-elected to the Governing Council of the United Nations Development Programme (UNDP), securing the highest number of votes—36 out of 54—from among 7 candidates. Also elected from Asia were Bangladesh and Bahrain

N.T. Rama Rao, re-elected President of the Telugu Desam at the first annual convention of the party in Vijayawada Andhra Pradesh

SCIENCE

A newly-discovered comet, described as 'a fairly large blob of light', streaked within 5 million km of the earth on May 11, closer than any comet in the last 200 years has done. The comet has been named Iras Araki Alcock after the recently launched astronomical satellite and two amateur astronomers credited with its discovery. The close encounter gave scientists a rare opportunity to study the space phenomenon and amateur astronomers a glimpse of a rare naked-eye comet. The comet is thought to be about 64,375 km across with a nucleus of frozen water, carbon dioxide and methane about 1.6 km in diameter. Its tail of gas stretches more than 4,82,800 km behind its bright head.

EXOSAT. A European space agency satellite called EXOSAT, carrying equipment to study X-ray sources, was launched from Vandenberg Air Force Base, California, USA, on May 26, on board a three-stage NASA delta rocket. The satellite's eccentric orbit will bring it close to 345 km from earth at one point and as far away as 1,98,976 km over the North Pole. The satellite will take four days to complete an orbit.

Planet outside solar system: Douglas Lin, an astronomer from Santa Cruz University, California, has claimed the discovery of the first planet outside the solar system. This 'enormous' object discovered two years ago in the constellation of Taurus, 450 light years from earth, is a 'protoplanet' or one that is in the process of formation, according to Lin. Named Tirc for Taurus infrared companion, the mysterious body presents the appearance of a vast gas cloud that is 20 times larger than Jupiter.

Life growth at 250 degrees centigrade: Scientists have discovered life forms that can grow at temperatures of 250 degrees centigrade, a finding which may prompt a rethinking on the

possibility of life on other planets. The upper temperature level of environments known to support life was known till recently as only 105 degrees. But scientists at the Oregon and John Hopkins Universities in the US used a pressure cooker to nurture colonies of seawater bacteria from the Pacific that thrived at 250 degrees and multiplied 100 times in a few hours.

ECONOMY—National

The Food Corporation of India lost 6,51,000 tonnes of foodgrains in transit and storage, resulting in loss of Rs 120.05 crores during 1981-82.

World Bank report on state of Indian economy. The World Bank has urged India to broaden its domestic resources base by a host of measures including taxation of higher income groups in the agricultural sector. The Bank has advised this in view of India's high investment requirements and challenges on the external front. The Bank's report on the state of the Indian economy was placed before the developed members of the Aid India Consortium.

The African Development Bank on May 13 adopted a resolution clearing the way for India, Portugal and Saudi Arabia to become its latest non-African members. The decision, which has to be ratified by the governments of the three countries, will bring the Bank's membership to 71.

India will loan 10,000 tonnes of wheat to Nepal to help it tide over a difficult food situation under an agreement signed between the two countries on May 18 in New Delhi. The commodity loan is on replacement basis and free of interest for six months from date of delivery.

World Bank loan for power project. The World Bank on May 23 announced a \$250.7-million loan for the development of India's power transmission capability. The Bank also announced the approval of a \$147 million credit to India by the International Development Association (IDA) for an urban development project in Calcutta. The power project will provide the first stage of integration between the northern, western and southern power grids by constructing inter- and intra-regional transmission links—the first step towards an integration of separate regional transmission networks to a national grid.

Changes in Import-Export Policy. The Commerce Ministry has announced more changes in the import and export policy for 1983-84, under which the upper limit for allowing automatic import of technical designs and drawings

against replenishment licences (RPL) by manufacturers and exporters has been raised from Rs 10 lakhs to Rs 20 lakhs. This will be applicable to units exporting at least 25 per cent of their production of select products with the minimum at Rs 5 lakhs or who export select products of at least Rs 1 crore. Also, the upper limit for the import of a single item by actual users has been raised from Rs 1 lakh to Rs 1.5 lakhs. It has been decided to restore the Open General Licence (OGL) facility for the import of web-fed high speed letter press rotary and offset rotary printing machines having a speed of more than 35,000 impressions per hour.

India's foreign-exchange reserves at the end of 1982 stood at Rs 4,566.44 crores, a drop of Rs 255.66 crores over the previous year despite the drawing of Rs 1,892.81 crores from the International Monetary Fund's (IMF) extended financing facility. This comes to an overall fall of Rs 2,148.47 crores in the reserves during the year if IMF borrowings are excluded or an average monthly fall of Rs 179 crores. The reserves at the end of 1981-82 stood at Rs 3,354.50 crores, including a drawing of Rs 636.8 crores from the IMF.

India-EEC joint trade. India and the European Economic Community (EEC) will intensify industrial cooperation in a bid to stimulate European investment and encourage transfer of technology. Under an agreement at the second meeting of the EEC-India joint commission in Brussels recently, it was decided that a working group will review joint trade to help reduce India's trade deficit with EEC. It was also decided that science and technology would be the priority sectors in bilateral cooperation in the future. An EEC delegation is to visit India soon to explore possibilities of joint programmes in third countries.

Netherlands loan. The Netherlands will provide India with a loan of Rs 70 crores for the current year. The loan will be for the import of various types of equipment from the Netherlands, as well as for financing the cost of development projects like the NABARD and rural drinking-water supply scheme.

The International Bank for Rural Development (IBRD) has given India a \$46.2 million loan to help prevent further deterioration in the Himalayan ecology. The loan is for 20 years, including five years of grace, and carries an annual commitment charge of 0.75 per cent on undisbursed balance and a fee of 0.25 per cent on the loan.

ECONOMY—International

Swedish aid for developing

Countries: The Swedish Parliament has approved a \$900 million budget for aid to developing countries at 1 per cent of GNP. India's quota of \$45 million remains unchanged which makes it the third biggest beneficiary. The total is a 2.5 per cent increase on the previous year's budget.

The 10-nation European Common Market on May 17 raised its agricultural subsidies. A 4.2 per cent increase in subsidy price for cereals, milk, meat and sugar of other products was effected. The raise followed six weeks of quabale marked by violent protests by French farmers demanding higher price supports.

Increased taxes in US 1984 Budget: The US Senate on May 13 gave tentative approval by a 57 vote to a 9-1 Budget that relies on tax increases of \$9.9 billion next year and more than \$14 billion over three years to help to reduce swollen federal deficits. It was the worst defeat for President Reagan in the Republican controlled Senate since he took office two and a half years ago. The \$849.7 billion budget provides for a 6 per cent spending increase, far below the 10 per cent Reagan had asked for for the FY 1984. On domestic spending it provides \$12 billion more than Reagan sought. It relies on tax increases: \$9.9 billion in 1984, \$14.7 billion in 1985 and \$5.1 billion in 1986 to reduce deficits that would have soared past \$200 billion by 1990. The deficits are estimated at \$178.6 billion in 1984, \$167.7 billion in 1985 and \$170 billion in 1986.

The UN World Food Programme will give \$282 million in food aid for 23 development projects in 18 countries including India. The aid will partly substitute the wages of workers in development projects, encourage voluntary work and feed the hungry.

New economic plan for Pakistan: The National Economic Council Pakistan's highest economic decision making body has approved a new five year economic plan aimed at making the country a significant agricultural exporter and expanding domestic energy sources. The new plan includes an expenditure of \$23 billion in the public sector and \$15 billion in the private sector. It would allocate \$7 billion to agriculture. The plan will become official when the Planning Commission finalises it. The proposed \$38 billion plan is more than double that of the current five year plan ending June 30.

Increased aid from the rich countries: Aid from rich countries to developing nations in 1982 increased by 9 per cent from \$23 billion to \$27.9

billion, according to the Paris-based Organisation for Economic Cooperation and Development (OECD). The sum represents 0.39 per cent of the rich countries GNP compared to 0.35 per cent the year before. The increase was due to increased contributions to the multilateral aid institutions, which were unusually low in 1981.

EVENTS—National

Fifty years of Indo-British telephone link: Britain and India on May 3 observed the completion of 50 years of their telephone link with a brief conversation between their Prime Ministers. Indira Gandhi spoke to Margaret Thatcher briefly. Half a century ago, the then Secretary of State for India, Sir Samuel Hoare, made the first call from London to Sir Frederick Sykes, Governor of Bombay.

AP restores age limit for government service: The Andhra Pradesh Government on May 2 reversed its earlier decision to reduce the age limit for joining government service from 34 to 28 years. Announcing it at a press conference, Chief Minister N.T. Rama Rao said the government restored the status quo following representations from several people. This was the first time the Telugu Desam Government had to reverse its decision following public pressure.

INSAT-1B, the Indian national satellite, has been delivered to the Kennedy Space Centre in Florida, USA, for final preparations before its take-off in August. The satellite, built by Ford Aerospace and Communications Corporation for ISRO, will be launched atop the American space shuttle, Challenger.

Mottur thermal power project: The Planning Commission has approved the Rs 238.28-crore Mottur Thermal Power Project Extension in Tamil Nadu for inclusion in the state's Sixth Plan.

Supreme Court stays ban on private practice: The Supreme Court on May 16 dismissed an appeal by the Andhra Pradesh Government against an order of the state High Court staying its ban on private practice by government doctors.

Indo-Pak joint commission: The Union Cabinet on May 16 ratified formally the Indo-Pakistan joint commission, which will meet for the first time in Islamabad shortly. The commission was established to boost bilateral cooperation in various fields.

The Assam Ministry's strength rose by three with the induction on May 17 of one Cabinet-rank minister and two ministers of state. The new ministers are G.C. Langthasa (Cabinet) and Kabir

Rai Brachhari and Lakhmi Prasad Hazarika. The strength of the Sankar Ministry is now 33.

Indian gyrocopter: India has successfully test-flown its first gyrocopter, developed at the Indian Institute of Science, Bangalore. Evolved from the famous Benson gyrocopter, the one-man ultralight aircraft made two short hops recently at the aerodrome of Hindustan Aeronautics Limited (HAL).

India's proposals for prevention of nuclear war: India has presented a set of proposals in the form of a working paper on behalf of the non-aligned countries, aimed at preventing nuclear war, before the UN Disarmament Commission. Indian Ambassador in Geneva, M. Dubey, presented the draft on May 20. Among the 14-point recommendations are prohibition of use or threat of use of nuclear weapons by all nuclear states, a treaty banning the testing of nuclear weapons and a declaration by all states possessing nuclear weapons on non first use, and a freeze on the development, production, stockpiling and deployment of nuclear weapons.

Insurance payment for INSAT-1A: The New India Assurance Company on May 21 made the final payment of about \$3.5 million to the ISRO for the loss of Indian National Satellite INSAT-1A completing payment for the largest ever claim of \$66 million in Indian insurance history. INSAT-1A, launched on April 10, 1982, from the Cape Canaveral launching pad in Florida, USA, was abandoned in space on September 4 following sudden depletion of fuel resulting from minor spacecraft deficiencies.

Heavy-water consignment for atomic-power project: A consignment of 20 metric tonnes of heavy water meant for the second unit of the Rajasthan Atomic Power Project at Kota arrived in New Delhi on May 25 from the Soviet Union. The heavy water was imported under an existing contract with the Soviet Union for supply of 256 metric tonnes.

New categories of film certification: The Central Board of Film Censors will be known from June 1 as the Central Board of Film Certification, under the new Cinematograph (Certification) Rules, 1983. There will be two new categories of UA (universal but subject to parents' permission to allow their children below 12 years to see the film) and S (restricted to members of a particular profession), in addition to the already existing 'Universal' and 'Adults only'.

MIG-27: Equipment for the assembly and eventual indigenous production

and is now being installed in the HAL units by Indian experts. A total of about 200 MiG-27 aircraft are expected to be assembled and produced at HAL with the first aircraft rolling out in April 1984. The assembly of the aircraft will be done at the Nasik division of HAL.

APPLE used for educational purposes: India's first experimental satellite APPLE on June 4 beamed a five-hour course in robotics to audiences in four centres in UP, Tamil Nadu, Gujarat and Karnataka. The pre-recorded programme, jointly organised by the ISRO, the New York-based Institute of Electrical and Electronics Engineering (IEEE) and the P & T Department, was beamed from the Space Application Centre, Ahmedabad.

New party formed in Kerala: A new political party, named the Kerala Pradesh Labour Party (KPLP), has been formed in Kerala. The main platform of the party is to bring regional parties to power in the state. Party President is Arookutty Majeed and General Secretary is Vaikom Kumaran.

Parliament approved the Central Industrial Security Force (Amendment) Bill, 1983, with the Rajya Sabha passing it on May 10. The Bill seeks to amend the Central Industrial Security Force Act to convert the force into an armed force of the Union and make it a more effective force in providing security to vital industrial undertakings.

EVENTS—International

Iran's pro-Soviet Tudeh (Communist) Party was dissolved on May 4 by an order of the Iranian Prosecutor General. The move followed televised confessions by seven Tudeh leaders in which they said that they had passed military and political information to the Soviet Union, and declared that Marxism no longer had a place in Iran.

The US House Appropriations Defence Sub-Committee on May 11 voted 9-3 in favour of a resolution to free funds for the controversial MX missile, following President Reagan's assurance that he would undertake a review of arms-control proposals at the negotiations with the Soviet Union. The Sub-Committee voted for a spending of \$560 million for research, development and flight-testing of 10 warhead missiles.

New US intelligence unit: The Pentagon has created a new intelligence unit for espionage and covert operations called the Army Intelligence Support Activity (ISA). The unit augments the role of the Central Intelligence Agency (CIA) and the Defence

Intelligence Agency. **Mika Spiljak** on May 13 became President of Yugoslavia in succession to Petar Stambolic, who ended his one-year term as head of the country's nine-man collective state Presidency. Vidoje Zarkovic became Vice-President for the next 12 months. He will become President next year under the system by which the office rotates annually. The system of rotation of the office among eight members of the body was introduced three years ago after the death of Marshal Tito.

New party formed in Turkey: A group of retired officers, former bureaucrats, cabinet members, lawyers and businessmen on May 16 announced the formation of Turkey's first new political party since 1980. The Nationalist Democratic Party, as the new party calls itself, is headed by Turgut Sunalp, 66, a retired Four-star General, and a former Ambassador to Canada. The party was formed following a new political parties law which came into force on April 24.

Election announcement by Kenyan President: President Daniel Arap Moi of Kenya on May 17 called for a general election in September in an apparent bid to resolve the serious political situation in the country. The last general election was held in November 1979 when Moi was formally affirmed by the electorate.

New government in Austria: The Socialist Chancellor in Austria, Fred Sinowatz, on May 18 announced a new 15-member coalition government showing eight changes from the country's outgoing one party Cabinet. The new administration includes three members of the rightist Liberal Freedom Party (FPÖ), with the party leader, Norbert Steger, receiving double portfolios of Vice-Chancellor and Trade Minister.

US Immigration Reform Bill: The US Senate has passed a Bill to grant legal status to millions of illegal aliens and increased penalties for employers who violate immigration laws. Under the Immigration Reform Bill passed on May 18, aliens who have been in the US continually since 1977, even if they entered the country illegally, would be granted permanent resident status. Aliens in the US since 1980 would get temporary legal status. Also, employers who have illegal aliens working for them face a \$1,000 fine for the first violation after a warning and upto \$2,000 for subsequent violations.

US lifts embargo on F-16 delivery: President Reagan on May 19 lifted an embargo he imposed last year on the delivery of the 75 F-16 fighter bombers

last year following the Israeli invasion of Lebanon and lifted when Israel and Lebanon reached accord on withdrawal of foreign troops from Lebanese territories.

Enquiry into Poland's labour troubles: Member nations of the International Labour Organisation (ILO) have voted overwhelmingly in favour of setting up a special enquiry into Poland's labour troubles. The 56-member governing body of the ILO on May 27 voted 44-6 with 5 abstentions to approve a commission of enquiry recommended by the ILO's Freedom of Association Committee. The decision followed Poland's refusal to let the ILO meet Lech Walesa and other Solidarity leaders last October.

Pakistan has banned the entry of any newspaper, magazine or document showing Kashmir as part of India. The omnibus ban includes calendars, charts, paintings, drawings, photographs, films, slides and other visual representations.

Emergency declared in Peru: The Peruvian Government on May 30 clamped a 60 day state of emergency on the country following a wave of bomb attacks in Lima on May 27, allegedly by leftist guerrillas, which blew up 10 electric pylons and caused a 90-minute blackout in the capital. The emergency, which suspends all constitutional rights, was justified as being imposed to protect Peru's electricity service.

Amnesty to Kenyan prisoners: President Moi on June 1 granted amnesty to more than 6,000 Kenyan prisoners, including 22 air force men accused of plotting to overthrow the government, to commemorate 20 years of Kenyan self rule.

Australia renews contact with USSR: Australia has decided to lift all sanctions imposed on contacts with the Soviet Union by the previous Conservative Government. The Labour Government's Foreign Minister, Bill Hayden, announced on May 31 that Australia was interested in a more productive relationship with the Soviet Union and would henceforth deal with the Soviets on a "more pragmatic basis". The move followed the Australian Government's recent decision to normalise trade relations with Moscow.

Mongolia expels Chinese residents: China on June 4 lodged an official protest with the Mongolian Government over the massive expulsions of Chinese residents from Mongolia in recent weeks. In a note handed to the Mongolian embassy in Beijing, China

more than 1,700 Chinese residents of Mongolia had been expelled, and ordered the Chinese Government to regard the expelled as stateless. The Chinese Government, through the South Mongolian People's Republic, admitted that a number of stateless had been expelled, but said that the expelled were not Chinese citizens. It said that the expelled were Chinese citizens of the People's Republic of China, and that the Chinese Government would take steps to protect their rights.

Japan to stop discrimination against foreign manufacturers. The Japanese Government has announced that it will stop discriminating against foreign manufacturers in the textile industry. The Japanese Government has announced that it will stop discriminating against foreign manufacturers in the textile industry. The Japanese Government has announced that it will stop discriminating against foreign manufacturers in the textile industry.

Taiwan has severed diplomatic relations with Lesotho. Taiwan has severed diplomatic relations with Lesotho. Taiwan has severed diplomatic relations with Lesotho. Taiwan has severed diplomatic relations with Lesotho. Taiwan has severed diplomatic relations with Lesotho.

Uranium struck in Pakistan. Uranium has been struck in four new areas of Pakistan. Pakistan Atomic Energy Commission (PAEC), which conducted surveys for uranium in central Pakistan, areas of the Arabian Sea coast and on both sides of the Indus river, discovered uranium contents of 0.2 per cent in a large amount of the samples. The potential output of uranium when fully exploited is yet to be determined.

Nepal and Bhutan have established formal diplomatic relations. The ambassadors of Nepal and Bhutan in New Delhi will be concurrently accredited to Thimphu and Kathmandu, according to an announcement on June 1.

Riots in London. About 100 people went on a rampage on June 5 in the north London district of Proton, which two years ago witnessed serious racial riots. The rioters looted, smashed police equipment and two policemen about 400 yards. A police car was overturned and set on fire, and one police officer was seriously injured.

US to negotiate for nuclear freeze. The US House of Representatives on May 14 passed a bill directing the administration to negotiate for a nuclear freeze.

the superpowers for a mutual and verifiable nuclear freeze. The House disregarded President Reagan's warning that a freeze resolution would weaken his administration's position at the arms control talks in Geneva. Sixty members of Reagan's Republican Party voted with the Opposition for the freeze.

Afghanistan expels US diplomat. Afghanistan on May 9 ordered an American diplomat, Peter Graham, to leave the country within 48 hours. Graham was expelled for allegedly interfering in the Afghan civil war. Graham was expelled for allegedly interfering in the Afghan civil war. Graham was expelled for allegedly interfering in the Afghan civil war.

US military aid. The US House of Representatives on May 14 passed a bill to cut off military aid to Pakistan. The Reagan Administration had asked for \$15 million military aid for Pakistan. Others among more than two dozen countries similarly eliminated were Sudan (\$57 million), Morocco (\$52 million), Tunisia (\$73 million), Turkey (\$120 million) and Korea (\$60 million).

DIED

John Masters, 68, noted author whose works included *Bhowani Junction* and *Night Runners of Bengal*, who served as an officer of the British Army in India, with active service on the north-west frontier, on May 8 in Albuquerque, New Mexico.

Muguel Aleman, 82, the first civilian President of Mexico after its revolution and the man credited with creating modern Mexico, on May 14 in Mexico City of heart attack.

Kenneth Clark, 79, the distinguished British historian and author of the widely acclaimed book *Civilisation* which was serialised by the BBC, on May 21 in London following a brief illness.

Albert Claude, 84, Belgian scientist and Nobel Prize winner for Medicine in 1974, a pioneer in the use of electron microscopy, on May 22 in Brussels.

Arvid Pelshe, 84, the oldest member of the Soviet Union's ruling Politburo, who for years headed the party's watchdog control commission. Date and cause of death were not given.

Prince Charles of Belgium, 79, the Count of Flanders who ruled Belgium for six years as Prince Regent at the end of World War II, on June 1 in Ostend on the Belgian coast.

Nuclear Science & Engineering

Science postgraduates and Engineering graduates interested in making a career in the field of Nuclear Science and Engineering have an excellent opportunity to join a one-year orientation course in the above mentioned subjects, conducted by the Department of Atomic Energy, Bhabha Atomic Research Centre (BARC), Bombay. After successful completion of the course, candidates will be appointed as Scientific Officers in any of the units or projects of the department. To be eligible, Science postgraduates must have at least 60 per cent marks either in Physics, with Maths at least upto E Sc level as a subsidiary subject, or in Chemistry, with Physics upto B Sc subsidiary level and Maths upto pre university/XII standard level. Engineering graduates must have obtained not less than 65 per cent marks. The age limit is 26 years as on 1/9/83. Last date for receipt of applications is 20/7/83. For details and application forms, write to Deputy Establishment Officer (R-IV), BARC, Central Complex, Trombay, Bombay-400 085, sending a self-addressed envelope (23 x 12 cm) with stamps worth Rs 1/10.

Senior Residents, JIPMER

The Jawaharlal Institute of Postgraduate Medical Education and Research (JIPMER), Pondicherry, requires 32 Senior Residents in the departments of Medicine, Surgery, Obstetrics & Gynaecology, Urology, Anaesthesiology, Skin and STD, Radiology, ENT, Orthopaedics, Surgery, Ophthalmology, Anatomy, Physiology, Pathology, Pharmacology and Preventive & Social Medicine. To be eligible, candidates must hold a postgraduate degree or diploma in the concerned specialty and not be over 30 years of age.

The institute also requires 12 1st year Junior Residents (non post graduates), for which candidates must be registered medical graduates and have completed one-year compulsory internship. There's no upper-age limit for these posts. Last date for receipt of applications is 11/7/83. For prescribed application forms, write to the Director, JIPMER, Pondicherry-605 006, by 30/6/83, sending a self-addressed stamped (75p) envelope (24 x 10 cm).

Legal Officers, RBI

The Reserve Bank of India Services Board, Bombay, invites applications for 5 posts of Legal Officer in Reserve Bank of India. Candidates must have a bachelor's degree in Law with at least 50 per cent marks and a minimum of 3 years experience as an advocate/law officer in legal department of a large banking or financial institution/lawyer in an advocate's or solicitor's office. Age should not be above 32 years as on 1/6/83. Last date for receipt of applications is 18/7/83. Application must be submitted in the prescribed forms obtainable from Secretary, RBI Services Board, Hongkong Bank Building, 6th Floor, Mahatma Gandhi Road, Flora Fountain, Bombay 400 023, on payment of Rs 5 by crossed Indian Postal Order (IPO), drawn in favour of RBI and payable at GPO Bombay. Requests for forms must be accompanied by a self-addressed envelope (27 x 12 cm) with stamps worth Rs 1/30 and must reach the above address by 1/7/83.

Sports Scholarships

The Netaji Subhash National Institute of Sports (NIS), Patiala, offers a number of scholarships to youngsters proficient in sports under the following schemes: (i) 400 national level scholarships of Rs 75 p.m. to school students who have secured first or second positions in a recognised national sports meet, (ii) 800 state level scholarships of Rs 50 p.m. for school students who have secured first or second positions in a recognised state sports meet, (iii) 100 national level scholarships under NSO programme of Rs 100 p.m. for university or college students who have secured first or second positions in a junior/senior national championship or first position in the All India Inter-varsity Championship, (iv) 30 scholarships of Rs 200 p.m. to sportswomen who have secured first position in an individual event in a senior national championship or to those who have represented the country in an approved international competition obtaining a satisfactory position, (v) scholarships of Rs 150 p.m. to women holding a master's degree in Physical Education and doing M.Phil/Ph.D. Last date for receipt of applications is 31/7/83. For details and prescribed application

forms, write to the Director, NIS, Motibagh, Patiala-147 001 mentioning the scheme under which you want to apply and enclose a self-addressed envelope (23 x 10 cm).

Probationary Officers Exam

The Banking Service Recruitment Boards, Lucknow (Central Group), Baroda (Western Group) and Madras (Southern Region) will hold a written exam for selection of Probationary Officers on 11/9/83. To be eligible, candidates must have a degree or equivalent qualification and their age must be between 21 and 28 years as on 1/1/83. Last date for receipt of applications is 9/7/83. For details and the standard format of application form, see the following newspapers: *Indian Express & The Statesman* dated 3/6/83 and *Employment News* dated 11/6/83 for BSRB, Lucknow; *The Times of India* dated 4/6/83 and *The Hindu* dated 1/6/83 for BSRB, Baroda; *Indian Express* dated 8/6/83 and *The Hindustan Times* dated 9/6/83 for BSRB, Madras.

Central Excise, Income tax Inspectors Exam

The Staff Selection Commission will hold the Inspectors of Central Excise, Income tax etc. exam on 13/10/83. Candidates must hold a degree or equivalent qualification. Age limit varies between 18 and 25 years for different posts. Applications should be submitted by post in the standard printed forms available at head/main post offices on payment of 70 paise. Last date for receipt of applications is 4/7/83. For details see *Employment News* dated 21/5/83.

Senior Observers Exam

The Staff Selection Commission will hold the Senior Observers Exam on 6/11/83 for recruitment to the above-mentioned post in various meteorological centres of the India Meteorological Department. To be eligible, candidates must have a B.Sc. degree with Physics as one of the subjects and their age must be between 20 and 25 years as on 1/8/83. Last date for receipt of applications is 25/7/83. Standard application forms are available at major post offices for 70 paise. For details, see *Employment News* dated 11/6/83. □

★ MEDICAL ENTRANCE EXAM '84

Students of XII Std, PUC, start early to make sure of a medical seat.

ALPHA's specialised course, designed on the new syllabus and past question papers of all medical colleges in the country, will guide you towards the goal.

The examiner cannot go beyond the boundary of the **QUESTION BANK** (4,000 questions and answers) compiled by Alpha's experts. ★ **FOUNDATION COURSE FOR '85 EXAM** Students of XI Std, first PUC, etc strengthen your chances for the '85 medical entrance exam by undergoing the foundation course. Both the above courses will be useful for the regular courses also.

(Prelim) (IAS)'84

Graduates desiring to join the highly coveted Indian Administrative Service can prepare early to pass this highly competitive exam with ease. Alpha's **QUESTION BANK** (3,000 questions and answers) will guide you to the goal.

Excellent coaching for MBA entrance exams conducted by the Indian Institute of Management (Ahmedabad, Bangalore and Calcutta) XLRI Jamshedpur, Bajaj Institute of management, foreign and Indian Universities. Study materials prepared on the basis of the previous question papers will help you to pass the exam in flying colours.

**Result oriented coaching by experts.
PUC, HSC are now eligible to appear
for the exam.**

**For detailed prospectus send Rs. 2/-
by P.O. or M.O.**

REACTIONS

Since none of the 'Reactions' to our 'Points To Ponder' ('Why Student Violence?', April '83) rated a First Prize, the three best ones are being given Rs 50 each.

WHY STUDENT VIOLENCE?

The geometric growth of the institutions of higher education has not only lowered the standards of education, but has also contributed its share towards the ever increasing student violence in the country. Most colleges are understaffed and lack proper facilities like libraries, laboratories and playgrounds. The warning to the state governments not to increase the number of colleges and universities has fallen on deaf ears. The UGC has to bow before the politicians for sanctioning new institutions.

The teachers who back them are appointed not according to their academic records but due to their political approaches. Every institution is infested with groupism among teachers. These rival groups further divide the students into different factions inciting them to indulge in undue violence. When ex-politicians, who had indulged in factionalism throughout their lives, are appointed as vice-chancellors, their arrogant behaviour adds fuel to the already ignited fire of student unrest.

Worst still, except a few lucky ones, most students see a bleak future. They know, no matter how seriously they study, the limited jobs available will always be grabbed either by those having the right approach or the means (money) to buy it or belonging to the reserved categories. But the fact which has been least studied is that a majority of the students who indulge in violence are those who know that no harm will come to them because they are either re-

lated to powerful politicians or bureaucrats or are the sons of affluent parents. They know that whether they study or not, they will never lack jobs or will be absorbed in the family business.

Student violence can be minimised only if deserving students are admitted for higher education and certain jobs are delinked from degrees.

R.C. GOYEL, Solan

Our educational administrators mostly buy peace by conceding students' demands. However, even a superficial analysis shows that these demands are not the real cause of the violence that afflicts our campuses. They are only the external manifestation of the total lack of involvement of the 'learner' in the 'learning process'. There will always be a demand, no matter how many you satisfy. If, today, it is food in the hostels, tomorrow it will be the removal of the vice-chancellor.

How then are we to involve the learner in the learning process? The need of the hour is to question the very relevance of our present educational system and to ruthlessly change it wherever necessary. More than a decade back, Alvin Toffler in his celebrated book, *Future Shock*, had forcefully suggested that... "we shall first need to generate successive, alternate images of the future—assumptions about the kinds of jobs, professions and vocations that may be needed twenty to fifty years in the future... the kind of technology that will surround us and the organisational structures with which we must mesh. It is only by generating such assumptions... that we can deduce the nature of the cognitive and affective skills that the people of tomorrow will need..." This remedy should prove just as good for India as it is for post-industrial societies. It is only by increasing the 'cope-ability' potential of the educational process in this manner that we can involve and commit students. We shall be better off if we heed Toffler's advice instead of harping incessantly and almost pathologically on the golden past when the 'guru' was worshipped even before God.

R.G. SOOD, Simla

Violence, like corruption, is probably a way of life—a mode of expression for latent frustration. Frustration for the student because of a bleak future. This, in turn, is due to limited job-oriented courses, limited openings in the available few and lack of proper guidance to join the right course at the right time. In addition, insufficient coaching, inefficient coaches and inadequate material make matters worse. As a result, the student strays into everything other than his education and wastes his invaluable potential and precious years. Today, the student is not brought up in a proper milieu. This very same student is tomorrow a teacher and how best he moulds his students is anybody's guess. He becomes a parent too and how well his offspring is groomed is common knowledge. And the vicious circle continues.

Day-to-day reports in the media promise no prospects in the future for our young student. Day in and day out it is dinned into the ears that what matters for success be it in an exam or an interview is not 'merit only', but what in today's parlance is known as 'a pull'. It is but natural that the student in this setup continues his education with a broken heart, shaken confidence and shrunken thought. All this finds an outlet in escapism and this escapism dons the apparel of violence, be it an issue directly concerned with his studies or not.

Logic, analysis and reasoning appear to be beyond the comprehension of our students. They do not know why they are violent but they are violent. Everyone in this society—from the parents, to the teachers, to the leaders, to the very education system—are totally responsible for this national malady—student violence.

K. KARAMCHETI, Tirupati

AT THE INTERVIEW

Where did I go wrong at my interview? How do I give a successful interview? Beginning this issue, we start a new feature wherein a factual interview is reproduced with comments from a panel of experts comprising members on the interview boards of public and private sector firms and banks who assess the candidate's performance and pinpoint his weak and strong points

CIVIL SERVICES

Under Mohan is facing the UPSC interview board for his personality test. This is the final round in the selection procedure. If successful, he will be admitted to the coveted ranks of IAS officers. A Political Science graduate from Delhi University, Mohan has had a brilliant academic record. On completing his studies, he landed the job of Management Executive with a prestigious industrial house in Bombay. He is drawing a handsome salary and is quite successful in his career. But all along he has wanted to join the IAS. He scored high in both the Civil Services Prelims and Mains. And he has now been called for the interview.

Mohan is ushered into the room by a UPSC official. As he steps in, he takes a quick view of the set up of the room and walks towards the interview board. He wishes the members good morning, whereupon the Chairman asks him to be seated. Mohan makes himself comfortable and sits confidently in a businesslike manner. Besides the Chairman, the interview board comprises four other members. The first person from the left is a nuclear scientist (NS). Next to him is a Philosophy professor (PP). In the middle is the Chairman (C) who is a member of the UPSC. Next to him is a senior bank manager (BM). The fifth gentleman is a political scientist (PS). The interview begins.

C: Mr. Mohan, your bio data indicates that your academic record has been excellent right from the beginning. With such a record, why didn't you do postgraduation?

M: Mr. Chairman, I should have. But I thought it would be a waste of time and money as I was interested neither in teaching nor in research. My interest was management

C: Excuse me if I'm being personal, but why were you not interested in teaching?

M: Sir, it is just a question of aptitude. During my three-year stay in college, I frequently used to debate on this question when I was alone. I found that I was at my best when I was dealing with difficult problems and was negotiating on certain issues with different people. I was convinced that I would not come across such situations if I opted for teaching.

C: Then why do you want to give up your present job, which also gives you a handsome salary? In fact, what you are earning now would be available to you in the Civil Services only 10 years hence.

M: I agree. Moneywise, Civil Services is not a better proposition. But man does not work for money alone. It's my philosophy that one should get enough money to maintain one's family. If one gets enough money for a comfortable living, then one should care more for status and respect than mundane things like money.

C looks at PP.

PP: Mr. Mohan, are you an elitist believing that a comfortable living is the be all and end all of life? Do you think people who serve the poor and live a simple life, like Gandhi, are not happy?

M: Happiness is a very subjective phenomenon. There may be people who may not be happy with tons of money and there may be people like fakirs who are quite happy, though they do not possess anything. Such people are exceptions. I belong to the category of average normal human beings who want to live in a society. I think I am not an elitist because I do not want to live away from the masses. The very fact that I want to leave the present job, which gives me more money than the civil services, is sufficient evidence to prove that I want to live among the masses.

persons who do not live in the society are not average human beings?

M: I don't mean that. My point was that such people lead a life different than is led by the average social human being. The important thing is that the society would not accept if we all started living like that. A civilisation can progress only when the social structure is maintained.

PP: Do you think we can maintain our social structure when violence is on the increase?

M: No sir, we cannot. The increasing violence in every aspect of life is the most dangerous development of the post-independence era. Violence is shaking the foundation of our society and if it is not checked, civilised living may not be possible.

NS: What do you think is the root cause of violence in our society?

M: I think it is the increasing non-tolerance among us. Every society has to develop a set of rules which have to be observed by all. It is the duty of the state to see that these laws are observed. Those who do not should be disciplined. In India, we have developed a tendency of not observing rules and the state does not make efforts to discipline those who violate them.

NS: Probably, what you're saying is that the state is primarily responsible for the present violence?

M: In fact, it is. In a civilised society there is no other institution which can maintain law and order. The state has to protect the lives and property of its citizens.

C: Are you trying to say that the government should deal with the unruly crowd with a heavy hand?

M: Not necessarily. Sometimes, it may be necessary, but efforts should be made to deal with the situation in such a way that a heavy hand is not used. All situations are not similar and, therefore, you cannot prescribe a standard way of controlling the situation.

PS: Mohan, suppose you are in a district which is in turmoil. The two communities are at loggerheads and there is a possibility of a flare-up. How would you handle the situation?

M: Sir, as soon as I report for duty, I would check up on the

intelligence system. The first priority would be to develop a good intelligence system so that I could know what situations are likely to happen, when, and who are the people behind all this. When I come to know that there is a likelihood of violent disturbances, I would try to contact different people connected with the disturbances. I would meet them individually and in groups and would try to convince them that the situation is not going to benefit either. I would also try to involve prominent citizens of the city and influential people and peoples' representatives. Thus, I would try to check the developing of a violent disturbance. However, I would not imagine that nothing would happen. I would be prepared for violent occurrences. My instructions would be to deal with the crowd politely, tactfully but promptly.

B: Mr Mohan, since the nationalisation of banks, there has been an emphasis on providing financial support to the weaker sections and the poor. Do you think it is a wise policy?

M: I think it is. In a developing country, the weaker section forms the bulk of the society. People

being small businesses are unable to get finances from any source and they are unable to raise finances from their own sources. However, their potential in creating employment, particularly in the rural sector, is high. Neglect of this sector is bound to upset the pace of growth and the development of the economy. I think our banks have a greater role and responsibility in ensuring the functioning of the small sector.

B: But recovery from the small sector is very bad, and funds cannot be recycled if the recovery ratio is slow. What have you to suggest?

M: You are right, sir. The recovery ratio is slow. In some cases it is as low as 30 per cent. This, however, should not check banks to reduce the flow of finances to the small sector. Banks should ensure that funds are properly used and the desired results achieved. Negative utilisation of bank funds should be checked. The bank loan should not be taken as a free gift.

B: But what can banks do in this connection?

M: Banks can deal with the situation in several ways. Banks should realise that small farmers have many unsatisfied wants and

they divert a part of their loans for meeting consumption expenditure. I feel that when a bank is considering a loan proposal, a circulation margin for consumption expenditure depending upon the social status of the borrowers must be provided. This would help the borrower carry on with the scheme smoothly and prevent mis-utilisation of sanctioned funds. Banks can also appoint technical officers to supervise and assist borrowers. Banks should also try to have sufficient information about the borrowers relating to his need, genuineness, integrity and working capacity. The repaying capacity of the borrower should also be considered. Bank officers should personally visit the borrower's work premises. Efforts can also be made to maintain some personal contact with the borrower. I understand that a few banks have appointed recovery officers who visit the borrower on pre-fixed dates and collect instalments. Such recovery officers can also help in proper utilisation.

PS: How do you feel, Mr Mohan, to the formation of a council of chief ministers of the southern states?

M: I think it is welcome move. This would help in bringing to regional level. In fact, our constitution provides for such inter-state council. I do not remember the article but I am sure there is a provision for inter-state councils for inter-state and for crossing steps in which some of the states, or the union and two or more states, have common interest.

PS: Are you referring to Art. 263?

M: May be. I'm not very sure, as I've told you earlier.

C: How are you sure that councils will help in regional operation?

M: Since in a particular case, there are local and regional problems which the common groups have to face. For example, in Tamil Nadu and Andhra Pradesh, there are many problems in water supply. Then, in the case of power, the state may be a single state and another a deficit state. For example, in Tamil Nadu there is an acute power shortage whereas in Andhra, the situation is not that bad. State councils can help in solving these problems. □

ASSESSMENT

Mohan gave a convincing answer to the question why he wanted to go in for all-India services in spite of the fact that he had already got a well-paid job. However, it sounded hypocritical to say that man should not bother about mundane things like money. It was enough to say that status and public esteem are also important.

The question regarding a teacher's job should have been answered more frankly. He could have mentioned that he had no aptitude for a teacher's job. There is no harm in saying that the pay, prospects and status of teachers are not as good as that of administrators.

The question regarding elitism could have been analysed a bit deeper. Elitism and comfortable living are not synonymous. Elite is a French word meaning 'the choicest', 'the best', and it is generally applied to the cream of the intelligentsia and the professionals. It is in this sense that IAS, IPS, etc. are re-

garded as elitist services. Field jobs in the all-India services are not always comfortable but they give job satisfaction due to achievements.

The answer to the question regarding violence in society was very good. Promotion of peace and harmony is laudable but ultimately, the State is responsible for maintaining law and order. The State alone has the instruments to enforce its will.

With reference to the question regarding a council of the chief ministers of the states, it was alright to say that they could solve many problems. Inter-state cooperation, however, was essential to add that they should not form any 'front' against the Centre and should not adopt any confrontation postures.

To sum up, Mohan acquitted himself very well. His logic and reasoning were good. However, he gave the impression of not being totally frank as to why he wanted to change over to the administrative services.

CAREER & COMPETITION TIMES

"In the field of Computers, there is no question of India adopting an intermediate technology. The Computers we use must be the most modern. This is not for hand-waving or prestige but because it represents the best investment."

—Prof. M.G.K. Menon

The Computer Centre at IIT Kanpur operates a sophisticated time-sharing/multi-programming Computer System—DEC 1090, which facilitates interactive computing and lends strong support to instructional and r and d activities in Computer Science. It stands dedicated to the fostering of excellence in the domains of Computer hardware and Software and to the building up of a self-reliant base in Computing in tune with the country's development needs.

YASSER ARAFAT

Yasser Arafat is many things to many people: terrorist, father figure, revolutionary. What is he really? An insight into our newsmaker of this month.

He is a statesman with a state denied, a politician with his people dispersed, a terrorist who strikes no terror.

He is Yasser Arafat, de facto Chief of Staff of the 4.5 million stateless Palestinians and Chairman of the Palestine Liberation Organisation, founded in 1964 at the first Arab Summit. Like everything in the desert is in extremes, so is nationalism in troubled West Asia always at 'white heat'. Arafat, like his Jewish counterparts in the diaspora before him, will go to any extent in pursuance of his cause, which is self-determination for his people and their right to have a homeland. It is Palestine he wants—or rather, of late, what the UN then, in 1947, decided should be an Arab state in its partition plan of Palestine.

Pre-1947 Palestine under British mandate covered what is today Israel plus Israeli-occupied Gaza and the West Bank. In Palestine, of its

2-million population in 1948, two thirds were Arabs and the rest Jews. The UN partition plan, supported by the US and USSR, gave 57 per cent of Palestine to Jews, 42 per cent to Arabs and placed Jerusalem to be shared by Jews and Arabs under UN administration. War broke out in 1948, 1967 and 1973. The upshot was that Palestine was dismembered and Palestinians evicted to the West Bank and Gaza. Many others took refuge in Arab countries. PLO terrorist attacks on Israel and Jews worldwide and Israeli counteractions were the set routine thereafter. The scene of Israeli-PLO confrontation shifted to Lebanon. The Israeli-PLO face off there in June 82, the US supervised eviction of PLO guerrillas from their West Beirut redoubts following that the massacre of unarmed Palestinian civilians in West Beirut refugee camps later that year, and the stalemate over the withdrawal of foreign troops—Israeli, PLO and Syrian from Lebanon now highlight if anything the poignancy of the Palestinian problem.

And the credit for keeping it ever in world focus should go to Arafat. He has reigned virtually unchallenged for 14 years as the PLO Chairman, no mean task in the unstable Arab world. His organisation is now recognised by over 115 countries and has been granted a permanent observer status in the UN. Addressing its 29th General Assembly session in 1974, Arafat said: 'Today I come bearing an olive branch and a freedom fighter's gun. Do not let the olive branch fall from my hand.'

Rhetoric apart, his actions and attire in public are calculated to conform to the image he has built over the years, his 'permanent scraggle of beard, which Arafat claims saves him an hour of shaving time—and thus working time—each week; his military fatigues with a gun at hip, and the chequered black-and-white *Keffiyeh* on his

head proclaiming he is an Arab and also meant to cover his baldness. Standing at 5 feet 7 inches, his smile and fortitude has a strange charisma. On the podium, he is a better speech-maker by Arab standards—a singular accomplishment among a race known to 'prize dramatic oratory'. He is known never to sleep twice under one roof for fear of assassination either by Arab or Israeli elements. While attending the New Delhi NAM Summit, his aides said with pride: 'Abu Amr (i.e. Arafat) never sleeps.'

Of his private life, they remain obsessively secretive, as does Arafat himself. Whatever little is known has been clouded by years of PLO myth-making. For instance, his little known real name is Abdil Rahman Arafat al Qudwa. While he was born in 1929 or 1930, whether it was in Jerusalem (as the PLO has it) or in Gaza or Cairo is a matter of conjecture. Son of a merchant father and a mother belonging to the powerful Hussaini clan of Jerusalem, Arafat adopted the alias 'Yasser' and joined the anti-Zionist party led by one of his Hussaini relatives. He also spearheaded revolts against the British mandate. In 1948, after the Israelis defeated the Palestinians, Arafat delinked himself from the clan and downplayed his aristocratic connections.

Later, Arafat did civil engineering in Cairo and ever politically conscious, was elected Chairman of Cairo's Palestinian Student Union. He was 27 then, and fought in the 1956 Suez Crisis as an Egyptian reservist lieutenant. Moving to Kuwait, he founded in 1957, Fatah, the Palestinian guerilla organisation. He says, 'Fatah is my woman, my family, my life.'

Arafat is a not-so devout Sunni Muslim—probably because Fatah is officially non-sectarian and also it would clash with his image as a revolutionary. For all that, Arafat

(Continued on page 90)

HOW TO MAKE NOTES-3

BY YASMEEN LUKMANI

Can you isolate important ideas and jot them down in the right order by just reading a passage? This instalment tells you how to group these ideas and place them in the order of importance.

In the last issue, we looked at some of the ways of identifying the important ideas in a passage and the type of language used in making notes. Now we shall consider ways of grouping ideas in a passage and placing them in a hierarchy. Let us look at the following passage:

Exercise 6: Carolus Linnaeus, the eighteenth-century inventor of the system of classification of living things still in use, listed *Homo ferus*, Latin for 'Wild man', as a subdivision of our species, *Homo sapiens*. The characteristics of the feral form of human life, he declared, were hairiness, walking on all fours and lack of speech. When Linnaeus made his classification, he knew of ten cases of 'wolf children' abandoned by their parents and supposed to have been nurtured by wild animals. Since then more than 30 other cases have been thoroughly documented, although it has never been demonstrated that these children were reared by wolves or by any other animals. Scientists and philosophers early recognised the importance of 'wolf children', because such wild creatures provide natural evidence in the way human beings develop their behaviour when isolated from society. In fact, the capture of 'Wild Peter' in Hanover, Germany, in 1724 led a scientist to proclaim that he was more important than the discovery of 30,000 new stars. When 12-year-old 'Wild Boy of Aveyron' was captured in 1797 in France, contemporary readers of Rousseau anticipated that he would display the virtues of the 'noble savage' uncontaminated by civilisation. Scholars anxiously awaited his first words, which they felt would be man's

'natural' language, most probably Hebrew. They were disappointed. The wild boy was not particularly hairy, as Linnaeus claimed, but he did trot along on all fours—and he was inarticulate.

The first sentence indicates a system of classifying living things, in which *Homo sapiens* form one species with *Homo ferus* as a sub-species. This relationship can be stated very clearly in the form of a diagram:

In the next sentence, the writer speaks of the characteristics of *Homo ferus*, which can be clearly stated as:

Characteristics of *Homo ferus*:
1. hairiness; 2. walking on all fours; 3. lack of speech.

The first two sentences deal with the *nature* of the feral form of human life, which implies its status among created beings and its characteristics. What follows is somewhat different. It consists of evidence and counter-evidence for the nature of *Homo ferus* as described above. This can be stated in point form as follows:

Evidence

1. Linnaeus (18th century): Ten cases of 'wolf' children studied, i.e. children nurtured by wild animals.

2. Later: More than 30 other cases documented.

3. In Hanover, Germany, 1724: Capture of 'Wild Peter'.

4. In France, 1797: Capture of the 12-year-old 'Wild Boy of Aveyron'.

The formulation above states the actual evidence on hand, but this bare list is far from satisfactory for it indicates nothing of what each piece of evidence stands for. Let us try reformulating this. (See table on next page.)

The ideas within this single paragraph passage are carefully arranged, so that it is easy to make notes on them. It starts off with a very general statement which indicates Linnaeus' credentials as a classifier of species. This is interesting information in itself, but its importance for this passage, however, is only to establish Linnaeus' status; the fact of his being "the 18th century inventor of the system...still in use" is considered peripheral information in the context of the passage, and thus not listed in the notes. If it were to be listed, the notes would lose their focus. So it is important to distinguish between ideas central to the passage in question and those which can be ignored. The opening line here exemplifies a strategy commonly used, namely that the starting point of connected writing often provides a general statement of this type, linking the piece as a whole to the outside reality. The other points raised then fit within its general framework.

It is also important to distinguish examples from general statements. The cases mentioned in this passage are not examples but stages in the documentation of evidence regarding 'wolf children'. Hence they are central to the development of the main idea, namely, the nature of wolf children, and need to be mentioned if the notes are to attempt to outline the major ideas of the passage. Used for a different purpose, they could easily have been examples and would not

have needed to be added to their entry. This would have been the case, for instance, in the following sentence:

'Wolf children' have been studied by Linnaeus who knew of ten cases; by scientists and philosophers who recorded more than 30 other cases beyond the ones noted by Linnaeus; by scientists in Germany who studied 'Wild Peter', etc.

Also, notice how dramatic statements, as in lines 14-17, have to be altered in writing notes. "...the capture of 'Wild Peter'..." a scientist to proclaim that he was more important than the discovery of 30,000 stars" changes to, "Felt to be a milestone in scientific development" in the notes, in order to connect this explicitly with the study of human behaviour in isolation. The sentence quoted from the passage goes beyond this, comparing astronomy unfavourably with the social sciences, but this opinion is irrelevant to the main discussion and has to be suppressed in the notes. The use of the words 'In fact' in the lines quoted indicates

that the evidence is going to make the general statement particular. We need to hold on to only the relevant point in the particular statement which carries the thread of the argument.

Now I shall ask you to make notes on the following passage, bearing in mind the need for classificatory headings and the selection of ideas contributing to the focus of the passage. (key to notes in next issue.)

Exercise 7: Lots of theories have been put forward to explain why animals—even the human kind—yawn. According to Dr John Hadidian of Penn State University in the United States, one purpose of yawning is to maintain status. An animal opening its mouth bares its teeth and hence provides a subtle threat to others in the group.

If this explanation sounds a little far-fetched, it's worth mentioning that Dr Hadidian has spent a total of 698 hours watching a group of 20 monkeys. He compared their rates of yawning with their positions in the social hierarchy. As a result, he's now certain that

the yawning in the social group is accompanied by increased yawning.

What Dr Hadidian isn't sure of is the extent to which these conclusions apply to human beings. But whether they do it aggressively or not, he does believe that there is such a thing as 'social yawning'. So if you find yourself yawning all day, don't apologise. You may well be on your way to the top! **Key to exercises in previous issue**

Exercise 3: Sentence 1 establishes the framework of the development of American dictionaries out of British dictionary writing. The word 'earliest' suggests that a chronological sequence is to follow. Sentence 2 moves on to the major American milestone in dictionary writing. Sentences 3-5 deal with aspects of this dictionary, its weaknesses, its plus points and the nature of its impact on Americans.

Exercise 5:

1. Development of American dictionaries:

- (i) Earliest American dictionaries, simple school-books based on Samuel Johnson's famous dictionary (British).
- (ii) 1828: Publication of Noah Webster's *An American Dictionary Of The English Language*: a milestone.

2. Assessment of Webster's dictionary:

- (i) Plus points
 - (a) First native dictionary of importance.
 - (b) Used American spellings, definitions and illustrative quotations drawn from American scene.
 - (c) Writing of clarity and compactness not previously achieved in American dictionaries.
- (ii) Weaknesses: Crude pronunciation system, even inferior to previous dictionaries.
- (iii) Impact: Never achieved great popular acceptance because of two-volume size and high price.

(To be continued)

TABLE

| Case(s) | Documentation | Claim |
|---|---|--|
| 1. 10 cases of 'wolf children' | Linnaeus, 18th C | (i) Nurtured by wild animals
(ii) Can be classified as <i>Homo ferus</i> , a form of <i>Homo sapiens</i> |
| 2. More than 30 other cases | Thoroughly documented, studied after Linnaeus' classification | No evidence that these children were reared by wolves or other animals |
| 3. Capture of 'Wild Peter' | Found in Hanover, Germany, 1724 | Wild creatures provide evidence of the way human behaviour develops when isolated from society. Felt to be a milestone in scientific development |
| 4. Capture of 12-year-old 'Wild Boy of Aveyron' | Found in France in 1797 (period of Rousseau) | (i) Would display the virtues of the 'noble savage', uncontaminated by civilisation
(ii) Would speak in man's natural language, most probably Hebrew |
| (For 4.) | | Evidence
(i) The wild boy not particularly hairy (disproved Linnaeus)
(ii) Totted on all fours (supported Linnaeus)
(iii) Was inarticulate (disproved Rousseau's contemporaries) |

READING THE RAPID WAY-4

Do you have trouble adjusting your reading to your requirements? The problem can be solved if you learn to extract the relevant matter from the jungle of words before you.

Third step

Read (the first of the 3 Rs). With *Survey* and *Questions* behind you, you are now ready to read. Now the key point in reading is flexibility—flexibility in speed and flexibility in method. Read difficult and important material slowly, light matter quickly. Keep pressure on yourself to move as quickly as possible. By increasing our speed, we usually increase our concentration.

Anything that helps you concentrate better will help you read better. Make sure you have picked a place where, as far as possible, you won't be disturbed.

Flexibility in method. Some people feel guilty if they don't read every word. The important thing is not every word but every thought. Read for *thought-units*, not *word-units*. We don't live on things but on the *meaning of things*.

Consequently, in every paragraph look for the *main thought*. Often, it's in the first sentence. Sometimes there's only a single idea under a mountain of words. Most books, chapters and articles can be reduced by nearly 50 per cent and still express the full thought. Train yourself to detect the thought under those words.

Let us take an example. Read the following letter. It has 111 words. After you have read it, go over it again and see how many words you can strike out *without loss of meaning*.

EXERCISE: STRIKE OUT
Mr Ravinder Singh
Universal Book Agency
Main Road, Chaibasa

Dear Mr Singh:

We have received your letter dated October 21, in which you have asked for a copy of our publication *Brain-teasers*. We were very happy to receive your letter and shall be happy also to render you any service.

We regret to inform you that *Brain-teasers* is currently out of stock. The demand for this book has been so great that we could not keep up with the demand. We will, however, publish a reprint of that publication within the next six months since the response to it has been very favourable. When the new reprint is ready, we will inform you to determine whether you still wish to place an order.

Yours faithfully,

Manohar Datta
(Sales-in-charge)

Now go over it again and see how many words you can strike out without loss of meaning.

No. of words struck out——

No. of words remaining ——

Now consider, one after another, the real meaning of each paragraph:

1st: We received your letter.

2nd: The book is out of stock.

3rd: We will inform you when the reprint is ready.

Therefore, the actual number of words that are meaningful is less than 20. This can be done with most paragraphs and most articles in books. Every sentence will have some deadspots where the eye sees the word but the mind does not do any reading because there's nothing in the word that conveys or advances the thought. The *eye sees* but the *mind reads*. And this is the difference between watching a book and reading.

(Time to be spent on reading: 80 per cent of the total time.)

Fourth step

Restate: Putting the book down try to tell yourself the meaning of what you have read. If you get a chance, talk to others. It is even better if you can act on the basis of what you have read. Remember the old Chinese proverb:

"What you hear, you forget,
What you see, you remember,
What you do, you know."

EXERCISE: RESTATE
Again, choose a partner. Read the following story as quickly as you can, without any loss of understanding. You should be able to read it in less than two minutes, but do not take more than three. Then, putting the paper aside, restate to your partner the major facts and thoughts of the story.
(Time when you start: Minutes... seconds...)

The Dissection

It has always been my ardent desire to become a doctor, even more, a surgeon. Doing Botany practicals and dissections are my hobbies. I had dissected frogs, but this did not satisfy me. I wanted to work on something bigger and more interesting—a rabbit. I had on one occasion tried to poison one of our pet rabbits, but these suspicious rodents just would not come near the poisoned carrot. So I was quite surprised when I was informed that one of the rabbits had died, probably of shock when Herr Franz Von Titov, our German Alsatian, came sniffing near it. I was very happy and wasted no time in ringing up one of my friends. Sumit agreed to come over and assist in my dissection.

While Sumit was admiring the perfect specimen, I got the instruments ready and started on the preliminaries. Very carefully we nailed the specimen to the small perforated wooden board. The blood curdled in my veins while I tapped the rusty iron nails through the bones and into the wood. After each limb had been transfixed to the board, we started making headway on the dissection. Without any amateur fumbling, I took out a pair of shining scissors and started cutting the still soft, furry skin along a line from the chin to the fluffy tail. Taking extra care not to damage any of the organs, we gradually peeled off the skin. With a sigh of relief we sat back and just stared at the anatomy which looked like an assortment of various cakes. The one thing that attracted my attention was that no smell came from the specimen, which had been dead for about four hours. Remembering what I had been taught a few days back, I confidently pointed out to my friend the various organs such as the lungs, the five-lobed liver and the jelly-like mass of coiled,

(Continued on page 88)

PROJECT TIGER

*"Tiger, tiger burning bright,
in the forests of the night,
what immortal hand or eye
could frame thy fearful symmetry?"*

A majestic being, the tiger—but on the verge of extinction. An estimated tiger population of 40,000 at the turn of the century fell to 1,827 in 1972 as a result of the depredations of man. Had it not been for Project Tiger, these majestic creatures of the nocturnal forests would not have been "burning bright" by 2000 A.D.

Project Tiger was launched at the Corbett National Park in 1973 when it was realised that the tiger could never survive in forests that were still subject to exploitation by man. Over the last fifty years, the population explosion in the country had led to encroachment on forest land resulting in the destruction of wildlife habitats and disturbances in the ecological system. Irrigation projects, involving the inundation of large tracts of forest land, and poaching had also quickened the process of the extinction of animals like tigers. Tigers are an accurate indicator of the ecological health of forests as they cannot survive except in ideal conditions. The government therefore undertook Project Tiger with the objective of maintaining a viable tiger population in their natural environment in India, on the recommendations of a task force appointed by it under the auspices of the Indian Board for Wildlife. The World Wildlife Fund spearheaded a worldwide emotional crusade and raised over a million dollars for the project.

The project is now being implemented as a centrally-sponsored scheme in 11 tiger reserves in Assam, Bihar, Orissa, UP, Rajasthan, MP, Maharashtra, Karnataka, Kerala and West Bengal. Ideal tiger habitats were chosen for tiger reserves and natural prey

Deforestation is just as disastrous as killing the hen that lays golden eggs. As a future Indian Forest Service officer, this is a fact you cannot ignore and many others besides. Our two fact-filled related essays discuss some of them to help you in the IFtS exam this month.

was made available in these areas. In each reserve, an area of not less than 300 sq km is maintained as the core area and this is kept free from all human interference. The total area of all tiger reserves today is 15,800 sq km, of which the total core area is 5,142 sq km. There is provision for the enlargement of the reserved areas. In fact, the Central Government has sanctioned Rs 94 lakhs in the Sixth Plan for the enlargement of Corbett Park, where the growing tiger population has begun an in-group struggle for territorial "overlordship". The UP Government, however, has not yet approved the inclusion of a 1,100-km buffer zone.

On the whole, Project Tiger has been a success. The population of tigers in the reserves was estimated to be 268 in 1972. The number rose to 757 in 1981 in the now-existing 11 reserves. The all-India population of tigers also increased from an estimated 1,827 in 1972 to 3,015 in 1979. Taking into account the success of the project, the steering committee has planned 4 new tiger reserves at Namdapha in Arunachal Pradesh, Buxa in West Bengal, Indravati in MP and Nagarjunasagar in Andhra Pradesh. Its success has also prompted the government and independent agencies to think in terms of more projects dealing with the conservation of nature. India has one of the richest wildlife in the world with an estimated 500 species of mammals, 2,120

of birds, 26,000 of insects and 700 types of reptiles. It is a pity that today 29 species of mammals, 28 types of birds and 3 species of crocodiles are on the verge of extinction. Animals and birds like the cheetah, the pin-headed duck, the mountain quail and Blewitt's owl are already extinct. Project Tiger was a pioneering effort and it is to be hoped that more such projects will be undertaken in future.

FORESTS

According to the *Agnipurana*, a tree is equal to 10 sons. Growing a tree would, therefore, be the equivalent of begetting 10 sons. The new forest policy of the government, which is now in the process of being thrashed out, pays attention not only to the preservation, conservation and protection of existing forests but also to reafforestation. And it is high time due emphasis was laid on the growth of new trees. As a result of indiscriminate felling, about 4.32 million hectares of forest area became forestless between 1951-52 and 1978-79. The per capita forest area in India is 0.11 hectares—far below the world figure of 1.04 hectares. With only 75 million hectares of forests, just 23 per cent of the land area is under forests in India—and this too is a highly inflated figure. The 1952 national forest policy had indicated that forest land should comprise 33 per cent of the geographical area of the country. But today, less than 12 per cent of the country's land surface is under adequate tree cover.

What is alarming is that the systematic denudation of the forest region has led to a serious disturbance in the ecological balance. Recently, a research team from the Universities of Chicago and Florida found evidence that the sudden demise of the Mayan civilisation of lower Guatemala was directly co-related to the breakdown of the ecological system in the region.

Radiocarbon and other dating core samples taken from the beds of two lakes indicated that in the centuries preceding the demise of the Mayan civilisation, there was a sharp increase in the rate of silting of the lake bed resulting from deforestation and consequent soil erosion. This itself had led to a steady decline in food production. The finding of the research team has prompted these scientists to question the accepted views on the demise of other civilisations like the Mesopotamian, the Carthagian and the Mohenjodaro. It is true that Sindh, Libya and Tunisia were all granaries once upon a time and are now largely deserts. It is, therefore, quite possible that these civilisations may also have been overcome by ecological catastrophes.

In modern day India, the effects of deforestation are already being felt; erosion and landslides have devastated vast tracts, bare and denuded slopes are ruined as a result of the excessive loss of topsoil. The loss of ground water is irreplaceable and this is the natural scenario for droughts and floods. Topsoil, the main ingredient for plants growth, takes over 600 years to form, and every year in India, about 6,000 tonnes of topsoil is washed away. Deforestation has also resulted in decreasing the life of river-valley projects and dams which are silting up. Bhakra, which was due to

sustain itself for only 47, and Hirakud will "die" in 35 years instead of the estimated 110.

So far, just a few environmentalists had bothered about the ecological implications of deforestation. But now many other sections of society are becoming conscious of their duty. The popularity of programmes like the 'Vanamahotsav' and 'A Tree for Every Child', and movements like the 'Chipko movement' (hugging the trees), which was launched in the Uttarakhand region of UP in 1973, indicates that the public has become aware that our forests are our friends. Organisations like the Environment Planning and Coordination Organisation (EPCO) and the Institute of Environment at Bhopal help to promote public consciousness in this direction. All this has led to the emergence of the concept of social forestry, which aims at involving people in tree plantation. Social forestry forms an important component of the 20-Point Programme and the Sixth Five Year Plan. Farm forestry or agro-forestry, which is a part of social forestry, is also being promoted by the government. It aims at encouraging farmers to grow trees on the periphery of their farms. Recent experiments have proved that this can be highly profitable because trees, unlike crops, are not affected by droughts and floods. Fast-growing vari-

and eucalyptus, which can also be subjected to a rotating cycle involving the cutting of a certain number of trees every year, have enriched the farmers of drought-prone Bhavnagar district in Gujarat. State governments have also undertaken projects to plant trees, sometimes 5 to 15 deep, along village and district roads, state and national highways, railway tracks and canals. Foreign nations too, are helping India in its social forestry programmes. The Philippines has supplied 3 tonnes of seeds of subabul. The World Bank and other international organisations are helping India financially and social forestry projects aided by these organisations have an outlay of Rs 500 crores.

The National Committee on Environmental Planning (NCEP), which has recommended a new forest policy, has emphasised the need for a rapid increase in forest cover, maintenance of an ecological balance, a relation between forests and forest-based industries and the needs of tribal communities which live in the forests. The government, when it adopts a new policy, should also take into consideration the need for research in forestry and regular soil, botanical and geological surveys. These should form the basis for future policy revisions in the management of forests.

S.B.

READING THE RAPID WAY-4

(Continued from page 86)

rope-like intestines. The stomach, which was pale-yellow, resembled a miniature, over-inflated balloon. Sumit began to poke the stomach with a teasing needle, and what followed can be guessed at.

The whole anatomy of the rabbit being exposed very neatly, we decided to trace the alimentary canal. Holding the teasing needle in one hand and the forceps in the other, I carefully exposed the white, tubular oesophagus, while Sumit slid a piece of black paper beneath it. On coming to the shrunken stomach, I pressed out the little air left in it and in the process punctured a small intestine. A pale green, viscous liquid began to ooze out and almost simultaneously our hands went up to our noses. Using only his right hand, Sumit managed

to slip another piece of black paper under the transparent, delicate-looking stomach. Sumit, who wanted to continue tracing the rest of the alimentary tract, did not have much difficulty in locating the tiny gall bladder and the pancreas. The dark red liver, which was also the largest organ, did not give us any difficulty, but in trying to locate the duodenum, the beginning of the small intestine, Sumit carelessly punctured the filled intestine in a few more places. The smell being too much for our inexperienced noses, we decided to dissect an organ far from the intestines.

The unanimous choice being the heart, I picked up the scissors and cut off all the thin ribs covering the lungs. Then with a teasing needle I carefully separated the lungs which were brownish-yellow and freckled with small pink dots. Since I was the more experienced one, I wiped

my fingers and got ready to remove the heart. I gently but surely gripped the blood-stained scalpel and started severing all the blood vessels entering and leaving the heart. After a few minutes, the vena cava, pulmonary vein, pulmonary artery and the aorta were disengaged from the heart. Now all that was left was to transfer the heart to the test tube of icy cold water to be observed and examined. After washing the instruments, we very solemnly buried the rabbit, which had given up its life for the advancement of surgery.

THE FREEDOM MOVEMENT

BY RAJU MANSUKHANI

Our third instalment traces the events leading to the Khilafat Movement and the spread of Gandhian thought.

Khilafat and Non-Cooperation Movement

Gandhi had deliberately created links with the Indian Muslim community in his attempt to put into practice the convictions of his South African experience viz. Indians and Muslims were one nation. At Champaran he befriended Hazharul Haq, known for his Pan-Islamism. In Gujarat he attracted the loyalty of the Bohra Muslims. By 1918, he had reached out to the Ali brothers and spoken at various Muslim League meetings.

Turkey was no longer being propped up by the British. After the peace of 1920, the Treaty of Sevres was signed. The British plan was to remove any European territory from the Turkish Empire and to place all Arab portions under Allied mandates.

The Pan-Islamic ideals, as expressed by Mohd. Ali, were: the Caliph should retain his empire with temporal powers to defend his faith; the geographical centre of Islam, Jazirat-ul-Arab, should remain under Muslim sovereignty; the Khilafat should remain warden of Muslim sanctuaries. Gandhi accepted the three-fold Khilafat claim because it involved religious belief for Muslims and for secular justice.

In 1919, a Khilafat Committee was organised by Maulana Azad, Ajmal Khan and Hazrat Mohani. Gandhi cemented his alliance with Abdul Bari of Ferangi Mahal. His ideal of Hindu-Muslim unity was shaping into reality.

October 17, 1919 was observed as Khilafat Day. Gandhi spoke in public meetings and gave press reports on Hindu-Muslim unity. Swami Shradhdhananda of the Arya Samaj spoke in the Jama Masjid.

By 1920, Maulana Azad, the Ali brothers, the maulvis of the Deoband school and of Lucknow had taken the United Provinces by

storm. Meetings and prayers followed in quick succession.

In May 1920, the terms of the Treaty of Sevres were known and the Hunter Report was published. The two issues of Khilafat and Punjab became humiliating signs of Indian feeling counting little with the British Empire.

In December 1920, at the Nagpur session of the Congress the call for non-cooperation was made. The Congress organisation structure was revolutionised. A linguistic basis was accepted for forming provincial committees. Delegates were to be elected on the proportion of population.

By January 1921, non-cooperation was to proceed on three lines—renunciation of titles and honours, the boycott of councils and law courts; boycott of schools and colleges, and the setting up of national educational institutions.

The boycott of foreign goods continued. Shops selling imported goods were picketed and public bonfires organised.

In Andhra Pradesh, agitations against municipal taxes were carried on. In Chirala, a new township was planned. Liquor and excise taxes imposed by the government were challenged. In the Rae Bareilly and Pratapgarh districts of UP, grassroot-level resistance emerged. Kisan sabhas were established, voicing the grievances of poor cultivators paying illegal cesses. In Bihar, the Tara Bhagat Movement of the Adivasis threatened non-payment of Chowkidari tax and rent. In Bombay, the Prince of Wales' visit was boycotted and a strike organised.

The British took repressive measures to stop this groundswell. Mass arrests were made. All important leaders, barring Gandhi, were put in jail.

In February 1922, violence at Chauri Chaura, Gorakhpur, made Gandhi call off the movement. This Bardoli resolution came as a shock to many. Gandhi was accused of being a lackey of the *zamindars* and the British. But Gandhi's personal courage was invulnerable. He stood by

non-violence.

The Moplah Rebellion

The rise of the Khilafat Movement and the call for non-cooperation, gave rise to feverish political activity in the Malabar region. It came to be known as the Moplah rebellion. The Moplahs, descendants of the Arabs, formed the lowest rung of the agrarian society in the southern talukas. Over the years their discontent with the upper-class Brahmins and Nairs grew. In the initial stages, various tenancy associations were formed. Then came the Khilafat Movement which provided the Moplahs with a political outlet.

The movement was intensified in February 1921 when local Khilafat leaders were arrested in Ernad and Walluvanad. A government ban on meetings angered the Moplahs and they rose in revolt. However, despite much destruction of public property (railways and telegraphs in particular), the rebellion could not be sustained because the British took a tough stand.

During 1922-1924, due to the age-old grievances of the tribal regarding forest laws and grazing rights, tribal agitations mounted particularly in those areas which today constitute the state of Andhra Pradesh. Alluri Sitaramayya Raju emerged as a formidable leader. Though he constantly quoted Gandhi, he practised violence. He never hesitated in killing police and forest officers as they symbolised the white exploiters. He himself was killed in an encounter with the police.

The Justice Party

Political activity in Madras had never reached the same pitch as in Bombay or Punjab. Though no national leader of significance came to the fore, a group of rich and educated men (mainly lawyers and administrators) called the Hylapori set had emerged by 1900. They were opposed by a mixed group of city merchants and politicians who espoused the cause of the non-Brahmin community. This group came to be known as the Justice Party. In the Non-Brahmin Manifesto of 1916, the party maintained

public services, the university and the High Court, dominated public life. It demanded reservation of seats for non-Brahmins in the legislative councils. This implied patronage in public services and local government. Certain congressmen (like C. Rajagopalachari, Ramalingam Chetty, C.P. Ramaswami Iyer, S. Satyamurti, N.G. Ranga, Dr Natesar and A.P. Patro) were sympathetic towards the Justice Party. The Congress, despite initial losses, however, became the dominant political party by 1937.

The Swarajists

In 1922, the Congress was pervaded by a sense of disillusionment. Sensing its declining popularity, C.R. Dass and Motilal Nehru suggested that instead of boycotting the legislatures, non-cooperation should be practised in the councils. On the other hand, orthodox Gandhians like Rajagopalachari and Rajendra Prasad opposed council-entry and favoured continuing the boycott. In December 1922, Dass, Nehru, Madan Mohan Malaviya, Jayakar and others

joined the Congress-Khilafat Swaraj Party with Dass as President and Nehru as one of the secretaries. The Swarajists did very well in the election of November 1923. They won 42 out of the 101 elected seats in the Central Legislative Assembly. By 1924, the Swarajists had gained ground in Bengal, United Provinces, Central Provinces and Assam. In March 1925, they succeeded in electing Vallabhbhai Patel as the President (Speaker) of the Central Legislative Assembly. They, however, failed to change the policies of the British in India. Hence, they changed their tactics and walked out of the Central Assembly in March 1926. Nevertheless a group of responsivists like Malaviya, Kelkar and Lala Lajpat Rai offered cooperation to the government.

From March 10, 1922 to February 5, 1924 Gandhi was in jail. Once out of prison, he stayed out of active politics and engaged himself in constructive work in villages. His base was the Sabarmati Ashram where he also formulated many of his ideas. Emphasising the importance of villages, he wanted

that all that could be produced in villages should not be produced in cities. The latter should serve as clearing houses for village products. His model village was self-sufficient in all respects—it even had its own legislative, executive and judicial systems.

Gandhi also wanted to adopt a new education system which promoted mental, moral and physical development of the child. He believed that the existing system was defective as it was based on Western culture. He was in favour of a national language because he thought that education was impossible through English, a foreign language. He also wanted students to spend more time in villages so that they could identify themselves with the rural folk.

This was the time when devoted Gandhians were spreading the use of *khadi* and the *charkha*. Extensive philanthropic work, essentially reformist in nature, was done in Gujarat and parts of UP. This provided a good social base in the rural areas.

(To be continued)

YASSER ARAFAT

(Continued from page 83)

provides intimate, Arab-style personal leadership and delegates little authority. That little authority rests with those who founded Fatah with him in Kuwait.

There are other instances of the contradictions inherent in Arafat. He talks of an armed struggle against Israel and vows moderation to Israel's Western allies. He is publicly anti-US and privately "obsessed" with gaining its recognition (He meets Americans from all walks of life and airs his grievances till late at night.) "Arafat is not perfect", says Israeli-exiled Mayor of the West Bank town of Halhut, Mohammed Milhem. "No one is perfect. But Arafat is our representative, and you will have to deal with him. Arafat is the only one with all the strings in his hands."

It would be more precise to say that Arafat is in the centre of an explosive web. He is being pulled from three sides: Arab countries with their internecine disputes, the US with Israel, and his own fellow Palestinians. His aides say he is a "tireless negotiator" and "gifted conciliator". But his gifts are most times put to keep the PLO united

and keep relations with Arab countries on good terms. There is no love lost between the Palestinians and other Arabs since the former are better educated—at par with the Israelis—and tend to establish a state-within-a-state wherever they are based. King Hussein expelled them, bloodily, from Jordan in 1970 for the same reason. And before the Israelis finished the job, Lebanese Christians were desperately trying the same in Beirut since after the 1975-76 civil war. True, in the 1974 Arab Summit at Rabat, Morocco, PLO was accepted as the sole representative of the Palestinians with Arafat as their leader. But there are pro-Syrian, Libyan and Iraqi, leftist rebels in the PLO who have succeeded till now in blocking any move by Arafat to seek accommodation with Israel, albeit indirectly. Concedes Arafat: "Leadership is not easy in a jungle of guns."

The policies of Menachem Begin's Israel have made his job even tougher. And it provides little solace when Begin goes on record as saying: "Our lobby in America is so strong that Washington quails before them." Even so, US President Ronald Reagan came up with a plan in September 1982,

which Israel rejected out of hand, calling for Palestinian autonomy in occupied West Bank and Gaza in association with Jordan. What Israel abhorred was that the plan called for a freeze on Israeli settlements in the region, which are fast picking up pace. The pitch was further queued for Arafat when the Palestinian parliament-in-exile, the Palestine National Council (PNC), met in Algiers in February '83. PNC stayed Arafat's hands for further negotiation on the plan, rejected it, and as an appeasement reaffirmed its faith in him as a leader.

Time and again, Arafat has been hamstrung by the PNC—and by leaders and nations who just don't understand him. Arafat has often said he would renounce violence if given a lesser Palestine. Trouble is neither the West nor Palestinians themselves are ready to believe him yet. "He is a man with no fixed ideology," says a leftist Palestinian critic of Arafat. "Who knows what he will really do?"

Such sceptics fail to understand that Arafat's ideology is a new form of Arab nationalism: non-sectarian in approach and free of religious bigotry. If that doesn't get Arafat a lesser Palestine, nothing will.

N.V. SUBRAMANIAN with P.N.K.

BOOK DIGEST

THE WONDER THAT WAS INDIA

by A.L. Basham; published by Rupa & Co; pages: 572; price: Rs 60

History is no longer considered to be a chronicle of kings, events and dates—it is a reconstruction and analysis of the past in its entirety. And A.L. Basham does just this—and with marvellous effect—in *The Wonder That Was India: A survey of the Indian sub-continent before the coming of the Muslims*. The popularity of the book is proved by the number of reprints that it has seen since its first publication in 1954. Although it was meant for the 'general reader' and for a Western audience, Basham himself admits in a later edition that "it has been widely used as a college textbook, not only in England, but also in India itself and in America". Rupa & Co. has done a good job by bringing this useful book within the reach of the Indian reader.

The book appears bulky at first glance, but when the extent of the subject that is covered is considered, one wonders how Basham managed to squeeze so much into 572 pages. Besides the main chapters, the book contains many line drawings, maps, chronology, a somewhat limited bibliography, illustrations (the prints of which could have been better), an index and a glossary. The 10 chapters in the book deal with five main themes—pre-history and history; state, social order and daily life; religion; the arts; language and literature. There are 12 appendices giving the general reader much-needed information on cosmology and geography; astronomy; the calendar; mathematics, physics and chemistry; physiology and medicine; logic and epistemology; weights and measures; coinage; the alphabet and its pronunciation; proverbs and the gypsies. Specially praiseworthy are the sections on literature, language and religion. The author has made a deep and analytical study and intersperses his observations with illustrations from the classical texts. One is even more

impressed when one learns that most of the translations are his own. The section on the state, social order and daily life are also good, especially so because much of it is deduced from literature and contemporary architecture—there being so little actual historical material available on these subjects. The section on history is brief, but is packed with facts. The chapter on the arts, however, does not come up to the standard of the rest of the book. His account of Indian music, though it has been revised in the later editions, leaves much to be desired and the sub-section on dance is sketchy and incomplete.

One of the chief merits of the book is the extremely lucid and readable style of Basham. India's glorious past comes alive with the colour that he attaches to his words. Furthermore, he has succeeded in doing something that he did not set out to do. In his preface, he writes that he intended to get Western readers interested in the civilisation of India; in the process, he has succeeded in interesting Indian readers in the civilisations of the West. Throughout the book he draws analogies with the West, comparing words, customs, etc. of the various ancient civilisations of the world. He compares the culture as depicted in the *Rig Veda* as having a 'generic likeness to that of *Beowulf*, the earlier Icelandic sagas, and the old Irish prose epics, and was somewhat less advanced than that depicted in the *Illiad*" (pg. 34). Although this was written to draw responses from minds attuned to the Western world, it also succeeded in raising questions about the Occident in oriental minds.

Basham, however, does make some generalisations without actual facts. For instance, he says that the watershed between the Indus and the Ganges "has been the scene of many bitter battles since at least 1000 B.C." (Pg. 2). Again, on pg. 19, he writes that "every merchant or mercantile family had a seal" in the Harappan period. Later, he speaks of Aditi as the "great mother of

gods" (pg. 235). Actually, Aditi was a mother of some of the gods, namely the Adityas, and not others like the Asvins.

These lapses, however, are minor and the book, on the whole, is most useful. A student preparing for a competitive exam will find it invaluable. Even otherwise, it is a book that should be a must on everybody's list.

THE SOVIETS IN AFGHANISTAN

by Cyriac Maprayil; published by the Cosmic Press, London; pages: 165

The Soviet intervention in Afghanistan triggered off a global controversy of a magnitude which is almost equivalent to those of the Arab-Israeli and the Vietnamese controversies. Yet, while Afghanistan has figured time and again in the circles of top political commentators, not a single attempt was made to present the problem in simplistic terms, so as to explain the whys and hows of it to the younger students of politics.

It is in this manner that *The Soviets In Afghanistan* is a welcome if not a refreshing change. Cyriac Maprayil outlines the histories of the two countries since the Tsarist times. He also claims that the Iran revolution led to the rise of fundamentalism in Afghanistan, as a result of which the Russians got concerned about their own Muslim population and intervened.

Maprayil gives a Muslim angle to the problem in that he is of the view that the Muslim world can no longer trust the West for its security. He feels the international community should club together and demand an unconditional Soviet withdrawal from Afghanistan.

Maprayil concludes that the US withdrawal from the Indian Ocean, and Diego Garcia in particular, is the only way to make the Soviets move out of Afghanistan.

However, Maprayil's analysis seems to be on the sketchier side and the solution he offers is more moralistic than realistic, for the Muslim world is more pro-US than against it. Anyhow his work is laudable in that it is simple, even in terms of language unlike most of the recent political books.

MANAGEMENT DEVELOPMENT PROGRAMMES 1983

THROUGH CORRESPONDENCE

COURSES

1. POST-GRADUATE DIPLOMA IN BUSINESS MANAGEMENT & INDUSTRIAL ADMINISTRATION
2. DIPLOMA IN MARKETING MANAGEMENT
3. DIPLOMA IN SALES MANAGEMENT
4. DIPLOMA IN OFFICE MANAGEMENT
5. DIPLOMA IN COMPANY SECRETARIAL PRACTICE

DURATION: 18 MONTHS/4 MONTHS

ELIGIBILITY: Bachelors's degree in any discipline for Post-Graduate courses and Passed school leaving certificate exam / appeared for diploma courses. Youngsters from business families, entrepreneurs, Sales Representatives will also be considered on the basis of their knowledge of English which is the medium of instruction of the courses. Candidates appearing for final year Bachelor's degree examination can also apply for Post Graduate course

20% CONCESSION WILL BE ALLOWED ON FEES TO THOSE WHO ARE SC ST, DEFENCE PERSONNEL AND PHYSICALLY HANDICAPPED.

SCHOLARSHIPS: A few merit scholarships of Rs 1000/- and Rs 500/- awarded to meritorious students as per Institute's rule

PLACEMENT: The Institute's Placement Service assists students in securing suitable jobs

Prospectus and Application Forms are available by sending a Crossed Indian Postal Order Bank Draft payable at Calcutta for Rs 20/- in favour of "International Institute of Management Sciences, Calcutta". Candidates sending Money Order are requested to mention clearly on the M.O. Coupon the Mailing Address and Name of the Programme for which the prospectus and Application Forms are wanted. Cheque or Cash Payment not accepted

For prospectus and application form

DURGA

CAREER COUNSELLING

BY G.J. UNNITHAN

Director, Students' Advisory Bureau, University of Rajasthan

Please name the institutes/universities offering M. Tech. and M.Sc. degrees in Geology or in subjects related to Geology like Geohydrology, Geological Prospecting, etc. I already know about Roorkee University, ISM, Dhanbad; Dibrugarh University; and Gauhati University.

Chandan Mahanta, Gauhati

Geology (Applied) is taught at: Maharaja Sayajirao University of Baroda; University of Calcutta; University of Delhi; University of Jadavpur, Calcutta; Karnatak University, Dharwar; University of Nagpur, Nagpur; and Osmania University, Hyderabad. Geology (Pure and Applied) is taught at: University of Rajasthan, Jaipur; and Geology and Mineralogy is taught at Utkal University, Bhubaneswar. Admission will depend upon your subsidiary subjects besides the percentage of marks obtained in graduation.

I am a XI class student; have passed the X class Central Board of Secondary Education Exam with an aggregate percentage of 73.2 with distinction in Science and Maths; and am now thinking of giving both PMT as well as PET/IIT, i.e., I am interested in both Medicine and Engineering. Yet, the exam schedule is such that my appearing in both the engineering and medical tests may create some problems for me. What should I do?

Mukesh Kalla, Jaipur

Many students who have taken both Maths and Biology at the +2 level, share your problem. Base your decision on three factors: your ability/performance in Maths and Biology; your genuine interest; and the availability of seats in these engineering and medical courses in India. To obtain more information about the latter, consult the informative *Handbooks Of Medical Education And Engineering Education* (1933), published by the Association of Indian Universities, Deen Dayal Upadhyaya Marg, New Delhi. (Rs 12 each plus Rs 4 for postage.) You could also consult school guidance personnel or guidance bureaux in your home town.

Please give me full details about

the railway personnel services.

Avinash Sharma, Agra

Recruitment to the Indian Railway Personnel Service (Group A), the Indian Railway Traffic Service and the Indian Railway Accounts Service is done through the UPSC's Civil Services Exam. The 1984 exam will be announced in December 1983 through a special supplement in the *Employment News*.

I am a B.Sc. Home Science Second Year student and wish to take up export management as a career. Which institute should I join or which diploma course (postal) should I do?

Rachna Gupta, New Delhi

The Department of Business Management, Punjabi University, Patiala, offers a correspondence course in International Marketing for degree-holders with work experience in this field. Besides, there are several private organisations which offer these correspondence courses and they regularly advertise in this magazine. Please note that they are not formally recognised by the government. However, consider whether Home Science is a proper foundation for export management.

I am awaiting the results of the All-India Senior School Certificate Exam and am very much interested in studying Microbiology, Biochemistry or Bio-medical Engineering. Please provide me detailed information about the institutions offering undergraduate courses in the above-mentioned fields, in India as well as abroad, plus the scope for research and employment.

Amar Sharma Masoom, Ranchi

Facilities for studying Microbiology are available at the University of Bombay (St Xavier's College, Wilson College, Sophia College, N.M. Institute of Science, Bhavan's College, Sir M.V. College of Science); Gujarat University (B.P. Baria Science Institute, Navsari); Panjab University, Chandigarh; Smt Chandibai Himathmal College, Ulhasnagar, Thana, Maharashtra; Guru Nanak Dev University, Amritsar; Himachal Pra-

desh University, Simla; Kurukshetra University, Kurukshetra; Marathwada University, Aurangabad; Sardar Patel University, Vallabh Vidyanagar; South Gujarat University, Surat; Poona University, Pune; and Shivaji University, Kolhapur.

B.Sc. Biochemistry is available at: Gujarat University, Ahmedabad; Guru Nanak Dev University, Amritsar; University of Madras; Marathwada University, Aurangabad; Panjab University, Chandigarh. Courses in Bio-medical Engineering are available at PG level only. Details about admissions may be obtained from the colleges/universities concerned by sending a self-addressed stamped envelope, so that the initial admission information can be sent to you. The scope for employment and research in these fields is good.

I'm a Commerce graduate and wish to become a news reader or a radio announcer. Whom should I contact for further information and what are the future prospects in this profession?

Pradeep Kumar Abrol, Kanpur

Contact the AIR Station Director in your home town. If there are temporary vacancies you will be asked to give an audition test. AIR and Doordarshan are government undertakings and regular appointments can only be made through ads. and open selection. 

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many students ask for a personal reply. Sorry this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to: Career Counselling, Career & Competition Times, 10 Daryaganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

COUPON

1 **debase** A to lower in value, quality or character. From time to time, phony works of art have debased culture.

Minimum qualification for entrance to courses under (a) is 10 + 2 with Physics, Chemistry and mathematics (Matriculates may also apply but they will have to undergo a one year student-ship course) For courses under (b) the applicants must be graduates with one year experience in a supervisory capacity Applications on prescribed forms must reach the registrar latest by 30th June, 83 (Students awaiting results may also apply) Application forms with detailed prospectus may be obtained from the institute by sending crossed postal orders for Rs 10/- separately for each stream Hostel is compulsory for outstation students

good

SPORTS

BADMINTON

Sweeping changes to the organisation of international tournaments were approved at the annual meeting of the International Badminton Federation (IBF) at Copenhagen (Denmark) on May 3.

From now on, the Thomas and Uber Cups—the men's and women's team tournaments respectively—shall be held every two years, instead of every three years, at the same time and venue. The matches will be best of five—three singles and two doubles—instead of nine, as at present.

The world championships (inaugurated in 1977) and held every three years, will now be held every two years, alternating with the above tournaments.

At the 3rd World Championships, which ended at Copenhagen on May 8, the Chinese, for a change, took the back seat. The results of the finals are as follows:

Men's: Singles: Icuk Sugianto (Indonesia—Ina) b Liem Swie King (Ina) 15-8, 12-15, 17-16. **Doubles:** Sten Fladberg and Jesper Hol'edie (Denmark—Den) b Mike Ridgett and Martin Dew (G. Britain—G.B.) 15-10, 15-10. **Women's: Singles:** Li Ling Wei (China—Chn) b Ha Ai-Ping (Chn) 11-8, 6-11, 11-7. **Doubles:** Lin Ying and Wu Dixi (Chn) b Nora Perry and Jane Webster (G.B.) 15-4, 15-12. **Mixed Doubles:** Thomas Kihlstrom (Sweden) and Nora b Fladberg and Pia Nielsen (Den) 15-1, 15-11.

CRICKET

Wisden's 'Five Cricketers of the Year' 1982 are: Kapil Dev (India), Imran Khan (Pakistan), Alvin Kallicharran (Warwickshire), Trevor Jesty (Hampshire) and Malcolm Marshall (Hampshire). These nominations are based on performances only during the season in England. Kapil is the 10th Indian to figure in the "celebrated five".

DIVING

American men and Chinese women dominated the World Cup competition which ended at Woodlands, Texas, on April 29. Among the winners:

Men: Springboard (3m)—Greg Louganis (USA); **Platform (10m)**—Louganis; **Women: Springboard**—Peng Yuan Chun (Chn); **Platform**—Chen Xiao Xia (Chn); **Team:** 1. China—4,404.95 pts; 2. USA—4,397.97 pts; 3. USSR—4,019.79 pts.

FOOTBALL

Mohammedan Sporting (Calcutta) won the replayed final of the Federation Cup at Cannanore on May 9, with a 2-0 victory over Mohan Bagan (also of Calcutta).

Mexico is to host the 1986 World Cup thus becoming the only country to be given the tournament twice. Colombia, the original hosts, withdrew because of financial reasons while the US' and Canada's applications for hosting this event were rejected.

ICE HOCKEY

The 49th World Championships, held at Munich and which ended on May 3, was won for the fifth consecutive year by the Soviet Union. Czechoslovakia finished runners-up, with Canada third. This was the 19th time that the Soviets won these championships, thus equalling the record wins by Canada (who last won in 1961).

HOCKEY

EME Jullundur beat CRPF Neemuch by a late second-half goal to take the Beighton Cup tournament at Calcutta on April 30.

Pakistan International Airlines beat Indian Airlines 5-4 to lift the 78th Aga Khan Cup tournament on May 21 at the Bombay Gymkhana grounds.

SHOOTING

The National Skeet Championships ended at the Tughlakabad Ranges, near New Delhi, on April 30, with the following results: **International rules: Team:** (1) Punjab—388 pts (out of 450); **Individual:** (1) P.S. Sodhi (Punjab) 189 pts; **Indian Rules: Team:** (1) Punjab—81 pts (out of 150); **Individual:** (1) Capt H.S. Manshahia (Air Force).

Tense moments in the replayed Federation Cup final: Sporting wins.

SNOOKER

The 25-year-old Briton, Steve Davis regained the title he had earlier won in 1981, at the World Professional Championships at Sheffield (England) on May 2. In the best-of-35-frames final, he beat Canadian Cliff Thorburn by 18 frames to 6.

SQUASH

In the \$ 40,000 French Open Championships, held at Cirque D'Hiver, Paris, world No. 1, Pakistan's Jahangir Khan, beat compatriot Qamar Zaman 9-5, 7-9, 9-1, 10-8 in the final on May 16 to maintain his unbeaten run for the last two years.

TABLE TENNIS

The International Table Tennis Federation (ITTF) announced important changes in the rules of the game.

With effect from July 1, 1983, deliberate heavy stamping on the floor by a player, when serving, will be illegal and penalty points will be given if the player persists after being warned;

With effect from January 1, 1984, bats used in international tournaments will have to have different colours on each side. This is to help neutralise the switching from one side of the bat to the other, and using different rubber surfaces to produce spin that baffles the receiver;

Players in future will also be banned from serving with their back towards an opponent, or from below the surface of the table—two seemingly impossible tactics still managed by some players.

The 37th World Championships ended at Tokyo on May 9. The results: **Team:** (M) China (Chn) b Sweden

5-1, (W) Chin b Japan 3-0, Singles: (M) Guo Yue Hua (Chn) b Cai Zhen Hua (Chn) 21-15, 19-21, 21-18, 21-18, (W) Cao Yan Hua (Chn) b Yang Young-Ja (South Korea) 21-9, 10-21, 21-9, 21-13; Doubles: (M) Dragutin Subsek and Zoran Kalinic (Yugoslavia) b Xie Sike and Jiang Jia-Liang (Chn) 21-15, 19-21, 20-22, 21-17, 22-20, (W) Shen Jian Ping and Dai Lili (Chn) b Geng Li Juan and Huang Jun-Gun (Chn) 23-21, 21-12, 15-21, 10-21, 21-16, Mixed Doubles: Yue Hua and Ni Xia-Lian (Chn) b Chen Xin-Hua and Tong Ling (Chn) 21-13, 17-21, 21-19, 18-21, 21-12.

The \$17,000 Norwich Union Masters tournament at Kingston, Jamaica, which ended on May 28, was won by Wang Hui-Yuan (Chn) with a 21-19, 21-13, 21-14 victory over Commonwealth champion Chou Man-Kuen (Hong Kong). Jiang Jia-Liang (Chn) came third.

TENNIS

Following were the major international tournaments held in May:

Yannick Noah (France) won the Spanish Open tournament at Madrid, on May 1, with a 3-6, 6-0, 6-2, 6-4 win over Henrik Sundstrom (Sweden).

At Dallas (Texas), on May 1, the 12-man WCT tournament was won by John McEnroe (USA) beating Ivan Lendl (Czechoslovakia) 6-2, 4-6, 6-3, 6-7, (5-7), 7-6, (7-0) in the final, lasting a record 4 hours 35 minutes.

Wilander: Topping the points table.

McEnroe won his first clay-court tournament in four years when he beat fellow New Yorker Vitas Gerulaitis 6-3, 7-5 in the final of the WCT Tournament

of Champions at New York on May 8.

Chris Evert Lloyd (USA) won the \$1,50,000 West German Open for Women, at West Berlin on May 23, when she beat 17-year-old Kathy Horvath (USA) 6-4, 7-6 in the final. Jo Durrie and Ann Hobbs (Great Britain) took the doubles with a 6-4, 7-6 victory over Claudia Kohde and Eva Pfaff (FRG).

The following are the top-ten in the grand-prix points table, as on May 23: (i) Mats Wilander (Sweden) 969 pts; (ii) Noah 915, (iii) Jose Higuera (Spain) 914; (iv) Lendl 779; Gene Mayer (USA) 730; (vi) Jimmy Connors (USA) 715; (vii) Tomas Smid (Czechoslovakia) 438; (viii) Jimmy Arias (USA) 432; (ix) Peter McNamara (Australia) 425; and (x) Eliot Teltscher (USA) 415.

ATHLETICS

At the University of California athletics meet, held at Los Angeles on May 15, Tom Petranoff (USA) set a new world record in the javelin throw (men), when he hurled the spear to a distance of 99.72m. This throw shattered the previous record of 96.72 m set in April 1980 by Ferenc Paragi (Hungary).

Anisoara Cusmir (Romania) created a new women's long-jump record of 7.21m at an international meet in Bucharest on May 15. She improved by one cm the previous record set by compatriot Vali Ionescu in August '82.

The Paris Marathon, on May 14, in which 13,000 took part, was won by

McEnroe: Clay-court champ.

34-year-old Jacky Boxberger (France) in a time of 2:12:38.0 sec. Ryszard Maraczak (Poland) was 62 seconds behind, followed by last year's winner, Ian Thomson (Great Britain).

Galina Savinkova (USSR) set a new world record in the women's discus throw of 73.26m, during a meet at Leselidze, on the Black Sea coast in the USSR. The earlier record of 71.80m was held by Maria Vergova-Petkova (Bulgaria) since July 1980.

On May 29, Yuri Dumchev (USSR) threw 71.37m at a meet in Moscow to set a new world record in discus throw. The earlier record stood at 71.16m, held by Wolfgang Schmidt (GDR), since August 1978.

MOTOR RACING

The World Endurance Championship, the 1,000-km run at Silverstone (England), was won by Derek Bell (Great Britain) and Stefan Bellof (FRG) in a Porsche. B. Wollek (France) and S. Johansson (Sweden), also in a Porsche, were second.

WATER POLO

The World Cup championships, in which eight nations took part, ended at Malibu, California, on May 15, with victory for the Soviet Union. They won five matches, edging out West Germany who won four. Italy was third.

THE TRUTH ABOUT THE WESTERNS

Courtesy USIS

Alan Ladd (left) and Brandon de Wilde in *Shane* No place for a gunman

Western movies are the most popular and enduring form of American entertainment. More than 8,000 'westerns' have been made since the Edison Company released *Rippled Creek Barroom* (1896), a short film in which hardened cowboys make a tenderfoot dance by shooting at his feet.

The appeal of the western is undeniable. It features action, beautiful landscapes, and fights between good and evil; sentiment, romance and excitement. Yet, there is more to westerns than surface thrills and grandeur. The western is an important part of American mythology. These native folk tales are the story of where America has been, and what America has become. Taken as a genre, western movies are about American history and the national experience. They reveal aspects of America's native character, photographing the American landscape, and reworking American myths and realities.

The plots of many of these films lifted

from western history books or the pages of dime novels, are stories of the American adventure. There are accounts of moving westward and settling the land, of the Indian wars, the building of the trans-continental railroad and telegraph, range wars between cattlemen and farmers, gold rushes, and cattle drives. The movies tell and retell the epic of America. They are national stories about American heroes building a new country in the wilderness, and bringing law and order to the new towns.

Western movies have taken as their theme manifest destiny, the founding of a nation, the coming of civilization, the closing of the frontier, and the struggle in the American spirit between the love of independence and the needs of the community. The open spaces, the log cabins with chimney smoke drifting into the unknown, are symbols of the American ideal.

Western movies that portray this theme are almost as old as cinema itself. Many of the earliest movies have western elements: there were newswreaths of the Buffalo Bill Wild West Show Parade, and of authentic cowboys on the range. The most popular movie ever made, and one of the first to tell a story in cinematic terms was Edwin S. Porter's *The Great Train Robbery* (1903). This story, adapted from a famous stage play, is the exciting tale of an outlaw gang that holds up a train, kills a passenger, blows open an express box, and steals a payroll. They are chased by a posse and surrounded in a wood where, after a gunfight with the lawmen, the surviving members of the gang surrender. *The Great Train Robbery* set the pattern of violent action and the conflict between good and evil that survives in westerns till today.

One of the cast members in that film, G.M. Anderson, soon became the first great western star. He made more than 375 short movies under the name of Broncho Billy Anderson. Broncho Billy, quick with his guns and good with his fists, defended helpless women and children against the depredations of evil men. He brought justice to a land without law and was the champion of the right.

Anderson was only the first of many such heroes. He was soon followed by the legendary stars of the American silent western, the handsome circus rider, Tom Mix, dressed in fancy clothes and performing impossible stunts; Hoot Gibson, also a champion rider, who played gentle cowpokes; Ken Maynard, the greatest trick rider who ever worked in the movies; and Fred Thomson, a minister of the gospel. Perhaps, the most celebrated of them all was poker-faced, two-gun William S. Hart, the good bad man who, as an actor and director, imposed his stern, realistic vision of the west on some of the finest westerns ever made. His best films, such as *The Toll Gate* (1920), are celebrations of the hard pioneer spirit and accurate recreations

Cooper as the aging but heroic town marshal in *High Noon* Parable about fear

of life on the range and in the dusty cattle towns

There have been, in the years since the days of Hart literally hundreds of men who have created westerns. But none has made a greater contribution to the genre than John Ford, who directed westerns for 50 years and did it better than anyone else. Perhaps, Ford's most famous western is *Stagecoach* (1939), which tells a story of a group of stage passengers travelling across the West who are attacked by a band of Indians on the warpath. These passengers chased across the desert are saved by the heroics of the Ringo Kid (John Wayne) and the last-minute arrival of the US Cavalry. Ford, who had the soul of a poet and the eye of a printer, made movies that were celebrations of the American west and the American character, and *Stagecoach* is no exception. The movie is a story of heroism and sacrifice, of the battle for the settlement of America, of the cruel horrors of the Indian wars, of the nobility and courage of the Indian warriors and the white cavalry, and of a certain kind of chivalry among men, and between men and women.

Ford's interest in the works and days of the pioneers and the law bringers is nowhere more evident than in another of his lovely, authentic westerns—*My Darling Clementine* (1946). The movie is based on the book, *Wyatt Earp Frontier Marshal* by Stuart N. Lake. Lake knew Earp personally and set down the lawman's story of the coming of justice to Tombstone and Dodge City. Ford tells

Marshall Earp and his gang, led by his brother, who ends with the most famous gunfight in the annals of the west, when the Earp brothers and an ailing Doc Holliday shoot it out with the Clantons at the O.K. Corral.

My Darling Clementine is an exciting western—and something more. Ford has taken this story of a family feud and made it into a saga of the coming of law and civilisation to the west. Schools and churches are being built, the rough pioneer life is giving way to settlement. The movie is a celebration of the pioneer spirit.

The nationalistic concerns of *My Darling Clementine* are echoed in other westerns over the years. The theme of empire and great deeds can be seen in Howard Hawks' epic *Red River* (1948), a sweeping story of the opening of the Chisholm Trail by Texas cattlemen so that they can drive their herds from Texas to the railheads in Kansas and Missouri. *Red River*—which features exciting stampedes, gunfights and Indian battles—is based on one of the crucial events in the development of the American cattle business. It features Wayne in one of his greatest roles Tom Dunstan, the iron-hearted cattleman who is obsessed with moving his cattle across some of the roughest country in America.

The growth of the cattle empire, one of the epic stories in the settlement of the west, is also the basis for George Stevens' *Shane* (1953), a western about the wars between farmers and cattlemen in the range lands of the far west. The movie is a parable of the confrontation between good and evil, the villain is dressed in black, the noble gunfighter Shane (Alan Ladd) is costumed in elegant white buckskins. The story, as seen through the eyes of a young boy, has a tragic tone. Shane, the man of violence, has no place in the emerging civilisation of the west. He kills in order that the farmers may till the soil, but, when his grim task done, he must ride away because he does not belong in a land where swords will be turned into plowshares.

Perhaps the most famous of such bitter westerns is *High Noon* (1952). The story concerns an aging marshal (Gary Cooper) who discovers that four men are coming to town on the noon train to kill him. His Quaker bride urges him to flee, but he decides to stay and fight it out. He appeals to the townspeople he has so long protected, but they turn down his pleas for help, fearing for their lives and property. The marshal goes up against the killers, and triumphs, but the ending is tragic for him and

with his wife. *High Noon* was made in the US when suspicion of communism was cast on many thousands. Its writer, Carl Foreman, and its director, Fred Zinnemann, have told us that the movie is a parable about the fear that turns friend against friend, about times when men will not stand up for each other.

There is no time in history when there have been fewer westerns made than in the last several years, and most of those have been of little interest. Many of the major western directors are dead or retired, and, except for Sam Peckinpaw, few of the younger directors are interested in the genre. Even Wayne, long the stalwart actor of the genre, had turned to making police movies. Westerns have lost, at least temporarily, some of their traditional popularity, and one is tempted to speculate about the reasons. The western is basically an affirmative, nationalistic genre, celebrating the courage of the pioneers and lawmen who settled and tamed the American continent. But there is something in the national mood of recent years that no longer believes in or responds to the overly idealistic virtues of the western. Many of the westerns released in recent years have, in fact, gone against the values of older westerns. These new films are bleak, hard looks at genocide against the American Indian or the corrupt nature of the American hero.

Of recent revisionist westerns, Sam Peckinpaw's *The Wild Bunch* (1969) is, perhaps, the most interesting. The movie tells the story of the closing of the frontier and the fates of men who have lived out their time. The 'heroes' of the movie are a gang of tough bank robbers who, down on their luck, are chased across the Mexican border by bounty hunters. These outlaws, aging and out of place in the civilised west, become involved with the Mexican Revolution. The final moments of *The Wild Bunch* are a tribute to the courage and decency of these men who, having lived by force, decide to die with honour rather than live out their lives in poverty and fear.

Many other recent westerns also call into question some of the assumptions and values of the traditional westerns of such men as Ford and Howard Hawks, but these new westerns still feature the great deeds, the love of the land, and the bigger-than-life heroes that have made the western movie a permanent part of American folklore.

MAKING OF A CAPITAL CITY

The Capitol Made to order by Washington

Have you ever heard the story about why Washington was made the capital of the US?

After the American Revolution the US needed a capital city. Vying for that honour were various cities and sections of the country. Finally, as a compromise, it was decided to create a new city. Congress passed a new bill in 1790 giving permission for a site to be chosen somewhere near the Potomac River and not over 10 miles square (25.9 sq km). It was to be called the District of Columbia (D.C.), after Christopher Columbus, and the city to be built on it named Washington in honour of the country's first President, George Washington.

In 1791 Washington chose the site where the city now stands. He thought it was a good location because the Potomac River was deep enough for ships to come as far as the city.

The land was given to the Federal Government by the states of Maryland (about 165 sq km) and Virginia (about 93 sq km). Later, in 1846, Virginia, at its request, was given back its share of the land.

Washington chose a brilliant French engineer and architect, Major Pierre L'Enfant, to design the new city. The plan called for broad avenues lined with trees, beautiful government buildings, and monuments to honour great men.

By 1800, the President's house was nearly ready. The capital was built on a hill, renamed Capitol Hill, for the building in which Congress was to meet. In 1800, President John Adams and other members of the government moved to the new Federal city Washington, D.C.

PRESIDENTIAL QUIZ

1. Which US President never lived in the White House?
2. Who was the first US President to live in the White House?
3. Who was the only US President whose father was once the country's President?
4. Who was the first US President to be born under the American flag?
5. Which US President entered the White House with the largest number of children and stayed in it for the shortest period?
6. Who was the only bachelor President of the US?
7. Who was the only US President who has not seen the inside of a school?
8. Who was the only US President to be impeached?
9. Who was the only US President to serve two non consecutive terms?

PRESIDENTS IDENTIFIED

1. George Washington (1789-1797) & (1793-1797) the first President of the US, was the only President who died before the White House was ready.
2. John Adams (1797-1801), the second President of the US, was the first to stay in the White House in November 1800.
3. John Quincy Adams (1825-1829), the sixth President of the US, was the son of John Adams, its second President.
4. Martin Van Buren (1837-1841), the eighth President, born on December 5, 1782 (American Independence was declared on July 4, 1776).
5. William Henry Harrison (March 4, 1841-April 4, 1841, the ninth US President) with 10 children (6 sons and 4 daughters).
6. James Buchanan (1857-1861), the 15th President of the US, was the only bachelor President. The position of a hostess for the President was filled by his niece, Harriet Lane.
7. Abraham Lincoln (1861-1865), the 16th President of the US, from log cabin to the White House.
8. Andrew Johnson (1865-1869), the 17th President of the US, was the first President to be impeached.
9. Grover Cleveland (1885-1889), the 22nd President of the US (1893-1897), was the only President to serve two non consecutive terms.
10. Benjamin Harrison (1889-1893) the 23rd President of the US whose grandfather was W.H. Harrison (ninth US President).
11. William Howard Taft (1909-1913) the 27th President of the US, was

10. Who was the only US President whose grandfather was also the country's President?
11. Who was the only US President to serve both as President of the US and thereafter as Chief Justice of the Supreme Court?
12. Who was the only US President whose wife died in the White House and who remarried in the White House within the term of a year?
13. Who was the only US President to be sworn in by his father?
14. Which US President remained in office for the longest period in the White House?
15. Who was the first US President of the Union of 50 states?
16. Who was the first Roman Catholic and the youngest US President to enter the White House?
17. Who is the oldest President to enter the White House?

Mervin J Lobo Bombay

the only President to serve both as President and later on as Chief Justice (1921-1930).

12. Woodrow Wilson (1913-1921), the 28th President of the US, married twice: (i) Ellen Louise Axson—married in 1885, died on August 6, 1914, aged 54; (ii) Edith Bolling Galt (who had married Norman Galt, in 1896, a Washington jeweller who died in 1908) married Woodrow Wilson on December 18, 1915.
13. Calvin Coolidge (1923-1929), the 30th President, was the only President to be sworn in by his father, John Coolidge, a Notary Public who gave him the oath of office.
14. Franklin Delano Roosevelt (1933-1945) the 32nd President of the US, stayed for the longest period in the White House.
15. Dwight David Eisenhower (1953-1961), the 34th President of the US, was the first President of the Union of 50 states. Alaska entered the Union and Rank on January 3, 1959 and Hawaii on August 1959.

Kennedy

Reagan

16. John Fitzgerald Kennedy (1961-1963), the 35th President of the US (aged 43 years) was the youngest President to enter the White House and its first Roman Catholic President.
17. Ronald Reagan (1911-1918) the 40th President, born February 6, 1911.

Centre-Stage

INDIAN DANCES-1

India has hundreds of dialects, innumerable styles of music and scores of dances. Each of them has a distinct style and a history of its own.

The origin and development of each kind of dance depended to a large extent on the patronage accorded to it. The development took place over the years, with the various transitory stages almost merging into each other. The nature of society and environment prevalent in different eras and places, too, had their share in the metamorphosis of the art of dance.

Dance and drama, along with music have existed in India since times immemorial. Our epics have passages with references to dance and music. In Ramayana, King Dasaratha invited the entire community of dancing girls to attend the *Aswamedha Yagna* (the horse sacrifice). In Mahabharata, Arjuna, in his period of exile, disguised himself as a dancing master and taught this art to Princess Uttara and other women at the court of King Virata.

The epics were followed by classic literary works where dance figured time and again. Kalidasa, the great poet-dramatist who lived in Ujjain during the reign of Chandragupta II (376-414 A.D.), reveals the high status of dance and art in general in his works. In Kalidasa's drama, *Malavikagnimitra*, the heroine Princess Malavika, pupil of Ganadasa, exhibits the art so perfectly that her guru remarks: "Whatever I teach her she grasps so quickly and reproduces so perfectly that she seems to teach it again to me." Similarly, Kalidasa also describes dancers of Mahakala

temple in the play *Meghadoot*.

The invasions and the resulting chaos did not succeed in obliterating the art of dance. The continuing and enduring popularity of the epics in drama, dance and song proclaims the deep devotion of Hindus to the epic heroes of India.

Origin The origin of the Hindu classical dance from the four Vedas is recorded in the first chapter of the *Natya Shastra*. To put this knowledge of the Vedas to use, Brahma the Creator asked Bharata to compose a dance-drama (*Natya*) and present it to the Gods.

Bharata took up this task, but then he felt drama would be incomplete without women so he approached Brahma, saying, "At the time of Siva's dance I have seen his graceful style appropriate to the erotic sentiments, and this is endowed with gentle *angaharas* (dance sequences) and has *rasas* (sentiments) and *bhavas* (states) and action as its soul. This style cannot be practised properly by men without the help of women." Then Brahma created nymphs (*apsaras*) who were skilful in embellishing the drama.

Tandava, the classical dance, takes its name from Tanduvu, the celestial attendant who instructed sage Bharata in the use of *angaharas* and *karanas* (units of dance in which gesture, step and attitude are coordinated in a harmonic rhythmic movement). A sequence of six or more *karanas* is an *angahara* (*anga + hara*).

Anga means body and **Hara** is a name of Siva, creator of the *Tandava Nritya*. *Tandava* comprises 32 *angaharas* composed of 108 *karanas*.

The Siva temple at Chidambaram in Tamil Nadu has its walls sculptured with figures of 108 *karanas*. All these are women depicting diverse cadences and expressive moods of the dance.

Features (rasas) Hindu aesthetics define sentiments or *rasas* of different varieties. They are the 'erotic', the 'heroic', the 'pathetic', the 'marvellous', the comic, the 'odious', the 'terrible', and the 'furious'. The 'peaceful' mood, too, is included by some. These are the permanent moods and together these nine are the *Navarajas* (nine *rasas*) and the basic source of all emotional states and transitory moods of drama (*natya*) and expository dance (*nritya*).

The rhythmic exposition of moods, sentiments and ideas by means of gestures, facial expression and movements of the body is called *abhinaya*.

Postures The ideal postures of the body are another aspect in the art of

dance. The deviations of the body from the central plumb line are classified as *bhargas* (bends). The four main postures are *sanabhanga* (equal bend or equipoise), *abhangha* (a slight bend, where one hip is gracefully raised, and body weight is on one leg); *atibhanga* (great bend with the torso diagonally inclined and knees bent in the manner of a plier), and *tribhanga* (triple bend, with one hip raised, the torso curved to the opposite side and the head tilted at an angle).

The fundamental postures of dance are called *stana*.

Apart from postures, the movement of hand, head and eyes, and display of emotion, all in coordination complete a dance sequence.

Movements: Every movement of the head and eyes indicates mood, and movements of hands, too, have a specific meaning.

Head movement indicates moods like serenity, dignity, divinity, surprise, joy, anxiety, pride, self adulation, sorrow, remembrance, yearning, unwillingness, frenzy, eroticism, rejection, indifference and many others. The chest movements, too, have meanings like 'drawn in' for shame, fear 'heaved up' for pride, courage, 'raised' for viewing and so on.

The eyes ought to be in conjunction with the head, hand, waist and the body. The moods range as in the head movements.

Swamy, New Delhi
(To be continued)

On The Lighter Side

"What's the difference between thrifty and stingy?" a boy asks his father.

"Well, if I buy myself a cheap coat," the father explains "I am thrifty. But if I buy your mother a cheap coat, I am 'stingy'."

Inquisitive tourist: And whose skull is that one?

Tired guide: That, sir, is the skull of Julius Caesar.

Inquisitive tourist: Then whose is that small one beside it?

Tired guide: That, sir, is the skull of Julius Caesar when he was a little boy.

Cherian Thomas, New Delhi

At an Indian international airport, a foreigner asks of an Indian lady the correct time. "It's past 3 a.m.," comes the reply. "Is it GMT?" the man wants to know. "Oh, no," says the lady "It's HMT."

Manoj Nigam, Ghaziabad

HAIRDRESSING BY COMPUTER

Students at a British school of hairdressing, especially geared to the needs of students from other countries, will be able to use a computer as an aid to ensure perfect colouring or permanent waving for their models.

The Regency International School of Hairdressing, opened at Brighton, on the English south coast, on June 1, will have a qualified, bilingual (English-French) staff. They will instruct beginners, intermediate and advanced students in every aspect of the craft from traditional methods to modern techniques.

The school's computer will remove the guesswork from students' decisions about the hair they are working on. Detailed information on the condition, length, diameter and colour of hair and details of the shade required by the client will be fed into the computer, which will then produce—both on a screen and a print-out—the exact formula needed for perfect results.

Similarly, for permanent waving, the computer will process the appropriate information and tell the hairdresser which lotions should be used, how long they should be left on, and how they should be neutralised. If required, an analysis of shampoos and conditioners for use in the client's home can also be obtained.

Michael Cox, the school's Director, explained: "After the students have been taught to make their own analysis of the correct perming or colouring treatment required by the client, it will be checked with the computer to verify 100 per cent accuracy. Thus, the students learn to perfect their judgment, which will be invaluable to them when working in other environments where computers

may not be available."

The school claims that its six-month beginner's course will offer intensive training more thorough than that normally gained in a three-year apprenticeship. It will deal with everything from hygiene and salon etiquette to advanced fashion colouring, ending with a diploma exam.

Shorter specialist courses for experienced hairdressers and an intensive marketing and management course for those intending to set up their own hairdressing business are also offered.

For further details, address all enquiries to Michael Cox, Director, Fitzherberts Hairdressing Salons, 42 Preston Street, Brighton, East Sussex BN1 2HP, England.

CAR FOR THE DISABLED

Freelancer: Kit for confines.

Disability, it would seem, isn't a disability at all (no pun intended) if one goes by Detroit's track record in churning out special systems for the physically handicapped. One such has been marketed by Ford Motor Co in cooperation with England's Gowings Mobility International under the 'Freelancer' trademark. This new integrated car-and-wheelchair system enables the disabled to drive without having to leave his wheelchair.

Prior to this development, vehicles for wheelchair confines who drive themselves were always special designs differing greatly from standard-make cars. The custom design enabling the disabled to get in and out of the vehicles in question noticeably reduced the resale value of the vehicles and immediately drew attention to the driver's disability.

can be built into any car without affecting its performance or looks. The system, priced at about 9,350 marks, consists of three parts: a floor frame, a swing-out arm to lift in the wheelchair and easy-to-operate electric controls. This accessory system is relatively simple to install in place of either of the two front seats. It is just as easy to take out again so that the car in question can be returned to its original state for putting it up for sale. The system, which is fitted to the individual wheelchair, remains with the disabled person for instalment in the next car he buys.

FROBE: SIMPLY FUNNY

Gert Frobe, 70, catapulted to international fame as James Bond's Goldfinger in 1965. With a distinguished stage career behind him and his mercurial appearance on screen, Frobe has left an indelible impression on film-goers

Frobe with soccer star Sepp Maier (left) and film star Uschi Gles: Class comedian, baddest 'baddie'.

worldwide. He started off as an apprentice stage designer—and made it to the top by being "simply funny". Among his major successes: *Berliner Ballade* (1948), where he sparkled with cabaret wit; *The Darling Young Men In Their Flying Machines*, where he is typecast as a clumsy Prussian. Among the other roles he has portrayed: crotchety colonels, crafty rogues, blustery heroes and heavy-set villains. (His wrinkled face and bristly hair got him the role of Goldfinger—a craze among American and British cinema-goers). But, basically, he has played the simpleton in innumerable movies, a part which has regaled the Germans for years. Contrary to his looks, he likes subtle sounds—Morgens-terns lyrics seem to be his favourite: he recites them while on tour.

Happenings

MUSIC

Composer rajesh

FOR YOUNG poet-composer rajesh, life in recent times has seen hectic periods of "infinite confusion", ever since he decided to set his poems to music and get them recorded. Early last year, the end product, *Infinite Fusion*, finally hit the turnstiles and landed him and his group a slot in the Jazz Yatra '82 festivities

The making of the album makes interesting reading. Dureco, a small Dutch recording company, decided to sponsor rajesh's (who insists on spelling his name with a lower case) music, which he had jointly composed with Ustad Shamim Ahmed, Ravi Shanker's famed disciple.

Working on a shoe string budget, rajesh decided to fly to the musicians spread out in London, San Fran-

isco, Los Angeles and Bombay, rather than the other way around, and record on multi-track. Besides, he personally directed, mixed, edited and produced the entire effort.

The cream of Hindustani classical music talent (Pandits Hariprasad Chaurasia and Shivkumar Sharma and Ustads Zakir Hussain, Rias Khan and Shamim Ahmed) with India's leading jazz musicians (Braz Gonsalves, Louis Banks, Ranjit Barot and Xerxes Gobhai) fused their diverse talents in its making, not forgetting rajesh's musical contributions.

The music, in the words of a foreign reviewer, was aptly described as 'fusion music', with a strong Indian influence, but imaginatively and tastefully coordinated with Western arrangements and instruments. However, despite ecstatic foreign reviews, the album did not click in the local market as the recording company did not do its bit to promote the record.

rajesh is averse to personal publicity and would rather

let his music speak for itself. "Write about my music, not about me," he demurs.

Far from resting upon his laurels, rajesh has already recorded tracks for a second album, featuring Dallas Smith of San Francisco on lyre, sax and flute. Smith was also present on the first album and performed at the Jazz Yatra with the group. rajesh is also in the music promotion business, and plans to stage a few concerts this year.

Will the release of his second album propel this young composer into national prominence which should be a just reward for his constant endeavour?

THE BRITISH rock band, Lea Hart and the Roll-ups performed two gigs in Bombay and also played in Pune, Goa and Bangalore in mid-May. One of the two albums to their credit, *Born In Bangkok*, is planned to be released here to commemorate the visit.

Melody, Bombay

Club Desk

There was one common feature in most of the letters received at the Club Desk: nearly all CCTimes clubs nationwide have been flooded with applications for membership, but quality-conscious organisers are screening members thoroughly before taking them in. Excerpts

CCTimes Club, V K Nagar, Durgapur, organised a quiz contest in which 28 teams participated. The club held written tests out of which eight teams were selected for the oral quiz. Club member Sanjeev Agarwal and his two teammates won the first prize. The second and third prizes were won by teams captained by Chirantan Dhar and Dipanker Ganguly. The club hopes to organise another quiz contest soon.

CCTimes Club, B. I. T. Sinde (Bihar), held debate and quiz contests recently. Among the debate topics, 'Launching of Rohini Satellite', '1983—International

Telecommunication Year' and the Assam and Punjab problems.

CCTimes Club Bangur Nagar, Gurgaon (West), Bombay, organised a quiz contest and the response was "terrific". They also held discussions on two topics: 'Evils of Dowry' and 'Population Control—A Civilian Birth Right'.

CCTimes Club, Dhurva Ranchi, has "been flooded with applications" for membership but its organisers "have turned down all the requests keeping in view that quantity doesn't make quality". The club organised a debate on 'Whether India Should Hold (The) 1992 Olympics' and had on its panel of judges, some prominent professors of Ranchi University.

Hobby Hints

WANDERING EGG, "Have you ever seen an egg walking?" "No", chorus the spectators. You could prove they're all wrong. How?

Place an egg on the table and chat with the audience. Tell them this trick even baffled Lady Diana. They will

listen, but will also eye the egg and your hands for some plausible trick. Feign you caught their suspicious looks and move away from the table showing them there's nothing you're doing. After five minutes or less, move your hands over the egg and lo-and-behold the egg moves. What's the trick?

The egg was fixed-up. What you do is make a pinhole at one end of the egg, empty it and then dry it. Insert a small insect through that hole and wax it, leaving an opening for air passage. While you're chatting, the insect is getting all set to explore the innards of the egg. As the insect moves, so will the egg.

Note: A lazy insect won't do as the trick may misfire.

Anjam Em, Lucknow

RIDDING TIRED FEET. Those going hiking, trekking, jogging or mountaineering often get tired feet. To get relief from this, put a tablespoon each of vinegar and salt in a bowl of very hot water. Keep another bowl of cold water nearby. Now dip your feet in hot and cold water alternately.

Anju Khanna, Madras

Looking for a BANK JOB?

You also can secure a well paid bank job by passing the qualifying examination conducted by banks from time to time. Every year about 25,000 candidates are recruited by banks for which over ten lakh candidates appear for the examination. But only well prepared candidates can pass the examination. How can you become a successful candidate?

ALPHA the largest specialised bank recruitment training institute in the country, offers excellent result oriented oral/postal coaching by experts for

**Probationary Officers
Clerical Cadre**

CAIIB

RBI A & B Grade

LIC, GIC, etc.

Study materials prepared on the basis of the previous question papers will be despatched to the students at frequent intervals. Test of Reasoning and Numerical Ability/Quantitative Aptitude are made simple. Lessons on bank interview techniques will be given free to the successful candidates.

Every year Alpha's students are securing bank jobs. Why not you?

For detailed prospectus send Rs. 2/- by P.O. or M.O.

INDO-PAK RELATIONS

Group Discussion: Is Democracy The Best?

Energy: The Other Alternative

PURUSHOTTAM GOYEL SPEAKS SUCCESS

“There must be a good reason why a vast majority of those who join Banks in India as Probationary Officers are NSB students.”

Obviously! Our un-matched Specialisation and Expertise.

Take, for instance, the results of last year's PO exams held throughout the country. A majority of students who were called for interviews for the post of Probationary Officers were NSB students.

This is possible only because of NSB's professional commitment in covering exhaustively all subjects for objective and descriptive tests through specialised practice papers and books.

A continuous research in past exams and on-going programme of preparing typical exam questions have also contributed to our present pre-eminence as the Central Institute for Bank Recruitment training in India today.

Success-oriented students join the NSB Courses and benefit immensely from them. The same opportunity is also open to you. So enroll now to reap a rich harvest of a rewarding career in India's fast growing Banking industry

BANK RECRUITMENT

PROBATIONARY OFFICERS/CLERKS

"Specialised Training in NSB Regular/Correspondence Courses has proved to be the guaranteed way to secure jobs in Banks as Probationary Officers & Clerks."

-says Editor, Citylight, Bombay.

If you have applied to State Bank of India or any Nationalised Bank Boards, for PO or Clerical Post, join our Course now.

Banking: A Rewarding Career:

Nearly 2500 Probationary Officers are recruited every year by Banks in India. This avenue of direct recruitment as Probationary Officers in Banks offers a promising career for bright young people today. Any graduate between 21 and 28 years can apply for the post. The job brings a handsome remuneration, security of service and job satisfaction. The work content is rich and varied. And, after nationalisation, Bank jobs have acquired a new status, because now the Banks have taken upon themselves the responsibility of building a better India. Today, in our Banks, our social ideals find a dynamic expression. Bank jobs, therefore, offer the opportunity and challenge to participate in shaping our country's future.

Our Professional Commitment

We teach in regular Courses at Bombay, Pune and by POSTAL TUITION throughout India for objective and descriptive test of PO exams. All subjects: (1) Reasoning (verbal, logical, non-verbal) (2) Quantitative Aptitude (3) General Awareness and Current Affairs (4) English Comprehension (5) Essays, letters, précis writing - are covered exhaustively. Specialised practice books on all subjects covering thousands of typical and actual exam questions are supplied in the Course. These books are not sold to others.

Success Earned is Success Deserved:

We are just a few years old, but our successes have been noted across the country. Help and recognition have come from everywhere and in abundance. Test after test, hundreds of our students join the 20 Nationalised Banks, State Bank, Associate Banks, LIC, GIC, ECGC as Officers. The subjects, syllabus, pattern of tests and examining body (NIBM) for all these exams are same. Naturally we have a single common BRPO course for all these exams. Success oriented students join the Course well in advance of the test and benefit by our step-by-step and exhaustive coaching. Admissions are open round the year but the number of admissions is limited to the number of vacancies declared by Banks.

Selection on Merit through Competitive Exams:

When vacancies of Probationary Officers, Clerks are declared at intervals of almost every three months by one Bank or another, large numbers apply for them and appear for the intensely competitive exams based on general intelligence tests. Standards of evaluation are most rigorous and impartial. The percentage of success is lower than 0.5%. In 1979-80, from a total of 5½ lakh applicants, 2300 were taken as POs by Banks. Therefore, every single additional mark that you can get becomes important. A provenly competent, specialised and thorough coaching becomes a MUST.

NSB's Faith in Specialisation:

National School of Banking, headquartered at Bombay, was founded a few years ago as a specialised institute providing coaching mainly for BANK RECRUITMENT exams - of POs and Clerks. It has grown rapidly and is now the largest pre-recruitment training institute in the country. Our continuous research and on-going study of objective and descriptive exam question papers have contributed to our present pre-eminence as the central institute for BANK RECRUITMENT training.

The entire course materials and books are supplied on urgent basis in large instalments to those whose exams are scheduled soon.

JOIN NOW AND PREPARE FOR A RICH AND REWARDING CAREER. For details of vacancies, application forms and our special courses, write today with Rs. 2/- P.O. or M.O. to.

**We have a
Guaranteed Success Course
for Bank Clerical Exams.**

A State Ravaged

Once crowned as the most progressive Indian state and cited for its commendable communal harmony, Punjab today is a state ravaged. Chaos and confusion seem to be the watchwords of its daily life. The police force is nothing but a bunch of hapless jokers. Fanaticism and religious bigotry rule the state. And the government, like a helpless maid, scolds, screams and sobs while the tyrants cut their cake and eat it too. In between Atwais and Prithipais are killed by religious fundamentalists and anti-social elements. Tears are then shed, obituaries read and a new volcano explodes.

Will Rome keep on burning while Nero fiddles?

Deepak Kapoor, Sohna (Haryana)
Best Letter Rs 40

Indira's India

Dismaying politics, drifting economics and a near certain crime explosion in a few years that's where India is heading or under PM Indira Gandhi's dynamic leadership. And you say she is a winner and fighter (*Indira Gandhi: What Makes Her A Winner* June 83). It's just beyond comprehension.

Rajkumar Jain, Bhawanimandi

The author has overlooked the other side of Indira Gandhi's success: her policy of 'divide and rule' which has a lion's share in it.

O V Channawar, Wardha

What made her a winner was her defeats—a perfect example of the indefatigable spirit anyone of us can achieve.

Siju J Dominic, Trivandrum

America's Afghanistans

Apropos your *Focus* on Afghanistan (June 83) one wonders at the vigour of the American reaction: it has its own share of Afghanistans—the Bay of Pigs,asco in Cuba, the Vietnam war and the recent meddlings in El Salvador and Nicaragua. Doesn't this harsh protest on Kabul hide chagrin and pique at (i) losing a strategically placed (potential) ally to the Reds and (ii) inability to recognise the negative vibes originating

Swell Swill

The swell performance of newspapers (*Current Events*, June '83) is not something to brag about: the statistics show that more people can now afford the luxury of a newspaper. In many homes, newspaper is only a status-symbol. By noon half of it disappears as a wrapper to something and by evening, the rest becomes part of swill. And our young rarely read newspapers.

Not that there is much for them to read. None, being *The Hindu*, care to carry special weekly editions on education, science, economics, industry, etc. Would we live to see the day when we'll lack the time to go through the entire paper, like they say about *The New York Times*?

Lakshmi Kamalakar, Delhi
Prize-winning Letter: Rs 25

from Afghanistan since the April 78 Saur Revolution and taking prompt action?

Sandeepan Banerjee, Ranchi

Something Is Nothing

We in India have for long been the victims of a worthless political legacy. But then we are also to be blamed for carrying on this legacy without effecting any real change to suit our needs, circumstances and national aspirations. When intellectuals and the powers that be have nothing concrete to offer as a change in the system, they indulge in hollow phrases like 'something need be done'. Ironically, this 'something' has only exposed the poverty of practicable ideas from which most of us suffer.

Jogendra Krishna, Arrah

Walesa: Wonder Worker

Lech Walesa (*Poland Anti-Workers* June 83) leader of the banned independent trade union Solidarity, has given new blood and spirit to the motto 'Workers of the World, Unite!'

Lalit Choralis, Gauhati

Hacking History

I disagree with you on *Gandhi* (June 83). The motion picture underplayed British repression and cruelty and played down his history.

Saurabh Taneja, Varanasi

Once again the critics have to teach us new things. They made the film, viewed it with love and affection, awarded it, learnt and are learning things from it. But we Indians! Are we so unworthy to see a movie of our own man because screening of this film is met with resistance?

Are we Indians collectively insane?

Trumal Mundergi, Shorapur

Bridging The Gap

CCTimes' main attraction differentiating it from the other drab, uninteresting publications dealing with the same subject is its varied form. I've qualified as a PO in the SBI—and from my experience in these exams I feel it's the knowledge about music, theatre, art and the like which makes the difference between the winners and losers. Such articles in *Mini Mag* keep us in small towns informed of the various cultural activities going on in the capital and other big cities.

Niranjan Mathur, SBI, Gorakhpur

US States

The US has 51 states and not 50 as you say (*CCTimes Quiz Contest 1 and Know The World USA* [July 82]).

Devinder Kumar, Raheer, Amritsar

The US has only 50 states. District of Columbia is not a state though it is often grouped with them. Source: USIS.

Just One Point

The new CM of Himachal Pradesh is Vir Bhadra Singh, not Vir Bahadur Singh as mentioned in *Current Events: National* (May '83).

The picture on page 12 (July 83) was wrongly credited to USIS.

The errors are regretted—Editor

Hello folks...

Shanker, a wealthy merchant, was leading a carefree life. One fine day, he felt his eyes were popping out. Some minutes later, he could hear bells ringing in his ears. The sensation recurred first at long intervals, then rapidly. Fearing he had been attacked by some dreaded virus, Shanker rushed to a medical practitioner who advised him to see an ENT specialist. The specialist's diagnosis: enlarged tonsils. Treatment: operation. Shanker got himself operated and was cured.

A few months later, the strange sensation returned. Shanker now went to a better qualified doctor. The latter suspected pyorrhea and suggested Shanker see a dentist. After a thorough

check up, the dentist confirmed the physician's diagnosis: acute pyorrhea. And recommended extraction of all teeth. Shanker followed his advice and was cured.

Some months passed by and the weird sensation returned again. This time Shanker drove to the capital and consulted the best doctor in town. His diagnosis: Shanker indeed suffered from enlarged tonsils and acute pyorrhea. But it was too late now. Nothing could be done as the infection had spread everywhere in his body.

Thinking that his life was drawing to an end, Shanker decided he would live his last days in style. His first plan was to buy himself a new wardrobe. He chose the most expensive tailor to fit him out. The tailor, while taking down Shanker's measurements, noted 14½ inches as his collar size.

But my collar size is 14 inches, Shanker told him.

No sir, it's 14½, the tailor checked again.

But I have been wearing size 14 for the last three years. I refuse to change it.

Right sir, your collar will be size 14. But do not come back to me and say that your eyes are popping out and that you can hear bells ringing in your ears!

The predicament in which Shanker found himself can be avoided if we do not jump to conclusions at once. Learn to give importance to what, at the moment, may appear to be insignificant. For instance, if an electrical gadget in the house stops functioning, first check for minor faults like the plug, socket, switch, etc., before calling the mechanic. You can save yourself the trouble of living without the gadget till the busy mechanic arrives. Also, think of the money you would be saving. The unfortunate habit of thinking in extremes can be expensive and painful, as Shanker found to his utter dismay.

You can overcome this habit if you change your approach to a problem—examine it from below, not above. In other words, check the most unimportant cause first and then the more serious ones.

Take an example. You are preparing for the Indian Civil Services Exam which is only two weeks away. You are studying seriously and methodically.

You have a study schedule for each day. One night the electricity fails. Since it is only your house that is without power, you assume it is the fault of the sub-station nearby and lodge a complaint with them. The electrician arrives after three hours and finds that there is nothing wrong with the current flow to the meter. The fault is with the main fuse. You too could have fixed it.

The from below upwards approach is not only sensible but also economical. You move up step by step, eliminating the less important causes till you reach the right cause. In this process you may identify many minor defects which might create problems in the future. You are checking the various electrical points and fuses; you will tighten many others also which could loosen in the following days to disturb your studies. Above all, you escape the misery of feeling you've been cheated and take for a ride.

This approach can also prove to be both interesting and informative. Provided you follow it step by step, you will find that it is not unlike carrying out an investigation. Why not be your own detective? This way you would have first-hand knowledge of the problem and need not depend on outside reports. The from below upwards technique will get you into the habit of paying attention to the small things in life.

Do not get too impatient if it does not bring success initially. This attitude cannot be developed overnight. Practice it first with day to day problems. Very soon, you'll find it's become second nature with you. In moments of emergency, you'll become the best person to have around as this approach will give you no opportunity to lose your cool.

Within a short time, it will become a part of your work strategy. Nothing will miss your eye. Decision making will not be as difficult as it normally seems. Your methods will get results and you'll wonder for your career.

So, how about making this approach a way of your life?

K. H. Khan

**Make your gums strong.
And give your teeth a long life.**

Only Forhan's has an exclusive astringent to strengthen gums.

The tingling sensation tells you it's actually working:

Even healthy teeth need the support of strong gums — if gums become weak and spongy, your teeth no longer have a firm foundation. That's why Forhan's is formulated with an exclusive astringent that helps to tighten and

contract the gum tissue. The tingling sensation you feel when you brush your teeth with Forhan's is the astringent at work — making your gums stronger, firmer. So that your teeth stay healthy longer.

So give your teeth a firm foundation — Use Forhan's the toothpaste with an exclusive astringent.

If your gums are weak, even healthy teeth become loose.

Forhan's exclusive astringent tightens gum tissue

making your gums stronger, giving your teeth a long life

Trust Forhan's It's the toothpaste created by a dentist.

TEST YOUR WORD POWER

FOCUS

INDIA'S DEFENCE POLICY SELF-RELIANCE AT ANY COST

BY P N KUMRIA

Despite India's desire to live in peace and amity with her neighbours, it had to face four wars in less than four decades. Even as we were celebrating our independence, tribal hordes from Pakistan poured in in large numbers to annex Kashmir. Our hurried armed response repelled the attack. But Pakistan was able to keep a portion of Kashmir under its illegal occupation.

Pakistani attack on Kashmir was, nevertheless, followed by India's quest for peace. Jawaharlal Nehru worked actively for establishing good neighbourly relations through *Panchsheel*. However, after incorporating Tibet, India's other neighbour, China, raised border disputes with us along the 3,520-km-long border. In the early 60s they successfully occupied 22,400 sq km of Indian territory in Ladakh to open up the Sinkiang-Aksai-Chin Road that linked China with its last military outpost with Russia. After forcing upon us a war on two fronts that divided our military forces, China withdrew with the Sinkiang-Aksai Chin Road under its possession.

We were again victims of an aggression by Pakistan in 1965, when another attempt was made to annex Kashmir. Our forces gave a befitting reply and foiled the Pakistani attempt. In 1971, we were drawn into the fourth war when millions of refugees under Pak repression poured into our country from the erstwhile East Pakistan. Our economy groaned under the heavy burden of feeding and maintaining the hapless millions. When Pakistan attacked us in the Western Sector, our counter-stroke was masterly and our forces emerged victorious taking 90,000 prisoners of war. In the west, we pushed back the Pak forces into their territory from Rajas than to Kashmir sectors. We were magnanimous in victory. As former

East Pakistan became a free Bangladesh and our forces returned to India after completion of a difficult task. Prime Minister Indira Gandhi successfully concluded the Simla Agreement with the then Pakistan Prime Minister, Zulfikar Ali Bhutto. We returned their prisoners and the captured territory on the basis of an accord that all issues, including Kashmir, be settled bilaterally and without recourse to armed conflict.

The wars thrust upon India brought home the realisation that we will not be able to develop ourselves unless we have strong, adequate and well equipped defence forces to protect our sovereignty.

Security environment

Rising tensions in the world have increased the threats to our

security even more. The breakdown of disarmament and Strategic Arms Limitation Talks (SALT) have increased global hostilities with particular reference to South, South-East and West Asia. A new US strategic consensus has emerged that perceives Pakistan as a 'front-line' state against the Soviet Union. China is a king-pin in the US military plans and plays an important part in the American strategic consensus which has established a US Central Command (CENCOM) whose operational jurisdiction covers an area of 20 countries from Egypt in the west to Pakistan in the east and Kenya in the south. CENCOM controls the erstwhile Rapid Deployment Force (RDF) of over one lakh troops located in Tampa (Florida), which can be brought to the scene of

another dimension to the strife-torn region bordering the Persian Gulf and the Arabian Peninsula which holds two-thirds of the world's oil deposits, that are of vital interest to the US. The emergence of Pakistan as a front-line state has resulted in a massive supply of arms from the US and China. The \$3.2 billion US arms-aid package has enabled it to acquire F-16 aircraft with most modern radars, M-48 tanks, armoured personnel carriers (APC), 155-mm towed and self-propelled guns, missile-carrying helicopters, 203-mm guns, naval ships and submarines. Pakistan is also reported to be acquiring nuclear-weapons capability. The Chinese aid to Pakistan includes MiG-19s and T-37 C aircraft in addition to tanks of T-series.

Despite its aid to Pakistan, to our detriment, India's relations with China are somewhat better now. However, two hurdles are yet to be overcome: China's claim on Arunachal Pradesh and the construction of the Trans-Karakoram Highway. China had objected to a dance performance by an Arunachal Pradesh contingent during the IXth Asiad and claimed an area of 90,000 sq km, which is more than

Clockwise from centre-top: Jawans in an attack; INS Kalveri prowling the seas; Jaguar in flight; a battle-ready machine-gunner: Learning from wars —ready for another.

action in fast-moving ships and aircraft. CENCOM is linked with the Pacific Command (PACOM), which also controls the Seventh Fleet based in Philippines and the naval base at Diego Garcia in the Indian Ocean.

The Soviet Union has also correspondingly increased its naval presence in the Indian Ocean and its ally, Vietnam, has assisted in the establishment of the Heng Samrin regime in Kampuchea. The Soviet occupation of Afghanistan has also effected a change in the strategic power-equation in the region. The efforts of the littoral nations and of the Non-aligned Meet (March '83) to make the Indian Ocean a zone of peace are being thwarted. UN talks on the subject in 1984 are also not certain.

The Iran-Iraq war has added

OUR ACHIEVEMENTS

Emphasis on research and indigenous defence production has enhanced our capability to pursue an independent policy based on national interest. We have nine public-sector undertakings of which Hindustan Aeronautics Limited (HAL), Bangalore, Nasik and Mazagon Docks Limited (MDL), Bombay, and Bharat Dynamics Limited (BDL), Hyderabad, have achieved enviable records. These undertakings have worked in conjunction with the defence research and development organisation to achieve a breakthrough in weaponry and munitions.

HAL has been able to assemble Jaguar aircraft, and MiG series of aircraft, including MiG-27, are being manufactured progressively. This is in addition to projects for helicopters and trainer aircraft like the piston-engined HPT-32 and basic-jet KIRAN Mark II.

Mazagon Docks Limited, Bombay, have facilities to manufacture sophisticated warships, submarines, destroyers, frigates, corvettes, as well as off-shore patrol vessels.

Leander and Godavari-class frigates are by far Mazagon Docks' greatest achievements. Bharat Dynamics Limited have completed a programme for the manufacture of first-generation anti-tank guided missiles, and taken up the programme for the manufacture of second-generation anti-tank guided missiles.

Heavy Vehicle Factory (HVF), Avadi (Madras), manufacture Vijayanta tanks. A Rs 100-crore tank project for manufacturing engines for the T-72 Soviet-built tanks and Armoured Personnel Carriers (APC) is also being set up at Avadi. These tanks and armoured personnel carriers will be produced in a factory at Medak in Andhra Pradesh.

The entire area of the state is a strategic area is bounded by Bhutan in the west, Tibet and Sinkiang regions of China on the north and east, Burma on the south-east and Assam in the south. The Chinese claim is unjustified as it was never in this region except in 1962 after it invaded India.

The second irritant is the unilateral ceding of certain areas in Azad Kashmir by Pakistan to China for the construction of the 800-km-long Karakoram Highway. The highway links Sinkiang in China to Muzaffarabad in Azad Kashmir and passes through the 4,530 m high Khunjerab Pass where the borders of the USSR, Afghanistan, China, India and Pakistan join. The Karakoram Highway is therefore of vital geopolitical and geostrategic importance to India. The road is an attempt to formalise the illegal transfer of 5,120 sq km in the Karakoram watershed area during the 1963 Sino-Pak border agreement.

India has been protesting against this road since the very beginning. It also protested when the Khunjerab Pass was opened up to Chinese and Pakistani traffic in May 1983.

China's intentions are clear in the Khunjerab Pass region. It gives a higher priority to the defence of its borders with the Soviet Union as also with Vietnam. It has deployed 81 of the total 132 divisions of its Field Armies on these borders. The remaining 51 Field Army divisions, in addition to regional forces, can be deployed elsewhere. For Pakistan, on the other hand, the sole priority for troop deployment are its borders with India—where it has a long border with China, Bhutan, Burma and Nepal. This gives Pakistan military advantage which it has exploited on three occasions.

These dangerous trends apart, we are yet engaged in improving our relations with Pakistan. Our emphasis is on removing outside interference in bilateral affairs. We want to keep the superpowers away from the soil of the two nations. But Pakistan is not willing to guarantee that foreign bases will not be allowed on its soil.

Policy and achievements

This divergence in the Pakistani approach, plus the deteriorating security environment, had necessitated the revision of the original 1979-84 Five-Year Plan.

1983-84 allocations for defence in the Defence Budget are Rs 5,971 crores. This is 17.4 per cent of our expenditure. Our per capita defence expenditure of \$8 is lower than Pakistan's \$21.2, Malaysia's \$140, Singapore's \$295, Indonesia's \$17, Iran's \$113 and Philippines' \$13.1.

With 25 lakh sq km of exclusive economic zone in the Indian Ocean (320 km from the coastline) containing off-shore oil installations, mineral and marine wealth in addition to thousands of kilometres of land frontiers, we have to be vigilant. In international relations, there are no permanent friends, only permanent national interests which change as global and regional security perceptions change. Having faced four wars since independence, we have realised that self-reliance in defence production, research and development is essential for our very existence. Military alliances tend to make the recipient a surrogate of superpowers who internationalise regional issues to their advantage. The policy of self-reliance and peaceful co-existence was well enunciated during the Non-aligned Meet in

Our defence policy aims at providing to our armed forces the most modern weapons which could be produced indigenously and imported (when it is not possible) from those countries which are prepared to transfer the latest technology so that indigenous production can be undertaken. This policy has yielded good results. Vijayanta tanks, produced in collaboration earlier, have been improved and are completely indigenous. We have produced a new kind of armour, 'Kanchan', which is truly unique and cannot be pierced. A main battle tank, having hydro-pneumatic suspension, is expected to go into production shortly. A factory is being established in Medak (Andhra Pradesh) to produce modern infantry combat vehicles. Besides these indigenous efforts, we have imported the most modern T-72 tanks, BMP-1 infantry combat vehicles, Schilka air-defence weapon systems and modern engineering equipment like AM-50 hydraulically-operated bridges and mine-clearing equipment to ensure that our forces do not lag behind in technology. These weapons are already in use. Having developed

ARMS AND OUR NEIGHBOURS

Pakistan attacked us thrice and China once during the past 36 years. Their armed strength, based on statistics published in the 1982-83 edition of International Institute of Strategic Studies, London.

China
Nuclear Forces Some inter-continental ballistic missiles (ICBMs), about 70 intermediate-range ballistic missiles (IRBMs) and approximately 50 medium-range ballistic missiles (MRBMs). About 90 Hong-6 (TU-16) strategic bombers. Tested an ICBM of range 12,000 km in May '80. Reported to be having a tactical nuclear force of 150 nuclear warheads in 20-kiloton range capable of delivery by 180-mm artillery and T-5 short-range ballistic missiles of 100-km range (SRBMs). **Army** Land Army, 3.6 million strong, comprising 132 divisions of Field Armies which include 11 armoured divisions and 3 airborne divisions. An additional force of

97 divisions of regional forces equipped with 1,200 tanks, Navy: 1,900 ships, including 88 submarines and 39 other ships such as destroyers and frigates, **Air Force** 6,000 aircraft including naval; **Para-military forces** 12 million; **People's Militia** 100 million.

Pakistan
Army 4½ lakh troops with a reserve of 5 lakh men including 29,000 Pak-occupied Kashmir troops organised in 7 Corps HQ, 2 armoured divisions, 16 infantry divisions, 4 independent armoured brigades, 5 independent infantry brigades, 7 artillery brigades, 2 anti-aircraft artillery brigades, 6 armoured reconnaissance regiments, 9 SAM batteries with 18 crotales, 1 special service group; **Navy** 11,200 sailors, 11 submarines, 1 cruiser, 9 destroyers, 5 large patrol craft; **Air Force** 17,600 airmen with 219 combat aircraft including F-16s and Mirages; **Para-military forces** Over 1 lakh.

Samal

a sound industrial base, we have become innovative. For example we have mounted a 130-mm medium gun on the chassis of a Vijayanta tank to provide mobility to our artillery.

The Indian Navy, with a budget of Rs 680 crores, has made rapid strides. Indigenously-produced Leander-class frigates have been fitted with newly-developed sonar-systems. Sea Harrier aircraft on our aircraft-carrier Vikrant have increased our punch and the country is going in for missile frigates, mine-sweepers and long-range maritime aircraft (IL-38) to increase the patrolling range. Our coastguard has been strengthened with frigates, patrol boats and helicopters to guard off-shore installations.

Pak procurement of the most modern US-manufactured F-16 jet fighter, which uses the latest 'fly-by-wire' technique, has upset the prevailing military balance. Acquisition of these and other sophisticated weaponry by Pakistan poses a direct threat to us as Pakistan will not dare use them against Soviet Russia and mechanised armoured forces are not suitable for deployment in the mountainous terrain of Afghanistan. To counter the threat, we have gone in for the British Jaguar deep-penetration aircraft, being assembled in India, and are also acquiring the French-built Mirage-2000, which is the Indian answer to F-16. These are in addition to improved versions of the MiG series of aircraft, the latest being MiG-27, which will be manufactured under licence in Hindustan Aeronautics Ltd. These are equipped with the latest air-to-air and air-to-surface missiles. India is also going in for the purchase of AN-32 transport aircraft to improve its strategic and tactical mobility.

Human material

More important than armament and modernisation is the man behind the gun. Time and again, our armed forces have proved their mettle in all the wars. The armed forces need the best of the Indian youth motivated by patriotism. The stakes for our defence are high and we live in a world of global and regional tensions which have been aggravated due to the arms race. Though we hope for peace and co-existence, we have to be prepared for all contingencies. ■

INDO-PAK RELATIONS

WAR AND PEACE

BY PARTHA S. GHOSH
Centre for Policy Research, New Delhi

Ever since independence, the relationship between India and Pakistan has been one of mutual suspicion and distrust. Not only have they traded abuses and charges at various international and other forums, thrice they have even tried to settle their score on the battlefield. As a result, Pakistan has dominated India's foreign relations as much as India has dominated Pakistan's. Of late, however, the two countries have been going through a slow and halting process of pulling themselves out from excessive preoccupation with each other and of normalising their relations.

The currents for peace and co-operation between India and Pakistan are rooted in several major changes in the political-strategic-economic milieu of the world as well as the South Asian sub-system. The Soviet intervention in Afghanistan and the consequent revamping of the strategic alliance between the US and Pakistan had kindled a new cold war between India and Pakistan. But with the passage of time, its flames seemed to be dying out. Within less than three years of the Afghan crisis, the two countries were seen negotiating a Pakistani proposal for a no-war pact and/or an Indian proposal for a treaty of peace and friendship. There are reasons to believe that Pakistan's no-war pact proposal was carefully synchronised with the US and Chinese strategies for the South Asian region. India, on its part, has discussed the matter with Soviet leaders. Each superpower expects results that would advance its own interests and abridge the interests of its adversary. Thus, the US would like India and Pakistan to sign a single no-war pact which would not prevent Pakistan from placing facilities at US disposal in a contingency; the USSR, on the other hand, would prefer a Pakistan more truly non-aligned than now.

It will, however, be wrong to assume that the Pakistani initiative has been prompted entirely, or even mainly, by US pressure. The

*Mrs Gandhi and Zia in New Delhi.
Let's be friends ma'am.*

martial law regime has its own very good reason to seek a no-war pact with India: it secures the eastern frontiers of Pakistan and confers on the regime a longevity which its own people do not guarantee. Indeed, it is generally recognised in Pakistan that another war with India might mean the end of Pakistan as a sovereign state. And it will certainly break the back of the Pakistani military machine and so discredit the army in the eyes of the people that it may cease to be the country's ruling force.

On the domestic political front, the ruling elites of both India and Pakistan have become increasingly aware of the growing irrelevance of the Pakistan and India factor in their respective politics. In India, the political weapon of using the Pakistan bogey has become somewhat blunt, partly because of growing incidence of Hindu-Muslim riots and partly because of India's increasing interest in creating a better environment for Indo-US relations. Similarly, in Pakistan politics the India bogey does not pay enough political dividends to the military elites any more. Contrarily, responding to popular opinion, the ruling military junta finds it politically useful to talk of good-neighbourliness with India. The political opposition of Pakistan's military President, Zia-ul-Haq, has been cautioning that Zia's no-war pact offer is a ploy to earn legitimacy for his government.

Economic considerations must have also contributed to the peace

Factor. The prolonged recession in the industrial world—showing no visible signs of improvement resulting in growing protectionism and shrinking of foreign aid flows—has impelled the developing world to look inward for trade and commerce and resource development. There has been some progress in the efforts to forge South Asian economic cooperation on the lines originally mooted in April 1980 by the late Gen Ziaur Rehman of Bangladesh. In the third meeting in Islamabad in August 1982 (the first two being at Colombo and Kathmandu in April and November 1981 respectively), serious attention was paid to multi-lateral cooperation in the areas covering agriculture, meteorology, telecommunication, health and population.

As a result of the above positive factors, there has been a slow but steady progress in the normalisation of relations between India and Pakistan. Two high powered trade teams, under the auspices of FICCI and the Punjab, Haryana and Delhi (PHD) Chamber of Commerce and Industry, have visited Pakistan to identify areas of economic cooperation and promotion of trade between the two countries. In the midst of the Seventh Summit of the Non-aligned Movement, the two countries took a significant step forward in strengthening bilateral ties by signing an agreement for a joint commission to give an institutional framework to their endeavours for cooperation. Participating in the signing ceremony Prime Minister India Gandhi said the doors which were closed were being opened one by one.

But while the above factors breed optimism, there are undercurrents which might militate against the entire process of peace. Pakistani leaders have expressed dissatisfaction at the pace of the peace process. Sahabzada Yakub Khan, the Foreign Minister of Pakistan, said recently that though progress was being made by the setting up of the joint commission, etc, Pakistan wanted "parallel progress" on the question of a no-war pact.

Deep-rooted attitudinal obstacles appear to be still marling Indo-Pak relations. Pakistani leaders are reported to have expressed their concern and anguish at the plight of Indian Muslims with particular

reference to communal riots and the types of violence that have rocked Assam. Indian leaders interpreted these as tantamount to interference in the internal affairs of India.

In the economic domain, there are inherent problems. Following the opening of trade between India and Pakistan, manufacturers from India would flood the Pakistani market causing anxiety to their business interests. Pakistan's fear about India's potentiality to throttle its industrial growth has been expressed by no less a person than Agha Shahi, former Foreign Minister of Pakistan. Speaking on South Asian regional cooperation at a forum in Lahore in April 1982, Shahi said the problem was how to create linkages based upon 'balanced interdependence', in other words, "how the more industrially developed countries of South Asia can be prevented from becoming a threat to the industrialisation of the other countries as a result of economic regional cooperation".

In the military strategic milieu, there are many possibilities which might jeopardise the process of peace. The most important of them could be that of Pakistan acquiring nuclear capability. According to the latest strategic survey conducted by the London-based International Institute of Strategic Studies, Pakistan is continuing its attempts to obtain essential components for a nuclear weapon. There is no doubt that if Pakistan goes nuclear the Indo-Pak strategic balance would be upset to the detriment of India's status as the pre-eminent power in the region.

There have also been misgivings among Indian defence experts about Zia's position on the deployment of F-16s. In his *Meet the Press* programme in Washington on December 13, 1982, Zia said the F-16s would be deployed on the western border with Afghanistan and not on his country's border with India. The Indian experts have referred to a US Congressional document on US assistance to Pakistan, brought out in November 1981, which states that the F-16 aircraft would be deployed at three air force bases, one of which was "situated in the geographic centre of the country". The experts believe that this referred to Sargodha, which is

less than 226 km from Amritsar and which had been the main operational air base for Pakistan Air Force's operations against India. They also doubted Zia's explanation that the bulk of the Pakistani troops are deployed on the Indian border due to 'difficulties of infrastructure'.

The differences in approach to non-alignment can also be an area of tension. Against the background of reports that the US might get into Pakistan an electronic surveillance facility like the one that operated at Baadber near Peshawar, India felt strongly committed to preserve the basic principles of non-alignment which rule out accommodation of any base facilities by a member country. Pakistan seems to be reluctant to forswear its option on such matters. Commenting on the possibility of Pakistan giving the base facilities to the US Rapid Deployment Force (RDF) Mrs Gandhi has emphatically said in May 1983, that it would greatly aggravate the situation in South Asia and would certainly go against the spirit of the [non-aligned] declaration on the Indian Ocean as a zone of peace.

Frequent references to the Kashmir issue by Pakistan at various international forums could also militate against the process of peace. Pakistani delegate Agha Hilali's statement at the ILO meeting in Geneva in early 1982 had caused sufficient strain in Indo-Pak relations. Recently, at the non-aligned summit in New Delhi in March, Zia did the same thing. It was fortunate that the Indian leaders chose not to react, otherwise the process of peace would have received a serious jolt.

In view of the positive and negative factors in Indo-Pak relations, nothing can be said for certain about the shape of things to come. Much would depend upon the political future of the present ruling elites of both the countries. In the meantime, without being much optimistic about the prospects of cooperation, it is essential to keep the ball of peace process rolling. Peace and co-operation between India and Pakistan undoubtedly would enhance the security and stability of both the countries at reduced defence expenditure. □

THE ACHIEVERS

Purushottam Goyel

BY AMIT AGARWAL

Inspiration can be derived from places—and people. People who have walked the path of success very young in life. Meet our first achiever for the secret of his success.

Some time back, two prominent Congress (I) councillors of the Metropolitan Council of Delhi (MCD) asked MCD Chairman Purushottam Goyel to step down from his chair. Reason: he had "some connection" with the case of a senior officer of the Directorate of Health Services who was allegedly involved in the "harassing of some of his women colleagues". Goyel's reply: he was "involved" in all matters coming up before the house.

Political dexterity, true. But that one statement also embodies all that Goyel upholds: honesty, cent per cent involvement in one's job and confidence in one's capabilities. These qualities have been his 'building blocks', lifting him high above the ordinary folks. At 42, he is probably the youngest ever to hold the position of a Speaker in India.

Yet Goyel's childhood and early life has been as ordinary as yours or mine. His family migrated to Delhi 60 years back from Bulandshahr in the rural heartland of UP. He did his graduation and post-graduation in Economics from Ramjas and St Stephen's colleges. Education over, he started off as a lecturer, first in Deshbandhu College and then in Sri Ram College of Commerce, where he has been teaching Economics for the last 18 years.

But politics was in his blood. His father, Shyam Lal Goyel 85 and alive, was a freedom fighter. And he has learnt from him that loyalties do not shift with time or circum-

stances. He was closely associated with the Congress party led by Prime Minister Indira Gandhi and was at her side right through the tumultuous post-emergency days. He had to pay the price for that: Goyel lost the 1977 elections. But he made his comeback in 1983, strictly on his personal record of ethics and hard work. His track record is excellent for a political lightweight of sorts, contesting from a constituency which has extremes of wealth and poverty. He has defeated political stalwarts like Prem Chand Gupta, the renowned Hindu leader who brought about the fall of Gulzari Lal Nanda by masterminding the anti-cow slaughter agitation in 1967, and Charti Lal Goel, ex-Deputy Mayor of Delhi.

Goyel attributes his success to good public relations—not wholly true, though. Something more landed him the job of MCD Chairman. He is competent in his work, is intelligent and keeps himself abreast of all that goes on around him. He reads three to four hours a day—the books he takes up have political and cultural value. Not surprisingly, his views are clear and precise:

On Gandhism: The ideas of the Mahatma have to be brought back one way or the other. There is immediate need for people who "have a feel for the nation, people and problems".

On politics of today: Clearly, the Gresham's Law applies here. As in Economics the bad coin drives the good coin out of circulation, so in politics the bad politician drives the good one into political wilderness.

On campus politics: Students should not allow themselves to be used by politicians: the latter are not interested in the former's welfare and will use them for their own ends. This is because the youth are a politically immature lot on whom an ideology or doctrine can be imposed easily—thus making them a force to reckon with. Goyel cites the example of the youth movement spearheaded by Jayaprakash Narayan (JP). While the idealist JP's opportunistic cohorts used the students for achieving their ends, not one of them (the students) found a place in the Cabinet or lower decision-making bodies.

One thing is clear from the interview *CCTimes* had with him: unlike the run-of-the mill politician, Goyel minces no words. When he advises the youth to have a clear aim, not wander aimlessly like a grasshopper, persevere from the early stages towards a set goal, and develop some basic values like honesty and integrity—he says it all with great conviction, born out of practising them. Honesty, he says, may not pay you in the short run but definitely does so in the long run. MCD Chairman Goyel is himself a testimony to that. Excerpts from his interview:

There is considerable dissatisfaction in people with the state of Indian politics. There is a lot of cynicism against politicians and politics. Do you think people are justified in feeling this way? What do you think is wrong with Indian politics?

Essentially, the people's own indifference is the reason for this. Politics today does not draw the best people. During the freedom struggle, the best were tossed up from different walks of life and they, in turn, generated confidence and instilled inspiration in people.

persons then asked to come into politics with a sense of dedication to the nation and were ever ready to suffer and sacrifice their lives. This is absent now.

It can only be corrected if people are more politically conscious. For instance, during election time, they take no interest in the candidates contesting the elections. Thus, a good candidate is beaten in an election due to this or people are swayed by showmanship, propaganda, money or other things. And once the undeserving person comes into power, people become critics—convenient critics.

Who are the best people?

People who are professional successes, who have achieved something. These people should not only be sincere and dedicated, but competent also. For example, during the freedom struggle, people like Chittaranjan Das, Sardar Patel and Dr Rajendra Bahi—gave up their successful career in law to fight for their country.

What do you think of politics as a career?

Politics as a career corrupts you. Therefore, I repeat, a person must succeed professionally before joining politics. Otherwise there is nothing to fall back on. Unless you have an independent source of living, you shall never be in a position to take independent decisions. If you have to earn your living through politics, your reason will be governed by the question: "From where do I get the money?" This, obviously, will make you corrupt. You'll never acquire a stature that deserves to be respected and admired.

Would you agree with the statement that our universities are fast turning into training centres for young, would-be politicians?

Yes. There has been a major involvement of political parties in the universities to consolidate their political structure. In Delhi University, for example, there is proof that people with marginal qualifications were appointed in various colleges; and there have been principals with political background and inclinations. The same is true of JNU. Then, there is this problem of foreign embassies getting interested in students and using them with their money-power. These factors are extra academic variables and are

eroding the academic autonomy of Delhi. In other universities the situation is even worse because regional variables matter more and the regional politician has a greater say.

So you advocate a complete divorce of academics from politics?

Academics should be left alone. It does not happen but that should be the ideal.

According to you, a person's first step in politics should be only after he has completed his education?

No, that's not what I am suggesting. A person should be capable of political interpretation, should possess political sagacity, be a decision-maker and have the power to analyse. Or else he'll end up as a politician's henchman.

During your career as a lecturer in the university, what shortcomings have you observed in the students?

Our academic standard is going down because there are too many diversions, and to a certain extent, extra academic considerations like politics are creeping in. People crave for political appointments.

What other flaws have you observed in the education system?

I think students have to be diverted after the 12th or even the 10th standard, to non-academic channels, to career pursuits. Joining college due to matrimonial considerations or status-symbol reasons has to be stopped. At the moment, we are just multiplying colleges and creating evening colleges by which the problem won't be solved at all. Only serious students should be allowed to pursue higher studies.

Would you like to give some suggestions to students as to what they must bear in mind for success?

One should be serious and sure from the start about where one wants to go. At the moment, there is ad-hocism. From the 10th to graduation, a person is absolutely unsure of what he is going to do. Something should be done to facilitate this decision. According to me, one must join a clear-cut line, either by way of training or professional education. At present, young people just drift and float when they should be actively swimming. The entire system has to be reoriented through

changes in the planning of education, career, man-power policy and fresh goals have to be set for the coming generation. Right now we are wasting our funds. The education system has to be more technical and professional studies have to be taken more seriously.

So the major flaw in the education system, you would say, is that it is not career-oriented?

Yes, and there is the repetition of a stereotype approach. Education should be a dynamic laboratory, which it is not. We just touch it here and there superficially and thus do not go very far. I believe that beyond matric, there should be no preconsiderations. All competitions should be open, including the IAS.

Did you always want to be a politician?

No, never. It was a matter of chance. Though my father has a political background, I was never involved. I was dragged in when I joined a social service camp, received a letter of appreciation from the Prime Minister for that, then took the editorship and then chief-editorship of Indian Youth Congress publications, was made director of some social service camps and asked to join the Pradesh Congress Committee (PCC) and to fight elections from the university constituency.

How can you continue lecturership with politics and do justice to both?

At the moment I have taken extraordinary leave from the university, but previously as a Member of the MCD, I could continue the two as the MCD does not meet very regularly.

How have you achieved so much success at a rather young age?

I think by sincerity and hard work and, of course, with the cooperation of my colleagues and others. Politics is a game of faith and instilling faith through honest work is initially very hard. There are moments of trial but ultimately people prefer a sincere and honest approach.

How have you maintained and built public relations over the years?

I think you must have tremendous restraint within yourself. You have to respect people when they need you rather than expecting them to help you when you need them. □

IN THE NEWS

PUERTO RICO PUNJAB

THE BARNES CONNECTION

The Puerto Rico independence struggle can never be equated with the current situation in Punjab. Why?

The US is not interested in destabilising India. This clarification came in the wake of a statement by US Ambassador to India Harry G Barnes allegedly distorted by the press equating the extremist activities in Punjab with the Puerto Rico independence struggle. The US Embassy in New Delhi issued a strong rebuttal aware that the controversy would for all purposes have jeopardised US Secretary of State George Shultz's visit to India in late June.

Addressing a press conference in New Delhi on June 22, an apparently irked Barnes said: "There are people who come to India for instance who advocate a separate independent Puerto Rico. We as a country think the people of Puerto Rico have had a chance to express their opinion if they want to become free as a separate independent state they have a choice of doing it but we don't go around complaining because somebody happens to come to India from time to time and talk about Puerto Rico. And therefore we are rather puzzled why people here are bothered about it so much, especially when the attitude of the Government of the United States is perfectly clear."

The perfectly clear American stand was contained in a US policy statement in letter form dated March 1, 1983 given to the External Affairs Minister P.V. Narasimha Rao by Shultz. Released at the press conference it read: "This [Reagan] Administration is firmly committed to the unity and integrity of India. We view this unity and integrity as key elements in the stability of the entire South Asian region, something very much in the interest of the US. In no way, therefore, should the decision to grant [the self-styled] Khazistan

leader, Dr Jagjit Singh] Chauhan, a visitor's visa be construed as US Government approval of...the views of Dr Chauhan or the Sikh separatist movement."

If, indeed, Barnes' statement was distorted, it is all the more fortunate for him—and for Indo-US relations. First, there are already rumbles in the Indian ranks on Pakistan's request for 60 more F 16s from the US. Second, no responsible American diplomat can possibly compare the two movements in question and get away with it. Since much is known about the Khalistan movement in India, we take up the Puerto Rico question.

Puerto Rico, a small island (3,435 sq miles) situated near the American mainland, was a Spanish colony for 400 years till it was ceded to the US after the Spanish-American war of 1898. Till today, the US has continued in its capacity as a landlord American citizenship was granted to the islanders in 1917 and in 1947 they were given the right to elect their own governor. In 1952, they were given a Constitution by which they gained Commonwealth status. A plebiscite was held in 1967 in which 60.5 per cent of the voters ratified a continuation of the Commonwealth status in preference to independence (0.6 per cent) or incorporation as a US state (38.9 per cent).

The islanders have a strange relationship with the US. Although they are citizens of the US, they cannot vote in the national elections. A resident commissioner, elected for a four-year term, represents Puerto Rico in the US House of Representatives but has only committee voting privileges. Until the 50s, Puerto Rico was the poor house of the Caribbean. But as a result of massive programmes of US federal aid, conditions improved rapidly. The island is important to the US because it has built military bases there and is also the home of more than 360 major US-based companies, whose profits exceed \$3 billion annually.

The islanders, however, are split on what their relationship with the US should be. As the 1967 plebiscite showed, there are three strands of thought: some want statehood, others independence, and yet others to retain their Commonwealth

Shultz affirmed this during his visit to India.

status. None, however, want a status quo condition. Even those who want continued Commonwealth status are now clamouring for more autonomy. Among other things, they want veto power over federal law affecting the island. The backers of statehood and the backers of Commonwealth status are almost equally divided.

The backers of independence, who had been in a minimal minority for a long time, have recently increased in strength. Since 1974, there has been an increase in militant nationalism, including terrorist attacks in the US by the Fuerzas Armadas De Liberacion Nacional (FALN) and the Macheteros in Puerto Rico, who demand independence for the island. In August 1978, the UN Decolonisation Committee in a resolution recognised 'the inalienable right of the Puerto Rican people to self-determination and independence'. It also called for US withdrawal prior to any plebiscite on the island's future.

As a result of recent economic problems involving large-scale unemployment (official figure 22 per cent, other sources 35 per cent), the situation has worsened. Terrorism has entered a new and more violent phase. In May 1982, a US Navy sailor was shot down by nationalist gunmen at San Juan, while in 1981, terrorist bombs destroyed nine jet fighters at the Puerto Rican National Guard Air Base at Isla Verde. The US also fears that Cuban President Fidel Castro is providing arms and training to nationalist leftist Puerto Ricans.

Thus, we see that the situation in Puerto Rico is entirely different from that in Punjab. The Puerto Ricans enjoy what many consider to be 'second class citizenship' of the US. It is not a state of the US, although many Puerto Ricans are agitating for statehood. On the other hand, Punjab is a full-fledged state of India and the Akalis enjoy all the rights and benefits of Indian citizenship. There is a growing drive for total independence in Puerto Rico, and the movement is left-oriented. The Akalis have no leftist connection and they do not want independence as such. Their movement is motivated by religion, and that of the Puerto Ricans by politics. If at all a parallel was drawn between the two movements, it was baseless—and will always remain so.

S.B.

Friction In The Union

BY T V SATHYAMURTHY

It is not as if strained Centre-state relations is new to India. Regional parties have from time to time questioned the balance of power between the Centre and states. But never before has the conflict assumed such proportions as now in Punjab and Assam.

Two mutually conflicting tendencies have been at work in Indian politics ever since independence, and especially during the last 15 years or so. One of these pertains to the Central Government's tendency to centralise and consolidate political authority in its hands. This is justified on a number of grounds, chief among them being the interests of national integrity and security as well as the rapid and equitable economic development of different parts of the country. The other tendency has been represented by the increasing pressure from different states to ensure a better and more equitable balance of power between the Centre and the states.

The problem of Centre-state relations is not unique to India. Wherever a number of different linguistic and culturally diverse elements are brought together to constitute a single nation-state, some form of federal principle is brought into play to reconcile the interests of the several distinctive parts with the interests of the whole. In Yugoslavia, for example, under an ingenious arrangement worked out over a long period of time, eight different cultural, linguistic and ethnic nationalities at different stages of economic development and different levels of social organisation are functioning in a political atmosphere of comparative regional autonomy under a loose federation.

In India, however, the problem of co-existence is complicated by several factors like the size of the country, the multiplicity of

political parties competing for power and a number of non-Congress (I) state governments. During the last few months, the Centre-state conflict has assumed new dimensions because of the Assam and Punjab problems.

Why should there be a conflict between the Centre and the states? The answer lies in four kinds of regionally based political opposition to the Centre's authority.

(a) In certain states (notably Kerala, West Bengal and Tripura), communist parties have been able to achieve Assembly majorities and form governments either independently or in coalition. The first such was the 1957-59 CPI-led government in Kerala. The communist parties were among the first to challenge the Centre on a number of fronts and especially on the question of the authority of states in mobilising resources for development, claiming a more equitable share in tax revenues collected by the Centre, and greater autonomy in maintaining law and order. They also demanded the expansion of the State list so as to include those items of the Concurrent list where the scope of Central intervention is always greater.

(b) In Tamil Nadu, regionalism has a long history of political assertion through a populist 'self-respect' movement, controlled by the Dravida Kazhagam (DK), the Dravida Munnetra Kazhagam (DMK) and its schismatic offshoot, the All-India Anna Dravida Munnetra Kazhagam (AIADMK). Even though this

movement abandoned its original commitment to secession as soon as it realised that it was within reach of power, it has always represented a powerful popular counterforce to the Congress Party within the state. It must, however, be pointed out that despite its claims to represent the interests of the south as a whole (including Karnataka and Andhra Pradesh), neither the DMK nor the AIADMK has been able to penetrate much beyond the borders of Tamil Nadu. This was mainly because the Congress had a much stronger influence (until the 1983 January elections to the state Assemblies, and even more pointedly until the Kanakapura Assembly by-election of May 1983) in both these states. In Andhra Pradesh and Karnataka, the virulent anti-Hindi agitation, characteristic of periodic outbursts of anti-Centre political agitation in Tamil Nadu, never really caught on. The DMK Government of Tamil Nadu under C.N. Annadurai and M. Karunanidhi took a systematic interest in Centre-state relations. It focussed attention on the question of how the balance of power between the Centre and states could be redressed in the latter's favour. To this effect, a committee was appointed to report on all aspects of Centre-state relations under the Chairmanship of P.V. Rajamannar, retired Chief Justice of the Madras High Court. It must be noted that no other state government has taken such an initiative so far, and, despite its initial disapproval of the Rajamannar Committee, the Central Government has been compelled to take notice of the seriousness with which state governments ruled by opposition parties view Centre-state relations.

(c) Since the emergency, the Indian political scene has undergone a radical change at the Centre. The defeat of the Congress Party in the 1977 Lok Sabha and state Assembly elections was marked by the emergence, at the national level, of factions, parties and organisations in opposition to the Congress. The Congress itself underwent a series of splits. Although splitting has become a regular feature of all national parties with the exception of cadre parties such as the CPI, CPM and the BJP, the Congress (I) was able to return to power in 1980 as a single coherent ruling party.

The situation has changed since the Congress (I) returned to power. Powerful opposition has been generated in the form of regional forces in Andhra Pradesh, which have been able to remove the Congress (I) from power. At the same time, the Janata Party, with the help of the BJP and the erstwhile regionally-orientated dissident faction of the Congress (I)—the Kranti Rang—ousts Congress (I) from power in neighbouring Karnataka. While at one level Andhra Pradesh and Karnataka appear to have repeated in 1983 what the DMK and AIADMK had already achieved in 1967 and 1977, yet, at another level, they are indeed quite different from Tamil Nadu. For one thing, they have no great quarrel with Hindi; for another, they are much more interested in decentralisation of power not only between the Centre and the states but also within each state. In this, they are closer to the West Bengal and Tripura governments than to the one in Tamil Nadu.

Thirdly they would like to combine political autonomy with the economic benefits accruing from a juster and more equitable distribution of revenue resources by the Centre, if not a partial transfer of power from the Centre to the state to raise resources through taxation and other means. In this they would appear to reflect ambitions very similar to those expressed by, for example, the National Conference (NC) of Jammu and Kashmir. A common denominator can also be found, on this question, between the forces opposed to the Congress (I) which are in control of several states in the north east, either singly or in coalition.

(d) The most serious manifestations of the nationality question to date have been the Assam and Akali agitations. Although these two examples differ from one another in the circumstances immediately surrounding them, they exhibit certain features which are fundamentally similar and therefore worth noting. The Assam agitation is based on a fear of erosion of the Assamese majority due to the repeated influx of Bengali refugees from East Bengal, East Pakistan and lately Bangladesh. They have reacted to the double oppression to which they see themselves as having been subjected—first by the Bengali *bhadralok* who entered Assam during the colonial era and took over a whole range of commercial, administrative and professional functions in the province while dominating its cultural life with the Bengali language, and

second, subsequent to partition, by the swamping of the population with injections of large quantities of alien people who occupied the land of the Assamese. It was, therefore, the foreigners issue which became the focal point of the agitation of the Assamese (under the leadership of students' organisations) against the Central Government. Fundamental to the conflict are the questions "Who should decide who is a 'foreigner'—the Assamese or the Central Government?" and "Who should exercise the power of expelling the foreigners" from Assam?" To these questions, the Centre and the AASU/AAGSP have been voicing diametrically opposed answers in the course of their negotiations.

There is an interesting contrast here between the position of the Assam agitators and the position adopted by the NC on the reverse question of "Who should have the power to determine which of the refugees in 'Azad Kashmir' territory are genuinely Indian and whether they should be allowed to return to unoccupied Kashmir?" Between them, these two questions, preoccupying the regional political party in Kashmir and the regional popular movement in Assam, touch on an area of political life which is fundamental to the exercise of Central authority without challenge.

The Punjab question too touches the sensitive political, religious and economic areas of Centre-state relations. On the religious

side, the Akali Dal has specifically demanded which call for the Sikh community being allowed to maintain its distinctive features. It can even be compared to the successful struggle of the Sikhs to gain recognition as a separate and distinct ethnic group in countries such as Britain, Canada and the US. These demands are easy enough to accommodate and the Centre has shown its readiness to do so. But, it is the linkage between religious demands on the one hand and, on the other, the assertion of the Akali Dal that the Centre should place Punjab, economically and politically speaking, in its hands that gives the question a 'nationality' dimension. Endowing the Akalis with exclusive political and economic control on what would appear, on the face of it, to be grounds of a communal nature, would inevitably involve redrawing of territorial boundaries. It would mean reopening the question of reorganising the states of Haryana, Punjab and Himachal Pradesh. It would also mean reorganising the resource base of the entire region in order to meet Akali Dal's demand over the sharing of the Ravi-Beas waters. Even so, it should not be overlooked that, in these regional and 'nationality' demands, real and tangible material interests are inseparable and the Centre has to tackle them with imagination, resourcefulness and sensitivity. The Centre, however, has failed to show the strength and determination.

(To be concluded)

Answers to TEST YOUR WORD POWER

1. **absolute** D. having complete or arbitrary power, unlimited. Catherine the Great reigned as an absolute monarch.
2. **anonymous** B. without a name, having no acknowledged name. Great literature from Homer to Shakespeare to Frost has been lifted by forgers, some unmasked, some forever anonymous.
3. **antedate** A. to come before in time, to come or happen before something else. Radio antedates television.
4. **antipathetic** C. naturally opposed. The climate of Ireland is antipathetic to the growth of roses.
5. **conjunction** A. word that joins other words. The conjunction and may be used to join independent clauses together in a compound sentence.
6. **depose** A. to remove from office, specially of sovereign, to take an office position etc. away from the person holding it. Zulfikar Ali Bhutto, Pakistan's former Prime Minister was executed after being deposed in a 1977 military coup.
7. **destitute** A. needy, extremely poor. For more than two decades a Canadian pastor, Mark Buntain, and his wife have been feeding, healing and educating thousands of destitutes in the slums of Calcutta.
8. **effluence** C. a flowing out, emanation. Someone has said that influence is the effluence of affluence.
9. **flexible** B. easily bent without breaking. Radio aerials on cars are made of flexible metal.
10. **forger** D. one who makes a copy of something in order to deceive, counterfeit. Ever since humankind became literate, civilisation has been bedevilled by the forger's determination to deceive by mimicking the writing of others.
11. **fusion** C. union of things as if melted together, mixing of different things into one. Brass is formed by the fusion

of copper and zinc.

12. **hangover** D. unpleasant after-effects of excessive drinking. One of the more unpleasant features of a hangover is the inability to remember exactly what you did the night before.
13. **insomnia** B. inability to sleep. Sixty per cent of youngsters in low- and medium-grade classes in Japan suffer from insomnia, according to medical authorities.
14. **lurk** A. to lie hidden, keep out of view, lying in wait or ready to attack. About 50 kinds of poisonous snakes lurk in India's towns and villages.
15. **obsolete** B. out of date, no longer in use. Even though the capabilities of the present generation of computers are formidable, new breakthroughs in artificial miniaturisation should soon render present-day computers virtually obsolete.
16. **pesticide** D. substance used to destroy pests. India imports several brands of harmful pesticides which have been banned internationally.
17. **pinnacle** B. highest point, peak. Nature has programmed great nations and communities to rise to pinnacles of cultural and social achievement only to prepare the way for their eventual doom.
18. **shrewd** C. having sound judgment and common sense. At 76, President Junius Jayawardene of Sri Lanka is known as hard-working, shrewd, honest and incorruptible.
19. **spawn** A. to produce in great numbers. Micro-electronics have spawned entire industries that did not even exist 10 years ago.
20. **verge** A. border, edge, brink. Recent reports in the Indian and international press have strongly hinted that Pakistan is on the verge of testing a nuclear device.

Vocabulary Ratings:

- 20-18 correct exceptional
17-15 correct excellent
14-12 correct good

SHULTZ'S VISIT SPARES FOR TARAPUR

US Secretary of State George Shultz's first visit to India was successful beyond all expectations in that the contentious Tarapur spares issue was amicably resolved. (But differences still exist as Shultz admitted on India reprocessing spent Tarapur fuel.)

The non availability of spare parts for the Tarapur Atomic Power Station (TAPS) was causing considerable anxiety to the government because of the danger it posed to the employees' health. According to the new agreement, India may arrange for spare parts from some other source (European countries), and the US would supply these safety-related spares which were not available elsewhere.

This decision has been taken by the Reagan Administration despite stiff opposition from Congress: it is against supplying nuclear equipment to countries which have not signed the Nuclear non-Proliferation Treaty.

Shultz affirmed the US's commitment to India's unity and territorial integrity. This is significant in view of US Ambassador Harry G. Barnes' heat-stirring statement on Punjab and Puerto Rico.

Shultz discussed the US offer of arms sales to India in talks with his Indian counterpart P.V. Narasimha Rao. But India is still studying the matter: when

Shultz with Rao in Delhi. The shuttle that succeeded

India had earlier wished to purchase US arms, Washington had quoted exorbitant prices and opposed transfer of technology. The two co-chaired the Indo-US joint commission on bilateral co-operation and discussed stopping double taxation in Indo-US trade.

Shultz held talks with Mrs Gandhi and President Zail Singh on bilateral and global matters.

PUNJAB

A TURN FOR THE WORSE

Jullundur was the centre of crisis this time. Trouble arose when some Nihangs installed their flag inside the Baba Sodal Mandir. Adding to the usual routine of battles with police, bus-burning, inter-community violence and processions was a parcel-bomb explosion in a newspaper office, killing two. The Punjab Hindu Sangathan called for a Punjab bandh to protest against the killing of two priests by two unidentified youths in Sultanpur Lodhi. In the ensuing violence on bandh day, five people were killed and a 24-hour curfew was imposed. The situation is under control for now.

Fortunately, the Akali 'rail-roko' plan, on June 17, passed off uneventfully. This because the Centre suspended all trains and buses to Punjab that day, seeing that the Akalis refused Home Minister P.C. Sethi's invitation for talks earlier

on. Despite being hindered by the 30 CRPF and BSF battalions posted there, and the arrest of 300 Akali supporters, the Dal still claimed winning a great victory.

Its misguided sense of victory is, perhaps, behind the Dal's rejection of the Centre's proposal to refer the river-waters and territory disputes to two different tribunals, as also Sethi's proposal to set up a committee to screen people living within Golden Temple.

While the Akalis mull over their next move, the situation in Malerkotla, where communal riots broke out earlier, is still tense.

HERSH'S ALLEGATIONS A CASE OF MISTAKEN IDENTITY?

Prominent Pulitzer Prize winning American journalist of *My Life* Massacre fame, Seymour Martin Hersh, in his book *Price Of Power* (Kingsinger In The Nixon White House) states that former PM Morarji Desai was paid \$20,000 (Rs 1.6 lakh) a year by the CIA to feed vital information regarding the 1971 Indo-Pak war. It is unthinkable that a man with such an exemplary political record would sell his country. And it is equally unfortunate that FM Mrs Gandhi has chosen to be enigmatic about the whole thing.

What makes the allegation even more suspect is the number of silly mistakes and factual errors in the book. Hersh claims Desai was passing on information to the CIA during the Johnson Administration (1964-68), whereas he left the government in 1963 due to the Kamraj Plan and only returned in 1967. Between 1966-67 Desai was Administrative Reforms Committee Chairman, a position which provides hardly any access to top secret intelligence data.

Price Of Power states that Desai was leaking information "through 1970" which is not possible since he was sacked as Finance Minister in 1969 and resigned as the Deputy Prime Minister. Not being in the government Desai could not have obtained any information to pass on. The book says that Mrs Gandhi returned to power in 1979. The correct date is 1980.

All these show that Hersh's sources are far from reliable—and possibly motivated. If he could make such mis-

takes. It is quite possible that the whole thing is a case of mistaken identity. In fact, Mr Desai was the Foreign Secretary from 1959-63.

He is naturally denied this and claims to have documentary evidence to prove his point. Meanwhile Desai has filed a criminal case in court claiming damages of Rs 5 crore against the book publisher.

OPPOSITION MEET

CENTRE UNDER FIRE

A meeting of the Vijayawada opposition parties' conclave to the Congress (I) opposition leaders in New Delhi's Constitution Club (Chairman Shri Lok Dal) and Chairman B. K. Chatterjee) relented to attend the meet at the personal request of Atal Bihari Vajpayee and J & K CMs N T Rama Rao and Farooq Abdullah. But the BJP kept it from the staying away. The meet recommended the Centre for drifting from the Punjab problem but offered no new solution. They agreed that the Centre must go to Punjab and try to give certain areas for backward and compensation money to make a new capital. However Lok Dal was not satisfied with the solution offered. Lok Dal insists that certain areas in Abohar and Fazilka must be given to any village.

The meet also discussed other national issues as the floods, President's rule, Emergency and the Election Commission's attitude to re-election. It is obvious that the only way to win the opposition leader's support is their opposition to the Government. The Congress (I) is still a very strong force in the state. It is still a very strong force in the state. It is still a very strong force in the state.

POLITICAL LIFE

DRAMA IN THE STATES

Bhajan Lal Jagannath just survived a confidence motion because of the indecisive opposition. And now Haryana and Rajasthan are in the centre of a not very different political crisis. Infighting in the state Congress (I) apparatus. Haryana CM Bhajan Lal dismissed two Cabinet ministers Phool Chand and Lachhman Singh—who had defected to the Congress (I) when Lal formed his government—because they were allegedly working at cross purposes with the state government on the Punjab dispute.

He promised to fire other Cabinet ministers if they resign to PM

Indira Gandhi—which were accepted. In addition, the Parliamentary Secretary has also resigned to express solidarity with the dismissed ministers. Yet Lal appears unconcerned, claiming that four opposition MLAs wish to join his party. But there is more to his nonchalance. Lal has the tacit approval of the party high command in curbing dissident activity.

The drama in Rajasthan ran on Haryana's lines, only it stopped at the first act. CM Shiv Charan Mathur sacked four ministers said to be planning his ouster.

In Pondicherry there was no act—only action. President's rule was imposed on the Union territory for the sixth time, when the Congress (I) withdrew from the 42 month DMK coalition government. DMK CM D Rama chandran yet claimed to enjoy a majority in the 30 member house saying several opposition parties had pledged him support.

The Congress (I) action is seen as a counterthrust for Ramachandran's participation in the southern states chief ministers meet convened by Karnataka CM R K Hegde in March. For now, the Congress (I) expresses no wish to form a government though it claims it can do so. Reason: after its rout in Karnataka and Andhra Pradesh it seeks to secure a fresh mandate from the south. Now fresh elections are to be held for the Assembly within six months or later by a year, since President's rule cannot be extended beyond that period.

J & K

BRIDGE OVER TROUBLED WATERS

Farooq Abdullah's 'hell raising' victory in this June's Assembly elections—which got him the chief ministership and his party National Conference (NC) 46 of the 76 seats in the house—was crusted with violence in Srinagar. Reports said NC workers in thousands converged on the Congress (I) strongholds of Zadibal, Hawal Navidpora and Alamgir Bazar areas and allegedly looted shops and ransacked and burnt houses. At least 700 were hurt in violent armed clashes between Congress (I) and NC workers. The upshot: police swung into action, shoot at sight orders were issued, a 24-hour curfew was clamped, and a serious rift has been created among the people.

Abdullah has pledged to 'build bridges' between the various communities, but the Congress (I), having 26

seats in the house, is not going to make that bridge-building task easy for Abdullah. It has already blamed his party for rigging elections in the 42 Valley seats as have most opposition parties in the state. The Election Commission has received many complaints from people alleging intimidation by NC workers. Equally controversial was the state government's refusal to deploy a mixed state police and paramilitary force for polling stations.

This is perhaps because Farooq is not the hard disciplinarian that his father the Sheikh, was. He seems to have little control over his workers whose actions are no credit to him. Even during the swearing-in ceremony many NC workers created a tumult.

For the record Abdullah as expected retained the key portfolios: General Administration, Home, Tourism and Labour. His other ministers are G M Shah, P L Handoo, Abdul Rahim, Rathor, Hakim Habibullah, Mohd Shafi, Uri, Bodhraj Bali and Jagjivan Lal.

AGRICULTURAL PRICE HIKE

AN ECONOMIC BLUNDER?

Barely three days after the reduction in fertiliser prices the government announced the increase in prices for paddy, pulse and coarse grains.

The price of the common variety of paddy has been fixed at Rs 132 a quintal, Rs 10 higher than in the previous year. The price of fine variety will be Rs 136 and superfine variety, Rs 140 per quintal.

As promised by Agriculture Minister Rao Birendra Singh, the price has been at the start of the sowing season. This is to provide an incentive to farmers to grow more food and cash crops.

The price of the common variety of jowar bajra and millets has been fixed at Rs 124, Rs 60 and Rs 50 respectively.

The price hike is a necessary step to the farmers is a sound economic policy. The reduction in fertiliser prices was declared at a time when the farmers must have already prepared the land for sowing. So they are unlikely to benefit from it this year. However it is hoped that it would lead to a greater use of fertilisers even by small farmers. The reduction (7.5 per cent) will certainly bring down the cost of production.

Keeping this in mind there was hardly any need to hike paddy prices with the inflation rate already at 22 per cent. Increase in paddy prices are bound to escalate prices in other areas as well, leading to a further increase in inflation.

The price hike is likely to benefit the

high farmers, more than 100 per cent in most paddy-producing areas, the produce is not for sale but for consumption by farmers themselves. Major areas of paddy production for sale are Punjab, Haryana and west UP where farmers need no incentive to grow more.

The repercussions of these two moves on the economy as a whole are likely to be far from beneficial.

PM'S EUROPEAN TOUR

EXPLORING NEW HORIZONS

Prime Minister Indira Gandhi returned to India on June 20 after a 11 day trip to Yugoslavia, Finland, Denmark, Norway and Austria. The trip was high on protocol and low on returns. Not surprising, since she went to mobilise support for NAM and to improve India's image abroad.

The highpoint of Mrs Gandhi's visit to Yugoslavia first—co-founding NAM with India and Egypt—was her prestigious Raul Prebisch lecture on Peace and Development at the UNCTAD VI conference at Sava Centre, Belgrade. In her address she pleaded for a more decisive movement towards a new economic order and criticised the structural flaws in Bretton Woods frame for the management of international financial institutions like the IMF and World Bank.

Then north to Finland and formal talks with PM Tarmo Kalevi Sorsa and President Mauno Koivisto on the renewed cold war between the two superpowers with no arms reduction accord in sight. India and Finland signed an agreement on cultural exchange and avoidance of double taxation in trade.

Discord set in at Mrs Gandhi's next stop, Denmark. While agreeing on most issues, the two countries differed on the Kampuchea question. Denmark supports ASEAN's view of the legitimacy of the Pol Pot regime, while India backs the Vietnam-installed Heng Samrin Government.

For the press in India—and Zia ul Haq in Pakistan—Denmark came as a pleasant surprise. Addressing newsmen there, Mrs Gandhi dismissed as baseless reports that India planned to attack Pakistan's nuclear installations. She answered many other questions on Pakistan. On the nuclear question, Mrs Gandhi herself got a different kind of assurance at Oslo. Norwegian PM Kaare Willoch told her no nuclear weapons would be deployed in his country. Both the leaders agreed on superpower disarmament but disagreed on Afghanistan.

Geopolitics took a back seat and India came front during her visit to Austria, last on her itinerary. Mrs Gandhi delivered

Mrs Gandhi with Norway's King Olav V. Diplomatic niceties.

the keynote address at the Alpbach European Forum organised by the Austrian College. The theme, contrary to the tradition of discussions on political, economic and cultural problems of Europe, was India. True to form, Mrs Gandhi, in her speech, underlined the need for friendship and cooperation between India and Europe, as well as the interdependence of their economies.

FOREIGN AID

INDIA FEELS THE PINCH

Economic recession in industrially developed countries has not only led to a decrease in Indian exports to these countries, but also a decrease in aid to India.

In May, some countries had opposed the ADB loan to India. Now, Aid India Consortium, in its two-day meeting in Paris, has reduced aid to India by about 3 per cent, \$3.6 billion for 1983-84, against last year's commitment of \$3.73 billion. Budgetary pressures have led many donor countries to reduce their contribution—US commitment is the same as last year, while UK and France have increased and FRG has reduced it by 6 per cent—even though the Consortium has simultaneously expressed satisfaction over the working of the Indian economy despite world recession and natural calamities.

Indian economy was also given a clean bill in a World Bank report that said the country was credit worthy for continued non-concessional borrowings sufficient to finance the overall balance-of-payments gap. The Bank has made several suggestions for the improvement of the Indian economic situation by taxation of affluent farmers, price increases in power and coal and an

increased rate of domestic savings. The World Bank group has also pledged the same amount as last year, \$2.1 billion.

The situation is similar with EEC loans to India, though the consequences are not very heartening. EEC has ruled out any substantial increase in quantitative financial aid, even while Community representative at the Alpbach European Forum, E. Pisani, promised increase in qualitative, project-based aid to India. India is already the largest single borrower from EEC and 65 per cent of Indian exports to EEC enter duty-free.

INDIA-CANADA

MacEachen Makes First Move

India's relations with Canada received a tremendous boost with the visit of Canadian Deputy Prime Minister Allan J. MacEachen to India. Relations between the two countries had received a setback earlier due to differences on the nuclear policy and the Khalistan and Afghan issues.

In his talk with Indian leaders, MacEachen supported some of India's NAM proposal and reiterated his country's willingness to cooperate with India in resolving North-South issues.

In wide-ranging talks with External Affairs Minister P.V. Narasimha Reddy, MacEachen offered Canadian assistance in setting up joint venture in mining and the manufacture of Twin Otter aircraft in India. Canada also offered transfer of technology to India to manufacture the aircraft's engine. Hindustan Aeronautics Anotations offer was to assist in oil and gas exploration and laying of pipelines.

In his talks with the Finance Minister Pranab Mukherjee, the Canadian deputy PM agreed on the need to en-

(Continued on page 3)

POLAND POPE'S PILGRIMAGE

All of Poland was stuck with posters of Pope John Paul II with one word printed below: *Czekamy*—"We are waiting." And when he did come on June 16 on an eight day pilgrimage of Poland Poles were ready with flowers, with faces reflecting "bitter-sweet joy", with banners reading *Hope—Solidarity and You Are The Father Of Solidarity*.

The 'Father of Solidarity' was not allowed by the authorities to visit Gdansk, the outlawed trade union's birth place and impeded from meeting people at close quarters by various dubious tactics in the name of security. Still, people descended in millions from all over Poland to listen to his homilies. The Pope's journey across Poland took him to Warsaw (June 16-18), Niepokalanow (June 18), Czestochowa (June 18-20), Katowice (June 20), Poznan (June 20), Wroclaw (June 21) and Cracow (June 22-23). This was his second visit to Poland, becoming the Pope, the first in 1979, after leaving for Vatican City earlier as a cardinal and Poland's first Pope. His first visit, many changes had

Pope and Jaruzelski in Warsaw (left), Walesa leaves Gdansk to meet the Pope War on Walesa—and Solidarity?

been wrought in his homeland (the most religious-minded among all East bloc countries) Solidarity, born from his visit in August 1980, was banned, freedoms won in the famous Gdansk agreement were snatched, and Poland's military Premier Gen Wojciech Jaruzelski imposed martial law on his 'unwilling countrymen' on December 13, 1981.

In the Pope's first-ever meeting with Jaruzelski, it was naturally Jaruzelski who was uncomfortable. Reading out from his prepared text, the General sought to justify the imposition of martial law. Said he "It is said that Poland suffers. But who put in the scales the enormity of human suffering, torment and tears that have been successfully avoided?"

The allusion was to an imminent Soviet invasion which Jaruzelski claimed to have forestalled by imposing martial law. In reply, the Pope focussed indirectly on the torment and tears that Poles had to face after Solidarity was smashed and martial law imposed. Added the Pope "I do not stop hoping that the social reforms announced on many occasions, according to the principles so painstakingly worked out in the critical days of August 1980 and contained in the agreements, will gradually be put into effect."

Moscow will not let that happen. To Soviet news agency, TASS, the Pope's visit was a non-event, just of a "religious character." Soviet Foreign Minister Andrei Gromyko was not that subtle, say-

ing in the Supreme Soviet that "Poland has been and will remain an indivisible part of the socialist community."

The man who almost prised out Poland from the socialist community—Solidarity leader Lech Walesa—tried to keep a low profile during the Pope's visit. But that was not to be. The Pope brushed aside official objections to meet Walesa in Czestochowa on the occasion of the 600th anniversary celebrations of Poland's Black Madonna there. What transpired between the Pope and Walesa has been kept a secret.

Meanwhile, speculations are rife as to the minutes, all disastrous to Walesa, the Pope—and Poland. Editorialised the Vatican newspaper, *L'Osservatore Romano* "Walesa has lost his battle and leaves the scene." Did it mean that the Pope and Jaruzelski had struck a deal during their unscheduled second talk in Cracow's Wawel Castle to guarantee—as noted American columnist William Safire puts it—the Vatican's opposition to any uprising in return for an end to martial law? While the Vatican editorial writer resigned, saying he was expressing his personal opinion, and Safire preached that "the Pope should uphold and protect Walesa, not try to replace him", the Communist Party organ tried to make the most of this misunderstanding.

For misunderstanding it was. When Jaruzelski presented the Pope with a vintage piece of armour, the Pope gave him in return a painting of John the Baptist, a saint who was beheaded for telling the truth. Such a man cannot be expected to sign Warsaw's death warrant—as that of Poland's future

LEBANON MAKINGS OF A WAR

The future of Lebanon's sovereignty and the PLO's very existence hang in balance. The culprit Syria, and its hardline Soviet-supported President Hafez Al Assad

The May-17, US-mediated Israel-Lebanon troops-withdrawal pact has continually irked Assad as it undermined his role as a self-declared protector of Lebanese interests. What he wants is an unconditional Israeli-troops withdrawal from Lebanon to be followed by his own. That, Menachem Begin's Israel would never agree to, even though pressure is mounting at home on getting the Israeli Defence Force out of Lebanon. Begin has vowed to dig in southern Lebanon—and claims to have US backing for it—even as Jerusalem is sending more troops and arms into Lebanon to combat increasing Syrian and PLO behind-the-lines attacks. The situation in Lebanon has all the makings of a Syrian-Israeli war and the Soviet Union, aware of it, has flown in more arms for Syria.

Worst still, diplomacy received a drubbing when US Secretary of State George Shultz, after his India-Pakistan visit, flew to Damascus and later to Jerusalem, on July 7, to confer with Assad and Begin on getting Syrian and Israeli troops out of Lebanon. Said Shultz after his failed mission: "I wish I could report that somehow we see a movement in the direction of simultaneous withdrawal of all foreign forces [out of Lebanon]. But I can't give any such report."

But he added: "There is universal support for a strong, sovereign Lebanon." That's really wishful thinking: the situation in Lebanon is positively explosive with the mutiny in PLO leader Yasser Arafat's Fatah group out in the open. Arafat's leadership of the PLO has been called to question by the mutineers led by Col Abu Mousa and backed to the hilt by Syria. Damascus went one step further by expelling Arafat on June 24 and stepping up support to Mousa's mutineers. The result in a fortnight of fierce fighting—some running for a third straight day—PLO rebels are now in control of the entire 20-km stretch of the Beirut-Damascus highway between the east Lebanese Bekaa Valley town of Chataura and the Syrian border. Accusing Syria, first, of trying to divide Fatah and adding, "What the Israelis had failed to do in Beirut is now being done by the Syrians in the Bekaa Valley," Arafat has now sent a mediating team to Damascus to seek a compromise with

Syria and the mutineers

Damascus, however, has been more consistent. The government newspaper, *Tishrin*, called Arafat a "traitor" and "threatened to chop off his fingers", accusing him of "never squarely condemning [US President Ronald] Reagan's West Asian Plan of last September 1 or the Lebanon-Israeli troops withdrawal accord." War of words apart, Assad, for sure, has a reason for his stand: he wants ultimate control of the PLO forces in Bekaa Valley since any full-scale attack by them on Israeli units would, without doubt, lead to a larger Israeli-Syrian war. The Soviets are likely to tell the same thing to the succession of PLO leaders now visiting Moscow, climaxing with one by Arafat himself.

PAKISTAN

SIX YEARS OF ZIA

Pakistan's military President Gen Zia-ul-Haq has broken every code in the democratic law book during his six years of military rule beginning July 5-6, 1977, when he deposed Pakistan's only elected Prime Minister Zulfikar Ali Bhutto. And yet Zia is there to stay—at least for now.

That view was vindicated on July 5-6, 1983, marking Zia's six complete years of martial law when the 'black day' demonstrations by the eight-party Movement for Restoration of Democracy (MRD) and the all-Pakistan lawyers' association failed to take off the ground. Pre-emptive measures by the government put an end to protests in the form of black arm bands and black flags hoisted from homes to district courts.

July protests were a preliminary, though. Real opposition from Pakistan's 90-million-odd oppressed people and the suppressed opposition political parties may come on August 14 (It is Pakistan's Independence Day and is also Gen Zia's 'deadline' for unveiling a new political system with, reportedly, a distinct military bias.) Pakistan People's Party (PPP) Steering Committee Chairman Sheikh Mohammad Rashid said in London that a massive civil disobedience movement will be launched that day against Gen Zia's regime because the ground was ripe.

But civil disobedience movements work in a national state, not a garrison state—and that too Zia's, which has no precedent in Pakistan for its harshness. Field Marshall Ayub Khan's four-year martial law (1958-62) was modernistic in outlook. He never promised elections—but held local body polls and a referendum in 1960 which saw him to the Presidency. Gen Yahya Khan in his

three-year military rule (1969-72) set a unique precedent: he kept his promise of holding Pakistan's first general elections in December 1970 and lifted martial law less than two years later when Parliament adopted an interim Constitution.

They were presidents first and army chiefs later, never toyed with Islamicising Pakistan, and upheld women's equality.

Not so Zia. He has institutionalised military rule, derogated and debased women, and has foxed the clergy. And he has survived because he is the cleverest manipulator. Pakistan has got

He has engaged in disengagement talks with Afghans to keep the Russians happy while covertly supplying small arms to Afghan rebels to keep the Americans, Chinese and Arabs happy. His Pakistan is a frontline state: pitch has legitimised him in the West. Got him the \$3.2 billion US arms aid package, and big money from Gulf Sheikdoms with no strings attached. He has exported unemployment and the Pakistan army on garrison/mercenary duty to the oil-rich, labour-starved, godless-communism-fearing Gulf states. In the process, he has gained many thousands of millions of dollars in remittances which are being put in conspicuous consumption and arms. As if that's not enough, he has created global waves and given enough subject for Pakistanis to talk about by experimenting with an Islamic bomb.

The problems he faces are not many: schismatic political parties in opposition, the Baluch who cannot reconcile themselves with the Punjabi-dominated set up in Islamabad, the Shias whose ideas of Islamic laws are different from those of the government-supported Sunnis, and the clergy who disown him now but whose own power base has been eroded as erstwhile supporters of Zia.

Even if democratic Pakistanis must try to unsettle undemocratic Zia, civil disobedience movements won't do on August 14. They have to do more—and then there will, of course, be bloodshed. Level-headed Zia can be expected to lose his head in a crunch. But that's when his fall starts.

US-USSR

THE NEW THAW

While the Strategic Arms Reduction Talks (START) reconvened in Geneva under a near-total news blackout, there were visible signs of a probable East-West thaw, leading perhaps to a Reagan

Andropov summit in the near future. While Andropov and Gromyko spoke of the importance of negotiations before the Soviet Central Committee veteran diplomat Averell Harriman brought back rays of hope after his recent talks with Andropov in Moscow. Harriman recalled that Andropov had expressed the sincere and fervent desire of the Soviet Government to have normal relations with the United States.

The US too of late has shown signs of flexibility. The chief US negotiator for START Edward Rowley recently said US President Ronald Reagan had told him to examine all Soviet proposals seriously and to be flexible in our responses. Reagan himself wrote to Andropov after his election as President: "I hope that together we can find ways to promote peace by reducing the level of armament." Secretary of State George Shultz too struck a conciliatory note when he testified before the Senate Foreign Relations Committee. His testimony was the first comprehensive statement of US policy towards the USSR since he succeeded the hawkish Alexander Haig almost a year ago. In a break with past administrations Shultz argued that arms control should not be the main issue in US-Soviet relations and instead laid more emphasis on human rights as the central test for Soviet intentions. On arms control he said that while the US would strive for military balance, defend itself and its allies and support democratic movements in politically turbulent areas it would also respect legitimate Soviet security interests. He added that the US was also ready to negotiate equitable solutions to outstanding political problems.

MX

TAKES OFF

After two years of debate the \$15 billion MX appears to be finally under way. In late May the US House of Representatives voted 239 to 186 and the Senate 59 to 39 to release \$625 million in MX flight testing and development money. The bipartisan decision came five months after Congress had rejected US President Ronald Reagan's dense pack basing mode for the MX missile and its withheld production funds for the weapon.

The present decision followed the recommendation of the 11-member Scowcroft Commission which released its report in April. The panel recommended the deployment of 100 MX missiles in existing Minuteman silos but linked the issue to arms control and proposed the deployment of smaller

single-warhead intermediate missiles in the 1990s that would be less vulnerable to attack. In fact, many of the swing votes which resulted in the decision, came from members who gained assurances from Reagan that the Administration backed all the recommendations of the Scowcroft Commission. The commission pointed out that while the MX was less desirable in the long run, it could be used as an expression of 'national will' and as a lever to push along arms control negotiations.

The MX package has not been tied down entirely however. A day after the Senate vote 19 Republican senators wrote to Reagan urging him to adopt a 'meaningful build-down proposal for nuclear arms reduction' in the immediate future. They added that their continued support for the MX in Congress would depend on the 'sincerity' of Reagan's arms control approach. The Reagan Administration itself calls the MX a bargaining chip in its arms limitations talks with the Soviets. It feels that the planned deployment of 100 missiles is just the right number not enough to appear as a major first strike threat against the Soviets but enough to convince them that such a threat is not far off should they be unreasonable.

USSR

SHADOWS OF BREZHNEV

What took Leonid Brezhnev 13 years to get Yuri Andropov has secured in seven months. Andropov, who already held offices of General Secretary of the Communist Party and Chairman of the Defence Council, received the largely ceremonial title of state President in mid-June from the Soviet Parliament, the Supreme Soviet. Despite his elevation Andropov still appears to be moving cautiously. The probable reason is a behind-the-scenes power tussle with his archrival Konstantin Chernenko, who surprisingly nominated Andropov for the Presidency. Chernenko, a Brezhnev protégé, had disappeared from public life shortly after Andropov's designation as party leader. The fact that he is still powerful however emerged when it was announced that he would deliver the key note address to the meeting of the powerful Central Committee in mid-June. On the other hand Andropov, who recently reshuffled the Politburo, has not been able to fill the Soviet Communist Party power base with his own men.

Besides ideological discussions at the Central Committee meeting the issue of arms control also came up. On this question the USSR now appears to be

more forthcoming than previous negotiations. In his speech, Andropov stated that it would be a "great boon" for all countries "if it became possible to reduce the level of armaments and military spending on both sides." Foreign Minister Andrei Gromyko, too, emphasised the importance of negotiations. In a welcome move, Soviet television also allowed the US Government to express its point of view on the Soviet screen. The weekly show *International Panorama*, featured US Deputy Secretary of State Kenneth Dam answering questions on arms control from a reception room at the State Department. This was the first time that a Washington-based official explained US policies since former US President Richard Nixon addressed the Soviet nation in 1974.

AUSTRALIA

PLAYING PACIFIC POKER

In his first world tour Australia's Prime Minister for three months Bob Hawke, took in Port Moresby, Jakarta, London, Paris, Geneva and finally Washington. Hawke's leanings were quite evident as he strongly reiterated Australia's commitment to the 1951 Australia-New Zealand-US (ANZUS) Security Treaty for the defence of the Pacific. In fact he went so far as to say that he did not consider himself bound by the foreign policy stance of the left wing of the Labour Party which favours among other things an end to Australia's military aid to Indonesia and resumption of aid to Vietnam. His rapport with President Reagan was so pronounced that he felt compelled to reassure Australians that he had not become a Reaganite.

Hawke further offered the services of his government to mend differences between China and the US. He had met Chinese Premier Zhao Ziyang in April and the two had apparently discussed deteriorating Sino-US relations. However, Hawke's economic message to the US met with less enthusiastic response. Faced with an 11.2 per cent inflation rate, a 10 per cent unemployment rate and \$8.2 billion budget deficit inherited from the previous government, Hawke warned that Australia's economic recovery depended on moderate US interest rates, free trade and continued US investment in Australia.

The Reagan-Hawke *tete-a-tete* met with mixed response at home. While he received high praise from newspapers like the *Australian* and the *Melbourne Age*, the *Australian Financial Review* commented that Hawke's "jawboning" with Reagan was comparable to a "mere B-grade movie publicity stunt".

SRI LANKA TAMILS TAKE TO TERRORISM

The northern and eastern provinces of Sri Lanka were caught in a vicious circle of violence in June: terrorism by the Tamil United Liberation Front (TULF) militants followed reprisals from the army, which led to fresh attacks by the terrorists. It all started off with the May-18 parliamentary by-elections which focussed attention on the growing secessionist movement among the Tamils, although President Junius Jayewardene's United National Party (UNP) won a victory. Three UNP candidates had been shot before the elections, in early May. On May 18 itself, terrorists attacked a polling booth in Jaffna, killing a soldier, injuring another and wounding two policemen. Soon afterwards, 600 soldiers assaulted civilians, indulged in arson and looted houses in a residential area near the polling booth where the soldier had been killed. On May 19 too, there was violence on the part of the army which, under the guise of looking for a suspected terrorist, attacked a number of persons between the ages of 14 and 35. TULF claims that the presence of the army in the northern and eastern provinces has provoked the militants into action and wants its immediate withdrawal. It also wants emergency to be lifted and the annulment of a prevention of terrorism act, which gives wide powers to the army and police.

The Tamil underground secessionist movement has gained considerable popular sympathy in the last few months. Their primary demand is Eelam—a sovereign state carved out of Sri Lanka. The Sri Lanka Government, however, views the Tamil problem as basically a Jaffna problem and feels that although it may be a festering sore, it is a sore that is bearable. Thus, it is averse to discussions with the TULF, as suggested by some moderate leaders of the Tamil Front.

US-NICARAGUA EXPELLING ENVOYS

In June, while tensions built up in Nicaragua, US-Nicaraguan relations became considerably colder. The Sandinists accused the US of increased CIA activity involving a plot to kill Foreign Minister Miguel d' Escoto. In a press conference at Managua, two self-proclaimed double agents declared that they had been recruited by the CIA, displayed spy equipment and showed a video tape of supposed CIA agents in

action. They also claimed that a CIA agent had given them poison to assassinate the foreign minister.

The Nicaraguan Government charged three US diplomats with masterminding the plot and expelled them. The American response, however, surprised the whole world. Instead of expelling a similar number of Nicaraguan diplomats, the Reagan Administration ordered all six Nicaraguan consulates in the US closed and gave 21 diplomats one day to leave the country. It has also stepped up its vigilance of Nicaragua, adding more AC-130 spy-plane flights over the country and supplementing them with RF-4 reconnaissance jets and small piston-engined electronic snoopers for the first time. The Nicaraguan embassy in Washington, however, still remains open and neither side has threatened to break off relations. US Special Envoy Richard Stone also visited Managua during the course of a 12-day, 10-nation fact-finding mission of Latin America and he was apparently told by the Sandinists that they favoured more dialogue between the US and Nicaragua.

US President Ronald Reagan's tough stand is perhaps due to certain recent developments in Nicaragua. According to American sources, about 1,300 troops arrived in Nicaragua last month and in early June, six Soviet-chartered ships arrived in Nicaraguan ports and unloaded armoured personnel carriers, field kitchens and other equipment.

PERU-GUATEMALA FRESH TROUBLES

While attention is now focussed on El Salvador and Nicaragua, other nations in Central and Latin America are equally unstable. Peru, which has been the victim of a long-running leftist guerilla war, saw a fresh spate of violence in early June. A band of 20 guerillas burst into the Bayer chemical plant outside Lima and blew it up. Another group of terrorists blew up a number of electrical pylons leading to the city and in the ensuing blackout, there were dozens of bomb explosions throughout the city. This was the worst act of sabotage that Peru has had to face in the last 50 years and President Fernando Belaunde Terry, who had recently boasted that the guerillas were now on the run, imposed a 60-day nationwide state of emergency, curtailing civil rights, prohibiting public gathering and allowing police to search homes and make arrests without warrants.

In Guatemala, too, things may be changing since Gen Efraim Rios Montt

seized power 15 months back. Although he has been successful in not only reducing the guerilla threat but also in cutting down the activity of government death squads, the rumour goes that he was asked to resign by 14 young army officers in early June. In late May, Rios Montt had announced an indefinite postponement of national elections. The dimming prospects of democracy may have upset certain sections of the population.

AFGHANISTAN NO BREAKTHROUGH

The Geneva talks on Afghanistan, which were adjourned on April 22, were reconvened on June 16. The UN envoy, Diego Cordovez, resumed separate talks with the foreign ministers of Afghanistan and Pakistan. While Cordovez said some progress had been made, Pakistani Foreign Minister Sahabzada Yaqub Khan declared there are no breakthroughs on the horizon.

In fact, from all appearance, no breakthrough seems to be in sight. The Soviets launched a spring offensive which was perhaps the most savage attack since 1979. According to Western estimates, there are about 105,000 Soviet troops in Afghanistan. The guerillas, too, number between 1,00,000 and 2,00,000 and, fired by religious zeal, are putting up a tough fight. The guerillas are, unfortunately, divided and there is a lot of fighting between the ethnic Tajiks and the ethnic Pashtuns, the Sunnis and the Shiites, and the predominance of Shiites and the mass murder of Shiites. Another awkward development is the US administrative confusion in May 1983. The Americans were backing the anti-Soviet guerillas in Afghanistan. The US administration, however, later initiated an initiative to bring about a cease-fire action and a fresh dialogue with the Cordovez mission.

CHINA SOME NEW FACES

China's 10th National People's Congress, which opened in mid-June, elected a new old revolutionary in the Politburo, Hu Yaobang, as the Party's general secretary, as the President of the first national President since Mao Zedong's arrival. Liu Shaoqi was stepped of the role in 1968. The post, however, is largely ceremonial as the Congress confirmed Deng Xiaoping, who plays the dominant role in Chinese politics, as Commander of China's 4.2 million-strong armed forces. He was elected Chairman of the Central Military

Commissioner, Police
 Prime Minister. The post of Vice-President went to a Mongolian, Ulanhu. Earlier, Liao Chengzhi, a specialist on Taiwan and a veteran diplomat, had been tipped for the post, but his death changed plans.

China's progress and failures were reported candidly at the People's Congress, thus giving China an air of actual democracy. In his keynote address, Zhao stated that agricultural and industrial output in 1982 had increased by 32.6 per cent. Since 1978, the average annual growth rate was 7.3 per cent. He also reported that trade stood at \$38.1 billion in 1982, which marked a 120-per cent increase over 1978. He was equally outspoken about China's failures. Stating that the 1982 budget deficit was \$5 billion, he complained that corruption was a serious economic problem in China.

OAU

RIFT WITHIN THE RANKS

The tottering OAU gained a fresh lease of life when a meeting was held at Addis Ababa (Ethiopia) between June 8 and 11 after two unsuccessful attempts to hold a summit conference in Libya last year. The present meeting, too, was on the verge of failure, while 20 moderate members threatened to walk out if delegates of the Polisario guerrilla movement, that has been fighting Morocco for control of Western Sahara, were seated at the conference. 26 radical members led by Muammar Gaddafi of Libya, said that they would boycott the meeting if they were not. The situation was saved by the Polisarios, who agreed to stay away for the time being.

The meeting was a round defeat for Gaddafi who was not elected chairman of the OAU, although he had been the host of the two summit attempts last year. According to tradition, the title of Chairman went to the leader of the new host country, Ethiopia's Mengistu Haile Mariam. Gaddafi's objections to Chad being represented by Hissene Habre were also overruled by the OAU, and the 1984 Summit was assigned to Guinea, whose President, Sekou Toure, is an arch-enemy of Gaddafi.

Although the Polisario Front decided to stay away from Addis Ababa, the split between Africa's "radicals" and "moderates" was far from being patched up. The most clear evidence of this was its inability to elect a new secretary-general. The OAU had to settle for an Assistant Secretary-General, Peter Onu of Nigeria, who was appointed to run the Secretariat for a one-year period.

BRITAIN

NO NOOSE, GOOD NEWS

The official British hangman won't get back his job, after all. In a momentous decision on July 13, the House of Commons voted against restoring the rope and saved human-rights-conscious Britain from embarrassment worldwide. Hanging was sought to be revived for terrorist acts and for murder by gun/explosives or murder of policemen or prison officers. And each was defeated by 116 votes, 175 votes, 170 votes, 81 votes and 96 votes, in that order.

In tradition-bound Britain, members voting on hanging can obey their conscience and not the party line. Even so, against all expectations, the 101 newly-elected Tory MPs voted roughly 2-1 against the noose. In the cabinet, Prime Minister Margaret Thatcher—banking on the 93 per cent public-opinion poll for the noose and the supposed "500 per cent increase in serious crime using firearms in the past 10 years"—collected nine votes, including hers, against eight for not bringing back the hangman.

There were many others outside the cabinet and Commons who hated the hangman just as much: the Church of England, Catholic churches, lawyers, judges, doctors, prison governors, chief police constables and human rights organisations like Amnesty International. Britain's famous living hangman who had got hundreds at the gallows—Albert Pierrepoint—called the practice "barbaric". The European Parliament had condemned the move as most of West Europe had spurned the scaffold. The Netherlands were the first to abolish it in 1870. The other West European countries to follow suit: Italy (1947), West Germany (1949), Spain (1978) and France (1981).

FALL OF THAPA

Nepal's first elected Prime Minister Surya Bahadur Thapa was voted out of office—for the first time in the 20-year history of Nepal's legislature (Rashtriya Panchayat)—when more than 20 of his Cabinet colleagues resigned in a no-trust move supported by 120 of the 140 house members. Charges against the Thapa Government: corruption, economic chaos and undermining the crown's authority.

Informal Opposition leader Lokendra Bahadur Chand has been elected the new prime minister on the strength of 107 votes. He is to declare his Cabinet shortly.

Britain itself had done the same in 1965. Today, dear as hanging may be to some Tories, it has suffered a decisive death in the Commons. And Conservatives are unlikely to resurrect it at the party conference in October.

UNCTAD-VI

NORTH-SOUTH IMPASSE

The sixth UN Conference on Trade and Development (UNCTAD-VI), which met at Belgrade on June 6, did not, as its name would imply, focus on trade or development. More than a year ago, UNCTAD Secretary-General Gamani Corea proposed that the Conference should concentrate primarily on the world economic situation, international financial and monetary issues, commodity issues and lastly, in deference to the wishes of the Group of 77, on the specially serious plight of the least developed countries. All countries except the US and Israel voted in favour of the agenda, thus giving a preview of what was to come. The US took an adverse stance from the beginning. It strongly objected to points like the demand for aid for the national liberation movements in Namibia and South Africa and said that attempts were being made to politicise the Conference. It became evident from about the third day of the Conference that few, if any, of the hopes of the developing countries would be realised during the course of UNCTAD-VI. The affluent countries adopted a rigid posture on several key North-South issues at the committees and the US emphasised that trade was more important than aid. As tension increased, the Group of 77 denounced the developed countries for the lack of progress at UNCTAD-VI.

 N.V. SUBRAMANIAN

PRACTICE TESTS

Preparing these tests we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating: Evaluate your performance on the basis of the following score-card:

| | | |
|-----------------------------|---|-----------|
| 100 questions in 60 minutes | — | Excellent |
| 60 questions in 60 minutes | — | Good |
| 50 questions in 60 minutes | — | Fair |
| 35 questions in 60 minutes | — | Poor |

Tips: 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

TEST OF REASONING

BY LT COL I R MANCHANDA, former Dy President, S. S. B

FOR BSRB (PO) EXAM

This section forms an important part of the BSRB (PO) Exam (Southern, Western and Central Groups) to be held next month.

Time: 15 minutes.

Scores: 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer. 3. Then rate your score as under:

Excellent 44-48 Very Good 40-43 Good 36-39 Fair 31-35 Poor Below 31

DIRECTIONS For each of the following questions, tick mark the choice of best answers the question. Answers are given at the end of this supplement

Directions In questions 1 to 5 there is a series with one term missing. From amongst the given choices, select the missing term.

1. 0, 6, 24, ?, 120, 210, 336

- (a) 60
- (b) 70
- (c) 72
- (d) 75

2. 3, 3, 6, ?, 11, 5, 18

- (a) 2
- (b) 3
- (c) 4

(d) 5
3. 2, 6, 20, 56, ?, 272

- (a) 112
- (b) 132
- (c) 152
- (d) 172

4. Minus 1, 0, ?, 8, 15, 24

- (a) 1
- (b) 3
- (c) 5
- (d) 7

5. 1, 2, 6, 16, ?, 120, 328

- (a) 32

- (b) 36
(c) 40
(d) 44

Directions: Questions 6 to 10 are based on various operations and Arithmetic symbols as defined below. Select from amongst the given alternatives, the expression that gives the correct relation based on these symbols.

\vee stands for multiplication; $<$ stands for division; \wedge stands for addition; \times stands for subtraction; $-$ stands for greater than; $+$ stands for less than; $>$ stands for equal to.

6. (a) $18 - 3 \vee 2 < 4 \wedge 8 \wedge 12$
(b) $18 < 3 \wedge 2 < 4 \vee 8 + 12$
(c) $18 \times 3 \wedge 2 < 4 \wedge 8 > 12$
(d) $18 > 3 \wedge 2 \wedge 4 \wedge 8 < 12$
7. (a) $8 > 6 < 3 \vee 2 < 3 \vee 5$
(b) $8 > 6 \times 3 \wedge 2 \vee 3 \wedge 5$
(c) $8 + 6 \vee 3 \vee 2 < 3 \vee 5$
(d) $8 + 6 \wedge 3 < 3 \vee 2 \wedge 5$
8. (a) $4 < 2 \vee 4 + 4 \vee 2 < 4$
(b) $4 \vee 2 < 4 + 4 < 2 \vee 4$
(c) $4 > 2 < 4 \wedge 4 \vee 2 \wedge 4$
(d) $4 + 2 \wedge 4 < 4 \times 2 < 4$
9. (a) $9 < 4 - 8 \vee 2 < 4$
(b) $9 \wedge 4 - 8 \vee 2 < 4$
(c) $9 > 4 \wedge 8 < 4 \vee 4$
(d) $9 \times 4 + 8 \vee 2 < 4$

10. (a) $\sqrt{4} \times \frac{1}{\sqrt{4}} < \sqrt{3} < \sqrt{3}$
 $- \sqrt{5} < \frac{1}{\sqrt{5}}$
(b) $\sqrt{4} - \frac{1}{\sqrt{4}} \vee \sqrt{3} \wedge \sqrt{3} \wedge$
 $\wedge \sqrt{5} < \frac{1}{\sqrt{5}}$
(c) $\sqrt{4} < \frac{1}{\sqrt{4}} \wedge \sqrt{3} \vee \sqrt{3}$
 $- \sqrt{5} < \frac{1}{\sqrt{5}}$

$$(d) \sqrt{4} \wedge \frac{1}{\sqrt{4}} \wedge \sqrt{3} \\ + \sqrt{5} \vee \frac{1}{\sqrt{5}}$$

Directions: In questions 11 to 14, identify the number of squares and triangles in each of the two figures given below.

Fig. 1

Fig. 2

11. Figure (1) has — squares.
(a) 11
(b) 13
(c) 15
(d) 17
12. Figure (2) has — triangles.
(a) 40
(b) 42
(c) 44
(d) 46
13. Figure (1) has — triangles.
(a) 64
(b) 66
(c) 68

- (d) 70
14. Figure (2) has — squares.
 (a) 12
 (b) 14
 (c) 16
 (d) 18
15. If the statement, 'some men are wonderful', is true, which of the following must be true?
 (a) All men are wonderful
 (b) Some men are not wonderful
 (c) No men are wonderful
 (d) None of the above
16. If the statement, 'all men are intelligent', is false, which of the following must be true?
 (a) No man is intelligent
 (b) Some men are intelligent
 (c) Some men are not intelligent
 (d) None of the above

Directions: Questions 17 to 20 are based on the following. (1) P causes Q or R, but not both, (2) S occurs only if Q occurs, (3) T occurs if Q or R occur, (4) W occurs only if R occurs; (5) X occurs only if W or S occur, (6) T causes L, M, or both; (7) M occurs if W occurs; (8) L occurs if S occurs

17. If P occurs, — may occur
 I S and L; II W and M, III T
 (a) I only
 (b) II only
 (c) I and III or II and III, but not both
 (d) I, II, and III
18. If Q occurs, — must occur
 (a) S and L
 (b) T and L
 (c) L and M
 (d) T
19. The occurrence of X must involve the occurrence of
 (a) Either Q or R
 (b) W
 (c) Both W and S
 (d) T

20. — may occur as a result of a cause not listed in the opening statements.
 (a) T only
 (b) P only
 (c) T and P
 (d) L and S
21. The numerical value of a physical quantity is — the magnitude of the unit selected.
 (a) Directly proportional to
 (b) Inversely proportional to
 (c) Inversely proportional to the square of
 (d) Not dependent on
22. A body starting from rest accelerates uniformly. If it covers S_1 distance in the first five seconds and S_2 in the next five seconds, then — must be true
 (a) $S_2 = 2 S_1$
 (b) $S_2 = 3 S_1$
 (c) $S_2 = 5 S_1$
 (d) $S_2 = S_1^2$
23. To achieve maximum distance a footballer should kick the ball lying on the ground — degree(s) to the horizontal
 (a) Zero
 (b) 30
 (c) 45
 (d) 60
24. If 'FLOWER' is coded as 'UOLDVI', 'SAND' will be coded as
 (a) QPLW
 (b) TBOE
 (c) HZMW
 (d) UOTW
25. If 'FLOWER' is coded as 'JHSSIN', 'SAND' will be coded as
 (a) WWRZ
 (b) WRWZ
 (c) WBCZ
 (d) WERH
26. If 'FLOWER' is coded as 'GPXMDB', 'SAND' will be coded as
 (a) TONE

- (b) TRAY
(c) TEWT
(d) TROT
27. If 'FLOWER' is coded as 'GNRAJX', 'SAND' will be coded as
(a) TDPZ
(b) OQPS
(c) TCRI
(d) TCQH
28. If 'FLOWER' is coded as 'EJLSZL', 'SAND' will be coded as
(a) RYKZ
(b) RYLA
(c) RZBN
(d) RYXZ
29. If 13 pens and 12 pencils cost Rs 82, and 12 pens and 11 pencils Rs 75.50, 5 pens and 1 pencil will cost Rs
(a) 20
(b) 22.50
(c) 25
(d) 27.50
30. After travelling for 45 minutes, a train meets with an accident and thus has to stop for 45 minutes. Owing to the accident, its speed is also reduced to $\frac{2}{3}$ of its former value and the train reaches 1 hour 45 minutes late. Had the accident taken place 108 km later, the train would have reached 30 minutes earlier than it actually did. The length of the journey is — km.
(a) 230
(b) 270
(c) 297
(d) 324

Directions: In questions 31 to 35, select the word-pair which is related in the same way as the capitalised words are to each other.

31. WANTON : RESTRAINED ::
(a) missile : intercontinent
(b) latitude : international dateline

- (c) dissolute : lascivious
(d) immoral : continent
32. FRAGRANT : INCENSE
(a) frequency : sound
(b) sneeze : nostrils
(c) noxious : garbage
(d) noisome : pleasant
33. HACKNEYED : ORIGINAL ::
(a) trite : boring
(b) chicanery : trickery
(c) cliché : creative
(d) dream : vision
34. TRAINING : HEREDITY ::
(a) unnatural : usual
(b) ornithologist : birds
(c) habits : instincts
(d) astute : ingenious
35. TRIANGLE : HEXAGON ::
(a) cone : sphere
(b) rectangle : octagon
(c) pentagon : heptagon
(d) angle : quadrilateral
36. The correct exposure for a photographic print is 12 seconds at a distance of 4 m from a 60 candle-power lamp. What should be the exposure time for the same print at a distance of 8 m from a 40 candle-power lamp?
(a) 42 seconds
(b) 52 seconds
(c) 60 seconds
(d) 72 seconds
37. The total expenditure incurred by X on tea and coffee was Rs 180. Owing to increased consumption of coffee, his expenditure on coffee increased by 20 per cent. In order to ensure that overall expenditure on these two items remains the same, X has to reduce his expenditure on tea by 25 per cent. If coffee costs Rs 60 per kg, his present consumption of coffee is — kg.
(a) 1
(b) 1.5
(c) 2
(d) 3

Directions In questions 38 to 45, one of the alternatives gives the correct coded version in the correct sequence of the capitalised word given at the beginning of each question. The capitalised word in each of these questions has been coded according to the code given in the table below. This table has two columns. Column I gives the words in clear while Column II gives their code. The coded version in Column II however do not appear in the same order as the words in Column I also the letters in each of the codes have been jumbled up.

| Column I | Column II |
|----------|-----------|
| TAFÉ | neb |
| COUP | qgop |
| ROTATE | dbnc |
| TREAT | danc |
| SAY | dbacá |
| SIP | fac |
| TYRE | odaabc |
| TIE | bgac |
| YEAR | feg |

- 38 PRAY
 (a) g d n b
 (b) n g b d
 (c) g d b n
 (d) g b n d
- 39 SOUP
 (a) e o q g
 (b) e q o g
 (c) q o q e
 (d) e o g q
- 40 REACT
 (a) c d b p a
 (b) d c p t a
 (c) d c l p a
 (d) c d a l p
- 41 CASSFS
 (a) g o e e e e
 (b) e e g o e e
 (c) o g e e e e
 (d) g o e e e e
- 42 TRAP
 (a) a d g b
 (b) a d b q

- (c) b g d a
 (d) b g a d
- 43 CREATE
 (a) c a b c d p
 (b) p d c b a c
 (c) d p c b a c
 (d) p d b c a c
- 44 ACUTE
 (a) p q c a h
 (b) c a q p b
 (c) b p q a c
 (d) b q p c a
- 45 TRUCE
 (a) a q d p c
 (b) a d q p c
 (c) a p q d c
 (d) a d p q c

Directions Questions 46 to 48 are based on jumbled spellings of commonly known words. Below the letters of the jumbled words are numbers which have been allotted according to the sequence in which they appear in the alphabet. Each of these jumbled words is followed by four alternatives. State which of the alternative gives the meaningful word after the word is correctly spelt. Of the two similar letters only one has been numbered.

- 46 XNEELPDRTIU E
 9 4 2 5 1 6 7 3 8
 (a) 2 1 3 4 5 6 7 8 9 2 2
 (b) 2 5 4 2 3 1 6 8 7 9 2
 (c) 2 9 5 2 4 1 3 7 8 6 2
 (d) 2 9 4 2 5 1 3 8 7 2 0
- 47 YRAIAPOBT ON R

QUANTITATIVE APTITUDE

BY R.P. GOEL

FOR ASSTTS' GDE, BSRB (PO)...

While this section goes as ARITHMETIC in the Assistants' Grade and Income-tax/Central Excise Inspectors' exams, it is ELEMENTARY MATHEMATICS in the Combined Defence Services Exam (CDSE) and QUANTITATIVE APTITUDE in the BSRB PO Exam (Central, Southern and Western regions).

DIRECTIONS For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement

- 1 Zero divided by any counting number always gives
(a) That number
(b) 1
(c) 0
(d) None of the above
- 2 The L C M of two numbers is 120 and their H C F is 20. The two numbers are
(a) 10, 40
(b) 20, 40
(c) 20, 60
(d) 40, 60
- 3 Between any two different fractions there lies
(a) No fraction
(b) Only one fraction
(c) A finite number of fractions
(d) An infinite number of fractions
- 4 The average age of a group of 15 boys is 8 years 1 month. If 5 new boys of the average age of 8 years 9 months join this group, the average age of all the boys is
(a) 8 years 3 months
(b) 8 years 4 months
(c) 8 years 5 months
(d) 8 years 6 months
- 5 10 per cent of 15 per cent of 20 per cent of Rs 500 is Rs
(a) 225
(b) 150
(c) 67
(d) 1.50
- 6 A buffalo was given rich diet and gained 15 per cent in weight. She was then put on a poor diet and lost 20 per cent in weight. On the whole she
(a) Lost 5 per cent in weight
(b) Lost 8 per cent in weight
(c) Lost 10 per cent in weight
(d) Gained 6 per cent in weight
- 7 A merchant bought goods worth Rs 1,200. He sold $\frac{1}{3}$ rd of it at a gain of 10 per cent and $\frac{1}{4}$ th of it at a loss of 10 per cent. To gain 5 per cent on the whole sale, the remaining goods should be sold at a gain of — per cent.
(a) 5
(b) 10
(c) 15
(d) $12\frac{1}{2}$
- 8 Ram Kumar bought a sofa-set and sold it at a loss of 10 per cent. If he had received Rs 180 more, he would have gained $12\frac{1}{2}$ per cent. The price at which he purchased the sofa set was Rs
(a) 1,000
(b) 900
(c) 800
(d) 600
- 9 In school A, there are 600

- pupils, of whom, one quarter are girls, in school B, there are 500 pupils, of whom three-fifths are girls, and in school C, there are 700 pupils, of whom half are girls. What proportion of the pupils in the three schools as a whole are girls?
- (a) $\frac{4}{5}$
(b) $\frac{4}{9}$
(c) $\frac{9}{20}$
(d) $\frac{5}{9}$
- 0 The third proportional to 5 and 20 is
- (a) 10
(b) 4
(c) 80
(d) $1\frac{1}{2}$
- 1 Rakesh, Sunil and Jamil are business partners. They initially invest their money in the ratio 6 : 4 : 3. After 4 months Rakesh withdraws half his capital. At the end of the year the profit is of Rs 1,056. Then Rakesh's share of profit is Rs
- (a) 400
(b) 360
(c) 288
(d) 384
- 2 Ravi, Mohan, Sunil and Pramod borrowed equal sums of money at 12 per cent per annum for 2 years. Ravi had to pay simple interest, Mohan had to pay compound interest payable yearly, Sunil had to pay compound interest payable half yearly and Pramod had to pay compound interest payable quarterly. At the end of 2 years — will pay the maximum interest
- (a) Ravi
(b) Mohan
(c) Sunil
(d) Pramod
- 13 The Rs 50 share of a company is sold at 15 per cent premium. The number of shares that can be purchased for Rs 1,150 is
- (a) 23
(b) 22
(c) 20
(d) 18
- 14 Rati and Ram start harvesting a field. After working for 6 days, he finds that only half of the field has been harvested. If his equally-efficient brother joins him, they will complete the harvesting in _____ days.
- (a) $1\frac{1}{2}$
(b) 3
(c) 6
(d) 9
- 15 A 300-m long train overtook a man walking along the line (in the same direction as the train) at the speed of 4 kmph and passed him in 30 sec. The train's speed was _____ kmph
- (a) 36
(b) 32
(c) 40
(d) 34
- 16 Jai Singh mixes tea worth Rs 6 and Rs 7.50 per kg with a third kind of tea in the proportion 1 : 2 : 3. If the mixture costs him Rs 8.50 per kg, the third kind of tea costs Rs _____ per kg
- (a) 8
(b) 9
(c) 10
(d) 11
- 17 If the sum of two positive numbers is 5 and the sum of their squares is 17, their product is
- (a) 4
(b) 8
(c) 12
(d) 22
- 18 The value of
- $$\left(1 + \frac{1}{x}\right)\left(1 + \frac{1}{x+1}\right)$$
- $$\left(1 + \frac{1}{x+2}\right)\left(1 + \frac{1}{x+3}\right)$$
- is
- (a) $1 + \frac{1}{x+4}$

- (b) $\frac{1}{x+4}$
 (c) $\frac{x}{x+4}$
 (d) $\frac{x}{x+4}$
- 19 When $x^{13}+1$ is divided by $x-1$, the remainder is
 (a) 0
 (b) 1
 (c) 2
 (d) -1
- 20 If $a^x=b$, $b^y=c$, $c^z=a$, then xyz is equal to
 (a) 0
 (b) 1
 (c) 1
 (d) $a+b+c$
- 21 If $\sqrt{x-1} - \sqrt{x+1} + 1 = 0$, then $4x$ equals
 (a) 0
 (b) 4
 (c) $1\frac{1}{2}$
 (d) 5
- 22 If $a+b+c=0$, then

$$\frac{a^2}{2a^2+bc} + \frac{b^2}{2b^2+ca} + \frac{c^2}{2c^2+ab}$$
 equals
 (a) 1
 (b) abc
 (c) -1
 (d) abc
- 23 The graph of a linear equation in x and y is always a
 (a) Point
 (b) Curved line
 (c) Straight line
 (d) Broken line
- 24 If $x + \frac{1}{x} = \sqrt{3}$, then $x^3 + \frac{1}{x^3}$ equals
 (a) 10
 (b) $\sqrt{3}$
 (c) $3\sqrt{3}$
 (d) 0
- 25 The equation whose roots are twice the roots of the equation $x^2-3x+3=0$, is
 (a) $4x^2-6x+3=0$
 (b) $2x^2-3x+3=0$
 (c) $x^2-3x+6=0$
 (d) $x^2-6x+12=0$
- 26 Ravi was appointed in the scale of Rs 600-50-1,050. He will reach the maximum in — years
 (a) 9
 (b) 10
 (c) 8
 (d) 11
- 27 Seven times the 7th term of an Arithmetic Progression is equal to eleven times its 11th term. The 18th term of the Arithmetic Progression is
 (a) 18
 (b) 4
 (c) 4
 (d) 0
- 28 The 5th, 8th and 11th terms of a G.P. are x, y, z respectively. Then x, y, z
 (a) Are in A.P.
 (b) Are in G.P.
 (c) Are in H.P.
 (d) Do not form any sequence
- 29 In $\triangle ABC$, $\angle A = 50^\circ$ and the bisectors of $\angle B$ and $\angle C$ intersect each other at O . Then $\angle BOC$ is equal to
 (a) 25
 (b) 115
 (c) 65
 (d) 90
- 30 The four sided figure with diagonals of equal length is a
 (a) Parallelogram
 (b) Rhombus
 (c) Trapezium
 (d) Rectangle
- 31 The size of an interior angle of a regular 12-sided polygon is
 (a) 144°
 (b) 160°
 (c) 150°
 (d) 140°

32. The sides of a triangle are 3 cm, 4 cm and 5 cm in length. The perimeter of the triangle formed by joining the mid-points of the sides of the given triangle is — cm
 (a) 12
 (b) 6
 (c) 24
 (d) 30
33. A three-sided figure is always bisected by
 (a) The bisector of one of its angles
 (b) One of its medians
 (c) The right-bisector of one of its sides
 (d) One of its altitudes
34. In $\triangle ABC$, $\angle B = 90^\circ$, $AB = 8$ cm and $BC = 6$ cm. The length of the median BM is — cm
 (a) 3
 (b) 4
 (c) 5
 (d) 7
35. If four triangles are constructed with sides of the length indicated below, the triangle which will not be a right-angled triangle has sides measuring
 (a) 3 cm, 4 cm, 5 cm.
 (b) 5 cm, 12 cm, 13 cm
 (c) 8 cm, 15 cm, 17 cm
 (d) 12 cm, 15 cm, 18 cm
- The point of concurrence of the altitudes of a triangle is its
 (a) Circumcentre
 (b) Incentre
 (c) Orthocentre
 (d) Centroid
37. The radius of a circle is $\sqrt{2}$ cm. The circle is divided into two segments by a chord of length 2 cm. The angle in the smaller segment is
 (a) 90°
 (b) 270°
 (c) 45°
 (d) 135°
38. The angle between two radii of a circle is 120° . Then the angle between the tangents drawn at the extremities of these radii is
 (a) 120°
 (b) 60°
 (c) 30°
 (d) 240°
39. In $\triangle ABC$, a line is drawn parallel to BC intersecting AB and AC at X and Y respectively. If $\frac{\triangle AXY}{\triangle ABC} = \frac{1}{9}$, then $\frac{AX}{AB}$ is equal to
 (a) $\frac{8}{9}$
 (b) $\frac{9}{10}$
 (c) $\frac{1}{3}$
 (d) $\frac{2}{3}$
40. Chords AB and CD of a circle intersect at P within the circle. If $AP = 2$ cm, $AB = 8$ cm and $CP = 3$ cm, the length of the chord CD is — cm
 (a) 4
 (b) 5
 (c) 6
 (d) 7
41. Which of the following angles can you construct using only ruler and compasses?
 (i) 120° (ii) 135° (iii) 15°
 (a) One of them only
 (b) Two of them only
 (c) All of them
 (d) None of them

EDITOR'S NOTE

All possible steps are taken to check the information given in this supplement. But we do not take responsibility for chance errors or omissions. Authoritative corrections will be gratefully received.

GENERAL KNOWLEDGE

Questions published in this section appeared in the General Knowledge paper of the CDSE held in December 1982. These are based on the candidates' memory as they are not allowed to take their question papers out of the examination hall. Though we have compiled these questions as close to the original as possible, we take no responsibility for any discrepancies.

DIRECTIONS For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement.

- 1 A light year is
 - (a) The speed of light per year
 - (b) The amount of light travelling in a year
 - (c) The unit of measurement for distance between stars
 - (d) None of the above
- 2 *Geet Govinda* was written by
 - (a) Rabindra Nath Tagore
 - (b) Dr S Radhakrishnan
 - (c) Munshi Prem Chand
 - (d) Jaya Dev
- 3 ——— was the guest of honour at this year's Republic Day parade
 - (a) Jimmy Carter
 - (b) Idi Amin
 - (c) Gen Zia ul-Haq
 - (d) Juan Carlos
- 4 The U Thant Award was received by — in New York recently
 - (a) Lech Walesa
 - (b) Ingrid Bergman
 - (c) Arun Shourie
 - (d) None of the above
- 5 The UP Chief Minister is
 - (a) Sripat Mishra
 - (b) Vishwanath Pratap Singh
 - (c) Narain Dutt Tiwari
 - (d) Bhishma Narain Singh
6. Filmotsava '82 was held in
 - (a) New Delhi
 - (b) Bangalore
 - (c) Calcutta
 - (d) Bombay
- 7 ——— first made a demand for a separate Muslim state.
 - (a) Mohammad Ali Jinnah
 - (b) Syed Ahmed Khan
 - (c) Sir Mohammed Iqbal
 - (d) Aga Khan
8. ——— was the Viceroy when the first census was taken in India.
 - (a) Lord Ripon
 - (b) Lord Dufferin
 - (c) Lord Lansdowne
 - (d) Lord Mountbatten
- 9 According to the 1981 census, India's population is approximately — million
 - (a) 550
 - (b) 600
 - (c) 683
 - (d) 700
- 10 ——— wrote the *Arthashastra*.
 - (a) Swami Dayanand
 - (b) Kalidas
 - (c) Morarji Desai
 - (d) Kautilya
- 11 ——— was a social reformer
 - (a) Raja Ram Mohan Roy
 - (b) Bipin Chandra Pal
 - (c) Lala Lajpat Rai
 - (d) Subhash Chandra Bose

12. Who said, "Science is lame without religion and religion is blind without science"?
- Isaac Newton
 - Winston Churchill
 - Jawaharlal Nehru
 - None of the above
13. The Lahore Congress session was presided over by
- Bal Gangadhar Tilak
 - Mahatma Gandhi
 - Jawaharlal Nehru
 - Rajendra Prasad
14. Who wrote *India Wins Freedom*?
- Khushwant Singh
 - Maulana Azad
 - Rabindranath Tagore
 - Jawaharlal Nehru
15. — was reused for a space flight
- Columbia
 - INSAT-1A
 - INSAT-1B
 - APPLE
16. During the recent Falklands conflict between Argentina and Britain, the latter mainly used — aircraft
- Mirage 2000
 - F 16
 - MiG 23
 - Sea Harrier
17. The 1982 women's Wimbledon championship was won by
- Chris Evert Lloyd
 - Martina Navratilova
 - Kathy Jordan
 - Pam Shriver
18. — has scored maximum runs in Test matches
- Sunil Gavaskar
 - Kapil Dev
 - Imran Khan
 - Zaheer Abbas
19. A buffer state is
- A state which is in dispute
 - A small neutral state lying between two larger potentially-rival powers
 - An unclaimed piece of land between two states
 - All the above
20. Niagara falls are situated in
- France
 - Italy
 - Sweden
 - The US
21. — is the capital of Brazil
- Brasilia
 - Congo
 - Toronto
 - Pretoria
22. — is the capital of Morocco.
- Muscat
 - Managua
 - Ulan Bator
 - Rabat
23. — produces the maximum sugar in the world
- The US
 - India
 - Brazil
 - Cuba
24. — requires maximum water.
- Jute
 - Paddy
 - Wheat
 - Sugarcane
25. Nepa Nagar is associated with
- Newsprint
 - Jute
 - Electronic gadgets
 - All the above
26. Tirupati temple is situated in
- Kerala
 - Andhra Pradesh
 - Tamil Nadu
 - Orissa
27. — built the Jama Masjid
- Sher Shah Suri
 - Allauddin Khilji
 - Aurangzeb
 - Shah Jahan
28. Congo is situated on the — coast of Africa
- North
 - South
 - West
 - East
29. India obtains maximum gold from

- (b) Bihar
(c) Orissa
(d) Punjab
- 30 The Sanchi Stupas are located in
(a) Madhya Pradesh
(b) Bihar
(c) UP
(d) Orissa
- 31 Buddha was born in
(a) Lumbini Garden
(b) Kapilvastu
(c) Vaishali
(d) Kosala
- 32 The Permanent Settlement Bill was passed by
(a) Robert Clive
(b) Lord Cornwallis
(c) Warren Hastings
(d) Lord Lytton
- 33 _____ wrote *India Divided*
(a) Maulana Azad
(b) Mohammad Ali Jinnah
(c) Rajendra Prasad
(d) Bina Bhatt
- 34 _____ was the Speaker of the Constituent Assembly
(a) Motilal Nehru
(b) Dr Rajendra Prasad
(c) Mohammad Ali Jinnah
(d) Lala Lajpat Rai
- 35 _____ was named Vikramaditya
(a) Samudra Gupta
(b) Chandra Gupta II
(c) Bindusara
(d) Ashoka
- 36 The Indian Standard Time is
(a) A uniform time adopted by all places in India
(b) The difference of time between two states
(c) The difference between the local time of two villages
(d) None of the above
- 37 The First Battle of Panipat was fought between
(a) Sher Shah Suri and Akbar
(b) Humayun and Ibrahim Lodhi
(c) Babar and Ibrahim Lodhi
- 38 _____ grants loans to developing Asian countries only
(a) IMF
(b) World Bank
(c) ADB
(d) EXIM Bank
- 39 Ecology deals with
(a) Habits of living things and their relation to environment
(b) Atmosphere and its effects on mankind
(c) Extinct wildlife
(d) None of the above

(a) European Economic Community
(b) European Electronic Community
(c) European Economic Centre
(d) European Economic Committee
- 41 _____ is a rabi crop
(a) Rice
(b) Bajra
(c) Groundnut
(d) Barley
- 42 What is a cyclone?
(a) Sudden heavy floods
(b) No rains for long duration
(c) Heavy showers
(d) Violent windstorm
- 43 _____ is not a water borne disease
(a) Cholera
(b) Typhoid
(c) Dy-enteria
(d) Appendicitis
- 44 Rhodesia's new name is
(a) Zaire
(b) Zimbabwe
(c) Tanzania
(d) Swaziland
- 45 Durgapur Steel Plant was built in collaboration with
(a) Britain
(b) France
(c) The US
(d) The USSR

46. The biggest planet is
 (a) Venus
 (b) Mars
 (c) Mercury
 (d) Jupiter
47. Things are cooked faster in a pressure cooker than in an ordinary vessel because
 (a) In a pressure cooker, the increase in pressure raises the boiling point
 (b) The temperature outside does not affect the inside
 (c) Both (a) and (b)
 (d) None of the above
48. Study of earthquakes is known as
 (a) Ecology
 (b) Seismology
 (c) Numismatics
 (d) None of the above
49. Humidity is measured by a
 (a) Barometer
 (b) Hydrometer
 (c) Lactometer
 (d) Hygrometer
50. Elections to the Rajya Sabha are held every — years
 (a) 2
 (b) 4
 (c) 5
 (d) 6
51. A molecule is
 (a) A class of compounds
 (b) The smallest unit of a substance that retains the properties of the substance
 (c) The spectrum of a substance
 (d) A small mass
52. A cockroach has — pairs of legs
 (a) One
 (b) Two
 (c) Three
 (d) Four
53. Green Revolution signifies
 (a) The spectacular rise in wheat production in Punjab, Haryana and north-western UP
- (b) The great rice production in 1977-78
- (c) The overall agricultural growth in India
- (d) None of the above
54. Isohyets deal with
 (a) Agriculture
 (b) Volcanoes
 (c) Floods
 (d) None of the above
55. The US discontinued the supply of uranium for Tarapur because
 (a) India exploded a nuclear device
 (b) India refused to sign the Non Proliferation Treaty
 (c) Both (a) and (b)
 (d) None of the above
56. The first heart-transplant operation was performed by
 (a) Christian Bernard
 (b) Chris Reydol
 (c) P K Sethi
 (d) None of the above
57. The density of milk is measured by a
 (a) Lactometer
 (b) Hydrometer
 (c) Barometer
 (d) Hygrometer
58. — was given the U Thant Award recently
 (a) Lech Walesa
 (b) Indira Gandhi
 (c) Barbara Ward
 (d) Nelson Mandela
59. Flower is a modified form of
 (a) Leaves
 (b) Buds
 (c) Roots
 (d) None of the above
60. The Battle of Plassey was fought at
 (a) Travancore
 (b) Haldighati
 (c) Plassey
 (d) Delhi
61. Mahavir belonged to the — tribe

- (b) Janatrika
(c) Kouei Chouang
(d) Yeuh-Chi
- 62 The Commonwealth Meet was held in
(a) New Delhi
(b) Islamabad
(c) Brisbane
(d) Melbourne

59. Tides are caused by
 (a) The rotation of the earth
 (b) Revolution of the earth
 (c) Solar eclipses
 (d) Gravitational pull exerted by the moon and sun on the earth
60. Virus causes
 (a) Cholera
 (b) Tuberculosis
 (c) Plague
 (d) Typhoid
61. Encephalitis affects the
 (a) Liver
 (b) Kidneys
 (c) Heart
 (d) Brain

- 62 1982 has been declared the Year of
 (a) Productivity
 (b) The Blind
 (c) The Child
 (d) The Women
- 63 Of the following the most poisonous pair is
 (a) Lion and cobra
 (b) Water snake and viper
 (c) Craft and viper
 (d) Python and lion
- 64 Malaria is unpreventable in several parts of India because of
 (a) Lack of education
 (b) Superstitions
 (c) Poor sanitary conditions
 (d) Its widespread reach
- 65 Black pepper is largely produced in
 (a) UP
 (b) Madhya Pradesh
 (c) Punjab
 (d) Kerala
- 66 Apart from the Chief Justice, there are — judges in the Supreme Court
 (a) 14
 (b) 16
 (c) 17
 (d) 18
- 67 Kathakali originated in
 (a) Tamil Nadu
 (b) Manipur
 (c) Orissa
 (d) Kerala
- 68 — is hereditary
 (a) Appendicitis
 (b) Cancer
 (c) Gout
 (d) None of the above
- 69 — is the author of *Sakharam Binder*
 (a) Ved Mehta
 (b) Vijay Tendulkar
 (c) Khwaja Ahmed Abbas
 (d) Kuldip Nayar
- 70 Amrita Pritam was recently given the — Award
 (a) Nehru Peace

- (b) Templeton
 (c) Bharatiya Jnanpith
 (d) Kalinga
- 71 Lord Ripon will always be remembered for——in India.
 (a) Ban on sati
 (b) Widow remarriage
 (c) Post & Telegraph
 (d) Local self-government
- 72 — is not a nuclear-arms power
 (a) The USSR
 (b) China
 (c) The US
 (d) Japan
- 73 Rubic Cube's inventor is a
 (a) German
 (b) Briton
 (c) Hungarian
 (d) American
- 74 — is not situated on the banks of the Ganges
 (a) Patna
 (b) Kanpur
 (c) Allahabad
 (d) Ahmedabad
- 75 — is a solid lubricant
 (a) Starch
 (b) Grease
 (c) Gum
 (d) Paste
- 76 Anaemia is related to
 (a) Loss of memory
 (b) Lack of blood cells
 (c) Skin diseases
 (d) None of the above
- 77 — is the largest producer of mica
 (a) Bihar
 (b) Punjab
 (c) Andhra Pradesh
 (d) Bengal
- 78 Plants receive their nutrients mainly from
 (a) Chlorophyll
 (b) The atmosphere
 (c) Light
 (d) Soil
- 79 The Festival of India was held in
 (a) New York
 (b) Paris

- (c) Rome
(d) London
- 80 The UN Security Council has — permanent members
(a) 5
(b) 10
(c) 15
(d) 20
- 81 Hargobind Khorana shared the Nobel Prize for
(a) Physics
(b) Chemistry
(c) Peace
(d) Physiology & Medicine
- 82 — was illiterate
(a) Akbar
(b) Jehangir
(c) Shah Jahan
(d) Aurangzeb
- 83 Denmark's currency is
(a) Lira
(b) Krone
(c) Dollar
(d) Pound
- 84 Lack of — causes diabetes
(a) Sugar
(b) Insulin
(c) Pancreatic juices
(d) Calcium
- 85 — is also known as the Fourth Estate
(a) Farmers
(b) Civil servants
(c) Trade unions
(d) Press
- 86 — is the most irrigated state
(a) UP
(b) Haryana
(c) Punjab
(d) Andhra Pradesh
- 87 The function of CSIR is
(a) To promote sports
(b) Encourage art and literature among youth
(c) To promote scientific and industrial research
(d) To encourage more productivity
- 88 The Dilwara temples are situated in
(a) Punjab
(b) UP
(c) Rajasthan
(d) Andhra Pradesh
- 89 — was the first Indian to win the Nobel Prize
(a) C V Raman
(b) Hargobind Khorana
(c) Rabindranath Tagore
(d) J C Bose
- 90 — found the Mughal Empire
(a) Akbar
(b) Humayun
(c) Babur
(d) Allauddin Khilji
- 91 Ramon Magsaysay belonged to
(a) Malaysia
(b) Singapore
(c) Bangkok
(d) Philippines
- 92 *Sare Jahan Se Acha Hindustan Hamara* was written by
(a) Iqbal
(b) Maulana Azad
(c) Rabindranath Tagore
(d) Subhash Chandra Bose

ERRATA

The correct answers to Q Nos 55 80 and 91 (*NDA Exam Dec 82 G K Paper* // April 83) are Sarnath (d) and (d) respectively, and not (a) as mentioned in all cases

The correct answers to Q Nos 128 and 133 (*G K April 83*) are Holland and (c) respectively and not (a) and (d) as mentioned

The correct answer to Q No 42 (*Clerks Grade Exam July 82, June 83*) is Sir Syed Ahmed Khan and not (c) as mentioned

ENGLISH

BY RAGHU BHATNAGAR & RAJUL BHARGAVA

FOR PO, CDSE, ASSTTS' GDE. . .

This section will help those appearing in the BSRB PO exams in September, CDS & Assistants' Grade exams in October and the Senior Observers' & Income-tax, Central Excise Inspectors exams in November.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question Do this before looking at the answers given at the end of this supplement

READING COMPREHENSION

I Read the following passage and choose the best answer to the questions that follow

If men, instead of saying, "the employer ought to do this", would say, "the business ought to be so stimulated and managed that it can do this", they would get somewhere, because only the business can pay wages. Certainly the employer cannot unless the business warrants. But if the business does not warrant higher wages and the employer refuses, what is to be done? As a rule a business means the livelihood of too many men to be tampered with. It is criminal to assassinate a business to which large numbers of men have given their labours and to which they have learned to look as their field of usefulness and their source of livelihood. Killing the business by a strike or a lockout does not help. The employer can gain nothing by watching the employees suspiciously and asking himself—'How little can I get them to take?' Nor the employee by glaring back and asking—'How much can I force him to give?' Eventually, both will have to turn to the business and ask 'How can this industry be made safe and

profitable, so that it will be able to provide a sure and comfortable living for all of us?"

But by no means will all employers or all employees think straight. The habit of acting shortsightedly is a hard one to break. What can be done? Nothing. No rules or laws will effect the changes. But enlightened self interest will. It takes a little while for enlightenment to spread. But spread it must, for the concern in which both employer and employee work to the same end of service is bound to forge ahead in business.

1 *Men* in the first sentence refers to

- (a) all men
- (b) all men and women
- (c) workers
- (d) people in general

2 *Stimulated* in the first sentence means

- (a) aroused
- (b) encouraged
- (c) stirred
- (d) excited

3 *This* in the first sentence refers to a

- (a) higher payment
- (b) duty of the employer
- (c) difficult work
- (d) useful thing

4 A business can be killed by

- (a) only the employers
 (b) only the employees
 (c) either the employers or the employees
 (d) the employers and the employees jointly
- 5 The author is
- favouring the employees
 - favouring the employers
 - praising both employers and employees
 - neutral between employers and employees
- 6 According to the author, the main thing is the interests of
- the employer
 - the business
 - the employee
 - a large number of men
7. In the second paragraph the author's criticism is mainly directed at
- the employers
 - the employees
 - lack of farsightedness
 - ineffectiveness of rules and laws
- 8 The attitude of the author as revealed in this passage is one of
- optimism
 - uncertainty
 - pessimism
 - puzzlement

SYNONYMS

II Select the word which is nearly the same in meaning as the given word

1. CONTRAVENTION

- violation
- confrontation
- obstacle
- convention

2. MONOPOLISE

- control
- govern
- occupy
- capture

3. APPRISE

- honour

(b) approve

(c) evaluate

(d) inform

4. FEASIBILITY

- availability
- utility
- advantageousness
- practicability

5. HOARD

- hide
- reserve
- deposit
- accumulate

6. INDUSTRIOUS

- enterprising
- mechanical
- energetic
- diligent

7. INIMICAL

- anaemic
- malignant
- adverse
- clever

8. MITIGATE

- reduce
- subdue
- check
- coerce

9. RESIDUAL

- surplus
- superfluous
- superficial
- abundant

ANTONYMS

III Select the word which is nearly the opposite in meaning to the given word

1. AMATEUR

- romantic
- protective
- professional
- electronic

2. APATHETIC

- consoling
- interested
- warm
- emotional

3. TENACIOUS

- unenduring
- brittle

themselves when all of a
sudden it occurred to them
that someone was watching
all the five of them No error.

SENTENCE COMPLETION

V Select the alternative which best completes the meaning of the sentence.

- 1 One who interferes in the affairs of others is called
 - (a) a busybody
 - (b) an interferer
 - (c) a hindrance
 - (d) an obstacle
- 2 The place for a pipette is a
 - (a) drawing room
 - (b) zoo
 - (c) laboratory
 - (d) field
- 3 Having sought voluntary retirement, he looked forward to a life of
 - (a) struggle
 - (b) repose
 - (c) distress
 - (d) action
- 4 To bend before pressure is to
 - (a) lose
 - (b) accept defeat
 - (c) yield
 - (d) compromise
- 5 Amongst the words that have become—from the language, some are adjectives
 - (a) known
 - (b) lost
 - (c) current
 - (d) separated

SPELLING

VI Choose the correct spelling.

- 1 (a) physique
- (b) fizik
- (c) fisique
- (d) phizique

- (e) physiqe
- 2 (a) ineppropriate
- (b) inepropriate
- (c) inappropiate
- (d) inapropriate
- (e) inapppropriate
- 3 (a) pavillian
- (b) pawilian
- (c) pavilian
- (d) pavillion
- (e) pavilion
- 4 (a) valadictory
- (b) veledictory
- (c) veladictory
- (d) valedictory
- (e) valideictory
- 5 (a) emberassed
- (b) embarrassed
- (c) embarassed
- (d) embarrased
- (e) embarased

PREPOSITIONS

VII Choose the correct preposition

- 1 She was deeply concerned— my health
 - (a) with
 - (b) about
 - (c) for
 - (d) in
- 2 These facts are not at all relevant the point we are discussing
 - (a) to
 - (b) about
 - (c) on
 - (d) for
3. She was so excited she convulsed—laughter
 - (a) in
 - (b) through
 - (c) by
 - (d) with
- 4 According to me he is well versed— Mathematics
 - (a) in
 - (b) with
 - (c) about
 - (d) at

ANSWER KEY TEST OF REASONING

1. (a), i.e., 60. The series pattern $= 1^3 - 1, 2^3 - 2, 3^3 - 3, 4^3 - 4, 5^3 - 5$, and so on.
2. (c), i.e., 4. The numbers in odd places — 2, 3, 4, 5 and so on; while the numbers in even places — 3, 6, 11, 18.
3. (b), i.e., 132. The series pattern — $1^2 + 1, 2^2 + 2, 4^2 + 4, 7^2 + 7, 11^2 + 11, 16^2 + 16$
4. (b), i.e., 3. The series pattern—minus $1 + 1 = 0; 0 + 3 = 3; 3 + 5 = 8; 8 + 7 = 15; 15 + 9 = 24$.
5. (d), i.e., 44. The series runs thus: The third number has been obtained by doubling the sum of the first two numbers, i.e., $2(1 + 2) = 6$; the fourth number by doubling the sum of the numbers in the second and the third place, i.e., $2(2 + 6) = 16$, in the same manner, the fifth number would be $2(6 + 16)$, i.e., 44. The subsequent numbers have also been obtained according to the above pattern.
6. (b), i.e., $18 < 3 \wedge 2 < 4 \vee 8 \cdot 12$
7. (d), i.e., $8 + 6 \wedge 3 < 3 \vee 2 \wedge 5$
8. (b), i.e., $4 \vee 2 < 4 \cdot 4 < 2 \vee 4$
9. (b), i.e., $9 \wedge 4 \quad 8 \vee 2 < 4$
10. (c), i.e., $\sqrt{4} < \sqrt[1]{4} \wedge \sqrt{3} \vee \sqrt{3} - \sqrt{5} < \sqrt[1]{5}$.
11. (d), i.e., 17.
12. (c), i.e., 44.
13. (d), i.e., 70.
14. (b), i.e., 14.
15. (d), i.e., none of the above. Choice (c) is obviously wrong. Choice (a) may be true and may not be true at the same time. 'Some' in logical reasoning implies 'perhaps all', but not 'certainly all'. Likewise, we cannot be sure of the truth of choice (b), since there is a possibility of all men being wonderful also.
16. (c), i.e., some men are not intelligent. The statement "all men are intelligent" can be false either because no man is intelligent or because some men are not intelligent. Whether the first reason is true or not, the second has got to be true to prove the falsity of the opening statement.

Note: In order to answer questions 17 to 20 speedily, a rough diagram as shown below will be of immense help

17. (c), i.e., I and III or II and III. P causes Q or R, but not both. Irrespective of what P causes, T will occur. S and W can occur only if Q or R occur, respectively, so they cannot both occur if P occurs. Now if Q occurs, S may occur and if R occurs, W may occur. L will occur if S occurs, M will occur if W occurs.
18. (d), i.e., T must occur. Though S occurs only if Q occurs, it does not mean that S will always occur when Q occurs; it may occur but may not also. Choice (a) is, therefore, not valid. T will occur if Q occurs. Though T causes L, M or both, we cannot be sure whether it will cause L or M or both. Thus, choice (b) and (c) cannot be valid either, these may or may not be true at the same time.
19. (a), i.e., either Q or R. If X occurs, W or S must have occurred, which means either Q or R must have occurred. Choice (b) is wrong, since X can occur without the occurrence of W. Choice (c) is wrong since both W and S cannot occur at the same time. Though T will occur when either Q or R occurs, it is not a precondition for the occurrence of X.
20. (c), i.e., T and P. No precondition has been laid down for the occurrence of P. Though T occurs if Q or R occurs, it does not mean that T will not occur if Q or R does not occur.
21. (b), i.e., the numerical value of a physical quantity is inversely proportional to the magnitude of the unit selected. For example, if a certain distance measures 200 when expressed in centimetres, its numerical value becomes 2 when expressed in metres.
22. (b), i.e., $S_2 = 3S_1$. The distance covered by a body is equal to $ut + \frac{1}{2}at^2$, where u is the initial velocity, a the acceleration and t the time period. The body in the first five seconds will therefore, cover a distance equal to $0 \times 5 + \frac{1}{2}a \times (5)^2 = \frac{25a}{2}$. We have to take u as zero, since the body starts from rest. The distance covered by the body in the next five seconds will be equal to the distance covered by it in the first 10 seconds minus the distance covered by it in the first five seconds. This works out to be equal to $0 \times 10 + \frac{1}{2}a \times (10)^2 - \frac{25a}{2} = \frac{75a}{2}$. In other words, $S_2 = \frac{75a}{2}$ and $S_1 = \frac{25a}{2}$, i.e., $S_2 = 3S_1$.
23. (a) Zero degree to the horizontal. A large number of students will give (c) as the answer, which is not correct. A shell does reach the maximum distance when it is projected at an angle of 45 degrees to the horizontal. In order that we are able to give the football an angle of projection as close to 45 degrees as possible, it has to be kicked at angle zero to the horizontal. Try and see if you can kick it at angle 45 degrees to the horizontal. You just cannot!

Hint for questions 24 to 28 Write the alphabets from A to Z and number them 1 to 26. Likewise, number them 1 to 26 in the reverse order as shown below.

| | | | | | | | | | | | | | | | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 |
| A | B | C | D | E | F | G | H | I | J | K | L | M | N | O | P | Q | R | S | T | U | V | W | X | Y | Z |
| 26 | 25 | 24 | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 |

- 24 (c), i.e., HZMW. FLOWER, when expressed in number, is equivalent to 6, 12, 15, 23, 5, 18. When the equivalent of these numbers in letters are taken from the other side, we get UOLDVI. Using this as the key, we get the code for SAND.
- 25 (a), i.e., WWRZ. To get the code for FLOWER, the letters in the odd positions jump four places forward and those in even positions four places backward.
- 26 (c), i.e., TEWT. The first letter of the word in clear jumps forward one place (1^{st}); the second four places (2^{nd}), the third nine places (3^{rd}), the fourth 16 places (4^{th}), the fifth 25 places (5^{th}), the sixth 36 places (6^{th}) to get its code.
- 27 (d), i.e., TCQH. The first letter of the word in clear jumps forward one place, the second two, the third three, and so on to get its code.
- 28 (a), i.e., RYKZ. The first letter of the word in clear jumps back one place, the second two places, the third three places, and so on.
- 29 (b), i.e., Rs 22.50. The opening sentence in the question implies that 1 pen and 1 pencil will cost Rs 6.50. Therefore, 13 pens and 13 pencils will cost 6.50×13 , which is equal to Rs 84.50. This in other words, means that 1 pencil is worth Rs 2.50, whereas a pen costs Rs 4. Therefore, the cost of 5 pens and 1 pencil will be Rs 22.50.
- 30 (c), i.e., 297 km. The difference of 30 minutes, i.e. $\frac{1}{2}$ hour is on account of the fact that the train continues running at the original speed for 108 kms more in the second case than in the first since all other factors would be equal. In other words, $108 - 108, i.e.$

$$\frac{2x}{3} = x$$

- 54 $x = \frac{1}{2}$ hour or $x = 108$ kmph, where x is the speed of the train before the accident while $\frac{2}{3}x$ is its speed after the accident. Since the train is 1 hour 45 minutes late, and since for 45 minutes it stops after the accident, it stands to reason that the 1 hour difference has to be accounted for by the reduced speed of the train after the accident. Since $\frac{1}{2}$ hour is accounted for by 108 km, 1 hour shall be accounted for by 216 km. The length of the journey, therefore, is equal to distance covered by the train in 45 minutes at 108 kmph plus 216 km, which is equal to $108 \times \frac{3}{4} + 216$, which is equal to 297 km.
- 31 (d), i.e., immoral continent. Continent means temperate, chaste. Dissolute means loose living, debauched. Lascivious means lustful. The relationship between the capitalised words is that of antonyms.
- 32 (c), i.e., noxious garbage. Incense when burned gives a sweet smell in the same way as garbage emits noisome, disgusting smell.
- 33 (d), i.e., cliché creative. Self-explanatory.
- 34 (c), i.e., habits instincts. Habits are formed based on the kind of training one undergoes while our instincts are associated with heredity.
- 35 (b), i.e., rectangle octagon. Three-sided is to six-sided as four-sided is to eight-sided. Though angle is formed between two lines and quadrilateral is a four-sided figure, it is not the correct relationship as the figures involved in the given relationship are closed.
- 36 (d), i.e., 72 seconds. Two factors play an important part in getting

a certain photographic print (i) intensity of illumination, and (ii) the time of exposure. Further, intensity of illumination is equal to the candlepower of the lamp used divided by the square of the distance of the lamp from the object being photographed. Since in the first case intensity of illumination is $\frac{60}{(4)^2}$, $\frac{60 \times 12}{(4)^2}$ must equal

$\frac{40 \times x}{(8)^2}$, where x stands for the time of exposure in the second case.

This gives us x equal to 72 seconds

- 37 (c), i.e., 2 kg 20 per cent of expenditure on coffee = 25 per cent of the expenditure on tea. This means the amount spent on coffee and tea was in the ratio 5 : 4. In other words, he was spending

$$\frac{5 \times 180}{9} = \text{Rs } 100, \text{ on coffee before his consumption of coffee}$$

increased. Since the increased consumption of coffee increases his expenditure on coffee by 20 per cent, he is at present spending Rs 120 on it. Coffee costing Rs 60 per kg, he consumes 2 kg of it.

Hint for questions 38 to 45 Break the code first. From the table it is obvious that ROTATE (which consists of six letters) must have a code of six letters too. ROTATE must have, therefore, been coded as o d a a b c. Since T appears twice in the word in clear, the code of T must be a. Then take three-letter words, i.e., SAY, SIP, TIE. The code of TIE must include a, TIE when coded must be f a c f and c, therefore, stand for I and E. The code for SIP must contain either f or c, but not both. f e g must, therefore, be the code for SIP. The code for I must, therefore, be f and for E, it must be c. The code for SAY must, therefore, be n e b. Therefore, S must become e when coded. g must be the code for P. A is a common letter between ROTATE and SAY, the code for A must, therefore, be b. If you proceed in the manner discussed, you will be able to break the code completely. When all the words are logically equated, you will get the following code: A=b, C=p, E=c, I=f, O=o, P=g, R=d, S=e, T=a, U=q and Y=n.

- 38 (c), i.e., g d b n 39 (a), i.e., e o q g 40 (c), i.e., d c b p a
 41 (d), i.e., g o e e c e e 42 (b), i.e., a d b g 43 (b), i.e., p d c b a c
 44 (c), i.e., b p q j c 45 (b), i.e., a d q p c
 46 (c), i.e., 2 9 5 2 4 1 3 7 8 6 2 When disentangled the word formed is EXPENDITURE
 47 (b), i.e., 6 7 5 2 1 8 3 5 4 1 7 9 PROBATIONARY
 48 (c), i.e., 1 4 8 2 6 5 4 3 1 4 7 ENVIRONMENT

QUANTITATIVE APTITUDE

- 1 (c) When Zero is divided by any number, the quotient is always zero
- 2 (d) The numbers may be 20, 40, 60, 80, 100 etc. But the product of these two numbers should be 20, 120, i.e., 2,400. Hence, the numbers are 40 and 60
- 3 (d) An infinite number of fractions can be written between any two different fractions
- 4 (a) Total age of 15 boys = 121 years 3 months. Total age of 5 new boys = 43 years 9 months. Total age of 20 boys = 165 years and their average age = 8 years 3 months

5. (d). 10 per cent of 15 per cent of 20 per cent of Rs 500 = 10 per cent of 15 per cent of Rs 100 = 10 per cent of Rs 15, i.e., Rs 1.50.
6. (b) Let the original weight be 100 kg. Increased weight = 115 kg. Then reduced weight = $\frac{100}{115} \times 115$ kg, i.e., 92 kg. Loss in weight = 8 per cent.
7. (b). Goods worth Rs 400 were sold for Rs 440. Goods worth Rs 300 were sold for Rs 270. So goods worth Rs 500 should be sold for Rs $1,260 - 440 - 270$, i.e., Rs 550. The remaining goods should be sold at a gain of 10 per cent.
8. (c) Let C.P. of the sofa-set be Rs 100. First S.P. = Rs 90 and second S.P. = Rs 110. Then difference in S.P.s = Rs 20. But actual difference = Rs 180. So C.P. = Rs $\frac{100 \times 2 \times 180}{45}$, i.e., Rs 800. Hence $\frac{800}{1,800}$, i.e., $\frac{4}{9}$ is the required result.
9. (b) Total number of pupils in three schools = $600 + 500 + 700 = 1,800$. Total number of girls = $150 + 300 + 350 = 800$. Hence, $\frac{800}{1,800}$, i.e., $\frac{4}{9}$, is the required result.
10. (c) Let the third proportional be x . Then $5:20::20:x$. Therefore, $5x = 20 \times 20$, which gives $x = 80$.
11. (d). The ratio of investments of Rakesh, Sunil and Jamil is $2x + 24x : 48x : 36x$, i.e., $4:4:3$. Then Rakesh's share of the profit = $\frac{4}{11} \times$ Rs 1,056, i.e., Rs 384.
12. (d) For the same sum, C.I. is always more than S.I. for the same period and at the same rate. But C.I. will be maximum when interest is payable quarterly instead of yearly or half-yearly. So Pramod has to pay the maximum interest.
13. (c) M.P. of a share = Rs $\frac{115 \times 50}{100}$, i.e., Rs $57\frac{1}{2}$. Number of shares to be purchased for Rs 1,150 = $\frac{1,150 \times 2}{115}$, i.e., 20.
14. (b) Work done by Rati Ram in a day is $\frac{1}{12}$ th. Work to be done by both = $\frac{1}{12} + \frac{1}{12}$, i.e., $\frac{1}{6}$ in 1 day. So the remaining harvesting will be completed in 3 days.
15. (c). Distance travelled by the man in 30 seconds = $\frac{4 \times 30}{60 \times 60}$ km, i.e., $\frac{1}{30}$ km. Total distance covered by the train in passing the man = $(300 + \frac{1}{30})$ m, i.e., $\frac{1}{3}$ km. Hence, the speed of the train = $\frac{1 \times 60 \times 60}{3 \times 30}$ kmph, i.e., 40 kmph.
16. (c). Let the weights of three kinds of tea be 1 kg, 2 kg and 3 kg respectively. Total cost of third kind of tea = $6 \times$ Rs 8.50 = Rs 51. Total cost of first two kinds = Rs 7.50, i.e., Rs 30. Therefore, rate of third kind of tea = Rs $30 \div 3$ per kg, i.e., Rs 10 per kg.
17. (a). If a and b are two numbers, then $a + b = 5$ and $a^2 + b^2 = 17$. $a^2 + b^2 + 2ab = 25$ or $ab = 4$.
18. (d). Simplifying, we get $\left(\frac{x+1}{x}\right) \left(\frac{x+2}{x+1}\right) \left(\frac{x+3}{x+2}\right) \left(\frac{x+4}{x+3}\right)$, i.e., $\frac{x+4}{x}$.
19. (c). Since $x - 1$ is the divisor, $R = (+1)^{11} + 1$, i.e., $1 + 1$ or 2.
20. (b). $c^x = a$ or $(b^y)^z = a$, i.e., $b^{yz} = a$ or $(a^x)^{yz} = a$, i.e., $a^{xyz} = a$.

which gives $xyz=1$.

21. (d). The given equation can be written as $\sqrt{x-1} + 1 = \sqrt{x+1}$. Squaring and simplifying, we get $2\sqrt{x-1}=1$, which gives $4x=5$.
22. (b). $2a^2+bc=a^2+a(-b-c)+bc = \frac{-a^3}{-a^3} + \frac{-(a-b)(c-a)}{-b^3} + \frac{(c-a)(b-c)}{-c^3}$. The given expression $= \frac{(a-b)(c-a)}{(a-b)(b-c)(c-a)} + \frac{(b-c)(a-b)}{(a-b)(b-c)(c-a)} + \frac{(c-a)(b-c)}{(a-b)(b-c)(c-a)} = -\frac{[a^2(b-c)+b^2(c-a)+c^2(a-b)]}{(a-b)(b-c)(c-a)} = -\frac{[-(a-b)(b-c)(c-a)]}{(a-b)(b-c)(c-a)} = 1$.
23. (c). The graph of a linear equation in x and y is always a straight line.
24. (d). Given $x + \frac{1}{x} = \sqrt{3}$. Cubing, $x^3 + \frac{1}{x^3} + 3 \cdot x \cdot \frac{1}{x} \left(x + \frac{1}{x}\right) = 3\sqrt{3}$ or $x^3 + \frac{1}{x^3} + 3\sqrt{3} = 3\sqrt{3}$. Hence, $x^3 + \frac{1}{x^3} = 0$.
25. (d). If α and β are the roots of the given equation, then $\alpha + \beta = 3$ and $\alpha\beta = 3$. The equation with roots 2α and 2β is $x^2 - (2\alpha + 2\beta)x + 2\alpha \cdot 2\beta = 0$ or $x^2 - 6x + 12 = 0$.
26. (a). Since the pay-scale forms an A.P., we have $a = 600$, $d = 50$ and $l = \text{nth term} = 1,050$. Then $1,050 = 600 + (n-1)50$, which gives $n = 10$. So he will reach the maximum after 9 years of service.
27. (d). Here $7(a+6d) = 11(a+10d)$, which gives $a = 17d$. Now 18th term $= a + 17d = -17d + 17d$, i.e., zero.
28. (b). $x = ar^4$, $y = ar^7$ and $z = ar^{10}$. Since $\frac{y}{x} = r^3$ and $\frac{z}{y} = r^3$, we find that x, y, z are in G.P.
29. (b). $\angle B + \angle C = 130^\circ$. Then $\frac{1}{2}(\angle B + \angle C) = 65^\circ$. Therefore, $\angle BOC = 180^\circ - 65^\circ = 115^\circ$.
30. (d). Recall the properties of parallelograms. Diagonals are equal in case of squares and rectangles.
31. (c). An exterior angle of a 12-sided regular polygon $= 360^\circ \div 12 = 30^\circ$. So its each interior angle $= 180^\circ - 30^\circ$, i.e., 150° .
32. (b). Perimeter of the triangle so formed $= \frac{3}{4} \text{ cm} + \frac{1}{4} \text{ cm} + \frac{1}{4} \text{ cm}$, i.e., 5 cm.
33. (b). A median of a triangle divides it into two parts of equal area. Since $\angle B = 90^\circ$, we get $AC^2 = AB^2 + BC^2 = 64 + 36$, i.e., 100.
34. (c). Then $AC = 10$ cm. The median $BM = \frac{1}{2}(AC) = 5$ cm.
35. (d). Applying Pythagoras theorem, we have $3^2 + 4^2 = 5^2$; $5^2 + (12)^2 = (13)^2$; $8^2 + (15)^2 = (17)^2$. But $(12)^2 + (15)^2 \neq (18)^2$. Hence (d) is the answer.
36. (c). The altitudes of a triangle are concurrent and their point of intersection is known as orthocentre.
37. (d). The given chord subtends an angle of 90° at the centre. The angle in the smaller segment $= \frac{1}{2} \times 270^\circ$, i.e., 135° .
38. (b). The required angle $= \text{supplement of } 120^\circ$, i.e., 60° .
39. (c). $\triangle AX Y$ and $\triangle ABC$ are equiangular and hence similar. Then $\frac{\triangle AX Y}{\triangle ABC} = \frac{AX^2}{AB^2} = \frac{1}{4}$. Hence, $\frac{AX}{AB} = \frac{1}{2}$.
40. (d). $PB = (8-2) \text{ cm} = 6 \text{ cm}$. Here $AP \times PB = CP \times PD$ or $2 \times 6 = 3 \times PD$. So $PD = 4 \text{ cm}$; length of the chord $CD = (3+4) \text{ cm} = 7 \text{ cm}$.
41. (c). All three angles can be made using only ruler and compasses.

WHAT'S HAPPENING?

June 5 National Conference (NC) bags 21 of 33 seats declared in J & K polls; Congress (I) and BJP retain seats in Rajasthan, Janata wrests Chandi in Bihar from Congress (I).
7 NC-Congress (I) seat tally now 26-21 in J & K polls;

Sarkaria Commission's terms of reference announced; commission free to suggest new Centre-state arrangements.

8 UNCTAD-VI opens in Belgrade; Mrs Gandhi urges steps to reactivate world economy; appeals to US, USSR to move towards disarmament pact.

Home Minister P.C. Sethi writes to Akali Dal President Sant Harchand Singh Longowal for resumption of talks on Punjab tangle.

NC 10 seats short of majority; repolling in 18 booths in 10 constituencies peaceful.

9 Britain goes to polls; 80 per cent voters' turn-out recorded; final opinion polls show Tories headed for massive victory.

UNCTAD-VI continues debate; World Bank President A.W. Clausen calls for expansion of IMF and World Bank.

NC now just two seats short of absolute majority with 37 out of 62 seats; Congress (I) tally 23.

Escorts Board turns down registration of 4,67,000 shares bought on behalf of industrialist Swraj Paul during annual general meeting.

10 NC gains absolute majority in J & K.

British PM Margaret Thatcher leads Tories to massive win in British polls; Labour and Liberal-Social Democrats record worst defeat in 50 years.

11 Farooq Abdullah elected NC leader swearing-in tomorrow.

12 Eight-member J & K Ministry with Abdullah as CM sworn in; three ministers dropped.

British Labour Party leader Michael Foot announces resignation after party's electoral defeat.

Longowal calls for six-hour rail-roko stir in Punjab on June 17.

13 Congress (I) bags Pattan seat in Kashmir Valley.

Mauritian Parliament to dissolve on June 11, says PM Anerood Jugnauth.

14 Shoot-at-sight orders issued in Srinagar areas; 24-hour curfew clamped as Congress (I) and NC workers clash; NC takes Baramullah Lok Sabha seat.

15 Three hundred Akali activists held in Punjab in major crackdown on eve of rail-roko stir.

Aid-India Consortium pledges \$ 3.6-billion to India for 1983-84; three per cent decrease from last year's \$ 3.7 billion.

Thirty-five injured in renewed clashes in Srinagar; curfew continues.

16 Yuri Andropov elected Soviet President.

Centre to suspend rail movement in Punjab in pre-emptive move on Akali rail-roko stir.

Srinagar curfew relaxed; situation limping back to normal.

Pope John Paul II arrives in Poland to warm welcome.

17 Akali Dal suspends rail-roko stir; cancellation of trains and buses disarms Akalis.

Warsaw witnesses mass protests in support of Solidarity, Pope urges Poland's military regime to restore free trade unions.

Mauritian Parliament dissolved.

18 Li Xiannian elected China's first President since 1969; Deng Xiaoping confirmed as Commander of Chinese armed forces.

Mutiny against PLO leader Yasser Arafat erupts into heavy fighting in Lebanon.

No breakthrough on key economic issues in sight as UNCTAD-VI enters third week; conference concludes debate.

US test-launches first MX missile.

19 PM returns home after 11-day European tour, accuses Akali Dal and Opposition of exploiting Punjab crisis for political ends.

NC retains Badgam seat in Kashmir Valley to end with 47 seats in 76-member J & K Assembly.

Mutiny bid by rebel forces in Ghana foiled.

20 Punjab CM Darbara Singh briefs PM on Punjab situation after rail-roko stir, also meets Sethi.

Opposition leaders charge PM with fostering Punjab problem for electoral benefits.

21 Akalis reject Centre's renewed offer of negotiations.

Palestinian rebels capture eight pro-Fatah positions in eastern Lebanon.

22 Tribunals to consider Ravi-Beas river-waters dispute—Centre's new offer to Akalis; Centre also willing to refer territorial claims to tribunals.

Ten die as PLO faction fighting continues, Syrian troops surround pro-Fatah positions in eastern Lebanon.

23 Syrian troops occupy Fatah offices in Lebanon's Bekaa Valley.

Pope ends Poland visit after secret meeting with Solidarity leader Lech Walesa.

24 Akalis reject Centre's offer on tribunals.

Syria declares Arafat *persona non grata*, asks him to leave Syria.

Parcel bomb explosion in Punjab kills two.

25 Thirty hurt as police clash with armed mob in Jullundur, Longowal rules out further talks on Punjab issue.

26 Temple priest killed in Kapurthala and another injured on eve of Punjab bandh.

UNCTAD-VI enters final stretch; parleys still deadlocked.

USSR agrees to on-site troops inspection.

27 Five killed in Jullundur blast and firing; 48-hour curfew imposed.

28 Extremists kill Nirankari in Amritsar, Punjab still tense.

PLO rebels seize three Fatah bases as fresh fighting breaks out between pro-and anti-Arafat guerrillas.

29 Heavy fighting breaks out between rival Palestinian factions in eastern Lebanon.

Curfew extended in Jullundur.

US Secretary of State George Shultz arrives in New Delhi.

J & K High Court stays Election Commission's order for repoll in Doda.

30 US pledges supply of safety-related spare parts to Tarapur.

Seventeen Opposition leaders meet in New Delhi to uphold Punjab claim on Chandigarh.

UNCTAD-VI final plenary session adjourned by a day; key economic issues remain unsolved.

Indo-US joint commission meets; decides on measures to improve economic cooperation.

July 1 Shultz describes talks as constructive; says US is prepared to sell arms to India.

PLO factions declare 12-hour truce in eastern Lebanon; appoint seven-man committee to oversee truce.

Extremists kill two Nirankaris in Amritsar.

2 Shultz leaves for Islamabad.

Continuing extremist violence claims three more lives in Punjab.

3 PLO rebels renew attacks in Lebanon; India sends External Affairs Secretary Romesh Bhandari for on-the-spot study of West Asia situation.

UNCTAD-VI ends; Group of 77 expresses disappointment at conference outcome.

Canadian Deputy Prime Minister Allan Rock arrives in New Delhi.

4 Four Rajasthan ministers dismissed; India and Canada discuss bilateral cooperation.

5 Canada agrees to help India in oil exploration and mining.

Sethi calls meeting of Punjab and Haryana CMs tomorrow.

Relations with West Germany bound to suffer if American missiles are deployed in West Germany, Soviet President Yuri Andropov warns Chancellor Helmut Kohl.

6 Police and CRPF open fire in two villages of Kerala to control violent mobs; two killed, nine injured.

Punjab and Haryana CMs evolve formula in New Delhi in presence of Sethi, for supply of drinking water to their common capital Chandigarh and some of its adjoining areas; Punjab CM later apprises Sethi of steps being taken to control extremist activities in Punjab.

7 Shultz's talks with Israelis, Syrians on troops withdrawal from Lebanon fail; Lebanese PM Shafiq Al-Wazzan escapes bomb attack.

MPs express concern at role of foreign agencies in India.

8 Canada refuses to resume supply of nuclear fuel to Pakistan.

Akali Dal leader Gurcharan Singh Tohra calls upon Sikhs to keep police out of gurdwaras.

9 Government to amend statute on delimitation of Lok Sabha and Assembly constituencies and use of electronic voting machines.

Joint N-blasts by South Africa and Israel, says American magazine *Defense Electronics*.

10 Akali leaders threaten 'direct action'.

Recycling of US N-fuel waste to begin in December, says AEC Chairman Dr Horni Sethna.

Saudi-Pak defence agreement likely, says Canadian magazine.

Soyuz T-9 takes off. The Soviet Union, on June 27, launched the spaceship Soyuz T-9, with Col Vladimir Lyakhov and Aleksander Aleksandrov on board, to conduct scientific and technical experiments in space after the spaceship linked with the orbiting space complex, Salyut 7 Cosmos 1443.

Soviets launch Prognoz-9 The Soviet Union, on July 1 launched an automatic space station Prognoz 9, at an apogee (max distance from earth) of 720 000 km and perigee (min distance from earth) of 380 km to study radiation and radiowaves

ECONOMY—National

PC approves hydel project. The Planning Commission (PC) has approved the installation of the Abohar Canal Hydro-electric Project Stage I at Daudhar in Punjab. Estimated to cost Rs 2.75 crores, the Project envisages an annual energy generation of about 9.58 GWh (billion watts) in a 90 per cent dependable year and 11.83 GWh in an average year.

Newsprint (91 per cent) and printing machinery (77 per cent) industries achieved the highest growth rate during 1982-83, among 132 industries registered with the Directorate General of Technical Development—fifty two others showed a reverse growth rate. The overall growth rate of the 132 industries was 3.6 per cent. Only 31 industries could achieve their targeted production, with 45 achieving between 90 and 100 per cent, 21 between 80 and 90 per cent and 27 below 80 per cent.

Indo-Yugoslav trade turnover will be doubled in the next one year, under a protocol signed by the two countries in Belgrade through increased industrial linkages and export import deals besides joint participation in third country ventures.

Record wheat production: Official efforts to ensure extensive planting despite a prolonged dry spell, and meagre incidence of diseases and weeds has paid fruit a record 41.5 million tonnes wheat production this year, 10 per cent over last year's yield and crossing for the first time the 40 million tonne five year plan goal.

Dhaka-Delhi accords: Three agreements were signed when the Indo-Bangla joint economic commission ended its two-day standing committee meeting on June 15 a Rs 20-crore Indian credit to Bangladesh, with five per cent interest and repayable in 15 years, Rs 40 crores to Dhaka for industrial investment, and collaboration in agricultural research.

Air India and Quantas will be exempt from Australian and Indian taxes respectively on their profits from international traffic, according to an agreement signed between the two countries to avoid what would tantamount to double taxation.

Centre announces: The Centre will provide an additional Rs 1,650 crores as plan assistance to the states, above the Rs 15,350 crores originally agreed upon. Half the amount will be allotted during 1983-84. The Centre will also provide for the 1983-84 annual plan, a 20 per cent step-up in market borrowings over 1982-83, instead of the normal 10 per cent in the first three years of the Sixth Plan. Special market borrowings of about Rs 1,000 crores will be made available to states with an income less than the national average. Andhra Pradesh, Bihar, Madhya Pradesh, Orissa, Rajasthan and UP come under the category.

EEC will loan India about \$46 million as aid for two agricultural projects: \$13 million for the International Crop Research Institute for Semi-Arid Tropics, and \$45 million for fertiliser imports from the EEC. The loan was decided on June 21 by the permanent delegation of the New Delhi-based Commission of the European Communities for South Asia.

Under the June-24 Indo-Philippine trade protocol to raise annual bilateral trade to over \$100 million, New Delhi will import phosphoric fertilisers, copper rods and bars, and nickel briquets from Manila, and export iron-ore pellets, finished leather, testing machines and railway coaches.

A World Food Council report has commended India for achieving a high measure of food self-reliance and for its efforts to increase the incomes of landless people. The report says much of Asia's success is due to the wide use of high-yielding varieties of rice and wheat seeds, combined with fertiliser on irrigated fields. From 1972 to 1981, average food production in the region increased by 3.5 per cent compared to the global average of 2.6 per cent. India and China attained an average increase of 3.3 per cent and 3.6 per cent respectively. India alone increased its wheat production by 400 per cent during the decade.

Accord on agricultural research project: Under the June-30 Indo-US agreement, \$65 million of the \$20-million USAID (US Agency for International Development) assistance to India will be used for research on soyabean processing and utilisation and post-harvest technologies for fruits and vegetables.

More free-trade zones to be set up: In addition to those at Kandla and Santa Cruz, in Maharashtra, the government will set up four new trade zones at Noida in UP, Palta in West Bengal, Madras and Cochin to boost exports. This was recommended by the Tandon Committee on Free-trade Zones, which submitted its report in September '82.

The Planning Commission has asked the states to mobilise an additional Rs 3,300 crores in the next two years to avoid a shortfall in the Sixth Plan investment. The plan had envisaged an outlay of Rs 48,000 crores for the states, the states contributing Rs 33,250 crores. But the states' resources for the period are now estimated at only Rs 27,454 crores—a shortfall of Rs 5,800 crores. The state governments had agreed to raise an additional Rs 800 crores during 1983-84 which, coupled with the resources raised during 1984-85, will provide about Rs 2,500

crores—a shortfall of Rs 3,300 crores.

ECONOMY—International

Japan has raised import ceiling on industrial products from developing countries by about 50 per cent to about \$5 billion making the Japanese market more accessible, Japanese Foreign Minister Shintaro Abe announced at UNCTAD VI's plenary session on June 8.

Pakistan will get \$57.8 million as agricultural credit from World Bank (\$10 million) and the rest from IDA. Step in step comes Islamabad's June-11 Rs 88,289.6 million budget for the fiscal year beginning July 1, allocating a record Rs 25,219.3 million or about 28.57 per cent of the budget for defence expenditure. This represents a 10 per cent increase in defence expenditure over last year's figure of Rs 22,871.4 million.

EEC lifts freeze on aid to Israel: The EEC, meeting in Stuttgart, West Germany, on June 19, decided to lift the year-old financial-aid freeze on Israel for its Lebanon invasion. The decision was reached due to Greece's abstention.

The US has signed agreements with Bangladesh to provide \$35.8 million worth of food and family-planning services. The aid includes \$9.3-million worth of contraceptives and 1,00,000 tonnes of wheat.

IMF's predictions on overall production: The IMF, in a new report, has predicted that the overall US production will grow by 2.4 per cent during 1983 against a Soviet growth rate of 2.5 per cent. Japan will do better at 2.8 per cent but other major industrial nations will lag behind. Britain—1.5 per cent, 0.5 per cent for West Germany, and a drop of 0.1 of 1 per cent for Italy. China's growth rate of 5 per cent during 1982 will continue in 1983. During 1976-80, Soviet economy grew by about 4 per cent against the US' 3.7 per cent. In 1982, Soviet growth was only 1 per cent and the US growth dropped by 1.7 per cent, the IMF said.

EVENTS—National

Tourism in UP: Keeping in view the rising tourist traffic in the hills, the UP Tourism Department has prepared an ambitious programme for exploiting its full potential in the five year plan period 1980-85. On the cards are development of winter-sports resorts and facilities for trekking.

Accord on agriculture: Under a June-9 accord on agriculture, Egypt will supply India with date palms, grapes and olives and India Egypt with disease-resistant sugarcane varieties, sunflower, mustard, groundnut, medicinal and aromatic plants.

India expels DPRK envoy: India has expelled a First Secretary in the North Korean embassy, Bang Bong Nam, on the charge of smuggling contraband into India. Nam was apprehended by the New Delhi Customs on May 17 on arrival from Singapore and was found carrying diamonds and wrist watches, among other goods.

Indo-Soviet oil-exploration accord: India and the Soviet Union, on June 13, agreed to cooperate in oil exploration and production, following ten days of talks between the two countries in New Delhi. The Soviet Union

would also provide technical teams to accelerate repair of sick oilwells in Gujarat.

No more English-medium schools in Karnataka: To encourage the growth of Karnataka's administrative language, Kannada, the state government will not permit any more English-medium schools from the current academic year.

Arms Act amended: An Ordinance amending the provisions of the Arms Act, 1959, tightening up the procedure for the issue of licences, regulating manufacture and sale of arms and making punishment for major arms offences more stringent, came into effect on June 22. The Ordinance prescribes a minimum of three years imprisonment for illegal manufacture and sale of arms and ammunition and six months for lesser offences. Eligibility age for arms licence has been raised from 16 to 21 years. The Ordinance vests powers of search and seizure of arms to prevent their use and empowers the government to ban the carrying of arms in certain areas.

India denies 'Post' report: The External Affairs Ministry, on June 24, denied a *Washington Post* report that India has sunk additional shafts at its Rajasthan desert test site where it had staged its first nuclear blast nine years ago. The *Post* quoted "unnamed sources" as having said the White House was delaying approval of export of spare parts for the Tarapur nuclear reactor because it would require "informing Congress of possible Indian preparations for a second underground test".

Kranti Ranga and Hegde part ways: The six member S. Bangarappa-led Kranti Ranga group in the 225-member Karnataka Assembly, on June 25, decided to withdraw its support to the R. K. Hegde-led Janata Ministry. This, however, will have no impact on the ministry, which has the backing of 132 members, including 88 of its own.

Assam's new districts: Assam now has 16 districts—an addition of six—with the new districts being carved out of five existing ones. Barpeta, Kokrajhar, South Goalpara, Mangaldai, Sibsagar and Karimganj are the new districts which were inaugurated on July 2. The decision to create the new districts followed the government's desire to bring "administration closer to people".

Kalpakkam goes critical: The first unit of the Madras Atomic Power Plant at Kalpakkam, the third in the country, went critical (i.e. starting and sustaining a nuclear chain reaction for power production purposes) on July 2, making India one of the select few to fully design and run an atomic plant on its own after the US, USSR, UK, France, Sweden, FRG and Japan.

EVENTS—International

China becomes full ILO member: China, on June 6, became a full ILO member when the organisation voted overwhelmingly to waive insistence on China paying contribution arrears of \$37.2 million. The US, Canada and Guinea opposed China's entry.

A three-party coalition government has been formed in Norway, with the Centre and Christian Peoples' Party (CPP) joining Prime Minister Kaare Willoch's Conserva-

...giving him a parliamentary majority (79 of 155 seats) for the first time since the 1981 elections. The new government will have 11 Conservatives, four ministers from the C.P. and three from the Centre (Agrarian) Party.

Argentina, on June 6, lifted financial sanctions imposed on British firms and residents in Argentina during last year's Falklands conflict ending regulations that prevent British companies and non-permanent residents from repatriating dividends, royalties and from selling assets. Britain had lifted its financial sanctions against Argentina on September 15, 1982.

US N-fuel for Dhaka reactor: The US will provide Bangladesh with nuclear fuel for the country's first nuclear research reactor, an American built 3 Mw nuclear reactor, to be installed in Savar township about 20 km from Dhaka.

The Mauritian Parliament was dissolved on June 17 paving the way for early elections in the island state. This follows two quick crises in less than a year of the Mauritian Militant Movement (MMM) coming to power in alliance with the Mauritius Socialist Party (PSM) in June last year. The first crisis occurred when Finance Minister Paul Berenger resigned over the issue of cabinet solidarity within four months of the MMM-PSM Government coming into power. The second occurred when Berenger led a revolt by 11 ministers in March this year.

Australia suspends uranium supply to France: Australian Prime Minister Bob Hawke met French President Francois Mitterrand in Paris and later said he would 'not authorise the supply to France of Australian uranium in the future, and certainly not till October 1984' to protest against French nuclear tests in the South Pacific.

Mario Soares was, on June 9, sworn in as Prime Minister of a coalition of Socialist and Social Democrats, in what was Portugal's first centrist government, at the head of a 17-member Cabinet. The government was sworn in with a four-year mandate after parliamentary elections on April 25.

Representatives okay base construction: The US House of Representatives, on June 21, approved \$78.3 million for the construction of nuclear cruise missile bases in Europe, about half the amount requested by US President Ronald Reagan. The amount is part of the \$7 billion Military Construction Appropriation Bill approved by voice vote the same day and sent to the Senate.

US SC ruling: The US Supreme Court (SC), on June 23, ruled that Congress cannot veto decisions of the President and the executive branch made under powers granted them by the legislature. The opinion, one of the most important ever made by the Court on the separation of powers under the US Constitution, affects 200 laws ranging from national security and foreign affairs to budget and regulatory decisions.

Italy's dominant Christian Democrats suffered their worst electoral setback, losing over five per cent of their traditional vote share in the June-26-27 elections. Final results gave them 32.9 per cent of the vote, 5.4 per cent less than in the last elections in 1979, and just 3 per cent ahead of the Com-

munist, whose 29.9 per cent was marginally less than the 30.4 per cent in 1979 four years back.

Warsaw Pact calls for N-freeze: The seven-nation Warsaw Pact alliance, at the end of its June-28 one-day meeting in Moscow, called for an East-West nuclear-weapons freeze but failed to agree on a joint response to the planned deployment of new NATO missiles in Western Europe. It has been interpreted as a sign that the Kremlin has not yet secured unanimous endorsement of a warning issued in May that they (the Soviets) would deploy new weapons in Eastern Europe if NATO went ahead with its plans of missile-deployment in the West.

Lesotho-South Korea break ties: Lesotho has broken off diplomatic ties with South Korea because of the 'imminent' accreditation of a North Korean ambassador to Maseru, capital of Lesotho. The move, which took effect on June 27, was seen as a further illustration of Lesotho's desire to improve relations with communist countries. Last month, Taiwan's embassy in Maseru was closed after Lesotho established diplomatic relations with China.

Seychelles' Parliament was dissolved on June 2 by acting Chairman David Thomas. General elections will be held in three months time.

Moi suspends Njonjo: Kenyan President Daniel Arap Moi, on June 29, suspended Constitutional Affairs Minister Charles Njonjo, accused of being a 'traitor'. Later, Njonjo resigned from Parliament. The decision followed allegation in Parliament that Njonjo had business interests in South Africa. Six weeks ago, Moi said 'foreign powers' were grooming an unidentified politician to replace him, an issue which plunged Kenya into its worst political crisis. There was speculation that Njonjo might be the one Moi was referring to leading to the former issuing a press denial.

Emergency in Guatemala: Guatemalan President Efraim Rios Montt, on June 29, declared emergency in the country, restricting political activity and press freedom a day after two former supporters demanded his resignation. The government seized control of all radio stations and said 'the situation is under control'.

Died

Ghanshyam Das Birla, 89, doyen of Indian industry and close friend of Mahatma Gandhi who accompanied him to the Round Table Conference in London in 1930-31, on June 11 in London.

Alexei Surkov, 83, Soviet novelist and poet, who was one of the leaders of an official attack on author Boris Pasternak, and a member of the Supreme Soviet, on June 14 in Moscow.

Major Robert Wain Lewis, 65, who co-piloted the plane from which an atom bomb was dropped on Hiroshima, on August 8, 1945, and who later advocated a freeze on nuclear weapons, on June 18.

Evan Charlton, 71, last British Editor of Statesman and author of *Go And Order The Drums*, on June 25 in London.

ANIL PENNA

CURRENT EVENTS: NATIONAL

(Continued from page 25)

substantial increase in concessional aid to developing countries. He reiterated Canada's support for ADB loan to India. A joint business council has been set up to expand Indo-Canadian economic cooperation.

Among the subjects he discussed in talks with Mrs Gandhi was the proposed meeting of heads of state and government during the UN General Assembly session in September.

OIL-IMPORTS BILL

REDUCTION AND RELIEF

With the reduction in India's oil imports bill, India might possibly save Rs 1,182 crores in foreign exchange. Due to a reduction in the prices of OPEC oil as well as increased oil production at home, India is expected to spend Rs 3,422 crores as against Rs 4,500 crores spent last year.

It is expected that India will purchase 13.56 million tonnes of crude and petroleum products this year as compared to the net import of 16.883 million tonnes in 1982.

India's oil-import bill has been falling steadily since 1980-81 and it is hoped that by 1984-85, India's domestic crude production would go up to 29 million tonnes.

This trend will be a source of relief to the government which has been worried about the dwindling foreign-exchange reserves. The reduction in the import bill is all the more remarkable considering the fact that consumption of petroleum products in India has risen from 35 million tonnes to 38 million tonnes.

CHANDRA SHEKHAR'S LONG MARCH SHORT-CUT TO SUCCESS?

Janata Party President Chandra Shekhar could not have timed his 'Bharat Yatra' more accurately. His 4,200-mile marathon from Kanya Kumari to New Delhi—covering eight states over a span of six months—came amidst rumours of a mid-term poll and Indira Gandhi's dwindling popularity.

Shekhar has gained tremendous political mileage by the journey, leaving behind BJP's A.B. Vajpayee who was tipped as the only contender for the prime minister's office after Indira Gandhi.

Already a well-known figure in the north, Shekhar has made sure that his presence is felt in the south as well by spearheading his march from the country's tip.

ANITA SHARMA

Junior Research Fellowships, CSIR

Interested in doing research studies in Maths or Science subjects? Well, here's incentive for you provided by the Council of Scientific and Industrial Research (CSIR) in the form of Junior Research Fellowships worth Rs 800 per month and a contingent grant of Rs 3,000 per year. The fellowships will be tenable at various Indian universities and research/academic institutions. Candidates will be selected through a competitive written exam which will be conducted on 23.10.83. To be eligible for the fellowship, candidates must have a M.Sc. degree or a M.A. degree in Statistics. The upper age limit for the exam is 25 years as on 1.4.83. The tenure of the fellowships is two years and they will be effective from 1.1.84 or the date of admission to the course leading to the M.Phil./Ph.D. degree. For other details and format of the prescribed application form, see *Employment News* dated 2.7.83. Last date for receipt of applications is 1.8.83.

Cement Technology

Engineering graduates and Science postgraduates interested in making a career in the cement industry have an opportunity to join a six-month course in Cement Technology organised by the Cement Research Institute of India. The course which will start from 3.10.83, is specifically designed for professionals who are executive trainees/graduate engineers/trainees/first-line executives/supervisors in the cement and related industries. For details write to the Director General, Cement Research Institute of India, M-10, South Extension Part-II, New Delhi 110 049.

Loan Scholarships

The Sahu Jain Trust offers Loan Scholarships for higher studies to students of Indian nationality, under the following categories: (i) For higher studies abroad in technical subjects, whereby a loan of upto Rs 20,000 in lump sum or more as per requirements will be given. (ii) For technical and professional courses within the country like B.E., B.Tech., M.B.B.S., etc., or graduation in Dentistry, Pharmacy, Ayurved, Veterinary Science and Homoeopathy. (iii) Graduation or postgraduation in other courses. To be eligible, candidates must have maintained a uniformly brilliant academic record. For details

and application forms write to Secretary, Sahu Jain Trust, Times House 4th Floor, 7 Bahadur Shah Zafar Marg, New Delhi 110 002.

Air Stewardess, Gulf Air

Want to fly? Here's your big chance to spread your wings and take off with Gulf Air, the national airline of the Gulf states as an Air Stewardess. You need not necessarily have previous cabin crew experience but a customer-service background would be of help in getting the job. The other eligibility requirements: you must be an unmarried young woman between 21 and 25 years of age, at least 157 cm tall, with good health and good education. The job offers a generous tax-free salary and free accommodation in Bahrain among other things. Write with full career and personal details (including age, weight and height), along with a recent photograph to Recruitment Superintendent Gulf Air, P.O. Box 138, Bahrain.

Jobs In Gulf Countries

Tremendous employment opportunities exist in Middle East countries for engineers, technicians, skilled tradesmen, heavy-equipment operators, drivers, accountants, computer programmers, clerks, etc. For detailed information on the names and

Saudi Arabia, Kuwait, Bahrain, etc. write to the Recruitment Superintendent Gulf Air, P.O. Box 138, Bahrain.

For registration as a consulting engineer, part of the mechanical engineering course, write to the Recruitment Superintendent Gulf Air, P.O. Box 138, Bahrain.

The University of Cochin invites applications for the following courses in the 1983-84 session: (i) M.B.A. (full-time and part-time) in the School of Management Studies. To be eligible for the full-time course, candidates must have a bachelor's degree with at least 50 per cent marks in Arts/Commerce or 55 per cent in Science, Technology/Engineering. For the part-time course, they must have, apart from a bachelor's degree, at least three years experience in a supervisory/executive cadre in a public/private establishment or own business or in teaching Commerce, Economics, Maths, Statistics, Psychology, Engineering or Social Work at degree level. Candidates must be sponsored by their employer and

have completed 25 years of age as on 1.7.83. (ii) M.Sc. in Industrial Fisheries. Candidates must have a bachelor's degree in Zoology, Botany, Fisheries or Chemistry (main) with Zoology and Botany as subsidiaries, with 55 per cent marks in optional subjects.

Last date for receiving applications is 1.8.83. For details and application form write to the concerned Head of the Department enclosing Rs 10 in cash or by postal order payable at Cochin-682 022/Ernakulam post office in favour of the concerned head, along with a self-addressed stamped envelope worth Rs 2.50 (25x17 cm) for M.B.A. and Rs 1.10 (2x10 cm) for M.Sc.

M.B.A. Jodhpur University

The University of Jodhpur invites applications from graduates/post-graduates with minimum 50 per cent marks in the aggregate for the 1983 session of the M.B.A. course. The admission test, the date for which will be intimated later on, will be held in Jodhpur. Application forms may be obtained from the Dean, Faculty of Commerce, Jaswant Hall Campus, University of Jodhpur, Jodhpur-342 001, on payment of Rs 7 either in cash or through a postal order payable to the University of Jodhpur. Last date for receipt of applications is 1.8.83.

Sales Officers

MEC (India) Pvt. Ltd. needs Sales Officers to organise sale of refrigerators and air-conditioners. They will be posted in Delhi, Jaipur, Kanpur, Bhopal and western UP. CAREER COUNSELLING

BY G J UNNITHAN

Director Students Advisory Bureau University of Rajasthan

I am an Economics (Hons) graduate and am a cashier in a nationalised bank. How can I join the overseas services of State Bank of India or other nationalised banks especially in Europe, in clerical and officer cadres.

Ratan Kumar Ranchi

Bank's deputy experience and efficient officers and clerks abroad. Recruitment is internal and you may make enquiries from the personnel manager of your bank for further details.

I am a B.A. final year student and wish to take up a career in management particularly Materials Management. How should I go about it?

D V Vikas Delhi

The Indian Society for Materials Management 80-81 Bentinck Street Calcutta 700 001 conducts a government recognised graduate diploma course in Materials Management. In Delhi you may contact the Chairman India Association of Materials Management 53-54 Rajendra Nagar New Delhi 110 006.

I am an Installation Engineer in an electronics factory and have a diploma in Electrical Engineering. I want to set up a fluorescent bulb industry. Please provide me the necessary details.

Om Prakash Baranwal Chitrakpuri

in final year (B.E.) Production Technology and was interested in setting up a fluorescent bulb industry. There are many people who have started companies in this field.

Arun Kumar Samalpur

I am a Chemistry (Hons) graduate. I got 74 per cent in the final year exam and wish to become an entrepreneur. Which course should I take up? I don't want to do M.Sc.

Aneeta B. Bombay

Every state has organisations/institutions which assist persons to become entrepreneurs and stimulate self employment. The government operates Small Industries Service Institutes in many states. These institutes not only help in project planning and estimating funds required, they also provide three months entrepreneurial training. The finance corporations of most states, industries departments, Khadi and Village Industries Corporations, nationalised banks and others, all help prospective entrepreneurs. The All-India

Manufacturers Organisation (11-11 Jhandewalan Extension New Delhi 110 055) conducts a correspondence course to develop entrepreneurial skills and the organisation assists its students and members till they have set up their own unit.

National Institute of Management Block 3, Connaught Building 106 Malabar Street Fort Bombay 400 023 affiliated to the International University Missouri USA, offers a wide range of American degree courses including M.B.A. by correspondence. According to their prospectus the degrees have legal validity and are recognised by the governments of the USA, Spain, Japan etc. Are these degrees valid in India too?

Sunderpaul Sahasrabudhe

Diploma and degrees of US universities are accorded recognition by regional or national professional associations which are generally considered the highest accrediting authorities. Check if the university in question is so accredited. According to the information available International University has not been listed in any standard reference books of American universities and it is doubtful if you can obtain foreign exchange to study at this university. Follow the recognised degree courses.

I am a B.A. final year student and wish to take up a career in management particularly Materials Management. How should I go about it?

D V Vikas Delhi

Registration and conditioning are usually part of the mechanical or technical engineering degree course. No separate degree or post B.Sc. level courses are available in this subject. However, Khetan Polytechnic Gandhi Nagar Jaipur, conducts a three year diploma course and the British Institutes P.O. Box 1025, D.N. Road, Bombay 400 023, a correspondence course.

What is the scope for M.A. Geography? How can I become a town planner?

J. C. Nainwal, Namital

What is the scope for B.A. or M.A. Geography?

Rachna Pandeya, New Delhi

Employment opportunities exist

among others in surveying, cartography and aerial photo interpretation. Human Geography and population studies, Ecology, Climatology, Meteorology, remote sensing as well as town and regional planning and transport management teaching both at school and college level absorb most geographers. Openings in the other fields are limited. An increasing number of students take up Geography in competitive exams.

I am a Science teacher and wish to obtain a diploma in Audio Visual Education. Please give me the address of the institution conducting this course.

K. Vaithianathan Pondicherry

Contact Institute of Audio Visual Education Indraprastha Estate New Delhi 110 002.

Manoj Kumar Mishra New Delhi informs us that aspirants should contact:

C. R. Ramakrishnan F.A.

Secretary

and not the address given in this column of our July 82 issue. Our source was C.R.E.S. (I.G.E. & I. Government of India Ministry of Education) New Delhi 110 002.

NOTE TO READERS

Before reaching you, your letter has to be sorted out. It can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many students ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling, Career & Competition Times, 10 Daryaganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

GROUP DISCUSSION

Is Democracy The Best?

A group discussion is not to be taken lightly because it is often the deciding factor that may tilt the decision in your favour. If you are about to go through one in the near future, watch yourself from now—you can train yourself through self observation. We present here a mock discussion to give you some guidelines on how to and how not to conduct yourself in this vital stage of the selection procedure. The topic this month—Is democracy the best form of government?

A: I agree that democracy is the best possible form of government. It is a government of the people, for the people and by the people, and what could be better? It is a government where all sections of society are represented and the voice of the ruled is heard by those who rule. People elect their representatives at every level from the family upwards.

B (pronouncing 'democracy' with a thick French accent) I too think that democracy is the best form of government, but wouldn't you say that it is very relative? I mean it does depend on the people. Doesn't it? If the people cannot utilise their people's power, what good is democracy? What do you say? Then a dictatorship, a form of government, say a military dictatorship, would have the purpose. Yes, that would deliver the goods, and in the long run that is what matters, delivering the goods.

C Oh boy, what do we have here? Shades of Zia!

A I feel that we are going slightly off the point. It is true that there are times when a military dictatorship serves the purpose of bringing about order and discipline in a country, but if we look at the lessons of history, we see that a military dictatorship is always short-lived. Besides, it is certainly not the best form of government, either theoretically or practically. The dictator, military or otherwise, always has his own interests in mind and the people suffer as a result of the promotion of those interests. For

instance, see what has happened in some of the Central American nations. In Nicaragua, for instance, the long period of dictatorship enjoyed by the Somoza family ruined the economy of the nation. The same is true of Haiti, El Salvador and other countries.

B Oh, I did not mean it so seriously. Military dictatorship has some bad effects. I agree, and the people suffer. Okay, I agree that democracy is the best form of government.

D I am afraid this talk of military dictatorship and democracy has had the effect of limiting the discussion. There is another form of government which is as good, if not better, which has so far been ignored. I personally feel that socialism and its practical form, communism, is a more just form of government.

C Aw, come on, he is one of those.

B (simultaneously) We are not here to discuss communism, but democracy, what do you mean?

Moderator (intervening) Gentlemen, you must not all speak at once. Mr D, please continue.

D Yes. Thank you very much. I was saying that socialism, in a way, is more just than the kind of democracy we see being practised. It is true that a regime that socialises its economy cannot avoid total centralisation of power, specially at the first instance, and that is why people often react the way my friends reacted just now—they feel that under such political centralisation, the freedom of the individual is not protected because the material basis for a free press, trade union, churches and other autonomous institutions that protect the individual's freedom do not exist.

A May I interrupt for a minute? It is true that in a socialistic state there is a fundamental threat to the freedom of the individual. You have yourself just admitted that. But don't you feel that political freedom is the most important thing in political life—and that is guaranteed by democracy?

D Yes, I was just coming to that. Freedom cannot be absolute, every society would you not agree, must define its notion of the proper balance between the claims of the individual and those of the community.

G Hey, the man speaks sense!
D It is true that a socialistic society may not be a totally free society. But then, it remains to be proved that democracy can sustain a meaningful freedom for more than the elite! In fact, capitalism, which has a class connection with democracy, is concerned with the freedom of the few. On the other hand, socialism cannot offer a vision of free society unless it guarantees democracy.

E Well, I agree partly with what you are saying. In fact, socialism once meant the economic fulfillment of political democracy and was commonly referred to as economic democracy. In fact, it is a technological contradiction to speak of socialism without democracy.

A But what you are speaking of is the theoretical aspect of socialism. If we look at it from the practical point of view, we see a total concentration of power in a socialistic state because economic power is joined to political power. This kind of concentration of power gives immense opportunity for the coercion of man by his fellow men. In a democratic form of government, on the other hand, there is a dispersal and distribution of power which is reinforced by a system of checks and balances. If a government is too oppressive, it can be overthrown by the people.

B Oh yes, I totally agree with you. Even President Nixon was overthrown.

A Well, President Nixon was not who I had in mind when I used the word 'oppressive', but since the matter has been brought up, I must say it was one of the best possible examples of democracy in action. If we go to the other extreme, let us consider China. Chairman Mao was apparently unpopular because of his oppressive high-handedness. But could the people do anything about it while he was alive? No! Stalin too was dictatorial and quite unpopular—but the process of de-stalinisation took place only after his death. Why is it that in a socialistic state a person is put on a pedestal and glorified during his lifetime, but is criticised so intensely after his death?

C Fear man! Fear! The guy keeps himself in power through fear, so they get at him after his death.

A Yes, that is one way of putting it. Now that kind of fear does not exist in a democratic state. And neither do iron curtains and bamboo curtains. A free society is an open society, which a socialistic society is not. Why? We do not even know what is really happening in a socialistic state.

D If that were true, you would not be aware of Solidarity's problems in Poland now. Under socialism, everybody at

least has his belly full and his right to work is respected. For all the criticism levelled at Mao now, the Chinese admit that he raised them out of virtual serfdom. The Chinese were much worse off than the Indians in 1949—now, look at the progress they have made. Look at Russia—before 1917, its people were dying of starvation. Then almost overnight they began to have so much surplus as to send people into outer space. What is more important: economic democracy or the freedom to criticise the government?

B: Economic democracy, of course

D: Precisely. You find that more and more nations of the Third World have begun to adopt socialism. This is so because they are disillusioned with their prior experience of imperialistic democracy, which actually meant rule by the haves over the have-nots

E: As I was saying earlier, I agree partly with Mr D's views that socialism is a more just form of government. Democracy, where the electorate is uneducated, has no meaning. The Members of Parliament are often representatives only in name because the people do not have the necessary political education to reason for themselves and arrive at a proper choice. They follow their local leaders or accept money from party men and vote. There is also too much disparity between the rich and the poor in a democracy—often a democratic government comes under the influence of the rich and the powerful. I am not talking just about the new or underdeveloped nations.

A: Oh yes, I admit that the criticism is valid. Even the US Government is pressurised by various groups and has to bow to the wishes of the military indus-

trial complex more often than we speak about.

E: But the modern-day alternative of socialism too has its drawbacks. Pure socialism is not possible in practice, and there is always the danger of personality cults developing in a one-party state where the leader can combine many powers within himself. Political freedom, too, is curbed in a socialistic state. Under the circumstances, I feel that the ideal form of government would be a socialistic democracy. By this I mean an ideal combination of political and economic equality

B: Oh, I do not think that such a combination is possible, do you? What you are doing is condoning democratic socialism while condemning totalitarian socialism as practised in Russia, but that is not possible, is it? I mean a society which is socialistic cannot also be democratic, can it?

E: Why not? It is possible for a country to adopt the essential features of a socialistic state and yet assure industrial freedom through political arrangements

D: If this can be done, I would be the first to admit that that would be the best form of government

A: Well, certain nations are experimenting on those lines, including our own. Expanding the public sector, laying more emphasis on social welfare—all point in this direction. Western nations like England and Sweden are also working on the same lines. But, I emphasise, this does not make any of these countries less democratic.

D: I am sorry if I have been misunderstood. I never said that socialism is the best form of government. It is more just than the kind of democracy we see in practice. In fact, after the initial goals

have been reached, even a socialistic state tends to become more open and allows certain individual freedoms to exist. Perhaps, in the future, there will be no clear distinction between socialism and democracy.

Moderator: Mr F, you have not spoken at all. Do you have anything to say before we close the discussion?

F: Why yes, I was listening to the others. I think they have given a clear picture of the situation. As I see it now, every government has two sides and no government is perfect. This is so because there is a theoretical and practical side to all governments. But of all forms in existence now, I feel that democracy is the best because even the beggar has a voice.

C: But, don't you see man, in a socialistic state a beggar would not even exist.

F: What I mean is that democracy ensures political equality, especially if the electorate is educated, and this is the first step towards economic equality.

Assessment: A group discussion often turns into a shouting match with each candidate clamouring to make himself heard. A topic like 'democracy' can also add fuel to the situation because most people have strong views on such subjects. Under the circumstances, a good candidate should make the effort to remain cool and formulate his answers calmly. In the mock group discussion presented above, three of the candidates would be rejected outright. Candidate 'C' obviously does not take the discussion seriously, though it appears that he has some views and could have presented them better had he chosen to do so. He, in fact, chooses to play the clown. Candidate 'B' is artificial, lacks depth, is confused and puts on unwanted airs. And Candidate 'F' merely sums up what the others have said after being prodded to say something. This shows that he has but few ideas of his own. The other three candidates have definite ideas, but it is difficult to choose from them because as the discussion gets warmer, all three show signs of losing their cool. Candidate 'D' presents his arguments in a well-formulated manner and stands up in good light, but so does Candidate 'A', who defends democracy with equal vigour and in a reasoned manner. The balance, however, is struck by candidate 'E' who is more collected than candidate 'A'. In fact, of the three, 'E' stands in the best light from the selection board's point of view, although 'D' appears more intelligent.

STUDIO 2

TO PONDER

DEATH PENALTY: TO ABOLISH OR NOT TO ABOLISH?

As the seconds hand slowly ticks by, a metal cone is secured around his head, a greased leather strap is tightened around his waist and his arms and ankles are tied to the electric chair. Within moments the executioner will pull the lethal lever four times, each time sending 2,000 volts of electricity surging through his body, jerking him into death.

The electric chair is not the only means through which the death penalty is carried out today. Other means are hanging, facing a firing squad, cyanide gas and a recent invention of the US — a lethal injection of drugs. If this sounds like the chamber of horrors, one should recount the executions of bygone centuries—boiling, burning, choking, beheading, dismembering, impaling, crucifying, stoning, strangling, burying alive.

Although we have improved in comparison to earlier years, the basic question facing many countries today is: Is the death penalty at all justifiable? Does man have the right to take the life of another, even though the other person may have committed a violent act against nature and society? Does the ancient/medieval injunction—demanding an eye for an eye—still hold good?

In answer to such moral and emotional questions, many countries gave up capital punishment, especially in this century. But, there appears to be a growing outcry in its favour all over the world. In India, there has been much debate on the subject and the Supreme Court itself now appears undecided as to whether it is moral to retain death penalty.

The question, however, is not only moral, but whether it actually serves its purpose. Those who favour it say it has a deterrent

effect on would be assassins. But in view of the fact that many murderers kill under the influence of strong drinks and drugs and are not in a rational frame of mind at the time of the murder, is it correct to say that death penalty has a deterrent effect? Researches have, in fact, proved that crime rate does not decline with the imposition of death penalty in a state which did not have it earlier or vice versa. Would it not be more humane then to abolish death penalty? Is not execution an act of violence? Is it not true that violence begets violence? Is not death penalty, actually, legally sanctioned homicide?

Who does capital punishment ultimately punish? Is it the man himself? Or his family and friends? If he is the sole bread-winner of a poor family, does not his death compel his family to become a burden on society? If the goal is to improve society, should not one try removing the criminal tendency rather than the criminal?

Above all these questions of morality and ability lies one basic fear: an innocent person may be executed despite the elaborate system of appeals that exist in many countries. Death, being irrevocable, can we take upon ourselves the guilt and injustice of executing an innocent man?

In many present day governments, death penalty is frequently used as an extra-judicial instrument of repression against opposition parties, racial, ethnic, religious and under-privileged groups. In Iran, revolutionary tribunals have meted out death to at least 4,605 known victims since 1975. In Brazil, covert government death squads are supposedly responsible for 1,800 executions in the past ten years, although death penalty is banned in Brazil. In the US, it has been statistically proved that death sentences are meted out to black men who have killed white persons than the other way around. Under the circumstances, would it not be better to impose an universal ban on capital punishment, so that democracy can flourish unhampered by the use of officially-sanctioned terror tactics?

Yet, looking at the Bibles and Rangas of the world—and the world has many thousands of them—would not the world feel safer if they were exterminated? Life

sentences are never actually life sentences. And are there not cases of the murderer getting out of prison and murdering again? Some opponents of capital punishment feel that prison terms without parole would be more effective than death penalty. But would this not be a more inhuman form of torture than death itself? Besides, despite what the abolitionists say, is not the fear of the gallows a strong-enough inhibitive factor which substantially restricts murders? If we take the case of Muslim fundamentalist countries which have gone back to the eye-for-an-eye doctrine, do we not see that fear of death does act as a deterrent? Is it not too expensive for the state to support murderers in prison for protracted periods? And, finally, can a state risk the experiment of abolishing capital punishment at a time when social tensions, poverty and cultural patterns make for a high crime rate all over the world?

On the one hand, the Universal Declaration of Human Rights states that "everyone has the right to life, liberty and security of person", on the other, there are some brutal, merciless killings by hard-core criminals who are beyond the pale of reform. The question, therefore, is what comes first: security of person or personal security? It is because the majority does not wish to be terrorised by a few extreme criminal-types that there is, at present, an overwhelming public outcry in many parts of the world in favour of the retention of capital punishment.

S.B

THE FREEDOM MOVEMENT

BY RAJU MANSUKHANI

This instalment traces events leading to the expansion of Indian industrial houses and the launching of the Civil Disobedience Movement

The Indian bourgeoisie

World War I loosened the grip of European businessmen on the economy of India. The import of cotton textiles was adversely affected because of the British involvement in the war and the non-availability of shipping space. This came as a boon to the Indian entrepreneurs. The government also helped them by providing discriminating protection to a number of industries. Subsequently, steel, paper, cotton textiles, heavy chemicals and sugar industries got a shot in the arm. During this period many Indian industrial houses came into existence and began to expand. A few prominent ones were the Birlas, Thapars, Dalmias, Jains, Singhanias and Sri Ram.

The Simon Commission

India witnessed intensified political activity at the appointment of the Simon Commission in November 1927 to review the fitness of India for the extension of parliamentary democracy. Being an all-white commission, it was unanimously opposed by the Congress and the Muslim League. At its Madras session in 1927, the National Congress decided to boycott the Simon Commission "at every stage and in every form". The Muslim League and the Hindu Mahasabha decided to support the Congress decision. The Commission was boycotted in every city by all political parties. In Lahore, protest demonstrations were led by Lajpat Rai, who was brutally lathi-charged. He later succumbed to his injuries and his death was avenged by Bhagat Singh.

The Commission, however, submitted its report and recommended abolition of dyarchy, introduction of provincial autonomy, extension of franchise, Indianisation of the army

and reconstruction of Central and provincial legislatures.

The boycott of the Simon Commission led to a parallel attempt to formulate plans for an Indian Constitution. All important Indian leaders and parties decided to draw up a Constitution for India. An All Parties Conference was called first in Delhi and then in Poona. The conference appointed a sub-committee headed by Motilal Nehru in May 1928.

The committee gave its report, known as the Nehru Report, on August 15, 1928. It recommended the supremacy of a popularly elected legislature over the executive which did not exist in India at that time. A bicameral sovereign Parliament with Senate (200 members) and the House of Representatives (500 members) was suggested. It was against communal representation in Parliament except for Muslims in Bengal and non-Muslims in the north-west frontier. It also recommended the attainment of Dominion Status within the British Empire as in Canada and Australia. The Nehru Report reflected the conservative views of the older generation of Congress leadership in 1928.

Objections were raised by the communal-minded leaders of the Muslim League, the Hindu Mahasabha and the Sikh League. Muslim politicians, however, agreed to forego separate electorates if Muslim representation in Bengal and Punjab legislative councils was proportionate to population.

The critical question was about reservations in Bengal and Punjab. Mohanlal Ali Jinnah argued that since there was no universal suffrage, voting would be limited to a few. In Bengal, 50 per cent of the Muslim population belonged to the peasant class. He, therefore, demanded no representation for the Muslims, otherwise, he felt that the under-privileged Muslims would remain unrepresented. Jinnah put forth his "fourteen points" demand around this time, claiming, among

other things, separate electorates, one-third of the seats in the Central legislature for the Muslims, reservation of seats for Muslims in Bengal and Punjab in proportion to population and the vesting of residual powers in the provinces.

The menace of communalists was also evident in the opposition of Malaviya, Jayakar, Moonje and others to this proposal of the League. The Hindu Mahasabha denounced the report as pro-Muslim.

Thus, in 1928 came the parting of ways of the Congress and the Muslim League leaders. This was reflected in the negligible participation of the Muslims during the Civil Disobedience Movement.

The Civil Disobedience Movement

At the Lahore session of the Congress in December 1929, Jawaharlal Nehru gave the call for *Purna Swaraj*. This call, insistently made by the left wing represented by Nehru and Subhash Chandra Bose, was soon accepted by the whole party including Mahatma Gandhi. On December 31, 1929, the newly adopted tri-colour flag was hoisted and January 26, 1930, was fixed as the first Independence Day. The Congress also announced that it was launching a Civil Disobedience Movement. The second Civil Disobedience Movement was begun by Gandhi with the famous Dandi March on March 12, 1930. The idea was to make salt on the sea shore in defiance of the Salt Law regulation. As a political strategy, it was a electrifying appeal to the poorest peasants and the suffering urban classes. People all over the country joined *hartals*, demonstrations and campaigns to boycott foreign goods and refused to pay taxes.

The movement was launched during one of the worst economic crises. The mid 20s saw the decline of world agricultural prices. The skilled middle class was not as affected as the peasants in the countryside, who were

Energy: The Other Alternatives

BY SUDHIRENDAR CHAKMA

Modern society has grown without understanding the full nature of its dependence on energy. Industrial achievements and innovations have bewildered and perhaps misled man to the extent that he has almost forgotten the very foundation of modern civilisation—energy. Today, the walks of life, the dependence of society on energy has increased manifold, whereas the supply has become a question in itself. The search for energy must continue without disrupting natural systems of heat balance and without destroying the living web of the biosphere of which man is himself a part.

Before the industrial revolution, about 85 per cent of the total world energy was derived from plants, animals and men. The abolition of slavery was one of the causes that brought about a general scarcity of available energy. From the advent of industrial civilisation in 1840 to 1920, coal remained the primary source of energy. Later, oil and natural gas replaced it. The exploitation of coal, petroleum and natural gas, the non-renewable energy stored up chemically from sunshine over the past 600 million years—increased to such an extent that the countries having reserves of these resources, skyrocketed the prices to amass greater wealth. The spurt in Arab oil prices during the 70s forced the world to look for alternative sources of energy as a key to mere survival.

Commercial or non-renewable energy sources

In India, the thrust on the energy front concurrently lies in increasing indigenous production of both oil and coal vis a vis better management and conservation. The nuclear generating capacity is also being expanded cautiously. The coal production of 101 million tonnes of the 60s went up to 114 million tonnes in 1980-81 and further to about 125 million tonnes last year. It is expected to reach a level of 135 million tonnes this

We can survive oilless—if we make proper use of alternatives like biomass, windmills and solar energy

year and the coal production is expected to reach a staggering 160 million tonnes by the turn of the century. India, which has the largest coal reserves, has yet to gear up production and with the present rate of consumption its coal reserves may last for 200 years. However, the search for oil continues unabated with the expected production of 20 million tonnes this year. With substantial reserves of oil and gas indicated in the Krishna-Godavari basin, an additional Rs 560 crores have been allocated for exploration in the Sixth Plan. ONGC experts feel that with the success in offshore oil exploration as well as onshore digging, the country might well attain self-sufficiency in oil in the near future. The present trend indicates that oil consumption would reach 38 million tonnes by 1983-end and even if our indigenous production rises to 18 million tonnes, a net import of 20 million tonnes would mean an import bill of about Rs 5,500 crores.

While our coal and oil production fall short of consumption, our hydel and nuclear-power plants are not running to the installed capacity due to several technological and economic constraints. Erratic monsoons leave reservoirs half-empty, and force some of our generators to lie idle. Our nuclear plants have often been a victim of fuel supply from the US Tarapur (Maharashtra) and Kota (Rajasthan) non-breeder reactors are not generating more than 600 Mw against their generating capacity of 820 Mw of power. The Department of Atomic Energy (DAE) has of late finalised a plan for the generation of 10,000 Mw of electricity by the year 2000. Unfortunately, due to several constraints like fuel shortage and Non-

Proliferation Act of March 10, 1978 the projections of DAE seem quite optimistic.

Taking the energy sources, production and constraints into account, our consumption of commercial energy has, however, increased from 60 MTCR (million of tonnes of coal replacement) in 1953-54 to 294 MTCR in 1978-79—a compound growth rate of 6.6 per cent. Working Group on Energy Policy has further estimated that by the turn of the century we might consume, in terms of MTCR, 470 units of power, 483 units of oil and 310 units of coal against figures of 128, 164 and 97 in 1983. Will this four-fold increase in energy consumption be possible by the turn of the century? The situation is, no doubt, alarming, but there is a need to assess the total energy potential vis a-vis its utilisation and conservation. It is true that our per capita consumption of energy, including non-commercial energy, is only 0.4 tonne coal equivalent (TCE) as compared to 6.0 for the developed world. This low level is perhaps due to our poor standard of living. Much of our energy is being used in industries and agricultural operations and the remainder comforts the economically well-off urban population. But, simple calculations show that if we were to achieve the target of 6.0 TCE, we would be consuming the world's energy reserves. Therefore, there is a need to conserve energy on the one hand and increase efficiency of energy utilisation on the other.

Alternative sources of energy

Like most developing countries, the role of non-commercial energy in India is considerable and must be carefully studied as it holds the key to long-term survival. Its main constituents are: firewood (about 65 per cent), agricultural waste (about 20 per cent) and cowdung (about 15 per cent). The consumption of non-commercial energy has increased from 126 million tonnes in 1953-54 to 194 million tonnes

in 1975-76. It is, however, being argued that nuclear reactors would be catering to all our energy needs by the turn of the century. But the environmental hazards and the technological problems that need to be overcome are formidable. Even environmentalists are much concerned with the increase in coal utilisation for power generation, since considerable smoke and ash pollutes air, water and land. Therefore, technologists and planners are faced with the twin problems of a cleaner environment along with better energy options for the future. This is, a difficult compromise.

The UN Conference on New and Renewable Sources of Energy, held in Nairobi in August 1981, stressed the need for exploiting renewable energy sources (RES) to meet a variety of economic and social problems. A variety of reasons have been advanced in favour of RES: increases dependency on indigenous energy sources, thereby reducing the dependency on imported oil; saves foreign exchange and, in turn, boosts national technological self-reliance; and protects the environment vis-a-vis integrated rural development. In countries like India, where more than 70 per cent of the population reside in over 3 million villages, the concept of RES holds a bright future. For instance, only 14 per cent of the village households use electricity and the rest use kerosene. On the other hand, firewood scarcity forces them to use dung cakes for cooking.

To the growing energy scarcity in rural India, various RES have been advocated, biogas being the top of such indigenous energy sources. So far, biogas plants have not met with much success due to poor community response and participation. But, if all the available livestock excreta is used for biogas production, the total biogas yield will be 69,200 million cubic metres, which would produce 88.8 billion kwh of effective electric energy annually. The government's status report on Biogas technology and utilisation has further indicated that the energy requirement in the rural sector during 1975 was of the order of 117.5 billion kwh and, hence, the potential biogas production from waste could theoretically meet about 75 per cent of the rural energy requirement. The problem with RES is that since it involves

masses, it has proved to be extremely sensitive to microeconomic and social conditions such as the nature of the community organisation and involvement.

In addition to biogas, various other technologically simple RES are available: biomass and waste, fuelwood plantations, windmills, solar-water heaters, etc. It has been further indicated that more than 200 million tonnes per year of agricultural residues are produced in India, of which even if 100 million tonnes is processed into 'briquetted fuel' (pyrolysis), it will meet nearly half of the total coal requirement of the country. In urban areas, where 9,000 million litres of sewage per day is generated, its conversion to gas would meet 20 per cent of the city's fuel demand. Delhi's Sewage Disposal Undertaking is already working on a plan to supply sewage gas to 10,000 homes in the near future.

All the above sources will cater to our cooking energy requirement and the digested biomass could be used as manure. Since our fertiliser industry is oil-based and is constantly under pressure from farmers, the utilisation of biomass would meet our energy requirements vis-a-vis soil fertility and productivity. Not only this, various other options have been talked of like solar cells, wave and tidal power, ocean thermal energy, coal gasification, etc. But much of the research efforts are yet needed to make these sources commercially viable.

The energy options on a long-term basis would fail if population growth and urbanisation goes unchecked. We have, like the rest of the world, 20 years or so to adjust ourselves to the emerging energy scenario—and the time to begin doing so is right now. If one argues that fossil fuels are exhaustible and nuclear fuels are dangerous, then solar energy becomes the truly inexhaustible source of energy. We have to exploit our natural assets in two ways: first, we have a pool of scientific and technical talent, often misutilised, to be put to the service of the country in exploiting natural resources, second, we need to see that our resources like hydel power, animal power, coal and oil are harnessed and optimally used—a difficult but not impossible task. (5)

THE FREEDOM MOVEMENT

(Continued from page 73)

exploited by the government, the zamindars and the moneylenders. Pressurised from all sides, the peasantry participated in the Civil Disobedience Movement on a scale larger than that in the Non-cooperation Movement.

The Congress network, too, was better organised than ever before. In the North West Frontier Province, the United Provinces, Gujarat, Bihar, Maharashtra, the Central Provinces and Andhra Pradesh, its organisation was formidable. By May 1930, no-revenue campaigns were started in Maharashtra and Andhra Pradesh, non-payment of chowkidari tax in Bihar and Bengal, and controlled forest satyagrahas in the Central Provinces and Maharashtra. Over 90,000 were arrested during the campaigns.

There was a conscious violation of law, which had not been perceived in the earlier Non-cooperation Movement, where boycott had been the central strategy. Significantly, Gandhi did not object to sporadic violence, for instance, in Chittagong, Peshawar and Sholapur.

Meanwhile, the British Government summoned the First Round Table Conference in London in 1930, but the Congress boycotted it. To persuade the Congress to attend the next conference, the government made fresh attempts to negotiate an agreement. Finally, a settlement was made.

The Gandhi-Irwin Pact of March 5, 1931, marked the end of the movement. The government agreed to release those political prisoners who had remained non-violent, while the Congress agreed to take part in the Second Round Table Conference. However, the Second Round Table Conference, attended by Gandhi in September 1931, proved to be disastrous, and on his return, he resumed the Civil Disobedience Movement. The government cracked down on the Congress, declared it illegal and arrested many of its leaders, including Gandhi. General administration was carried on through ordinances and the normal working of laws was suspended. Over a lakh satyagrahis were arrested and, ultimately, the movement fizzled out. The Congress officially suspended it in May 1933 and withdrew it in May 1934.

(To be continued)

HOW TO MAKE NOTES-4

BY YASMEEN LUKMANI

In the last three instalments, we have discussed ways of extracting information from passages isolating the important ideas from the less important, grouping these ideas and placing them in hierarchy of the more general to the less general. We have also looked at some of the linguistic clues signalling these ideas and the ways in which it would be appropriate to express them. We shall now consider passages with a somewhat different organisation and see how we can pinpoint these ideas in notes.

Both the passages to follow have a structure in which two points are compared and contrasted on the basis of which general ideas are stated. We shall work through these passages and write notes on them.

Exercise 8

While reading the passage and before looking at the analysis try to work out an outline on your own and see how it compares with the one given here.

It took Dr Fred Hoyle's boundless imagination to weave the theory about cometary debris causing global outbreaks of infectious diseases. Well argued and excellently documented the proposition was nevertheless fantastic and properly ridiculed by all scientists, many of whom would pick holes in it. Coincidence or incorrect calculation explained the mystery of cometary pathogens and the affair was quietly forgotten.

Now a NASA scientist has interpreted the nature of the dust particles collected by high flying U 2 spy planes. These are specks after weighing no more than a nanogram (a billionth of one gram) were age tested and scientists found they were about 4.5 billion years old, that is to say as old as the earth itself. As to the origin the theory is that they are remnants of a comet which was in the earth's vicinity even as the latter was developing into a separate globe from condensing gases. The antique dust is still falling on the planet it seems.

This is as hard to swallow as the Hoyle hypothesis. If the dust is still falling, does it mean that the comet is still in our neighbourhood? Impossible, comets are passing through. C is the

dust what is left of the comet after it disintegrated 4.5 billion years ago? Equally incredible interplanetary and interstellar dust exists, but where does any comet come into the picture?

The passage is a newspaper report on the dust produced by a comet which some scientists suppose had existed at the time when the earth was being created and shaped into a globe. It discusses Hoyle's theory which was expressed some time ago and then contrasts and compares with a recent theory by a NASA scientist. Neither of these theories is accepted at present, so they are still hypotheses. And the attitude of the author is that both hypotheses are equally difficult to accept.

The easiest way to outline a comparison-contrast structure is to put the ideas being compared side by side rather than one below the other. This enables the points of similarity and difference to emerge more clearly. It is also necessary to give it a heading to indicate the framework in which the hypotheses operate. The analysis could run thus:

on earth. Hoyle connects it with a definite occurrence which he thinks this dust causes, while the NASA scientist merely records the presence of the dust. These distinctions however, need not be stated, for the passage does not call for focussing on them.

The analysis has emphasised the points of comparison: Hoyle versus the NASA scientist and the critics of each with those of the other.

Also notice that certain signs and punctuation marks have been used to indicate what is being stated. The colon (:) indicates that the views of a particular individual are being stated. The arrow indicates that A causes/leads to B (or A → B). The arrow crossed out → indicates that according to the critics the connection between the two entities does not hold.

Certain parts of this information have been put within brackets. This indicates that while the information is important enough to be mentioned, it is only an elaboration of the main statement, not another idea.

Let us now look at the nature of

The effects of cometary dust on the world in recent years (under dispute)

HYPOTHESIS I

Hoyle: (Chronologically earlier)
Cometary debris/pathogens
→ global outbreaks of infectious diseases

Critics: → Coincidence/faulty calculation (even though well-argued and excellently documented)

Conclusion: Can take note of these proposed hypotheses to explain the existence of dust which is analysed to be 4.5 billion years old but require much more evidence and theoretical explanation before they can be seriously considered.

Notice that the common factor in the two hypotheses is that cometary dust can exist in space for 4.5 billion years and affect life

HYPOTHESIS II

NASA scientist (now)
Remnants of dust of a comet
present when earth was being created → dust particles collected by high flying U 2 spy planes
(Nature of dust weight - 1 billionth of a gram age = 4.5 billion years)

Critics: → 1. Comets are by definition passing phenomena difficult to believe that their dust remnants are static.
2. Only interplanetary and interstellar dust known to exist in space not comet dust.

the headings used. The main heading 'The effects of cometary dust...' does not occur as such in the passage. It has to be

expressed in the passage, as being the central idea which establishes the framework in which the two hypotheses can be understood. The other headings refer to individuals and the last to the author's conclusions (based on his expressed attitude in the passage).

Let us go back for a moment to the linguistic aspects of the main heading. If the same idea was being expressed as a statement, one would say something like 'the fact that cometary dust has an effect on the world in recent years is in dispute'. A statement is a complete sentence, a heading is not. A heading is normally a noun phrase, consisting in this case of a noun phrase and a prepositional phrase without being completed by a verb phrase. Also the heading 'Hoyle', would, if it were part of a statement be 'Hoyle says'.

Exercise 9

Let us look at the second passage now. Try and see if you can arrive at its structure on your own.

No living creature, plant or animal, can exist in complete isolation. An animal is bound to depend on other living creatures, ultimately plants, for its food supply. It must also depend upon the activities of plants for a continued oxygen supply for its respiration. Apart from these two basic relationships it may be affected directly or indirectly in countless different ways by other plants and animals around it. Other animals prey on it or compete with it for the same food, plants may provide shelter, concealment or nesting material, and so on. Similarly, the animal will produce its own effects on the surrounding plants and animals. Some it may eat or destroy, for others it will provide food, and through its contribution of manure it may influence the texture and fertility of the soil.

This dependence on other living things is not confined to animals. Though plants manufacture their own food by photosynthesis, they are dependent on animal respiration for at least a part of the carbon dioxide which they use as raw material in this process. Supplies of mineral salts which they use to build up their substance can only be maintained through the activities of fungi and bacteria breaking down the organic matter left in the soil by other living creatures. Again, many plants are entirely dependent on insects for pollination or for the dispersal of their seeds. Moreover, despite the apparently peaceful relationships in plant

communities, there is intense competition going on for water, nutrient salts, and above all, for light.

The passage is based on a book on plant ecology. You will notice that its theme sentence or the main idea in the passage, occurs in the first line. As we saw in the second instalment (CCTimes, June '83), when this happens, the rest of the passage normally consists of examples or explanations. Here too, most of the passage consists of evidence for the idea and examples of it. The examples are of two kinds—one deals with the effect of animals on (i) plants and (ii) animals, the other with plants on (i) animals and (ii) plants.

We shall partially supply the outline. You are to fill in the rest of it in the blanks provided.

Thesis: _____

Evidence:

| I | | II | |
|--------------------------------|---------|--------------|-------------|
| depend
on | Animals | depend
on | _____ |
| | Plants | | Animals |
| e.g. (food supply, (e.g. _____ | | (e.g. _____ | (e.g. _____ |
| oxygen; shelter, _____ | | _____ | _____ |
| concealment; _____ | | _____ | _____ |
| nesting materials) _____ | | _____ | _____ |

Elaboration of thesis: Interdependence of creatures on each other is both cooperative and competitive.

Notice that the word 'thesis' is used at the start. This indicates that the author is trying to prove an idea by providing some evidence for it. The rest of the passage consists of the evidence with a number of examples. If you wished to record some of the examples in greater detail, in order to remember something new you had learnt, e.g., 'supplies of mineral salt which they (plants) use to build up their substance can only be maintained through the activities of fungi and bacteria breaking down the organic matters left in the soil by other living creatures', this would have to be recorded separately at the end. A full statement of this in the notes would not allow the main argument to emerge clearly.

Exercise 10

Now read through the following passage and work out a set of notes on it. As you are aware,

there are various ways of making notes. In this series, we are attempting mainly to work on outlines of the ideas in the passages. If you come up with strikingly different types of notes, which you think are equally valid, do send us your views and we can discuss them in these pages.

It is often thought that reafforestation is needed mainly to stop further damage being inflicted on the eco-system, and to undo some of the harm that has already been done. Even if this is all it did, the return on every rupee invested in reforestation would still be substantial. For instance, if it reduced soil erosion and flooding by 80 per cent over Rs 2 000 crores would be saved in terms of soil nutrients and reduced flood damage

every year.

The snag is that these would be returns to society, but not to any particular individual. What is more they would be available only after a lapse of 10 to 15 years. As such they do not provide a sufficient incentive for concerted and rapid action.

The tendency to view reforestation solely from the point of view of ecology has prevented planners and decision makers from realising that it is the most powerful single tool for economic development that is available to policy makers in any developing country today. Reforestation can not only improve the soil, increase rainfall, raise the availability of ground water, and reduce the frequency of floods, but also meet the country's demand for commercial and non-commercial energy, for paper and for cheap and durable building materials.

What is more, it can generate full employment in the rural areas, and generate a flow of funds into the villages that
(Continued on page 78)

READING THE RAPID WAY-3

Fifth step

Review This is the last step in the Survey Q3R formula. After you've finished reading and re-stating what you have read, pick up the book or chapter again and see what percentage of the main facts and conclusions you have correctly re-stated. Fill in the gaps where you know you are weak or where you want more precise information. The best way to remember what you read is to understand it thoroughly. In fact, if you spend a little time over learning what you have read, you will remember proportionately much more.

(Time to be spent on reviewing 5 per cent of the total time.)

Exercise. Review

With your same partner, put this issue aside and discuss with him or her this serial (*Reading The Rapid Way*), trying to recall as many of the main points and suggestions that have been discussed from the first instalment onwards. On the scale below, indicate by circling the correct number, the percentage of the major points and suggestions of the serial you could recall.

100% 75% 50% 25%

I think the Survey Q3R method has helped me both to read faster and to understand better. Also, I feel more confident now that I can get the meaning out of a page of print.

That's good. That confidence is important. Survey Q3R is the chief means of developing confidence and skill, but I have some other tips also for you.

Other reading tips

The first is to increase your word power. Make a note of the tough words you come across in reading. If you hear a difficult word in class, ask the instructor, and so on.

Should I look them up in a dictionary immediately?

No. Figure out what they mean by yourself from the sense of the sentence or paragraph. You will have many clues. Look them up in the dictionary later on. Go on with your reading for the time being. When you do look them up, take a good clear look at the word. That first 'snapshot' of a new word is important.

Should I try to use these new words in my conversation, etc?

Yes. Use them immediately. It's good to have a little book where you write down all the new words and review them from time to time.

How far from my eyes should I keep whatever I'm reading?

About 18 inches. Try to have the light coming from behind and over your shoulder, and to relieve your eyes, look into the distance from time to time.

What about the radio? Many of my friends say they can read even when the radio is on.

Psychologists, who have tested the effects of radio on reading, do not agree. Except when reading for enjoyment, reading with the radio on is much less effective.

Could you say something about how to read the newspaper?

Yes. Suppose you are spending 20 minutes a day on the newspaper, you could divide your time based on the following system:

Item

Time* (min.)

- 1 Scan headlines. This gives an overall view. 2
- 2 Read the big news stories of the day (local, national, international). This keeps you informed. 7
- 3 Read editorials. This tells us the significance of events. 6
- 4 Read what you like (sports, films, comics). This is for fun and relaxation. 5

20

Another difficulty is that I don't find time for reading.

If you were to read for half an hour each day, you will have read 40 books in a year. And 40 well-chosen books well-read could make you a well-educated person.

Here are 15 rules for improving your reading ability:

- 1 Read
- 2 Read
- 3 Read some more
- 4 Read what you like
- 5 Read when you like
- 6 Read for the fun of it
- 7 Read for the power of it
- 8 Read quickly most things
- 9 Read carefully other things
- 10 Read and talk about it
- 11 Read and act on it
- 12 Read to quench your mind's thirst
- 13 Read to stay alive
- 14 Don't think about reading
- 15 Just read

HOW TO MAKE NOTES-4

(Continued from page 77)

will make their future economic development self-sustaining. Last but by no means the least, in a properly designed reforestation programme the lion's share of the additional income generated in the rural areas will go to adivasis, landless labourers and owners of sub-marginal land holdings, precisely those social groups who have remained untouched by economic development so far.

Key to Exercise 7

Purpose to maintain status (Hadidian, Penn State University)*
Explanation:

1 Animals. Sustained study of a group of monkeys shows rise in social order with increased yawning.

2 Humans. No solid evidence to show the extent to which these conclusions apply to human beings.

Conclusion. Too early to

accept this theory as applying to human beings.**

* Notice that this is the name of the experimenter and the place from which the experimental finding emerged. The convention is to state the name of the experimenter, the place or year of experiment or report of it in brackets next to mention of the experiment.

** The conclusion is not stated anywhere. It emerges from the attitude of the writer in the passage.

(To be continued)

An essay is not just a test of how much you know — but how well you express it. A well-written essay demands imagination, cohesiveness, good language and a lot of practice. A few examples to help you prepare for the English paper of the CA Entrance Exam and the descriptive-type paper of SBI (Associate Banks Probationary Officers Exam, both to be held in June

WHERE THERE IS A WILL, THERE IS A WAY

Where there is a will, there is a way. One of the cardinal sins in Christianity is sloth. Likewise in Indian thought *Akar manyata* is regarded as an unmitigated evil. It would be interesting to speculate on the basic cause of much human failure. One credible guess however could be the absence of a strong determination and its attendant efforts to achieve the desired result.

It is not rare to come across instances where ingenious explanations are offered by people for missed opportunities and unattained goals. All kinds of rationalisations also come in handy to explain failure. These can pass muster simply because the least ascertainable cause is that which has something to do with factors beyond one's control. Such a formulation is at once a powerful agent for disarming public criticism and an unsuspectingly effective sop to one's feeling of guilt.

The converse is even more true. Just as, theoretically, there is nothing beyond the pale of possibility, similarly, there is nothing which the human will cannot bend to its own purpose. Those who succeeded in scaling Mount Everest and in landing either on the barren rocks of the Moon or the chilly expanse of the Antarctica were able to achieve what looked like impossible feats, thanks to their indomitable and irrepressible will.

It is not always the case that those who fail consciously decide not to put in the necessary effort in order to achieve their objective. Very often such people are victims

of a psychological disease which even as it saps their will to act, gives them deceptive intimations of either the non-essentiality of the stipulated end or of the inevitability of a negative outcome. The latter deserves more serious notice in a country like ours where it is customary to blame all things on an intractable destiny. Determinism of a highly pernicious type has enabled many of our countrymen to absolve themselves of all responsibility for their failure.

It is here that the need to emphasise the potency of human will is truly felt. For given a powerful will and the corresponding willingness to take the necessary action even when it involves physical discomfort and personal sacrifice there is nothing that a man cannot achieve. Besides emboldening him for increasingly arduous undertakings, the effective and purposive exercise of his will makes him an instrument of much social and communal good. Above all, his example will encourage those who are endowed with an anaemic will to give up their sloth and make headway in their lives.

SCIENTIFIC PROGRESS AND RATIONALISM

Futurology is now a respectable science. One might object to the use of the word science here. But if science includes making hypotheses on the basis of the observation and verification of facts, it is not at all improper to call futurology a science. One has, however, to take the precaution that all futuristic projections are made not as wild surmises or as wish fulfilment but as intelligent guesses supported by a clear

assessment of the present reality and the application of probabilistic predictions.

The above facts notwithstanding, social sciences cannot vie with the physical sciences in respect of either investigative reliability or predictive accuracy. For, controlled experimentation in the former is nearly impossible, thanks to the multiplicity of variables and the existence of a large number of imponderables. Even so it cannot be said that the game's not worth the candle.

What then are the realities of India 1983? Here is a subcontinent almost the size of the whole of Europe minus the Soviet Union, touching the figure of 700 million and showing an increased propensity to faster growth of population than of its matching resources, indiscriminate and mindless depletion of non renewable wealth of the earth uncontrolled ecological pollution, growing unemployment and consequent despair and violence, natural accompaniments of poverty and gaping economic disparities, and worst of all, the grave threat of political instability in the country.

On the other hand concerted efforts are being made to evolve better quality seeds, to bring more lands under the plough, to increase industrial production, to popularise various methods of family planning, to search alternate sources of energy, and to acquire self-reliance in critical sectors of the economy. Determined attempts are also being made to secure peace in the neighbourhood by mending fences with Pakistan and China.

The shape of things to come in the next two decades will largely depend on the relative strength of the contrary factors, and more importantly on whether Indian nationalism succeeds in overcoming the various divisive and fissiparous tendencies of regionalism, casteism and parochialism and throws up a national leadership deeply committed to the values of genuine socialism, secularism and democracy. □

SPORTS

TENNIS

Following were the major international tournaments held in June

The results of the finals of the French Open ending June 8 are **Men Singles** Yannick Noah (France) b Mats Wilander (Sweden) 6 2 7 5 7 6 **Double** Anders Jarryd & Hans Simonsson (Sweden) b Mark Edmondson (Australia) & Sherwood Stewart (USA) 7 6 6 4 6 2 **Women Singles** Chris Evert Lloyd (USA) b Mima Jausovic (Yugoslavia) 6 1 6 2 **Doubles** Candy Reynolds (USA) & Rosalyn Fairbanks (South Africa) b Ann Smith & Kathy Jordan (USA) 5 7 7 5 6 2 **Mixed Doubles** Eliot Teltscher (USA) & Barbara Jordan (USA) b Charles Strude & Leslie Allen (USA) 6 2 6 3

Johan Kriek (USA) beat compatriot Tom Gullikson 7 6 7 5 to clinch the \$1 00 000 West of England Grass Courts Championships ending June 18 in Bristol. Gullikson had beaten a very spirited Ramesh Krishnan (India) 6 4 7 6 in the semi finals

ATHLETICS

Hugh Jones (Great Britain) won the Stockholm Marathon on June 5 clocking 2 11 37 0 sec. Second placed Ag Pius Masong (Tanzania) was 17 sec slower. In the women's section, Tuulikki Raesaenen (Sweden) [2 36 58 0 sec] beat Rainey Kay Stolp (USA) into second place by less than a minute

Ron Tabb (USA) won the Australia Marathon held in Sydney on June 8 (2 10 53.0 sec). David Murphy (Great Britain) finished second (2 11 17 0 sec). The women's event was won by Annick Loir Lebreton (France)

At the US Track & Field Championships in Indianapolis, ending June 19 a University of Houston junior Carl Lewis (21), won three events for the first time in 97 years of the meet **Long jump** 8 79m, second best in history **200 m** 19 75 sec **100 m dash** 10 27 sec

BOXING

Jack Dempsey, one of America's most popular sports personalities who dominated boxing in the early twenties died at his Manhattan apartment in New York on May 31. He was 87.

The son of a Mormon school teacher, born in Manassa (Colorado), Dempsey showed tremendous punching power from the outset. His motto 'Kill the other

Yannick Noah Peerless Parisian

guy before he kills you. The Manassa Mauler is reported to have smashed Jess Willard's cheekbone in many places, when he won the world heavyweight crown from him on July 4, 1919 at Toledo (Ohio). He defended this title for seven years and has the distinction of fighting boxing's first million dollar gate

HOCKEY

Indian Airlines (IA) won the 53rd All-India Obaidullah Khan Gold Cup, beating

Corps of Signals (Jullundur) 2-1, in extra time in Bhopal on June 7. This is IA's second win, the first being in 1979.

Madras Engineering Group (Bangalore) beat Army Service Corps (Jullundur) 5-4, via the tie break to take the Murugappa Gold Cup in Madras on June 26

BADMINTON

The International Badminton Federation (IBF) announced its latest computer rankings: (i) Iruk Sugianto (Indonesia), (ii) Morten Frost Hansen (Denmark), (iii) Prakash Padukone (India), (iv) Luan Jin (China). Chinese girls occupy the first five positions, headed by Zhang Ailing. Ami Ghia, the only Indian, ranks 20th.

FOOTBALL

Brazil beat Argentina 1-0 in the final of the 4th World Youth Championship (Cocoa Cola Cup for under 20s) in Mexico City on June 19.

HANG GLIDING

The World Championships held in Bavaria (West Germany), ended on June 19 with victory in the individual section for Steve Moyes (Australia). Australia also won the team title.

WATER POLO

Holland won the Women's World Cup with an 11-7 victory over the US in the final at Quebec on June 20. Australia beat hosts Canada 10-8 to finish third. Only four countries took part.

SANJEEV KUMAR

PRUDENTIAL CUP

WHEN INDIA UPSET THE BOOKIES

Cricket pundits despaired—and Indians were delighted—as Kapil and his men brought home the cup that cheers the Prudential World Cup.

Not many scribes gave much hope for India qualifying for the last four—let alone winning. We had little to cheer about a single win in 1975 over East Africa and a bad pre-Prudential one day international season this year.

Bookies gave us little chance. And there was even less cause for cheer when India were placed in Group B with holders and heavily fancied West Indies, Australia, the 1975 finalists and newcomers Zimbabwe qualifying for the main competition by winning the ICC trophy of non-Test cricket-playing countries. But the upstarts had a veteran in their ranks. Spinner John Traicos, who had played three tests for South Africa against Australia in 1969-70.

The other group comprised hosts and 1979 finalists England, 1979 semi-finalists New Zealand, Pakistan and newcomers to Test cricket—Sri Lanka.

The tournament got off to a sensational start with Group B providing the fireworks. India trounced West Indies by 34 runs to deliver the first ever World Cup reverse for the two-time champions. Yashpal Sharma scored 89—the highest-ever by an Indian in World Cup till then, Sandeep Patil 36 and Roger Binny 27. The 71-run last-wicket stand between Andy Roberts (37 n.o.) and Joel Garner (37) was the Windies' saving grace. The destroyers-in-chief were medium-pace Binny (3 for 48) and Ravi Shastri (3 for 26).

Overshadowing the Windies' shock defeat was Australia's humiliation by Zimbabwe. The star of the 13-run Zimbabwean win: Skipper Duncan Fletcher,

In the other group, Pakistan, playing Sri Lanka and winning, registered the highest total in World Cup: 338 for 5 in 60 overs. Sri Lanka yet mustered the highest second innings total: 288 for 9. England, spearheaded by a brilliant 102 from Allan Lamb, thrashed New Zealand by 106 runs in their opening match.

Barring New Zealand's 52-run win over Pakistan, the second round witnessed no upset victories. England beat Sri Lanka in a high-scoring match, with a sparkling 130 from David Gower. India trounced Zimbabwe by 5 wickets. West Indies routed Australia by a 101 run margin. The highlight of the game—in fact, the second round itself—was new Windies paceman Winsten Davis' best ever World Cup bowling haul: 7 for 51 in 10.3 overs (including 3 maidens).

In the next round, India tasted its first defeat and Australia their first win. Trevor Chappell, youngest of the Chappell clan, knocked up 110 as the Aussies battered India by 162 runs. West Indies trampled Zimbabwe and England Pakistan by 8 wickets each. New Zealand beat Sri Lanka by five.

The half-way stage of the competition's league phase left England as the only unbeaten team with 12 points (four for each win). That of the others: New Zealand (8), Pakistan (4), India (8), West Indies (8), Australia (4) and Zimbabwe (4).

Avenging their earlier defeat, the Windies beat India by 68 runs (Viv Richards scored a masterly 119.) So did Australia, beating Zimbabwe by 32 runs. Unbeaten England lost to New

Zealand by 2 wickets in a very close match: the Kiwis got to the target with just a ball to spare.

A shade better was Pakistan's 11-run win over Sri Lanka. Captain Imran Khan, reduced to being just a batsman (not being allowed to bowl due to a stress fracture), rescued Pakistan, who were 43 for 5, with a magnificent 102 not out. He added 144 with Shahid Mahboob (77) for the 6th wicket.

But the pride of place was reserved for his sub-continental counterpart, Kapil Dev, "the Curry King". Walking in when India were 17 for 5 against the unpredictable Zimbabweans, Kapil, like a man possessed, turned in the finest aggressive display in modern cricket. 175 not out—the highest-ever individual score in Prudential Cup—including 17 fours and half-a-dozen sixes. It was belligerence unrivalled. India totalled 266 for 8 and then dismissed a spirited Zimbabwe for 235. Kevin Curran scored a gutsy 73.

In the other three games, West Indies downed Australia and England Pakistan by 7 wickets each. Sri Lanka beat New Zealand by 4 wickets for their only win in the competition.

After five matches and four wins each, West Indies and England were assured of a semi-final berth. To complete the formalities, the Windies convincingly beat Zimbabwe and England Sri Lanka. It was correspondingly tough for India to enter the semis. It must not lose to Australia as an equal number of points would lead to matters being decided by the scoring rate, which Australia was most certainly better at.

Overcoming this handicap, India trounced Australia by 118 runs, with Binny and Madan Lal claiming 4 wickets each. Meanwhile, Pakistan, spearheaded by an unbeaten 103 from the redoubtable Zaheer Abbas and his 152-run undefeated fourth-wicket partnership with Imran (79 n.o.), cruised to an exciting 16-run win over New Zealand and with it earned a place in the semi-finals for the first time.

Their victory was short-lived, though. Limited-overs masters West Indies crushed Pakistan by 8 wickets in the semis, restricting them to 184 in 60 overs and getting the runs without much ado. Richards scored a fine unbeaten 80.

The other semi-final saw underdogs India beat England most comprehensively by 6 wickets. The focal point of the game Mohinder Amarnath—2 for 27, and Kirti Azad—1 for 28. England's score: 213 in 60 overs.

Going in to bat, India were 46 for no wicket but then Gavaskar, first, and then Srikanth left in quick succession to leave India 50 for two. Amarnath (46) and Yashpal (61) added 92 runs and brought

Another one bites the dust.

India on road to victory. Exit Amarnath, enter Sandeep Patil. A quickfire 51 not out off 32 deliveries as India coasted to a well deserved win, with just the loss of Yashpal's wicket.

And onto the grand finale. India took on West Indies for the third time in 16 days with score at 1 all.

The Windies pace quartet of Roberts, Garner, Holding and Marshall, breathing fire, went flat out. With the Nursery End at Lord's aiding the speedsters, Indians were soon in trouble. Gavaskar, nibbling at an outgoing delivery from Roberts, left at 2. But Amarnath and Srikanth added 57. Srikanth fired in a quick 38 with 7 fours and a six off Roberts. Amarnath scored a steady 26. At lunch, India were 100 for 4. Soon they were reduced to 111 for 6. Eventually, with the help of Patil's 27, Madan Lal's 17 and a 22-run last-wicket stand, India reached 183.

Despondency set in the target seemed well within the mighty Caribbeans' reach, more so when Richards, the master, was in full form. They were 50 for the loss of Gordon Greenidge when Madan

WIMBLEDON '83

Martina Navratilova (USA) beat a determined Andrea Jaeger (USA) 6-0, 6-3 to take the women's singles Wimbledon Tennis Championship at Wimbledon (UK) on July 2. Next day John McEnroe (USA) swamped unseeded Chris Lewis (New Zealand) 6-2, 6-2, 6-2 to capture the men's singles title.

Kapil with the Cup: Lord of Lord's

chards was caught by Kapil running in from 30 yards, off Madan again for 33. And with it began the Windies landslide 66 for 5. 76 for 5 at tea off 25 overs. Play resumed and Bacchus left 76 for 6.

Then came a stubborn 43 run stand between Jeff Dujon and Malcolm Marshall. But Amarnath brought in at this stage queered the pitch exit Dujon with his first delivery exit Marshall at 124. A wicket between India and victory

before wicket. A few minutes later Kapil held aloft the Prudential World Cup.

Amarnath (26 and 3 for 12 off 7 overs) was declared the Man of the Match, as in the semi-finals. Not to be forgotten was Madan Lal's lion-hearted performance 17 and 3 for 31.

Cricket, all love to say, is unpredictable. But BBC commentators had bet their last buck on a Windies' win. They lost their buck—and India got the cup.

V KRISHNASWAMY

PRUDENTIAL DOWN THE YEARS

Basketball and baseball took America by storm because Americans love speed—and action.

And they all smirked at their transatlantic rousins. Great Britain slow monotonous Great Britain slow monotonous cricket. Five days of cricket. Man had made it to the moon, but there were these limeys playing five days of cricket!

Stung by this silent rebuke—and because of the dwindling tribe of cricket lovers worldwide—plainly exasperated by 13 men taking them for a work week ride on a 22 yard pitch, stiff and stuffy Britons gave us one day cricket. Experimented outside the island, but without success, it had to be England to give us the million pound gate one day cricket.

And so was born the quadrennial Prudential World Cup Tournament in 1975. One of Britain's most successful insurance firms, the Prudential Assurance Company sponsored this limited overs cricket contest offering unlimited delight with £1,00,000 as starters. Figures speak for the tournaments stupendous success. Prudential raked in a cool £1,90,000 of which £15,000 went to each of the eight participating teams, six Test playing nations and two invitees (Sri Lanka and East Africa). Winners West Indies automatically dubbed as the Limited overs Kings of the World got £4,000 runners up Australia £2,000 and losing semi-finalists England and New Zealand £1,000 each. The man of the match awards were £50 for league, £100 for semis and £200 for finals.

Prudential bosses were obviously pleased with their profits in the '79 World Cup. The sponsorship money was £2,50,000 and the receipts almost £3,60,000. Race-course jargon found way in cricketing columns of prestigious newspapers. Samples heavily fancied underdogs the dark horse Bookies made a beeline for the stands. With the pound going strong so was the competition, the six test-

playing nations were automatic qualifiers while a tournament was held for 15 other associate members of ICC. South Africa was barred entry. While Sri Lanka and Canada came in through the qualifying rounds.

Past winners and heavily-fancied West Indies played some fanciful cricket. And the sundae for their strokes £10,000 not forgetting the glittering 18½-inch high Prudential trophy containing 89½ ounces of sterling silver. Losing finalists England took £4,000 and semi-finalists New Zealand and Pakistan £2,000 each. Also, it paid well to become the man of the match £100 for pool play, £200 for semis and £300 for finals.

Prudential was playing for very high stakes in the third—and, sadly, last—World Cup held this June. Gate receipts are not in yet—though the conservative estimate is between £4,00,000—£4,50,000. Winners underdogs turned-dark horses India were richer by £20,000, twice the 1979 amount, and five times that in 1975. Heavily fancied-turned-also-rans West Indies collected £15,000, 50 per cent more than what they got as winners in '79. Nearly every award had gone up in monetary terms barring the man of the match prize money. There was one singular exception when Mohinder Amarnath was declared Man of the Match in the finals, he cornered £400.

All that was paid by spectators—and readily. Reason a novelty in this year's tournament, that each team had to play its opponent twice at group level, to bring out the artistic and athletic best of every cricketer. Given its success, Prudential inexplicably withdrew its sponsorship for future world cups and the hunt is now on for new ones. India and Pakistan are strong contenders for it. Whoever be the sponsors, the precedent of a thrilling and magnificent show of one-day cricket set by Prudential must at all cost be maintained.

WINSTON CHURCHILL: OF SANDWICHES AND STRATEGIES

Here are two entertaining and distinctly human selections, recorded with a fine sense of humour, of one of the great figures of our time—Britain's wartime Prime Minister, Winston Churchill.

These entertaining revelations of Churchill have been made by Phyllis Moir, his Private Secretary. Of the second selection, the author says it is chosen particularly because it is so typical of Churchill. He displays the same attention to detail in planning sandwiches for tomorrow's picnic as he does in planning a major piece of strategy. It is unusual to find a man with such a tremendous scope for detail.

A Gift For Phrase-making

Mr Churchill never talks for the sake of talking. If the conversation sinks to trivialities he relapses into bored silence. But he is always ready to hold forth endlessly on his favourite topics of politics, literature, journalism and Winston Churchill.

He loves especially to reminisce about his boyhood and his army days, how he was a dunce at Harrow, how he escaped from an enemy prison camp during the Boer War and how he was carried into

Churchill with the royalty in 1945: Gastronomical architect.

Parliament on the crest of a journalistic scoop. I have even heard him try out on some visitor whose judgment he respected a speech or a lecture he had to deliver.

When Mr Churchill is annoyed his wit can be sharp and merciless. At a dinner party in England he once got into a heated argument with his cousin, Lord Londonderry.

"Have you read my latest book?" Londonderry asked, hoping to make his point.

"No," said Churchill bitingly. "I only read for pleasure or profit." A witness of this verbal encounter laughed heartily as he told me the incident.

This gift for phrase-making on the platform is matched in his private conversation by a terrifying genius for epigram. Of Ramsay MacDonald he once said, "He has more than any other man the gift of compressing the largest amount of words into the smallest amount of thought." And referring to Stanley Baldwin in the House of Commons Mr Churchill remarked, "He used to be wiser. He used to

take my advice." No wonder Baldwin dispensed with his services in the Cabinet. "I make up my mind," he complained to a colleague, explaining Churchill's exclusion from the government, "then along comes Winston with his hundred-horse-power brain, and makes me change it."

How To Make A Roast Beef Sandwich

Mr Churchill has a special fondness for picnics, not the rough and ready paper-bag affairs, but elaborately prepared little feasts of caviar, cold game, hothouse fruits, and of course, champagne. This once gave rise to an amusing little incident which I witnessed. On one occasion at a lunch in a hotel, Mr Churchill had as usual summoned the head waiter to plan the menu for a picnic that was to take place the next day. After selecting the main items Mr Churchill, a precise man in all things, set about explaining how the roast beef sandwiches were to be made.

"I want some solid substantial sandwiches," he announced to the astonished head waiter, as solemnly as though he were making a statement to the House. "Get hold of a large loaf, and don't cut the slices too thin—or too thick, either. Trim the crust off the edges, and put plenty of butter on the bread. Please see to it there's enough beef for us to know it's a beef sandwich. And make certain that the beef comes clear to the edge of the bread. I don't like to bite twice into a sandwich before I can tell what's inside of it."

All this was rattled off with a very pronounced lisp, which left the unfortunate waiter completely bewildered. "Never mind," said Mr Churchill impatiently, when he realised the man had not taken in a word. "Bring me some paper and a pencil." And then and there he proceeded to illustrate the exact size and thickness of the sandwiches with a series of quick sketches, little blueprints of gastronomical architecture.

INDIAN DANCES 2

Sonal Mansingh Queen of grace

Amongst the umpteen styles which have emerged we will take up a few major ones and dwell on each of them briefly

Bharat Natyam

Even though its poses are reminiscent of the sculptures of the 10th century A D onwards the dance came into its present form only about a couple of centuries ago. The thematic and musical aspects of the dance are however, credited to the musicians of Tanjore courts of the 18th and 19th century.

Bharat Natyam is essentially a solo dance and has a close resemblance to the dance drama form called *Bhagvata Mela*. The dance style is characterised by straight lines diagonals and triangles which are basic motifs for executing movements as also patterns of floor choreography.

Some of the well known contemporary exponents of this dance are Sonal Mansingh, Yamini Krishnamurti, Indrani Rehman, Vyjayanthimala, Bali and Padma Subramaniam. Some of the important names dating back to the early 1920s are Balasaraswati, Rukmani Devi and Shanta Devi.

Dance repertoire The repertoire of Bharat Natyam was brought into its present form by the four eminent dance masters and musicians of Tanjore—the four brothers Ponniah and Sivanandam

the dance repertoire of the Tanjore Temple and the royal court of Tanjore; and Chinniah and Vadivelu, court musicians and composers.

The dance repertoire was so arranged that various styles of dance composition could be presented in a single evening's performance and as an entertainment for the last kings of Tanjore.

Alarippu It is a ritual dance prelude accompanied by rhythm syllables intoned by *nattuvanan* (conductor-choreographer) and accompanied by the drum in slow, medium and fast tempo (*Kala*). The gliding movement of the neck, and beautiful embellishments of neck, eyes and breasts are rendered with a gracious smile. The most beautiful postures and cadences of the arms and hands are reserved for this dance of divine adoration.

Jatiswaram Here, the patterns of melody are given visible form in varied sequences of dance. The dance begins with the rhythmic flexion of the neck in slow double, triple or quadruple timing (*tala*). The movements are sculptural in nature. The stately gait to each side and the rhythmic progression forward or back

with the movements of *Jatiswaram*—a beautiful synthesis of melody and rhythm in dance form.

Varne It is the most elaborate composition of the dance which calls forth the versatility of the danseuse in pure dance and mime. *Varne* is evenly balanced between expository dance and pure dance and the combination of both in the fine musical theme (*charanan*). The most fascinating element of the *varne* is the exposition of the transient movements of love (*sanchari bhava*) in mimetic dance. *Varne* takes 90 minutes but by limiting repetition of verses it is now danced in half the time.

Tillana It is a joyous fantasy of pure dance, the most graceful and lyrical of all styles of Bharat Natyam. Exquisite flexions of neck, breast, waist, elusive play of bewitching glances and vivid contrast between sculptural postures and slow or rapid movement, provoke a brilliant summary of dance artistry in the final inter of the dance recital.

On The Lighter Side

The Academic Hierarchy
(as seen on the notice board of a Computer laboratory)

A Vice Chancellor/A Principal
leaps tall buildings in a single bound
is more powerful than a locomotive
is faster than a speeding bullet
walks on water,
gives policy to God.

A Head of Department
leaps short buildings in a single bound
is more powerful than a shunting engine
is just as fast as a speeding bullet
walks on water if it is calm
talks with God

A Professor
leaps short buildings only with running
start and favourable winds,
is almost as powerful as a shunting engine
is slightly slower than a speeding bullet
walks on water in an indoor swimming pool,
talks with God if special request is approved!

A Reader/Senior Lecturer
barely clears a prefabricated hut,
loses a tug of war with locomotive
can fire a speeding bullet,
swims well,
is occasionally addressed by God.

A Lecturer
makes high marks on the wall when trying
to clear tall buildings
is run over by a locomotive
can sometimes handle a gun without
injuring himself
dog paddles

talks to animals
A Graduate Student
runs into buildings
recognises locomotives two times out of three

is not issued ammunition
can stay afloat with a life jacket
talks to walls
An Undergraduate
falls over doorstep when trying to enter buildings

says look at the choo choo
wets himself with a water pistol
plays in mud puddles
mumbles to himself
A Departmental Secretary/A Registrar
lifts buildings and walks under them
kicks locomotives off the tracks
catches speeding bullets in teeth and eats them

freezes water with a single glance
is GOD!!!

Rita Routier

How are the roads around here?
Fine, we've abolished the bad roads.
Big job, wasn't it?
Not at all, wherever the going is specially hard we don't call it a road we call it a detour.

Waiter is this peach or apple pie?
Can't you tell from the taste?
No, I can't.
Well then what difference does it make?
Ashok Bakshi Dehra Dun

Pick Of The Month

Menu: Real Nuts And Cookies

Ging hungry was one thing the US space shuttle astronauts didn't have to worry about when looked as though their mission might be extended by a day or two reports AP

"I think Rita packed enough food for us to stay in space for 10 days" said

Sally Ride and Robert Crippen (in front) John Fabian (middle) and Norm Thagard and Rick Hauck (in the rear) They took up the challenge

Commander Robert Crippen Thanks to Rita M Rapp Challenger's crew has dined from a menu that has 20 coverages and 75 foods

including steak, shrimp cocktail, Italian vegetables, smoked turkey and cauliflower with cheese

During a midweek dinner, one of the astronauts even dished up compliments to the chef, asking the ground communicator to 'tell Rita the barbecue is great'

Space eating has improved a lot in the two decades since Rita took charge

In the mercury programme the food was in metal tubes like toothpaste and astronauts squeezed it into their mouths That was thought to be the only way people could ever eat in space because of weightlessness Food will not stay on the plate as on earth and engineers worried that droplets of food floating around the cockpit would contaminate equipment

But Rita helped develop a way of partially drying food and compressing it into bite-sized cubes which were coated with gelatin to reduce crumbs It was terrific engineering but lousy dining, she said

They didn't have the

correct texture or taste. "What we sent up, we usually got back," she said.

Searching for a more palatable solution, Rita scored her "big breakthrough" when she prepared pouches of rehydratable turkey and dressing for the Apollo VIII astronauts on Christmas eve 1968

"It was determined that surface tension (of the liquid) held the food on the spoon," said Rita. If you very carefully aimed you could get it to your mouth. If you hit your arm through it goes bouncing all over."

Today's astronauts in addition to an expanded menu have condiments liquid salt and pepper, hot sauce and ketchup—and snack items such as peanuts and cookies

Food is in pop-top cans or plastic containers and is eaten with a fork or spoon. The menu provides 3000 calories a day and includes nutrients that have been determined necessary for space travellers

Tsukuba The City Of Brains

- A multi-jointed three-fingered robot which can hold sticks and tie knots as skilfully as human fingers
- A new kind of chip which will process information over 10 times faster than conventional silicon chips
- Advanced chemical research in the quest for alternative energy sources
- New designs for earthquake proof high rise buildings

All these extraordinary high priority, high technology projects are being developed in Tsukuba, a single multi-billion dollar science city which has been built from scratch, 60 km outside Tokyo. Little known outside Japan, the city is rapidly emerging as the nation's greatest asset in the feverish international competition to produce breakthrough

technologies in such fields as lasers, robotics, bionics and sophisticated electronics

Forty three governmental and one private research institution as well as two universities stand today where only a decade ago, there were half a-dozen small towns that were clustered amid palm groves and farmland. About 11,000 researchers, specialists and their support staff are engaged in intense scientific work in the very latest technology. Counting their dependents, the total population of this city of brains is now around 21,500

Tsukuba first evolved in 1963 when the Japanese Government decided that overcrowding in metropolitan Tokyo was leading to a deterioration of the research environment. It wanted to provide a clean, spacious city where scientists could con-

gregate to live, compete and find inspiration. Worthwhile though the objective was Tsukuba had a slow incubation since many scientists were reluctant to abandon the cultural delights available in Tokyo for a rural district. Indeed, till today not all the researchers have moved into the housing provided at Tsukuba some continue to commute three hours to work each day from Tokyo

But social and other amenities have continued to improve. Tsukuba now has supermarkets, discount stores, grocery stores, banks and post offices in each housing estate. For relaxation there are 94 parks, plazas and swimming pools and children have a choice of 14 schools, from kindergartens to high schools, with 22 more planned. An expressway under construction will reduce driving time to Tokyo by 50 minutes

About 400 foreign scholars

and technicians from 51 countries are now conducting research at Tsukuba laboratories, while nearly 10,000 foreigners visit the research institutes each year. However, visitors from the Soviet Union and other East European countries are barred from this scientific centre for security reasons

The concentration of talent at Tsukuba is so high that just one atom has dropped on it would wipe out 40 per cent of the major research institutes of Japan. Nightmarish though the prospect may seem in pacifist Japan today, the danger of such drastic devastation is considered minimal. Instead, this close interaction of the scientific community in a small area is regarded as a great national resource—helping Japan outpace the US and other advanced nations in technological development.

CCTIMES QUIZ CONTEST-12

1. Boston and Cambridge-Post, Massachusetts, USA, on October 9, 1876, between Alexander Graham Bell and his assistant Thomas Watson. The conversation was transmitted over a two-mile-long outdoor wire. The first long-distance telephone conversation took place between Boston and New York in 1884
2. Toxicology
3. Kautiysa
4. Stratford-on-Avon
5. Bhanu Athaiya
6. When its speed exceeds 1,100 ft per second, which is the velocity of sound
7. Carthage
8. Thomas L. Friedman of *The New York Times* and Loren Jenkins of the *Washington Post* shared the award in international reporting for their separate coverage of the massacre of Palestinians at two refugee camps in Beirut last September
9. He is the first American astronaut to orbit the earth
10. Sarkaria Commission

Winners

First Prize (all-correct/one-error): 1. V. Pushpa, Delhi. 2. S.G. Deshmukh, Bombay. 3. M.G. Sampath Kumar, Bangalore. 4. D.A. Tambe, Pantnagar (UP). 5. Jagdish N. Srivastava, Lucknow. 6. Anju Arora, Delhi. 7. A.K. Ananth Shenoy, Mangalore. 8. Parijat Sinha, Lucknow. 9. Devender Singh, New Delhi. 10. Manjul, New Delhi.

Second Prize (one-error): 1. Krishna Kumar Kurup, Nagda. 2. Antoinette Fernandez, Secunderabad. 3. Raghu Nambiar, Bangalore. 4. Lakshmi Vedagiri, Madras. 5. Piyush Sharma, New Delhi.

Third Prize (one-error): 1. Nasser Dubey, Secunderabad. 2. Mohinder Kumar, Delhi. 3. P.S. Ravi Shanker, Hyderabad. 4. Sumit Ukil, Calcutta. 5. Pradeep Saikia, Gauhati.

Consolation Prize (one-error):

1. Rajesh Kr. Premani, Patna. 2. Surajit Roy, Patna. 3. Deepa Pant, Muzaffarnagar. 4. Giselle Lobo Prabhu, Mangalore. 5. P.V. Rao, Waltair. 6. Jaidev Sehgal, Muzaffarnagar. 7. Tarakeshwar Prasad Mishra, Charbatia (Orissa). 8. Vimala Srinivasan, Vellore. 9. Rajiv Yadav, Rourkela. 10. Pufak Lahiry, Gauhati.

SPORTS QUIZ-20

1. No, except overthrows
2. None
3. Yes, only one is deducted
4. Never
5. Santos
6. No
7. Dwight Davis (USA)

Winners

First Prize (all-correct): 1. Ram Gopal Samariya, Mahwa (Rajasthan). 2. Vijaya M. Bhatt, Jaipur. Consolation Prize (all-correct): 1. Syed Waheeduddin Peerzada, Burhanpur (Madhya Pradesh). 2. Sunil Chand Jain, New Delhi. 3. Rohit Awasthi, Pathankot. 4. M.G. Sampath Kumar, Bangalore. 5. V. Sampath Kumar, Bhilai.

The Innerlight: Swinging Music

EVERY EVENING except Mondays, the sounds of swing can be heard emanating from the Rotisserie, the French restaurant of Centaur Hotel, situated just off the environs of Bombay's old airport

The young band responsible for this chugging jazz sound is The Innerlight, which has been performing at this venue for well nigh two years. The members comprise Elena D Souza (vocals), Johnny Rodrigues

(sax, clarinet), Donald Ferreira (guitar), Kelsey Carvalho (fender bass) and spokesman and 'band leader' Benny Soans (drums). The latest addition is the McCoy Tyner influenced pianist, Johnny Fernandes

"We got together mainly with the idea to work out progressive music" affirms Soans, "which was not happening with my previous set-up". The band which is more into swing and modern jazz, however, have a repertoire that includes pop disco funk and even rock. They perform the music of Natalie Cole, Chaka Khan, Stevie Wonder, Herbie Hancock, Miles Davis, Grover Washington Jr and Chicago besides a few of their own compositions

"It is good we get an international audience that can appreciate our music," muses lead guitarist Pereira who on the other hand laments that "the exclusiveness of the restaurant keeps away local music lovers

However, there is no satisfaction as we get ample opportunities to improve and add to our repertoire."

Fernandes, who is the fourth pianist to be working with The Innerlight, is a victim of the Maharashtra Government's new tax levies on hotels which employ bands. His contract at another hotel was terminated and so he joined The Innerlight, which was on the lookout for a pianist. Being an avowed jazzman, he is happy with the company he presently keeps, "as jazz is the best way I can express what's inside me"

With the present uncertainty hovering over Bombay's hotel bands, as a result of the new tax levies, the future for contracted performing musicians does not appear too bright. But The Innerlight is maintaining an optimistic front. We hope the people will recognise our music for what it's worth

Melody, Bombay

Booktalk

TOWARDS A NEW SOCIETY

A sustainable society is one in which "population size will more or less be stationary, energy will be used far more efficiently, and the economy will be fuelled largely with renewable sources of energy. As a result, people and industrial activity will be more widely dispersed, far less concentrated in urban agglomerations than they are in a petroleum-fuelled society." Lester Brown's book, however, is not the portrayal of an Utopian dream as the last few lines suggest. It is more in the nature of a warning as well as a concrete analysis as to how mankind can be saved from destruction. To Brown, "the key to national security is

sustainability". He states that non military threats like soil erosion, the deterioration of the earth's basic biological systems and the depletion of oil reserves are more of a challenge to all nations than military threats. Ecological stresses and resource scarcities have already resulted in inflation, unemployment, capital scarcity and monetary instability. Brown predicts that ultimately these economic stresses would translate into social unrest

A very readable book, *Building A Sustainable Society* is in two parts. In the first part entitled 'Converging Demands' Brown explains how we are eroding the base of our civilisation through the destruction of soil and food resources, deforestation, overfishing and overgrazing. He draws parallels with the Mayan Civilisation of Guatemala which collapsed due to continued soil erosion as a result of which the population faced starvation. He analyses the pressure of population on land in modern times and argues that we are unthinkingly shrinking the economy's resource base in order to feed the growing world population.

Brown, however, does not indulge only in doomday predictions in this book. He suggests alternatives that would ensure the survival of our society. The second part of the book, 'The Path To Sustainability', deals with the progress already

made in certain countries towards the transition to a sustainable society. It also recommends how further improvement could be effected in various countries. He analyses how we can work towards stabilising population and achieve a zero growth rate, preserve our resources through land planning, reforestation and energy recycling, and develop programmes to capture renewable energy from the sun

Brown's book is of interest not only to policy makers and planners but also to the general reader. It is quite evident that the author, who is also an agricultural scientist and an economist, has done much research before writing the book. There are many charts, tables and valuable statistics as well as an upto date bibliography. The book's charm lies in the fact that although the author has dealt with what is in essence a technical theme, the treatment is non technical enough to attract readers from all disciplines. It is, in fact, a level headed discussion of problems and solutions. The style is simple and lucid and makes for good reading. Furthermore, unlike most books, it does not concentrate unduly on any country; it deals with the very topical problems of environmental control from a global point of view.

**KENWORDS
COUPON**

Strap on a pack and make for adventure, in the virgin U.P. Himalayas.

U.P. State Tourism Development Corporation alongwith Garhwal and Kumaon Mandal Vikas Nigams offer you a choice of 3 exciting treks and a Grand Himalayan Tour.

Come, trek in the wilds.....sit around bon-fires.....eat fragrant curries and sleep under the starstudded sky.

1. Delhi-Har-Ki-Doon-Delhi: The 9 day trekking tour will take you by Deluxe Luxury Bus to Netwar via Mussoorie. The trek starts from Netwar, the confluence of river Supin and Rupin. Har-Ki-Doon, situated in the western ranges of the Garhwal Himalayas, is a cradle-shaped valley surrounded by glittering snow peaks and dense Pine, Deodar and Chinar forests, rich in wild life.

A distance of 90 Kms. will be covered on foot (both ways) in the 6 day trek. Maximum height of the trek will be about 11,696 ft.

Fare: Rs. 1,350/- Per ticket.
Departures on: 31 July, 7, 14, 21, 28 Aug. and 4 Sept.

2. Delhi-Roopkund-Delhi: An exhilarating 9 day tour through Rishikesh, Deoprayag, Srinagar and Karna Prayag by Deluxe Luxury Bus, will take you to Mandoli. The trek starts from Mandoli through dense forests and lush green meadows, water falls and

snow covered mountains all around Roopkund surrounded by glaciers and snow clad peaks is usually called the 'mystery lake' because human skeletons and remains of animals were found here.

A distance of 45 Kms. will be covered on foot (one way) in the 9 day trek. Maximum height of the trek will be approx. 16,940 ft.

Fare: Rs. 1,350/- Per ticket.
Departures on: 31 July, 14, 18 Aug. 4, 18 September and 2, 16 October.

3. Delhi-Khatling-Glacier-Delhi: Leave by Deluxe Luxury Bus for 9 day trekking tour upto Ghuttu via Haridwar. The trek starts from Ghuttu and enroute passes through Gangi village, Bhelbagi, dense forests, rivulets and singing water falls. Khatling Glacier is a lateral glacier at the source of the river Bhilangana.

Bhilangana valley offers a panoramic view of snow peaks, hanging glaciers, lush green meadows with delightful flowers and numerous streams and rivulets.

A distance of 45 Kms. will be covered on foot (one way) in the 6 day trek. Maximum height of the trek will be 12,000 ft.

Fare: Rs. 1,500/- Per ticket
Departures on: 31 July, 14, 28 August.
The Grand Himalayan Tour: A lifetime opportunity to come closer to the overwhelming beauty of the towering snow-clad Himalayas. Start from Delhi and carry on to Haridwar, Rishikesh, Dehradun, Mussoorie, Yamunotri, Uttarakashi, Bhairav Ghati, Gangotri, Lanka,

Gupta Kashi, Kedarnath, Badrinath, Karan Prayag, Kausani, Someshwar, Almora, Ranikhet and Nainital. All this by Deluxe Luxury Bus.

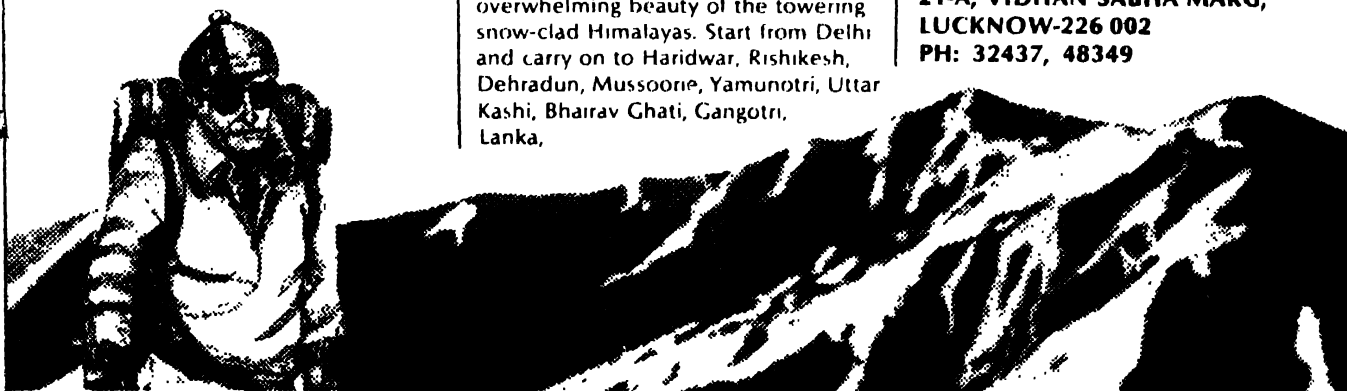

The 18 day tour will leave ample time for treks and walks amid scented pine forests and gurgling rivulets which meander across meadows filled with wild flowers.

Fare: Rs. 1,500/- Per ticket
Departures on: 7, 28 August, 11, 25 September and 5, 15 October.

All the tours will start and terminate at the U.P. Tourist Office, Chandralok Building, 36 Janpath, New Delhi. In the 27 seater Deluxe Luxury Bus, from Delhi the tourists will be accompanied by a Guide, who will enlighten them about the history, culture and ways of the people of the Garhwal Himalayas.

On each of these trekking tours you will have the added luxury of expert guide services, Vegetarian and Non-Vegetarian meals, medical aid and helpers. Moreover, all the camping/trekking equipment will be provided to you.

AN IAS TOPPER
ON HOW TO
MAKE IT

JITABHAI JAIN'S

“There must be a good reason why a vast majority of those who join Banks in India as Probationary Officers are NSB students.”

Obviously! Our un-matched Specialisation and Expertise.

Take, for instance, the results of last year's PO exams held throughout the country. A majority of students who were called for interviews for the post of Probationary Officers were NSB students.

This is possible only because of NSB's professional commitment in covering exhaustively all subjects for objective and descriptive tests through specialised practice papers and books.

A continuous research in past exams and on-going programme of preparing typical exam questions have also contributed to our present pre-eminence as the Central Institute for Bank Recruitment training in India today.

Success-oriented students join the NSB Courses and benefit immensely from them. The same opportunity is also open to you. So enroll now to reap a rich harvest of a rewarding career in India's fast growing Banking industry.

ADMISSION-NOTICE FOR

GOVERNMENT OF INDIA & UNION STATES — RECOGNISED DIPLOMAS & DEGREES.

Applications are invited from employed/unemployed Boys & Girls for the following Engineering & Management Correspondence Courses.

ENGINEERING COURSES

- 1. GRADUATESHIP (B.E.):** A M I E (India) Studentship Section A&B in Chemical, Civil, Electrical, Electronics & Communications, Mechanical, Metallurgical & Mining Engineering
- 2. GRADUATESHIP (B.E.):** A M I E T E (India) Section A & B Tele Com & Electronics
- 3. GRADUATESHIP (B.E.):** SURVEYOR
- 4. GRADUATESHIP (B.E.):** A M Ae S I AERONAUTICAL Studentship Section A&B
- 5. GRADUATESHIP (B.E.):** A M I M E (INDIA) MECHANICAL Studentship Section A & B
- 6. GRADUATESHIP (B.E.):** C E (U K) In Civil, Chemical, Electronics & Radio, Fuel Engg, Marine, Mechanical Production, Naval Architect & Structural Engg Part I & II
- 7. GRADUATESHIP (B.E.):** A M I I C H E M E (INDIA) Studentship Section A&B
- 8. GRADUATESHIP (B.E.):** I I M (INDIA) Metals Engg Part I & II
- 9. GRADUATESHIP (B.E.):** INDUSTRIAL ENGINEERING
(ALL THE ABOVE COURSES ARE RECOGNISED BY THE GOVT OF INDIA & ALL INDIAN UNION STATES AS EQUIVALENT TO B E OR B Tech. EVEN AFTER PASSING ANY OF THE ABOVE COURSES, STUDENTS ARE ELIGIBLE FOR ADMISSION TO M E, M Tech COURSES OF INDIAN UNIVERSITY)
- 10. GRADUATESHIP, AUTOMOBILE:** A M I A E Studentship Section A & B
- 11. I.I.T. ENTRANCE EXAMINATION**
- 12. DIPLOMA IN REFRIGERATION AND AIRCONDITIONING**
- 13. GOVT. AGRICULTURE ENGG.**
- 14. STATE BOARD OF TECHNICAL EDUCATION** Govt. of Andhra Pradesh, Tamilnadu, Kerala States
Diplomas in Civil, Mechanical & Electrical Engg
- 15. CITY & GUILDS ELECTRICAL DIPLOMA - C G I A (LONDON)**
- 16. CITY & GUILDS (LONDON) RADIO & T.V. COURSE**
- 17. GOVT. OF INDIA RADIO OFFICERS COURSE. C.O.P CLASS I & II**
- 18. DRAUGHTSMAN - CIVIL & MECHANICAL ENGG**
- 19. A.M.I.M.I. (INDIA) Motor Industry (Diploma in Automobile Engg)**

MANAGEMENT COURSES

- 1. GRADUATESHIP** COURSES OF A M I B M Part A & B
- 2. A.I.B.M. DIPLOMA IN BUSINESS MANAGEMENT**
- 3. GOVT. OF INDIA COMPANY SECRETARY EXAMINATION** - Intermediate & Final
- 4. I.C.W.A. (INDIA)** - Intermediate & Final
- 5. I.C.M.A. (LONDON)** - Part I, II, III & IV
- 6. CHARTERED SECRETARY (LONDON)** Part I, II & III
- 7. CHARTERED ACCOUNTANT (C A)** Entrance, Intermediate & Final

ADMISSION QUALIFICATIONS: Matric/SSC/HSC/PUC/Intermediate/Graduate/Diploma in any Branch or Graduates in Engg

FACILITIES OFFERED: This is the only Institute in India giving maximum facilities to its students. Limited Seats, Examination Centres all over India & abroad. Fully equipped library, highly qualified and experienced staff. Career Guidance, arrangement for practicals, supply of lessons and free books etc. are some of the special features.

This is one of the oldest and reputed Institutes in India with thousands of Indian and Foreign students. All subjects are taught from the beginning. So you start from scratch. For full detailed prospectus and Admission form send Rs 15/ for Engineering Courses and Rs 10/ for Management Courses by Money Order to the Principal.

Consumer Comes First

Advertisements occupy a large space, sometimes as large as fifty per cent, in our prestigious newspapers and magazines. While all these publications profess to be upholders of values in their editorial and news policies, none of them seems to have formulated any advertising policy worth the name. Selling advertising space is a business—anyone who prys for it can get away with any claim, however specious.

In our country, since legal action against misleading advertising is almost non-existent, the press has a duty to guard the public's interests rather than those of the advertisers. Largely circulated, popular publications should show the way by subscribing to a voluntary code of conduct on 'ethics in advertising'.

R G Sood, Simla

Legacy Of The British

In *Focus* (July '83), Sanjukta Banerji has rightly said that communalism is the legacy of the British policy of divide and rule and certain political parties are still following it to satisfy their own ends. Religion has so infested our society that even communists, to whom religion is taboo, preach here in India their 'ism' with the help of religion. Moreover, the press also fans communalism with its irresponsible headlines.

R C Goyal, Solan

Memory Talk

Hello Folks (July '83) was meaningless. We are absorbing and remembering more facts than our ancestors did in a world of computers, a good memory

is hardly an asset.

Ali Akbar Tehareally, Madras

I can say from personal experience that one can concentrate on the subject in hand better if one has developed keen interest in it.

Some three years ago, I had to study an entirely new subject—Corporate Planning—for my Master of Management Science exams. I read it for just half an hour daily for exactly 365 days and secured distinction in it!

K D. Singh, Nasik

Challenge For The Poor

A closed door conference of seven European nations (*Current Events, Williamsburg Summit Just Another Meet*, July '83) is an eye-opener for the Third World countries. The blue-eyed boy from Hollywood has assured concessional and increased credit to the developing countries while at home his budget deficit made no room for any further liability! Keeping in view the declining rate of contribution to international financial institutions, it seems futile to talk of a new economic and monetary system more suitable to the developing countries. It is high time these countries, too, thought of a new strategy to meet the challenge.

Satyra Verma, Simla

Statesman Without A State

The humiliating expulsion of PLO leader Yasser Arafat from Syria (*Newsmakers*, July '83) is bound to keep him eclipsed, though it will be naive to suppose that the incident marks his end as a leader and decision-maker.

Yet, his efforts to get a lesser Palestine may go in vain or he may only be partially successful. But it is a fact that he will go down in history as the most famous statesman without a state.

Jaydip Mishra, Rengali Dam (Orissa)

A Straw In The Wind ?

Women, on the one hand, are lauding the Supreme Court verdict (*Current Events, SC Verdict*, July '83), of corroboration not being essential in the evidence of a rape case, as a reprieve for the raped, on the other, Malti Devi, a married, rape victim, is running from pillar to post (*Indian Express*, July 9) in search of justice as if for a requiem. Despite this verdict, women continue to get a raw deal. Isn't this ruling a straw in the wind?

Lakshmi Kamalekar, New Delhi

Missing Links

Our readers have sent in names of some universities/institutions conducting computer courses which we have inadvertently failed to incorporate in our *Careers : Computers* (July '83). They are

(a) Sardar Patel University, Vallabh Vidhyanagar, offers a one-year P.G. diploma course in Computer Sciences and Applications and two six-week courses in FORTRAN Programming and BASIC Programming. It's now a UGC-recognised computer centre.

(b) Madras University, offers an applications-oriented M.Com degree course in Business Systems, having subjects like Systems Analysis and Data Processing, Computer Programming, Management Information Systems (MIS), Accounting Systems and Costing Systems.

(c) Massachusetts Institute of Technology (MIT), Cambridge, Boston, USA, offers Masters and Ph D programmes in Computer Sciences.

—Editor

Hello folks...

A Sunday newspaper reported that the night India won the Prudential World Cup, nearly everyone stood up and sang the national anthem at the Coffee Shop in the Taj Mahal Hotel, Bombay. This unusual burst of patriotism made me ask myself "What was so exceptional about this victory which motivated the elite of Bombay to act so uncharacteristically."

"With nothing happening to inspire pride in our country, Kapil gave us an occasion to be proud of," came the reply.

"But how did Kapil do it? If he can, can't we do it too?"

"Yes, we can if we analyse the Kapil strategy and translate it into practice."

The Kapil strategy in short was: be a good leader and not a boss; assess your weaknesses; select appropriate tactics; seize every opportunity that comes your way; and do not lose heart during moments of crisis.

The first step—being a good leader and not a boss—involves developing team spirit and inspiring your colleagues to put up a combined effort. Every member of your team must do something to ensure victory. You should know the capabilities of your boys and understand where you stand. West Indies Captain Clive Lloyd gave full credit to Kapil on this count: "He's been able to rally the entire team behind him." The first step Kapil took towards this end was not to act authoritatively. He was always "one of them", giving due respect to senior players and

guiding the younger ones. An admirable trait, when one takes into account the stories about many earlier captains whose treatment of their teammates at times left much to be desired. Kapil, on the contrary, gave pride of place to Sunil Gavaskar, the former skipper, and Mohinder Amarnath, the man of the Test. On the field, he was a constant source of inspiration, exhorting his team to greater heights. Off the field, he was an amiable and modest colleague, ever-ready to advise and console failures. This helped in smoothening out personal rivalries, inner tensions, regional loyalties and commercialism. The net result was that "we clicked because every man threw in everything he had and Kapil led from the front." And they turned the world upside down.

Another component of Kapil's strategy was to carefully assess the weak points of his team. He realised that their greatest weakness, particularly in the one-day matches, has been fielding. In an interview he pointed out that his first priority would be fielding, and he would not accept "anyone who does not give his all in the field". To show that he was serious and meant business, he specially flew to Bombay, interrupting his county commitments to Northamptonshire, to be present at the time of selection. In England, Kapil made his boys go through intensive practice, keeping them in the field for six hours a day. It was a result of this that the Indian team showed tremendous fighting spirit at Old Trafford and Lord's.

Kapil carefully selected his tactics for each game and changed them at appropriate moments. He felt that field placings were very important and one could feel the touch of professionalism and sound thinking in his decisions. Kapil also manoeuvred the bowling cleverly. "Each time India looked in trouble, Kapil's shrewd bowling changes swung the game back in their favour," wrote Sreedhar Pillai from London in *India Today*. It was his intelligent use of tactics that made our medium pace bowlers, often ridiculed by critics,

the major reason of our winning the World Cup.

Yet another aspect of the Kapil strategy was "a canny seizing of opportunity". Vinod Mehta has aptly elaborated it in the *Sunday Observer*: "I am sure neither Kapil Dev nor any of his team thought victory over Australia was possible in the return match when the Aussies went in to bat; or that the West Indies could be bowled out for less than 183 runs. However, as wickets began to fall, opportunity reared its lovely head. And it must be said that on each occasion Kapil and his men grasped it with both hands."

"It is something we seldom do in non-cricketing areas. Frequently, we fail because we simply do not perceive the opportunity; if we do, we respond so late that we are out of the race before it has begun."

Determination and not losing heart during moments of crisis was another step vital to our skipper's strategy. No one believed that our team had a chance of winning the World Cup. In fact, the London bookies had offered 50:1 odds against India winning the Cup. Kapil took up the challenge and determined that he and his boys would prove the pundits wrong. His determination demolished the myth of British superiority and dismissed the Australians for the lowest score recorded in the tournament. It was this confidence and determination that saw the Indians through their moments of crises and helped them reach the top. Kapil's unbeaten 175 (the highest individual score ever in a World Cup match), made when the Indian score was 17 for 5, is a case in point.

What Kapil did at Lord's can be done in other fields too—schools, colleges, universities, offices, factories and farms—if we all play as a team for a common goal.

R. Thalan

Appointments

Business Opportunity with no investment:

If you are a young person who can read, write and speak good English and happen to reside in a town with a population over one lakh we have a business proposition for you. Using an American Marketing plan we intend to market our home electrical products in a personalised manner. There is no catch. There is no risk. We send you our literature etc for sales promotion free of cost. Our products are currently being marketed thru dealers in Bombay, therefore this offer is not open to persons residing in the Bombay Metropolitan area. Write for more information.

**DELTA SCIENTIFIC, 157-161, Princess St.,
5th floor Zaveri Bldg., Bombay 400002**

SALES TRAINEES—HOTELS

We need young boys and girls from good families seeking a career in Hotel marketing at Delhi, Bombay, Calcutta, Bangalore & Madras. Age—19-20. No experience required.

Essential: Excellent command of English & good personality—10th/12th pass. Please apply within 7 days mentioning minimum stipend expected and recent photograph and a self-addressed stamped envelope.

In 4 months 15 hotels have joined us. We hope to be one of the largest Group of Hotels in India soon. International Affiliation is being arranged.

**INDOTEL—The Independent Hotels of India
N 258A, Greater Kailash I, New Delhi-110048**

MARKETING EXECUTIVES

The incumbents will be responsible for developing markets and organising the marketing of man-made fibres and their end-products like filter fabrics, blankets, hosiery, knitting yarn, etc.

The candidates should be Textile graduates preferably with specialisation in man-made fibres. An M B A or post-graduate qualification in Management from a reputed institution/university will be an added advantage.

The candidate should have about 2 to 3 years of experience in marketing synthetic fibres/yarns.

The compensation package will be attractive with liberal perks and will not be a limiting factor for the right candidates.

Please apply in confidence giving particulars of qualifications, experience in detail, present total emoluments and expected salary, etc.

5. **tempus fugit** (L): time flies.
6. **terminus ad quem** (L): the end to which; final or latest limiting point.
7. **terminus a quo** (L): the end from which; beginning; starting point; earliest limiting point.

KAPIL DEV

WHAT WICKETCRAFT!

BY V SWAMY

Picture Jesse Owens on a 22-yard pitch—and you've pictured Kapil Dev. He came like a bolt from the blue to storm the Prudential Cup—and went home with the world in his pocket. An insight into why he has been dubbed the "Haryana hurricane"

"I think Kapil Dev did a marvellous job. The fellow came here with an ordinary team but he took his chances and got them to rally around him. They turned out to be a very good one-day side." So said West Indies skipper Clive Lloyd after India's superlative performance in the third Prudential World Cup.

Being the captain of the previous two World Cup-winning squads, Lloyd knew what he was saying. It may have been Mohinder Amarnath in the semi-final and final, Roger Binny against Australia, who did yeoman service for India, but the most important contribution came from Kapil. As some scribes said, he set a "personal example" and "led from the front".

Twenty-year-old Kapil was a member of the ill-fated 1979 World Cup team which lost all its three matches. And he became captain under difficult circumstances. Sunil Gavaskar, the erstwhile skipper of the team which got mauled by Pakistan in Pakistan, was still the best choice for the captaincy in the books of many a worthy cricket watcher.

Nevertheless, Kapil was appointed the captain for the West Indies tour where he acquitted himself very well. Though India lost the series 0-2, Kapil scored 254 runs besides capturing 17 wickets in the five Tests. Then came the World Cup and rest is history.

Born in Chandigarh on January 6, 1959, Kapil started making news in his teens. A tall, well-built Haryana lad, Kapil made his first class debut in Ranji Trophy against Punjab in 1975-76, when he was barely 17. That match at Rohtak was a sensational start to his career. He took six for 39. From then, there was only one way for him, and that was up.

His first tour with the Indian team was to Pakistan in 1978. He made his debut at Faisalabad and opened the bowling after Pakistan elected to bat first. Though Kapil got no wicket in that innings, he had the misfortune of seeing wicketkeeper Sayed Kirmani floor the redoubtable Zaheer Abbas early in innings. Zaheer went on to score a masterly 176. Kapil had to wait till the second innings for his first Test scalp, and that was Sadiq Mohammed caught by Gavaskar in the slips for 16.

Kapil the skipper: Planning a crucifixion.

In the only innings he batted, he was caught by substitute Haroon Rashid off Mushtaq Mohammed for eight. With this rather sedate opening in Test cricket, Kapil went on to take seven wickets, the second highest after B.S. Chandrasekhar, but at an exorbitant cost of 60.85 apiece. He totalled 159 in five innings with 59 as his highest.

This series marked the exit of our spinning trio of B.S. Bedi, E.A.S. Prasanna and Chandra. Only S. Venkataraghavan was left. From now on a new era came into existence: the emergence of our dependency on Kapil—the medium pacer.

He then took 36 wickets in 11 Tests against West Indies and England.

In 1979, Australia, under Kim Hughes, came to India for six Tests and this was the beginning of our near-complete dependence on Kapil. He was the most successful bowler on either side, with a record haul for Indo-Australia encounters with 28 wickets at 22.35 apiece. He took five wickets in an innings two times. This was the first series in which none of the spinning trio played. Dilip Doshi made his debut and took 27 wickets. Apart from his bowling, Kapil scored 212 runs with 83 as his highest.

Pakistan came next. They lost 0-2, and Kapil established himself as the supremo in Indian cricket. Kapil captured 32 wickets at the cost of a mere 17.68 per wicket. He also scored 278 runs at an average of 30.88. His high came in the

Fifth Test at Chepauk, Madras. India dismissed the visitors for 272, Kapil claiming four for 90. In reply, India ran up 430 with 166 from Gavaskar and an attacking 84 from Kapil. In Pakistan's second innings, Kapil bowled his heart out and bagged a career-best seven for 56.

At Calcutta, Kapil completed his double. In the very same Test he reached his thousand runs and hundred wickets. He thus became the youngest to reach the double at the age of 21 years and 27 days.

In addition he created a world record of capturing 74 wickets in a calendar year. He eclipsed Australian Graham McKenzie's record of 71 wickets in 1964. Though McKenzie had taken 14 Tests, Kapil took 18.

From then on it was milestones and more milestones. He became the third Indian bowler to take 200 wickets, the first two being Bedi and Chandra. Kapil was the youngest to capture 200 wickets. He reached his 2,000 runs, too, and became the first Indian to achieve the double of 2,000 runs and 200 wickets. At present Kapil, in 53 Tests, has 206 wickets at 29.52 apiece and 2,253 runs at 32.64 an innings. He has three centuries to his credit.

In recent years there have been comparisons galore between Kapil, Ian Botham of England, Imran Khan of Pakistan and Richard Hadlee of New Zealand, as to who is the best all-rounder in the world.

In the World Cup, Kapil outshone the other three, though Imran despite being not allowed to bowl, performed exceedingly well with the bat. Hadlee, in patches in the World Cup, and then in the first Test of the current series against England, has staked claims too. Only Botham, who till before this Test had 3,266 runs and 267 wickets from 59 Tests, seems to be going through a lean patch. A contest, which may soon take place for the best all-rounder in the world, may be what every cricket lover in the world would like to see.

Kapil's first taste as a captain came against Sri Lanka in the one-day series and he did very well, leading India to a 3-0 win. Though India went down to Lloyd's team

Kapil in action: Sheer power—of muscle and will.

in the Test series, Kapil led his team to India's maiden one-day triumph at Berbice. In the 16-day, 27-match carnival that was World Cup, there was one innings which bettered all others. And that was Kapil's 175 not out at Tunbridge Wells against Zimbabwe. From 17 for five, India went on to win the match and that probably was the turning point of World Cup III. And then things happened, and how!

At the World Cup he astonished one and all by taking India to two wins in three matches—within a space of 16 days—over the mighty West Indies. And when Kapil held the magnificent Prudential World Cup aloft at Lord's on June 25, the world was in Kapil's pocket, so to say.

Truly, Kapil Dev, a hard-hitting batsman, a superb opening bowler and a tremendous fielder in the deep, is, alongwith the run-machine Sunil Gavaskar (who is going through a lean time), one of the finest cricketers India has produced. ■

IAS TOPPERS: MEDHA JAKATI

NO HALF MEASURES

BY HEMENDRA S BARTWAL

Every year, the Civil Services, particularly the Indian Administrative Service (IAS), attracts hundreds of bright youngsters from all over the country to join its coveted ranks. Some join it for making good money, others for wielding power, many for the exciting nature of the job, and a few for some noble purpose. Into this last category of 'good samaritans' comes Medha Jakati, second among the successful women candidates in the 1982 Civil Services Exam. Twenty three-year-old Medha, whose overall position is sixth, feels she must do something worthwhile in life, by serving the people, rather than "just earning a living".

She passed her I.S.C. Exam with a first division in 1976 from Carmel Convent, New Delhi. She has done B.A. (Hons) in Political Science from Lady Shri Ram College (New Delhi) and M.A. in Sociology from Delhi School of Economics, getting a second division in both. Interestingly, she has proved that one need not necessarily be a university topper or a first-divisioner to score high in the Civil Services Exam. Besides, she has done a three-year diploma course in French from Alliance Francaise and is well-versed in the language, right down

to rolling her r's perfectly. Her interests are reading books by French and English authors and writing short stories and articles.

Excerpts from an interview with her:

Is there any particular reason for which you chose to join the IAS—which is a demanding job and carries a lot of responsibility—rather than go in for some other profession which would be less taxing?

I'm afraid this will sound rather idealistic and hackneyed, but the fact is that I wanted to do something for the people—the public—instead of doing work which served only my interests and gave me a comfortable living. I was earning quite well even while I was at the university, by doing French translations for big multinational firms; but after a while it became monotonous. It was non-creative work and did not give me that satisfaction which comes out of a feeling of concrete achievement.

Another important reason is that I feel the administrative service would be an interesting career because of the great variety of experiences it offers—you are not stuck with the same kind of work day in and day out all your life. It also offers excitement in the form of new challenges which one faces every day. Last but not the least, my parents' constant encouragement—particularly my father's—was the major influence in shaping my decision to join the IAS.

How long before the exam did

Medha: In high places—at 23.

you start your preparation? In what way did you plan your studies?

I would say that in a way I had been preparing for the General Studies paper loosely throughout the year. As for my optional paper in the preliminary exam, i.e., Sociology, I had been studying it in my M.A. classes all throughout.

For the Mains, I started preparing immediately after the preliminary, without waiting for my result. Roughly, I studied about four-and-a-half months for it. Of these I devoted slightly more than two months to Political Science and International Relations—one month for each of the two papers—and the other two to Sociology. For General Studies, which I found to be rather tough, I studied along with the two optional subjects. In fact, I used to read two newspapers thoroughly each morning which proved to be a great help for this subject.

How did you plan your daily schedule and for how many hours did you work each day?

On an average, I studied about eight hours a day. I divided my day into three sessions—morning, afternoon and evening—with periods of rest in between. In the evenings, I would go out for a walk to relax.

For the benefit of those who might be opting for the same subjects as you did, in the forthcoming Civil Services exams, can you list the names of some of the authors whose books you found useful?

Let's start with General Studies which is common to all candidates: *Indian Economy* by Dutt and Sundharam, NCERT publications on History and Geography and the *Constitution Of India* by D.D. Basu. Besides, I regularly read magazines like *Newsweek*, *India Today*, *Economic And Political Weekly*, *Yojana*, *Indian & Foreign Review* and two newspapers—*The Times Of India* and the *Indian Express*.

For Political Science I read

Marksheet (Main exam)

| Subject | Total marks | Marks obtained |
|---|-------------|----------------|
| General Studies | 800 | 333 |
| Sociology | 600 | 415 |
| Political Science & International Relations | 600 | 311 |
| Interview | 250 | 160 |
| Grand total | 2,050 | 1,219 |

books by Wayker, Sabine, Carw, Hunt and Morris Jones. I also consulted the *Encyclopaedia Of Social Sciences*. For the paper in International Relations, I found the following authors useful: Palmer and Perkins, Morgenthau, Robert Hertman and Schumar.

For the second optional paper, Sociology, I read books by the following authors: (Paper I) Bottomore, Johnson, Coser, Raymond Avon and Nisbet; (Paper II) Andre Beteille, A.M. Shah, M.S.A. Rao, M.N. Srinivas, Yogendra Singh, Wiseman, Sylvia Vateek and David Mandelbaum. The *Encyclopaedia Of Social Sciences* is also useful for this paper.

Is there anything which you want to say for the benefit of the future Civil Service aspirants?

All I can say is that if one wishes to get through this exam there is only one way: hard work and more hard work. There can be no half-measures. However, from my experience I feel that for the Prelims one needs to have a very clear understanding of the fundamentals of the subject. So one should opt for one's B.A. (Hons) or M.A. subjects. For the Mains, I'd say that one must try to understand questions properly before beginning to write the answer, thereby avoiding irrelevancies. The answers must be very clear and analytical. For this, one should avoid 'mugging' which is both time-consuming and non-productive. Lastly, the technique of doing well at the interview is to remain calm and collected throughout.

home state, Maharashtra. Some of them are: What is the exact geographical location of Maharashtra? Which rivers of India flow from east to west and why? Which are the main crops grown in the state? While I was able to answer these questions, I was unable to discuss some questions on oil exploration like: What is the exact oil output of India and of Bombay High? Where exactly in India is oil found?

The third member discussed the social changes taking place in the country and wanted to know if they could be called reactionary. I was able to answer this question to the satisfaction of the member. Since I had stated that I was interested in journalism he asked me about one of my articles on request programmes on the radio. Following this I was asked in what way the role of radio and TV could be improved. I opined that it ought to be more educational.

The next member of the Board turned to my interest in French and asked me to name one part of India where there were remnants of French culture, viz, Pondicherry. I was then asked about the Auroville problem which I explained at some length. This was followed by a question on the Security Council. I talked about the veto problem which was hampering its functioning. He also asked me about some institutions for reforming criminals. To this I admitted my ignorance.

The last member again asked a few more questions on the Dalai Lama. I was able to answer some of the questions and was careful not to contradict my earlier views. I was then asked some detailed questions on oil exploration viz: What are the instruments used? What is a seismograph and how is it used in oil exploration? He also asked me to name the industries around Pune (my birth place).

From my experience I can say that the interview is not a question-answer session but a test of one's views and attitudes as well as one's ability to tackle certain situations. The interviewers also wish to see if one can maintain one's poise in difficult situations. If one cannot answer a few questions, there is absolutely no need to panic. However, one must frankly admit one's ignorance and not attempt to bluff. It is necessary to remain polite and respectful throughout.

MEDHA JAKATI

AT THE INTERVIEW CIVIL SERVICES

The interview does not require as much preparation as the Prelims or the Mains. Yet, it is important to keep abreast of the latest developments in national and international affairs. The best way is to read at least two newspapers every day in addition to the usual magazines like *India Today*, *Newsweek*, *Illustrated Weekly*, *Yojana*, etc. One should also brush up one's optionals and collect comprehensive information on the various aspects of one's own state,

hobbies and interests.

As I was the fourth candidate to be called in on the day I had my interview, I was a little nervous when I entered the room. However, the members of the board soon put me at ease. After a few general questions the Chairman turned to the subject of the Dalai Lama. I could answer only about half the questions satisfactorily. I frankly admitted my ignorance of the rest.

The next member asked me a number of questions about my

ASSESSMENT

The interview board tests a candidate on the following points: Is he a well-informed person or is he just trying to bluff his way in? Is he consistent in his views? Can he convince others about them? Medha showed positive results on all these points and, therefore, scored high in the personality test.

She is well-informed about the various aspects of her state, Maharashtra. She has fair knowledge about its geography and agriculture. She can talk knowledgeably about the former French possessions in India and their contemporary problems. She has fairly good knowledge about

the Security Council and can hold discussions on the mass media. All this shows she is well-read.

We do not expect the candidate to be a master of all. So if one cannot answer a few questions and is frank in admitting his ignorance, the selection committee does not penalise him. Medha did not try to cover her ignorance. She admitted that she didn't know certain details about the Dalai Lama, oil exploration and reformation of criminals.

Medha was consistent in her views and was careful not to contradict the views she had expressed earlier.

SARC MEET A MODEST BEGINNING

New Delhi's Vigyan Bhawan once again hummed with activity as the foreign ministers of the seven member countries of the South Asian Regional Cooperation (SARC) met for the first time.

The meeting, which was held in the Vigyan Bhawan, was the first of its kind. The SARC countries are India, Pakistan, Bangladesh, Sri Lanka, Nepal, Bhutan and Maldives. The meeting was held under the chairmanship of the Indian foreign minister, Mr. I. K. Gujral. The meeting was held in the Vigyan Bhawan, New Delhi, on September 1, 1983.

The joint declaration and the IPA was finalised in Delhi after three years of planning at the foreign secretaries level. Foreign secretaries held five meetings in Colombo, Kathmandu and Dhaka to chalk out the draft of the joint declaration. Earlier the foreign secretaries had proposed a summit level meeting in the near future.

The SARC seven expressed a sincere wish to promote collective self reliance and cooperate for the welfare of their people. They agreed that countries can assist each other in fighting their economic problems provided they show the desired political will.

The declaration emphasised that the cooperation should be based on respect for the principles of sovereign equality, territorial integrity, political independence, non interference in each others internal affairs and mutual benefit.

In her inaugural address, PM Indira Gandhi reiterated that India did not wish to dominate the region and only wanted its neighbours welfare.

While it would be a bit too early to compare the SARC to the European Economic Community (EEC) or the Association of South East Asian Nations (ASEAN), it is certainly a step in that direction. The seven nations of the region share a common colonial background. Their problems of poverty, economic backwardness and excess dependence on agriculture are also similar. With this background, the goal of SARC should not be too difficult to achieve.

However despite the similarities the countries are involved in a number of

SARC foreign ministers with Mrs Gandhi. A single platform at last

controversies and disagreements. Owning to its borders with all of them, India is at the centre of most of them. But differences have to be avoided if the SARC is to be a success.

The aims and targets of the IPA are modest with financial contributions for joint ventures depending on the ability of the country. The declaration is a definite if modest step in the right direction and a lot depends on India.

SMALL ARMS NEW MARKETS FOR INDIA

The next step after self reliance is export. Having achieved self sufficiency in the manufacture of small arms and ammunition, India is now exporting arms worth almost Rs 50 crores. By the end of the decade the exports are expected to reach Rs 100 crores.

The developing Asian and African countries can provide a good market to India because India can supply arms at a lower price than the developed nations. Reason: India's cheap labour. Among the arms India supplies are rifles and grenades.

India's efforts in arms export are directed to end the hegemony of a few nations in the areas where India can compete.

Meanwhile, India continues to be dependent on the industrialised countries for its requirement of sophisticated weapons and aircraft. Recently, India signed a deal to purchase 20 Sea King helicopters (for the navy) at the cost of Rs 360 crores from Britain.

The Sea Kings are fitted with the latest anti ship sea-skimming missiles—Sea

Eagle—for anti submarine warfare. The Sea Eagle has a range of 94 km, about 34 km more than the French Exocet missiles. It is equipped with ripple fire capability for automatically firing a second shot if the first misses the target.

The Sea Kings, which were preferred to the French Super Puma (fitted with Exocets) have four homing torpedoes and the latest radars, avionics and electronic countermeasures.

The Soviet Union has supplied an improved version of the T 72 tank fitted with sophisticated laser range finder. T 72 is operable in nuclear, chemical and biological warfare. Equipped with a 125 mm smooth bore gun, a machine gun coaxial with the main gun and an anti aircraft gun, the tank is almost invincible. It has a greater road speed—80 kmph—than the previous version and a range of 500 km. Rollers are fitted below the tank to clear anti personnel and anti tank mines.

The 'required fire power and manoeuvrability' of the tank, as laid down by the Indian Army, is well ahead of this century.

India is also considering the purchase of the Soviet version of MIGs, superior to the Pak F-16s and Ilyushin-76, a transport aircraft.

INDO BANGLA TALKS PARTIAL AGREEMENT

In the recent meeting of the Indo Bangla Joint Rivers Commission (JRC), in Dacca, an agreement was signed to share Teesta waters during the dry season. According to the agreement—valid till 1985—India will get 39 per cent of the Teesta waters and Bangladesh 36 per cent. The remaining amount will be shared after scientific studies have been made.

The two countries have also agreed to complete pre-feasibility studies of each others' proposals on the Ganga waters issue. Bangladesh's proposal to augment Ganga waters during dry seasons is to construct dams in Nepal (in the Himalayas) and bring water along a distance of 2 400 km and deliver it at Farakka. Throughout the various talks with India, Bangladesh has proposed the intervention of Nepal to settle the issue.

India's proposal to resolve the issue is to construct a 200-mile canal to link the Ganga and Brahmaputra waters. Only one-third of this canal would lie in Bangla territory. In talks last year, India had also suggested building dams to save Bangladesh from floods, and also supplying electricity to it. Earlier, Bangladesh had rejected the whole idea.

The next meeting of JRC in October, will cover all the aspects of the Ganga waters issue and discuss prospects of a long term accord. The JRC has been asked to report on the use of five small rivers also. The recent breakthrough in talks point to an amicable settlement on the issue in the near future.

However, the West Bengal Government has expressed displeasure at the Teesta accord, saying that it would affect its irrigation potential and agricultural targets.

MAPS

NUCLEAR SELF-RELIANCE

The Madras Atomic Power Station (MAPS) at Kalpakkam, 60 km south of Madras, is a landmark in the achievement of self-reliance in nuclear power generation. The late Dr Homi Bhabha's vision of self-sufficiency was realised when Mrs Gandhi dedicated MAPS to the nation on July 23.

MAPS is the first nuclear power station which was designed, engineered, built and commissioned as an Indian effort. It is the first to rely on completely indigenous sources for nuclear material such as natural uranium and heavy water used as moderator and coolant in the pressurised heavy-water reactor. The Station is also unique in that it is not subject to any external safeguards. The two other nuclear plants at Tarapur, Maharashtra, and in Rajasthan were built with assistance from the US and Canada respectively, and are subject to safeguards by the International Atomic Energy Agency (IAEA).

The power generated by MAPS will be fed into the whole southern grid when it begins to operate in its full capacity. The nuclear plant is of special significance to the area with no coal reserves and frequent droughts.

The long gestation period of the plant

(15 years)—in which the costs have almost tripled—is the price India had to pay for self-reliance. However, the Atomic Energy Commission claims that Indian scientists and engineers have learned a lot in the process. It is hoped the mistakes made would not be repeated in the construction of the nuclear-power station at Narora.

With this milestone in power generation, India has joined a select band of nations capable of designing, constructing and operating nuclear plants. Other members of the club: France, UK, the US, the USSR, Canada, Sweden and Japan.

CENTRE-STATE RELATIONS FOR GREATER AUTONOMY

The anxiety of state governments to get a larger share in the Union-controlled finances and to neutralise governors is not new. Long back, in the early '50s, Dr B C Roy, Chief Minister of West Bengal, was unhappy with the recommendations of the First Finance Commission. Later, other Congress Chief Ministers (B G Kher, Havi Shankar Shukla and Srikrishna Sinha) made serious efforts to preserve the legitimate powers of the states. They, however, amicably resolved their differences with the Centre through personal discussions. The situation changed in 1967 when states were largely controlled by non-Congress governments. Once again, the re-emergence of non-Congress (I) governments in several states since 1980 has opened the issue of distribution of power between the Central and state governments. The demand for more power to the states and specifically for a greater share of financial resources in the present context was first made sometime ago by the CPM-led Left Front Government of West Bengal and taken up later by other non-Congress (I) governments. The Government of India thought it fit to appoint the Sarkaria Commission. However, many states continued to put pressure on the Union Government. A seminar on the subject was held in Bangalore in August and was attended by 65 eminent planners, bureaucrats, scholars, jurists and journalists. B Sivaraman, Member and K A Ramasubramanyam, Secretary of the Sarkaria Commission, attended it as observers. The seminar was in tune with the March meeting of chief ministers of the southern states.

The major recommendations of the Bangalore seminar are: (1) An inter-state council consisting of the Prime Minister and chief ministers should be set up to deal with the problems concerning Centre-state relations. Though

Art 263 of the Constitution empowers the President to appoint such a council, it has never been appointed so far. (2) A national expenditure commission be established. It should undertake a review of the expenditure of the Union and state governments so that effective use of resources is ensured. It should provide a basis for the division of resources between the Union and states. This division should remain stable for 10 years. (3) Administrative tribunals under Art 323A should be established. (4) The governor should not act as an agent of the Central government. The seminar asked for the abridgment of the powers of the governor to reserve a Bill passed by the state legislature for the consideration of the President (under Arts 200 and 201). It also wanted Art 365 to be dropped. This article, which had been invoked on 64 occasions in the past, intails the President to take over the administration of the state if the governor feels that the state administration cannot be carried on in accordance with the Constitution.

SIXTH PLAN

MID-TERM APPRAISAL

In its meeting held recently in New Delhi, the Planning Commission (PC) approved the mid-term appraisal of the Sixth Five Year Plan. Under the Chairmanship of Indira Gandhi, the PC decided to enlarge the Plan outlay for the last two years of the Plan period.

Though the actual increase in investment is not known, the overall size of the Plan may exceed the original outlay of Rs 9 75 000 crores. The decision was taken to augment the annual growth rate, which had slumped to 2 per cent in the last three years.

With the increased Plan outlay, the Commission hopes to achieve a growth rate of 6 to 6.5 per cent in the last year to reach the Plan target of 5.2 per cent on an average.

The appraisal of the Sixth Plan shows a fall in food production by 15 million tons and major slippages in energy, generation of electricity, coal and steel industries. Exports stagnated in the previous year and the foreign-exchange reserves continue to remain under pressure. The only areas of growth were offshore oil production and industrial production (3.7 per cent). At its meeting, the PC also decided to consolidate the key infrastructural sectors of the country. It was felt this would give a tremendous boost to the economy.

One of the reasons behind this slow growth rate is the inability of the states to mobilise resources. Among the states, West Bengal's performance in

mobilising resources has been the worst. There is a shortfall of Rs 1310 crores against the expected target of Rs 2819.74 crores. Assam, belonging to the special category, achieved negative mobilisation of Rs 97.81 crores.

Karnataka and Gujarat have done rather well with Karnataka exceeding its target by Rs 15 crores. It is the only state to do so. However, the PC is considering sympathetically the problems of the states to mobilise resources.

The mid-term appraisal of the Sixth Plan, along with the suggestions of the Commission, are to be tabled in Parliament shortly.

AKALIS

STOCK-TAKING

At the end of the first year of the Akali agitation, the Akali Dal seems unsure of its future course of action. On the one hand, there is a wish to take drastic action to revitalise the agitation, and on the other, the growing extremist activity is causing considerable concern.

Furthermore, dissension within the Akali ranks has added to the anxieties of the party. The simmering discord within the party came to the surface when Jagdev Singh Talwandi, the President of a faction of Akali Dal (which had since merged with the Longowal group), called a meeting of his supporters. Talwandi issued the invitation for the meeting scheduled for August 28 as the President of Akali Dal. The move was considered a direct challenge to the authority of the party President Sant Harchand Singh Longowal. However, a possible split in the party was avoided when Talwandi cancelled the meeting after summons from the Akal Takht to explain his action.

Meanwhile, the Akalis, in no mood to resolve the Punjab tangle, have raised the demand for a separate personal law for the Sikhs. They have sought the amendment of Art 25 of the Constitution which brings Jains, Buddhists and Sikhs within the ambit of Hindu law. The government is studying the issue and might eventually concede the demand. In fact, Mr. Gandhi has already asked the Law Ministry to examine the matter and prepare a note on it.

The Punjab issue was also discussed in Parliament during its monsoon session. In his statement to the House, Home Minister P.C. Sethi said Chandigarh could be given to Punjab in lieu of certain villages, provided Haryana agreed to it. Both the states could also be given financial assistance to make new capitals, retaining Chandigarh as a Union territory.

IMF BORROWINGS LIBERAL FUNDING

Despite the criticism continuously levelled at the International Monetary Fund (IMF), the agency has been fairly liberal in its allocation of funds to India. Nor are the conditions laid down for borrowings (for 1983-84) adverse to India's interests.

IMF has raised the limit on domestic credit during the current fiscal year. The proposed credit expansion is 17.8 per cent—Rs 101,321 crores against the previous year's Rs 86,021 crores. The IMF has also approved 1.2 million Special Drawing Rights (SDRs) for the third year of the 5,000 million SDRs loans.

The Indian Government, however, proposes to limit commercial borrowings with maturity periods of 12 years and less, and to SDRs 1.5 billion to keep repayment of foreign-debt obligation within limits. Rather belatedly, the government has realised the heavy burden on its balance-of-payments situation. It would also be wiser not to let the domestic credit expansion grow more than 15 per cent because of the galloping inflation.

The credit for the current year is to be used for augmenting economic growth.

PRIVATE SECTOR INVESTMENT FAMINE

The public financial institutions are alarmed at the sudden fall in investment activity in the private sector. Recent reports reveal a drop in the projects proposed by companies for which financial assistance is sought. The corporate sector had enjoyed an investment boom during the last two years. It is experiencing a virtual investment famine now. In 1981, the sector raised Rs 400 crores from the market and the performance was repeated in 1982. No doubt, the financial institutions were running short of funds in those two years. Currently, they have large funds and only a few major projects to finance.

The major reason for the sharp decline is that the average increase in the prices of manufactured goods has been lower than the increase in the general price level. On the other hand, the cost of capital, especially the rates of interest charged by banks and other financial institutions, have been higher than the inflation rate. The poor performance of state electricity boards has caused a fall in the demand for power equipment, affecting their production. These factors have reduced the profitability rates and, therefore, a fall in expansion plans. Since expansion in the face of falling

demand is useless, the companies should try other forms of investment like conserving energy, reducing wastage and upgrading technology.

For the time being, the financial institutions have liberalised the financing rules to invite new projects. The soft-loan scheme has been extended further to cover more than the five industries it catered to earlier. Another scheme encourages investment in the zero-industry districts (areas where there are no industries). The scheme will finance the development of infrastructure for the sanctioned projects as these areas lack such facilities as transportation, power supply, etc. However, our best bet is a good monsoon which always improves the investment situation.

SWRAJ PAUL

BATTLELINES ARE DRAWN

The controversy over investments from abroad seems to be reaching its climactic phase. In an obvious effort to stave off take-over bids by the non-resident Indian investor Swraj Paul, Indian companies DCM and Escorts refused to register the shares he had purchased.

The Company Law allows refusal to register shares without assigning any reason. However, the move is going to cause a lot of financial difficulty even to the Indian shareholders who had bought DCM and Escorts shares along with Paul. While the companies have a right to protect their interest, the move does not resolve the controversy but only adds to it.

The issue was given a new turn when Finance Minister Pranab Mukherjee expressed doubts about the eligibility of non-residents to invest in Indian companies. The statement comes as a surprise because it was the government which had initially encouraged this.

The government will now have to take some stringent measures to resolve the impasse created by the companies' refusal to register the shares. The present situation does no credit to it and would undermine the foreign-investment scheme so eagerly launched. Meanwhile, RBI has been directed not to release Rs 107 crores—remitted by Paul's Caparo group of companies—for purchase of shares till legal opinion on the matter is given. Earlier, RBI had imposed a 5-per cent ceiling on the shares purchase of non-residents.

Options before the Indian companies are only two: either to register the transfer of shares in the name of new shareholders or arrive at an agreement with the purchasers to resell. The chances of

(Continued on page 22)

CENTRAL AMERICA "BIG-STICK" DIPLOMACY

The "big stick" has been raised again and "threatened" nations in Central America are all crying wolf. First came the leak that President Reagan was preparing to persuade Congress to approve \$400 million more in military and economic aid for the region next year, much of it for El Salvador's army. Then, the Pentagon let it out that it had recommended that the maximum number of American military advisers in El Salvador be raised from 55 to 125, and that they should be allowed to accompany Salvadorean forces into countryside, although not into actual battle. Next, a squadron of six warships is being sent to Nicaragua's Caribbean coast and eight ships are already standing off Nicaragua's Pacific seaboard. These ships will soon be reinforced by seven more. All this is aimed at quarantining Nicaragua from Cuban arms supplies. Furthermore, about 4,000 American soldiers are due to take part in joint exercises with the Honduran army along the Honduras-Nicaragua border. The exercise is codenamed Operation Big Pine II and will include infantry manoeuvres, marine landings and the construction of airstrips capable of taking large air force transports. The White House is also said to have given general approval to separate CIA plans for stepping up operations against Nicaragua. And last but not the least, former US Secretary of State Henry Kissinger has been brought back to centrefield as the head of Reagan's new National Bipartisan Commission on Central America. The Commission has been given December 1 as the deadline for a report on Central America. Reagan has apparently mustered the Kissinger Commission primarily to lend a higher profile to his own escalating offensive against Nicaragua and El Salvador.

Nicaragua and Cuba, the two leftist countries in the region, obviously do not like this kind of "big-stick" diplomacy. Although Reagan insisted at a TV press conference that the ships heading for Central America would perform standard military exercises and denied that he was looking for a fight in the region, the concerned countries were not reassured, especially because American military involvement in Central America and the Caribbean is nothing new.

The Contadora group—Colombia,

Mexico, Panama and Venezuela—increased their efforts to promote regional peace negotiations, but Cuba's reply to the American moves was bellicose. President Fidel Castro announced that he would arm a further million Cubans to meet "The insolent Yankee threat".

MADRID CONFERENCE MINOR BREAKTHROUGH

The Vienna talks on troops reduction are still dragging on after ten years of parleys. But Europe's second longest talks, the Madrid Conference to review the 1975 Helsinki agreement on "security and cooperation in Europe", appeared to be drawing to a close in late July after much dilly-dallying. The talks, which had begun in November 1980, almost broke up when martial law was declared in Poland in 1981. By March this year, however, a draft document was put forward by eight neutral and non-aligned states which identified only five main areas of disagreement between the East and the West: Soviet jamming of Western radio broadcasts; the persecution of Helsinki monitoring groups in the East; the defence of trade-union rights; "human contacts" between the East and the West; and the arrangement of a follow-up conference on disarmament and "confidence-building measures".

The final deadlock was broken in June by a compromise formula put forward by Spain. Although it does not meet all the Western demands, the Western diplomats appear to have achieved some minor advances over the Helsinki accord. According to the Madrid deal, all states will promise "genuinely" to implement the Helsinki agreement's promises on human rights, and the right to form and join trade unions will be acknowledged. A special experts conference has been agreed upon (to be held in Switzerland in 1986) to discuss family reunification and emigration; a follow-up conference will open in Stockholm in January 1984 to discuss disarmament and confidence-building measures; a meeting of experts on human rights will be held in Ottawa in 1985; and a further review conference in Vienna in November 1986; and, finally, foreign journalists have been promised more protection from official harassment. However, Russia still continues to jam Western radio broadcasts.

The foreign ministers of the respec-

tive countries are expected to meet again in Madrid in early September to sign the accord. There is no guarantee, however, that the East bloc nations will honour the Madrid compromise. The wording of the new agreement is vague enough to allow different interpretations of human rights. In fact, although Russia released some religious dissidents in late July, a *Pravda* editorial severely criticised what it claimed to be "false" rights in the West, on July 18. The other cog in the wheel is Malta, which is trying to hold up the signing of the final text by proposing a special conference on Mediterranean security problems.

RUSSO-JAPANESE RELATIONS STRAINED

President Reagan is due to visit Tokyo in November, at a time when Russo-Japanese relations are becoming chillier than ever. While Japanese Prime Minister Yasuhiro Nakasone appears to be drawing closer to Japan's Western allies, especially after the Williamsburg Summit, Japan's relations with the Soviet Union are none too cordial. In January, Nakasone spoke of turning Japan into an unsinkable aircraft carrier in support of the West, a remark particularly appalling to the Russians. The tense atmosphere was not cleared by the visit of a Japanese Foreign Ministry delegation to Moscow in mid-July.

The main points at issue between the Japanese and the Russians are three: Soviet SS-20 missiles, Russia's occupation of the Kuril Islands since after World War II and Russian interest in Japanese technology. Japan is uneasy about the SS-20s, 110 of which have already been deployed east of Lake Baikal and have the capability of hitting targets anywhere in Japan. Nakasone is also worried that the Russians may shift some of the missiles from the west to the east if there is a deal with the West in the Geneva Euromissiles talks. The Russians clearly told the Japanese in Moscow that they have no intention of removing the SS-20s from the eastern sector. In fact, Soviet Foreign Minister Andrei Gromyko reportedly remarked that "the gigantic nuclear base in Okinawa" is reason enough for adding to the number of SS-20s in eastern Siberia.

The Russians also have no intention of returning a group of islands at the end

of the Kurile chain north east of Hokkaido. There are only four channels by which Russian ships could get out of their Pacific ports in the event of a war, three of these can be easily blockaded and the fourth is guarded by the Kurile Islands.

The Russians therefore have equipped the territory with a formidable arsenal and have turned a deaf ear to the Japanese proposal that it would sign a peace treaty with Moscow in exchange for the Kurile Islands.

The Japanese on their part have become tough in other fields. So far Japan has leaked Western high tech secrets to the East but this spring a Russian diplomat was expelled from Japan on the grounds that he had stolen industrial secrets. Nakasone's Government has also decided to discontinue export licenses for sensitive items like the floating dry dock sold to the Soviet Union in 1982.

GEMAYEL

TROUBLED TIMES AHEAD

There was the visit that took place and the visit that failed to materialise. While Lebanese President Amin Gemayel was in Washington in late July to persuade the US to rebuild his shattered country, Israeli Prime Minister Menachem Begin cancelled a trip to the US which was planned for the beginning of August for ostensibly personal reasons. But less than 24 hours after the cancellation, the Israeli Cabinet voted unanimously in favour of a partial withdrawal of the nation's troops in Lebanon. There is a feeling in American and other circles that Begin does not wish to discuss Israel's plans face to face with Reagan and hence the cancellation.

Neither Reagan nor Gemayel approved of the Israeli Cabinet's decision. Last May Secretary of State George Shultz had negotiated a Lebanese-Israeli accord providing for the withdrawal of Israel's 36,000 troops from Lebanon on the condition that Syria also pulled out its 60,000 men. Syrian President Hafez Al Assad, however, declined to go along with the arrangement. The recent Israeli decision would lead to the de facto partitioning of Lebanon between Israel and Syria, leaving Gemayel's Government in control of only the area around Beirut. The new Israeli military line will probably run eastward from the mouth of the Awali river, 17 miles south of Beirut, and then turn upwards and meet the present line at the Bekaa Valley. No withdrawal is expected on the eastern front. The pullout would shorten the supply lines and

US Joint Chief of Staff Gen John W. Vessey Jr to Gemayel in Lebanon. We're behind you.

make the Israeli forces less vulnerable to attack. Although Reagan is not in favour of partial withdrawal, he is ready to go along with Israel for the time being, and US officials assured Gemayel that they would tell the Israelis that any redeployment should be the first stage of a complete pullout.

The Reagan Administration also tried to win over Gemayel by transforming \$150 million in loans to the Lebanese into outright grants. The President also announced that the US special envoy to the Middle East, Philip Habib, who had outlived his usefulness, would be replaced by the Deputy National Security Adviser Robert C. McFarlane.

The problem in Lebanon, however, is far from over. In late July, the feud between the rival Christian Phalangists and Druze militiamen flared up again, and about 20 people were killed and 65 injured as Beirut airport and the capital's suburbs were bombed by them. Later, Walid Jumblatt, the leader of the Druze sect, announced that he and two other Lebanese opposition leaders had formed a Syrian-backed National Salvation Front to challenge Gemayel's leadership.

POLAND

COSMETIC CHANGES

Martial law, which had been in effect in Poland since 1981, was lifted on July 22. Poland staggered back to civilian rule after 586 days when President Henryk Jablonski made the announcement before Sejm, Poland's rubber stamp Parliament. But the tone of the era to come was set by Polish leader General Wojciech Jaruzelski, who declared that although "there will

be a better tomorrow than today" at attempts to engage in anti-state activity will be dealt with no less firmly than they were under martial law.

Shortly before the lifting of martial law, Sejm approved a constitutional amendment that added to the powers of the government. The definition of anti-state activities was broadened, and the Prime Minister was given the authority to declare a state of emergency whenever necessary. Parliament also set the official work week at 48 hours and eliminated the holiday on Saturday won by Solidarity. The new laws also restrict the right of assembly, and all groups except trade unions, church bodies and political parties must now get government permission before holding a meeting.

The Polish Government, however, is eager to make a working compromise. It also passed an amnesty law which is expected to apply to 190 political prisoners and 465 persons awaiting trial. But this law does not cover 60 former leaders of Solidarity and a dissident group called the Committee for Social Self-Defence. However, the government is making some efforts to win over Solidarity as well. It has promised not to prosecute any activist who turns himself in before October 31, and it is hoped that this will lure out the 81-odd Solidarity activists who went into hiding when martial law was declared. Solidarity's reactions to these measures were guarded. According to its leader Lech Walesa, "We have a new situation. We have to adopt new methods to this situation. The reactions of the US, too, were not very enthusiastic, although Washington had made ending martial law a precondition for lifting economic sanctions against Poland. Remarkably, US President Ronald Reagan said: 'What we

went to be on guard for a further cosmetic change in which they replace martial law with equally onerous regulations."

FRG-USSR RELATIONS

CHILLIER THAN EVER

West Germany's first Christian Democratic Chancellor after 13 years of Social Democratic rule, Helmut Kohl, visited Moscow in mid-July. His trip, the first by a conservative West German Chancellor in 28 years, was not in the least fruitful. In fact, his talks with Soviet President Yuri Andropov took on the air of a full-scale fight at certain times. In the first instance, Andropov failed to receive Kohl on the day of his arrival. Although the excuse given was ill health, the absence could also be taken as a rebuff. In their talks, neither Andropov nor Kohl gave an inch. While Kohl reaffirmed his support for the stationing of 108 Pershing II and 464 cruise missiles in West Europe unless a compromise is reached at the Geneva arms talks, Andropov warned that if the NATO missiles were deployed, the people of East and West Germany would have to "look at each other through a thick pallisade of missiles", an obvious reference to Kohl's desire to see Germany reunified.

However, after his return to West Germany, Kohl tried to play down the significance of these statements. Some West German officials even suggested that there was still "a margin of flexibility" in Moscow's stance at the Geneva negotiations.

TERRORISM

INNOCENTS SUFFER

The Armenian Secret Army for the Liberation of Armenia (ASALA) struck at Orly Airport (Paris) in mid-July, setting off a bomb at the Turkish Airlines ticket counter, killing seven persons and injuring about 60 holiday travellers. ASALA is not interested in France; their target is Turkey. Since 1915, they have been revenging themselves upon the Turks, who killed an estimated 1.5 million Armenians living in Turkey in that year. The aim of current-day Armenian terrorists is to get the Ankara Government to admit that the massacres took place.

The French, who incidentally sympathise with the Armenian cause, were, however, not slow to round up the ASALA culprits. A large number of suspected ASALA members were arrested, among them Varadjan Garibidjian, who confessed to planting the bomb. In the course of police investigations, a large number of safe houses and

materials have been uncovered and these may lead to the exposure of other terrorist groups of Kurdish rebels, Palestinian extremists, etc., who have close ties with ASALA.

In another dramatic development around the same time, Turkish terrorist, Mehmet Ali Agca, the man convicted of shooting Pope John Paul II, declared at an impromptu press conference that the Bulgarian Secret Service and the KGB were involved in the attempt to assassinate the Pope. He has been saying this for some time during private investigations, but this was the first time that he has fingered the KGB publicly. He also accused Sergei Antonov, a Bulgarian airline official now facing complicity charges in Rome, and former Bulgarian Embassy officials Todor Ayvazov and Zhelya Kolev as his accomplices. In true spy-story style, the daughter of a Vatican employee was kidnapped on June 22 by unknown men who demanded Agca's release in return for the girl. But during his press conference, Agca told reporters that he was happy to remain in jail and called on the kidnappers to free the girl. The kidnappers dismissed Agca's statement as "irrelevant" and continued to demand his release. Some feel that the kidnappers may be Bulgarian or Soviet agents who want to stop Agca from talking further.

US-CHINA RELATIONS

IMPROVING

Sino-American relations, which have been in the pits for some time, appear to be improving again by leaps and bounds. President Reagan decided to liberalise sale of technology to China in May and talks were held between American and Chinese officials between July 12 and 14 on the possibilities of reaching an accord on nuclear cooperation. The US has decided to treat China as a nuclear weapons state; this means that Washington can now drop its previous demands for full-scope safeguards which it imposes on non-nuclear weapons states like India. Although China has not signed the Nuclear Non-Proliferation Treaty, US law only requires a prior bilateral agreement on inspection, reprocessing and transfer of nuclear materials to third countries before American manufacturers can sell equipment to a foreign country. In the US, the Reagan Administration has been working closely with the Democratic Party leadership of Congress to make progress on furthering an agreement with Beijing. On its part, China has shown interest in joining the International Atomic Energy Agency (IAEA).

much that China reacted very mildly to the American announcement (July 15) of its biggest single arms sale to Taiwan to date—a \$530-million deal for missiles and tank and aircraft parts. US Secretary of Defence Casper Weinberger is due to visit China in late September and Chinese Foreign Minister Wu Xueqian is scheduled to visit Washington in October.

Talks are also going on to settle the trade dispute that led the Reagan Administration to ban import of Chinese textiles in early 1983. The American Congress is favourable towards China and the winds are blowing hot again.

WORLD DEVELOPMENT REPORT

BAD NEWS FOR THE POOR

The *World Development Report*, 1983, sixth in the series of annual reports published by the World Bank, has been released. Its message is that while the recession afflicting the world economy was slowing down, the economies of many developing countries have deteriorated. Though the industrial nations experienced better economic conditions, they also observed negative growth, unemployment averaging eight per cent and moderate inflation in 1982. Among the less-developed nations, the African and Latin American nations registered fall in the growth rate, but as a whole, they managed a two-per cent growth.

The *Report* also noted that despite the promises in every international conference that they would relax trade barriers, the advanced countries imposed new import controls which directly affected the exports of less-developed countries. Textile exports were particularly hard hit. Falling exports caused deterioration in their terms of trade.

The *Report* has pointed out huge current account deficits of \$118 billion in 1982 (\$58 billion in 1980), which were about five per cent of the GNP of the less-developed countries and 25 per cent of exports of goods and services. The deficit was only 3.3 per cent of the GNP and 17.5 per cent of their exports in 1975.

The World Bank advocated cuts in public spending, monetary discipline and revision of prices. Its policy guidelines emphasise on agriculture, meeting the basic needs, holding down population growth, urban slum improvement, export-orientation and open trading, "realistic" administered prices and holding down fiscal deficits. It also recommends that governments (even socialist ones) should make more use of the market mechanism and that the

public sector should confine itself to activities for which market solutions are inappropriate

LATIN AMERICA

BURDENED BY DEBTS

"Foreign debt pushed Latin America into a depression and that debt will keep it there as the rest of the world recovers. So said C. Fred Bergsten, Director of the Institute for International Economics in Washington. And his prediction appears to be based on solid facts. Almost every Latin American country is burdened with an overload of foreign debt. By the end of 1982, Ecuador had borrowed \$6.6 billion, (b) Colombia \$10.2b, Venezuela \$33.2b, Argentina \$38.8b, Mexico \$84.6b and Brazil \$86.3b. In Argentina, inflation is expected to hit 450 per cent this year. In Mexico, the economic growth rate in 1982 was zero per cent. In every country, the economic and, consequently, the political situation appears to be bleak. Widespread demonstrations, walkouts, strikes and other forms of protest have added to the social unrest in the region.

This was hardly the position about ten years back, when many Latin American countries were well off. The export prices of their commodity products were at record highs and the countries began to borrow heavily to finance am-

bitious development projects and help their economic expansion. Although some of the money was wasted and went into the pockets of corrupt officials, international bankers, who were aiding the OPEC petrodollar boom of the 1970s, were eager to lend heavily to these nations. But when revenues fell, interest rates went up and creditors, worried about repayment, offered mostly short term loans. As a result, the debt crisis in Latin America has boiled over. The whole area is sinking deeper and deeper into poverty, malnutrition has increased and socio-economic chaos has set in.

DEBATEGATE

MUCH ADO ABOUT NOTHING

First came a book by *Time's* White House correspondent Lawrence Barrett in which he mentioned in passing that campaign advisers had prepared candidate (later President) Reagan for his October-28, 1980, debate with President Jimmy Carter by using position books assembled for Carter's use. Then a collector of campaign memorabilia took some papers which he had collected from the garbage can of Reagan's headquarters in Arlington, Virginia, after his election to the Washington post. Among these papers were economic memos prepared by Carter aides for the Cabinet.

marked, "Not for public distribution." Still worse, they were attached to a covering note addressed to Reagan campaign officials "Bob Gray, Bill Casey, Ed Meese", and signed by a low-level Reagan volunteer, Daniel Jones, who had written on one of the papers "Bob—Report from White House mole."

The press immediately took up the scent and the affair ballooned into a criminal investigation by the Justice Department and a Congressional probe under House Sub-committee Chairman Donald Albosta. President Reagan told reporters that he had not known that the Carter briefing book had been in the hands of his advisers and added that any adviser found guilty of wrong-doing in the affair could be fired.

There are two issues involved in "debategate": one is ethics, since Reagan's margin of victory rules out the question of the Carter briefing book being a decisive factor in the election, the other is the question of a mole in the Carter White House. There is a suspicion that a political espionage operation may have been conducted by Reagan aides. However, by the end of July, the scandal appeared to be dying out as no fresh discoveries of the 1980 Carter campaign material were made in Reagan's files and the White House mole remained undetected. S.B.

CURRENT EVENTS National

(Continued from page 18)

the latter course are minimal because Paul has threatened to fight till the end. Besides, DCM and Escorts will require huge amounts of money (more than one crore) to buy them back, which they do not have. Also, with non-residents' support of the shares in the market gone, the prices are bound to crash. In both cases, the two companies will have to face heavy losses.

To facilitate the transfer of shares from non-resident Indians to resident Indians, the RBI has removed certain technical hurdles in the way. The government has also exempted the sale and transfer of shares from the operation of Section 10(5) of the Foreign Exchange Regulation Act.

AGRICULTURAL EXPORTS A TEMPORARY PHASE?

India's exports of agricultural and allied commodities has risen to over Rs 2,400 crores in 1982-83, which is Rs 200 crores more than the previous year. As a proportion of the overall non-oil exports, this is a little less than one third.

However, Indian agriculture being so dependent on the monsoons, this is not likely to be a consistent performance. India has been lucky in that despite the reduction in the commodity prices of non-oil goods in the world market, it has not been seriously affected.

Also, the export of agricultural commodities is feasible only if there is a surplus after meeting domestic requirements. The Indian population of about 720 million needs at least 160 million tonnes of foodgrains and at present there is a shortfall of 30 million tonnes.

India can afford to export certain foodgrains only if they finance the import of scarce foodstuff.

NGO'S STRIKE VICTORY FOR THE WORKERS

The 19-day strike of the Andhra Pradesh Non-gazetted officers (NGOs) was called off after a settlement between the Andhra Pradesh Government and the leaders of the Action Committee of Employees and Workers (ACEW). The NGOs had struck work to protest against the Ordinance (Number 5 of 1983) amending service rules of workers, and the reduction of

the retirement age from 58 to 55 years.

The strike, which started on July 16, stopped all work in the state government offices and hospitals. Many other unions and organisations had threatened to go on strike from August 5 in support of the NGOs' demands. The massive show of strength forced CM N.T. Rama Rao to accept the major demands of the NGOs.

According to the settlement reached, the government will delete all the provisions of the Ordinance except those related to retirement age. The provision to Fundamental Rules 2, restraining the government from taking any action to the disadvantage of the employees, has also been accepted, but would not apply to retirement age. At least 15 other demands of the employees have also been accepted.

Meanwhile, the question of retirement age is still with the Supreme Court. If the Court upholds the government decision to reduce retirement age, then the whole Ordinance would be scrapped. The government has also agreed to consider the strike period as a special holiday.

A.S.

Everyday Science

Everyday Science just cannot be found in everyday books. Ever known what's the principle of a pressure cooker you use every day? Or why does steam cause more severe burns than boiling water? You cannot claim ignorance as a commerce/arts graduate when asked in the Civil Services interview about the major Indian cropping seasons. To prepare you for this and other exams like the Clerks' Grade, NDA, CDSE, PO and Assistants' Grade, our special feature on Everyday Science puts together in one place and one time—in notes and Q-A form—all that is not easily available.

AGRICULTURE & ALLIED SCIENCES

Agriculture. Rearing bees on commercial lines

Cropping seasons Major cropping seasons in India are rabi, kharif and summer. **Rabi crops**—wheat, barley, gram, linseed, masur, mustard, peas, potatoes—are sown around October-November and harvested around April-May. **Kharif crops**—Bajra, jowar, rice, maize, ragi, tur, moong, urad, groundnut, sesamum, cotton, jute, tobacco, sugarcane, rapeseed, oilseeds—are sown around June-July and harvested around October. Rabi and kharif are the most popular crops in India. **Summer crops**, sown around February and harvested around June/July, are not grown extensively and usually include items like green vegetables, maize, etc.

Cash crops are those grown mainly for sale and cash money. Examples: cotton, jute, sugarcane, tobacco, etc. These are usually non-food crops.

Contour farming Cultivation done on hilly slopes (contours) to make best use of available moisture and reduce soil erosion.

Cereals are foodgrains: rice, wheat, jowar, bajra, barley, millets, etc. The term is coined from the word 'Ceres', which in Greek mythology is the God of Food.

Pulses Black gram, horse gram, green gram, urad, cow pea, beans, kidney beans, arhar, etc. Pulses are a very rich source of proteins. A pulse crop is a short-duration crop and is usually sown between two major crops not only to increase farm income but also because it enriches the soil.

Oilseeds: Castor seed, groundnut, mustard, rapeseed, safflower, sesamum, soyabeans, etc. It may be noted that

weight for weight, soyabeans contain more proteins than meat. It is for this reason that wheat flour mixed with soyabean flour is being served to school children by some of the state governments in their mid-day lunch programme.

Fibre crop Cotton, jute, mesta, hemp, sannhemp, etc. Fibrous crops are used not only in textiles but also in paper making for their cellulose content. The best cellulose is obtained from cotton.

Plantations are farms run on commercial lines. Cash crops are generally grown on them. Examples of plantation crops: coconut, arecanut, banana, cocoa, coffee, pineapple, rubber, etc.

Cross breed Progeny produced by crossing pure breed with local breeds to evolve new strains which are better in quality and productive in quantity. Examples: Jersey, Holstein and Brown Swiss varieties of cows.

Cusec Quantity of water flowing at the rate of one cubic foot per second. 35 cusecs would mean a flow rate of 35 cubic feet per second.

Crop rotation Succession of crops in a field in a given agricultural year. Examples: maize, wheat and summer vegetables grown in succession in a year. Crop rotation is a useful technique for maximising usage of nutrients available in a given soil. Care has to be exercised that successive crops draw soil nutrients different from the previous one. Thus, sufficient time is made available for restoration of soil nutrients till the same crop is repeated, while not allowing land resources to remain idle.

Compost Vegetable and animal waste converted into plant food, which could easily be available to plants for its production phase. These are organic, i.e., provided by nature. Natural fertilisers, like compost, are considered better than artificial fertilisers because they assist the process of nutrient fixation in the soil. Continuous doses of artificial fertilisers are sometimes harmful to the soil.

Dry farming Raising crops in an

area without irrigation facilities and having annual rainfall no more than 60 cm.

Artificial fertilisers Inorganic form of plant nutrient in concentrated form. These are generally soluble in water and are easily available to plants for their vegetative growth, flowering and grain/fruit formation. The more important artificial fertilisers are:

(i) **Nitrogenous** Ammonium sulphate, ammonium nitrate, urea, calcium ammonium nitrate, ammonium sulphate nitrate, ammonium chloride, sodium nitrate or Chilean nitrate, etc. (ii) **Phosphatic** Super phosphate, double phosphate, rock phosphate, ammonium phosphate, triple superphosphate, diammonium phosphate, monoammonium sulphate, nitro phosphate, ammonium phosphate sulphate. (iii) **Potassic** Muriate of potash, sulphate of potash, etc.

Floriculture Branch of horticulture which deals with cultivation of economic flowers and ornamental flowering plants.

Bonsai is the Japanese art of growing trees and plants in miniature form in flower pots.

Ikebana is the Japanese art of arranging flowers to make abstract or other forms.

Jhoom cultivation is a sweeping type of cultivation practised in some of the north-eastern states of India. Forest lands are cleared, a crop grown and the cultivation then shifted to another area. This causes a lot of damage to forest areas as not only does deforestation take place but best use is not made of scarce land resources.

Horticulture Branch of agriculture dealing with cultivation of fruit and garden crops.

Sericulture is the science of rearing silkworms.

Pisciculture Rearing fish both inland and marine for business.

Green manure Quick-maturing leguminous leafy crops which are tender and can easily mix in the soil and add organic matter to it. Examples: sannhemp,

cow pea, dhancha etc

Grafting is the process by which one branch of a tree is joined to another branch of another tree. Better varieties of roots are grown by this process. A tomato plant can have tomatoes growing on one branch and brinjals on another by means of grafting.

Hybridisation is the process by which better varieties of seeds, plants and animals are mixed with the local variety to evolve a new strain. The new strain incorporates the best of the two varieties and dispossesses the unfavourable features. Examples: dwarf or Mexican varieties of wheat which are highly disease resistant and have high productivity and growth rate; cows with high milking power which have been obtained by cross breeding with imported varieties like Jersey.

Harrowing is light stirring of soil—manually by animal or by tractor drawn implements of wood or iron—to break mulch or prevent clodding of soil. This serves two purposes: aeration of soil and retention of moisture.

Hectare is an area measuring 2.47 acres.

Intercultivating is working with implements like harrow, hoe and plough in standing crops for weeding and harrowing.

Monoculture is taking out the same crop on the same land year after year.

Inter crop is growing crops of short duration in a field which already has some other crop with a view to getting higher income without disturbing the main crop. Sometimes inter crops also add plant nutrients for use by main crop. Examples: raising vegetables or pulses in cereal crops or short duration crops and banana or papaya in coconut or arecanut gardens.

Multiple cropping is taking of more than one crop on the same land in the same year or season.

Insecticides are chemicals used for controlling insects. Insects attack plants at all stages of growth. They damage wood and the stored agricultural produce too. Insects also spread diseases. The various types of insecticides are: (i) **Inorganic insecticides**—calcium arsenate, calcium cyanide, lead arsenate, sodium fluoride, Paris green and DDT (dichlorodiphenyl trichloroethane); (ii) **Plant based or organic insecticides**—nicotine, pyrethrum and rotenone.

Pesticides are chemicals used for controlling pests.

Weedicides are chemicals used for controlling weeds.

Mixed farming is a combination of crop enterprise with allied enterprise which may be complementary or supplementary.

Example: rearing sheep or goats, or running dairy or poultry farm, etc., along with agricultural farming.

Manures are animal and plant wastes like cattle dung and green manure used for improving soil fertility.

Olericulture is the cultivation of vegetable crops.

Pedigree is a record of lineage/ancestry of a plant or animal.

Poultry is raising domestic fowls for egg/meat. **Broilers** are varieties of poultry birds raised solely for meat (table) purposes like Cornish, Plymouth Rocks, etc. **Brooders** are equipment used for breeding baby chicks. **Growers** are chicken between the age of 2 to 4 months. **Hatchery** is a breeding farm for producing chicks. **Layers** are varieties of poultry birds raised for egg production like White Leghorn, Rhode Island Red, etc.

Note: It takes three weeks (21 days) for chicks to hatch out of eggs.

Pruning is cutting of stems and leaves which are outgrown. Pruning is done to give strength to stem and the direction it should grow for obtaining direct sunlight. It is generally done for fruit crops like oranges, vine grapes, apples, etc. and for ornamental gardens and flowers as in bonsai.

Soils in India are of various types. Common among them are black, red and alluvial. **Black soil** is fertile and useful for fibrous crops like cotton and found in Maharashtra/Gujarat. It is also called **regur**. **Red soil** is not as fertile but is considered better than black because it contains very fine soil particles which are best for water holding. Red soil is found in Tamil Nadu, Madhya Pradesh and Andhra Pradesh. **Alluvial soil** is extremely fertile and is brought as silt by rivers. Commonly found in the Indo Gangetic Plain.

Soils could also be classified as sandy, clayey, loam or clayey loam. **Sandy soils** are poorest in fertility and found along the coastal belt, desert areas and river beds. **Clayey** has best water retention ability but is difficult for carrying out operations like ploughing and harrowing because of clodding. **Loams** give properties midway between sandy and clayey and are about the best.

Trees

(a) **Cinchona**—Quinine, used for curing malaria, is obtained from it. The tree is found in India, Sri Lanka and Java.

(b) **Eucalyptus**—Its oil is used in disinfectants, soaps and medicines. It is the fastest growing tree and originated in Australia.

(c) **Serpentina Resperina**—The juice obtained from the bark of this tree is used for curing high blood pressure.

VINOD GUPTA

PHYSIOLOGY & BIOLOGY

DISEASES. They may be classified as communicable, infectious, contagious, epidemic, endemic, pandemic, chronic or acute.

Communicable diseases are those which are carried from one person to another through infection or contact. These are further classified as infectious or contagious. **Infectious diseases** are those that are caused by germs, bacteria or virus which spreads from one person to another through air, water, etc. Examples: common cold, flu, plague, smallpox, cholera, etc. These are diseases caused by organisms that destroy living cells. Infectious diseases can be contagious.

Contagious diseases are those that spread from one person to another through direct or indirect contact. Examples: eczema, tuberculosis, venereal diseases like syphilis, etc.

Epidemics are when communicable diseases like diphtheria, typhoid, etc. spread widely through a community at the same time; they are called epidemics. These diseases spread quickly from place to place.

Pandemics are epidemics that occur at the same time in many countries throughout the world as did the influenza epidemic of 1957 or the Hong Kong flu recently.

Endemic diseases are those that are always present in certain countries. Example: bubonic plague in India and China or malaria in Assam.

Chronic disease is a long continued disease.

Acute illness is a short and severe illness.

Deficiency diseases are those caused by lack of balanced diet. These are caused due to the deficiency of any nutritive ingredients, especially vitamins. Examples: beri-beri due to lack of Vitamin B, rickets due to lack of Vitamin D and scurvy due to lack of Vitamin C.

Allergy is an abnormal sensitivity to any substance by which normal persons are not affected. Cure is possible when the particular substance to which a patient is over sensitive is discovered. Allergic diseases could be due to fear, anxiety, grief, etc. Allergic disorders include asthma, hay fever, skin rashes, etc.

Appendicitis is the inflammation of the appendix, a small appendage at the junction of the large and small intestines. An apparently useless organ, it

can be a source of serious illness. The appendix is in the lower-right abdomen. **Symptoms** nausea, abdominal pain, fever vomiting, etc. **Cure:** surgery. **Precaution** It is dangerous to take laxative or apply hot water bottle under such conditions

Anaemia: It is a condition of bloodlessness due to a reduction in number of red blood corpuscles or haemoglobin content. It causes unhealthy skin paleness, loss of energy and palpitation. The disease is common in growing children, convalescents and pregnant women. In India, most children suffer from anaemia due to lack of iron and proteins in their diet.

Arthritis (or gout) is the inflammation of joints and is more common among elderly people.

Asthma is a condition in which air passages (bronchi) in the respiratory system become constricted. **Symptoms** laboured breathing with wheezing sound and/or cough. **Cause** allergy, respiratory infection, emotional stress, change in weather etc.

Beri-beri is a deficiency disease caused by deficiency of Vitamin B₁ in the diet. Consumption of polished rice, overcooked foods, etc. is the chief cause. There is disturbance in the area of the stomach and intestines, which attacks the nervous system resulting in numbness and a tingling sensation in parts of body reached by the affected nerves. It could even cause heart disorders. **Symptoms** the disease causes numbness of arms and legs and swelling of feet and hands. **Prevention** by giving a mixed diet rich in Vitamin B especially foods like fresh vegetables, whole milk, eggs and meat. Vitamin B₁ is found in most grains, particularly in their embryos and outer covering.

High or low blood pressure is a malady caused by increased pressure of blood on the walls of blood vessels, especially the arteries. It is due to contraction of arteries, their coagulation due to fats accelerated by the presence of salts, kidney disorders or internal poisoning. **Cure** juice of *resperina serpentina*. Low blood pressure could be due to lack of exercise, mental depression etc.

Cancer is the malignant growth of tumour of unknown cause, invading the surrounding tissues and spreading through blood vessels and nerves. It is a fatal disease. **Cause:** excessive smoking, chewing tobacco, contact with certain complex organic compounds, exposure to abnormal heat, radiation and chemical fumes. **Symptoms.** a wound or sore that does not heal, particularly in the mouth, lump in any part of the body,

particularly the breast in women; unusual and repeated bleeding in women especially after menopause, persistent hoarseness or cough continuing indigestion, difficulty in swallowing, change in bowel habits, change in size or colour of a mole or wart. **Cure** there is no certain remedy at present, except exposing the cancerous cell to radioactive rays.

Caries is a dental disease associated with the decay of teeth. It is caused by acids generated by decomposed particles of food sticking between the teeth. Common in children. **Prevention** brushing teeth twice daily—once in the morning and another just before sleeping.

Chicken pox is a highly infectious disease of children characterised by feverishness followed by skin eruptions all over the body. The rash normally appears after a few days. One attack of the disease is said to give an immunity for life.

Chilblain is a localised painful erythema (congestive or exudative redness of the skin) on fingers, toes or ears produced by excessive exposure to cold.

Coma Complete loss of consciousness occasioned by ailments such as brain tumours, diabetes, or accidents.

Concussion is shock injury to brain caused by a heavy blow.

Cholera is an ailment in which very severe diarrhoea and intense vomiting is accompanied by pain in legs and back. **Cause** housefly, it is caused by swallowing Koch's "coma bacillus" through infected water, food, fruits and vegetables. **Cure** Tomb's cholera mixture. **Prevention** anti-cholera vaccine, isolate the patient, prevent contamination of drink and food supply.

Convulsion. Any kind of fits.

Diabetes is the inability of the body to make use of sugar in food. It is, therefore, called a disease of the metabolism. **Symptoms** It is marked by excessive and frequent secretion of urine, presence of sugar in the urine as well as blood, increased thirst and appetite, loss of weight in spite of all that is taken, appearance of boils and itching of the skin. The body weight reduces because body tissues are starved resulting in rapid consumption of proteins and fats of the body. **Cause** still unclear. It is generally believed that failure in varying degrees of the endocrine glands called pancreas to produce sufficient insulin results in diabetes. **Cure** incurable, regular injections of insulin, control of diet, check on intake of sugar and regular exercise are helpful. Control in diet reduces stress on the pancreas. Insulin injection controls blood and urine-sugar level. Anti-diabetic drugs

are also sometimes administered to stimulate the pancreas to secrete sufficient insulin.

Debility. General feebleness and weakness resulting from various disorders within the body.

Dehydration is the elimination or loss of water. In this state, there is excessive loss of water from the body in the form of body fluids. It is infectious and is caused by shock, fever, diarrhoea, etc. **Symptoms:** intense thirst. **Cure** drink water. **Prevention:** drink fluids with salts.

Diarrhoea Excessive looseness of bowels. **Cause** irritation or nervous stimulation of intestines due to contaminated food and drinks. **Cure** a large dose of castor oil.

Diphtheria It is an infectious disease among children causing inflammation of throat which interferes with breathing. **Cause** growth of mucous membrane in the throat. **Cure** diphtheria vaccine.

Dysentery Severe diarrhoea condition accompanied by blood and mucus.

Dyspepsia Indigestion.

Eczema The term covers a wide range of skin troubles causing inflammation of the skin. It is characterised by itching, swelling, blistering, oozing and scaling of the skin caused by allergic sensitivity to food like milk, fish, eggs or dust, etc. Most varieties of eczema are infectious. It is cured like any other allergic disorder.

Elephantiasis is a disease in which some part of the body, commonly a leg, swells to gigantic proportions because of an infectious roundworm. Mosquitoes are believed to spread this disease.

Encephalitis is an infectious and contagious disease caused by a virus and showing unusual cerebral (i.e., brain,) symptoms like drowsiness, lethargy, languor, etc. The muscular system becomes weak.

Enteric fever is typhoid fever caused by contaminated water, milk food or insanitary conditions.

Epilepsy: Nervous disorder accompanied by attacks of sudden insensibility and froth in the mouth.

Eye diseases are astigmatism, cataract, colour blindness, conjunctivitis, hypermetropia and myopia.

Astigmatism is due to structural defects in the eye or lens. Here, the patient is able to see clearly only images in one plane either the horizontal or the vertical. The defect is usually corrected by wearing cylindrical glasses.

Colour blindness is the inability to distinguish between different colours, though sight is normal. To a patient suffering from colour blindness, the whole world is more or less like a black-and-white motion picture. It is a congenital

THE VITAL VITAMINS

| Name | Function | Vegetable Source | Animal | Deficiency Disease |
|---|--|---|---|--------------------|
| Vitamin A
(Carotene) | For normal vision, healthy skin and body growth | Carrots, fresh vegetables particularly tomatoes and fruits | Fish liver oil (cod and shark), whole milk, butter, egg yolk, liver | Night blindness |
| Vitamin B
Vitamin B ₁ (Thiamine) | For normal appetite and healthy nervous system | See below
Whole grains, green leafy vegetables, yeast, cabbages, carrots, onions, nuts, pulses | Eggs, liver, milk and milk-products | Beri-beri |
| Vitamin B ₂ Complex
i) Riboflavin | For oxidation inside the cells metabolism of amino acids and fatty acids | Millet, pulses and green leafy vegetables | Meat, liver, poultry, fish | |
| ii) Niacine
(Nicotinic acid) | For glucose utilisation and synthesis of fats | Outer covering of grains, groundnuts, yeast | Meat, liver, poultry, fish | |
| iii) Pantotheinic acid | For breakdown of fatty acids, cholesterol and phospholipids | All vegetables | Nil | |
| Vitamin B ₆
(Pyridoxin) | Removes carbon dioxide from amino acids | Whole grains, leafy vegetables | Meat, liver, etc | |
| Folic acid
(Folacin) | For building red blood cells | Fresh green vegetables | Liver | |
| Vitamin B ₁₂
(Cobalamin) | For proper functioning of the nervous system | Nil | Milk, liver, meat | |
| Vitamin C | Essential for resistance, build up and quick healing of wounds | Citrus fruits like grapes, oranges, lemons, pineapples, amla, cabbage | Nil | Scurvy |
| Vitamin D | For absorption and utilisation of calcium and proper bone formation | Vegetable oils | Liver, egg, cold milk, butter, ghee, etc | Rickets |
| Vitamin E | For preventing harmful oxidation | Lettuce, peas, vegetables, vegetable oils | Liver, egg yolk, milk | Skin wrinkles |
| Vitamin K | For proper clotting of blood | Green leaves, tomatoes, etc | Liver, egg yolk | |

disease Persons suffering from colour blindness are, therefore, advised not to drive as they would not be able to distinguish between different traffic lights at road crossings.

Cataract is clouding of the eye lens reducing visual clarity leading to blindness. **Cure** replacement of the natural lens by an artificial one through surgery.

Conjunctivitis is a communicable disease of the eye marked by acute swelling and watering of the eyes. It is an infection of the conjunctiva—the delicate membrane lining the eyelids and covering the eyeball—which gets inflamed and appears red.

Myopia is short sightedness. The patient can see nearby objects clearly but not far off ones. The eyeball elongates, leading to distortion of the eye lens. The disease normally affects young people. **Cure** use of concave lens.

Hypermetropia is long sightedness. The patient can see far-off objects clearly but not the ones nearby. The eyeball is shortened, distorting the eye lens. The

focal length lengthens. Thus, rays from nearby objects do not focus on the retina. The disease normally affects older people. **Cure** use of convex lens.

Trachoma is a chronic communicable viral disease which could lead to blindness and is characterised by inflammation of the conjunctiva. Granules start forming in the interior or face of eyelids. **Treatment** sulphur drugs. Later stage requires caustics like silver nitrate to remove the granules.

Curiosity Questions

- 1 In total darkness who would be able to see clearly—a man, a cat or an owl?
None, as any visibility requires some light. However, in partial darkness, as at night, the owl would be able to see most clearly. This is because it has large eyes with orbs directed forward, giving it binocular sight.
- 2 What is the stimulant found in tobacco?
Nicotine.
- 3 And in coffee?
Caffeine.
- 4 Why does milk turn sour?
Because of bacteria present in it, which putrefy it.
- 5 Why do hair grow grey?

Because blood stops circulating in the hair-roots.

- 6 Why is blood red?

Because of the presence of haemoglobin. This is the colouring matter of red blood cells, rich in iron content, and combines with oxygen in the lungs.

- 7 What are the constituents of blood?

Blood plasma, blood platelets, red corpuscles and white corpuscles.

- 8 What is the shape and size of kidneys? How many are they in number? Where are they located? What is their function?
Bean-shaped. They are the size of pigeon eggs. They are two in number, located one on each

side of vertebra at the back. They help purify blood by filtering waste and poisonous matter, throwing it out in the form of urine, which is rich in nitrogen

9 Why are proteins essential in our diet?

Proteins are composed of elements essential to human growth like carbon, nitrogen, oxygen, hydrogen, phosphorous and sulphur. They are the source of all nitrogen our food contains. Nitrogenous matter is absolutely essential for replacement of nitrogen eliminated by persons of all ages and for building up new fresh tissues in a growing child

10 A dentist uses a concave mirror to examine teeth. Why?

A concave mirror gives a magnified view which helps him in locating the trouble spots

11 We perspire on a hot day. Why?

Sweat glands are stimulated to secrete more perspiration because of the rise in outside temperature

12 Human breath is visible in winter but not in summer. Why?

In winter, air is cold and so water vapour present in the human breath condenses, making it visible

13 Steam causes more severe burns than boiling water. Why?

Because steam at the same temperature has latent heat (=540 calories/gram), which causes more severe burns than boiling water at the same temperature

14 A clinical thermometer has a constriction near the bulb. Why?

The constriction prevents the expanded mercury column from going back to the bulb, thus facilitating the reading of human temperature even after some delay

15 It is not advisable to wash a clinical thermometer with boiling water. Why?

Because the boiling point of water is much above the maximum provided in the clinical thermometer. As a result, pressure from undue expansion of mercury may break it.

16. By putting on a shirt, a person feels warm. Why?

The layer of air entrapped between the shirt and the human body is a poor conductor of heat. Thus, body heat is entrapped and not

allowed to radiate to the atmosphere.

17. White and not dark clothes are more comfortable in summer. Why?

Because white is a good reflector of heat, and a bad absorber

18 Why is kerosene oil poured on stagnant pools to eradicate malaria?

The mosquito and its larvae can float on water but would sink in kerosene and die

19 What is pasteurisation?

A process invented by world renowned French scientist Louis Pasteur and named after him. Pasteurisation prevents milk from going bad and becoming unfit for human consumption. In this process, milk is heated to a pre determined temperature to destroy harmful bacteria, and allowed to cool suddenly thereafter. Pasteurisation is of two types: hot, cold. In the hot type, milk is heated to 161°F and kept at that temperature for 15 minutes. In the cold type, it is heated upto 145°F and kept at that temperature for 45 minutes

20 Why does it not hurt when we cut our nails or hair?

Because there is no blood there

21 Why is it dangerous to have a charcoal fire burning in a badly ventilated room?

Because charcoal fire depletes oxygen and produces carbon dioxide and carbon monoxide, which can even prove fatal while definitely being harmful

22 What vitamins are present in the yolk of an egg?

Vitamins A, B and D

23 Name the eight systems of human body

(i) The digestive system (ii) circulatory system (iii) respiratory system, (iv) excretory system, (v) nervous system (vi) muscular system, (vii) reproductive system and (viii) skeleton or the body system

24 What is the vital organ of the respiratory system?

Lungs

25 Name the different systems for treatment of diseases prevalent in India

Allopathy, Ayurveda, Homoeopathy, Unani.

26 What is first-aid?

It is the first medical aid provided to any wounded or sick person before the doctor's arrival

V.G

PHYSICAL SCIENCES

The solar system consists of the sun, the nine planets revolving around it in elliptical orbits along with their moons (satellites), a large number of minor planets called asteroids and a large number of comets. Some important characteristics of the sun and planets

The sun is a star whose gravitational attraction keeps planets of the solar system revolving in their orbits. Vital statistics: diameter 8,64,000 miles, distance from earth 92,900,000 miles, density 1.41 times that of water, average solar surface temperature 6,000°K or about 10,000°F, solar interior temperature about 35,000,000°F. The light of the sun reaches earth in 499.012 sec or slightly more than 8 minutes. A series of thermo-nuclear reactions involving the atoms of the elements of which it is composed—mainly nuclear-fusion reactions involving fusion of hydrogen to form helium—produces the heat and light that makes life possible on earth. More than 60 of the natural terrestrial elements have been identified in the sun, all in gaseous form because of the intense heat of the sun.

The radiating surface of the sun is called the *photosphere*, and just above it is the *chromosphere*. Above the chromosphere is the *corona*.

The sun is 4,00,000 times as bright as the full moon and gives the earth 6 million times as much light as do all the other stars put together. Actually most of the stars that can be easily seen on any clear night are brighter than the sun.

Planets are opaque bodies revolving around the sun in a counter-clockwise direction and shining, mostly, by reflected sunlight. The order of the orbits of planets outward from the sun is Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune and Pluto. Both Uranus and Neptune are visible through good field glasses, but Pluto is so distant and so small that only large telescopes or long-exposure photographs can make it visible.

Mercury is the second smallest of the nine known planets of the solar system. Its diameter is 3,100 miles and its mean distance from the sun 36,000,000 miles. Day temperature on Mercury is about 800°F while night temperature has been described by Soviet astronomers as "room temperature"—possibly about 70°F. Surprisingly, Mercury has a weak but permanent magnetic field.

Venus, closest to the earth of all

planets, is the third brightest object in the sky, exceeded only by the sun and moon. This is because it is covered with a dense, white, cloudy atmosphere that reflects sunlight efficiently and also conceals whatever is below it. American and Russian space probes have sent startling results. Venus' atmosphere is nearly all carbon dioxide and must exert a pressure at the planet's surface of up to 100 times the earth's normal sea level pressure of one atmosphere. Since the size and age of earth and Venus are nearly the same, these inherent contradictions have led astronomers to ask which is the freak planet - earth or Venus? Russian probes detected more glow on Venus' surface than expected solely from sunlight. Since sulphur seems to play a large role in the chemistry of Venus, reactions involving sulphur may be responsible for the glow. Its surface temperature is estimated to be nearly 462°C and is associated with the solid body of Venus. There's another curious thing about Venus: its rotation period. It is 243 days clockwise—contrary to the spin of most of the other planets and to its own motion around the sun.

The earth is the fifth largest planet and third from the sun. Vital statistics: mass nearly 6.585×10^{21} tons; average density highest among all planets, 5.5 gm/cc; length of the equator 24,901.55 miles; length of a meridian 24,859.82 miles; equatorial diameter 7,926.41 miles. The earth is not a true sphere but is flattened at the poles and, hence, is an oblate spheroid; its polar diameter is nearly 42 km less than its equatorial diameter. It revolves around the sun with a period of 365 $\frac{1}{4}$ days while the mean period of its axial rotation is 23 hours, 56 min, 4.095 seconds.

The earth's atmosphere is a blanket composed of nitrogen, oxygen and argon, in amounts of 78, 21, and 1 per cent by volume and extending up to nearly 950 km above the earth's surface. Also present in minute quantities are carbon dioxide, hydrogen, neon, helium, krypton and xenon. The lowest layer of the atmosphere is the *troposphere*, extending in height from approximately 8 km at the poles to nearly 15 km at the equator. The limiting boundary of the troposphere which separates it from the next layer is called the *tropopause*. Within troposphere the temperature decreases with height at the rate of nearly 1°C for 500 ft increase, and the pressure too decreases. The layer above the troposphere is called the *stratosphere*, which extends to a height of nearly 30 km. The temperature is nearly constant in this layer. This layer also contains ozone formed by the action or oxygen of short wavelength ultraviolet

The planets in order of their distances from the sun

light. This light is thus prevented from reaching the earth's surface, where it would be harmful. This is precisely the reason why high-flying jets like Concorde were banned from overflying India: supersonic jets disturb the highly unstable ozone, exposing earth to the harmful ultraviolet light. *Ionosphere* extends up to nearly 950 km above the surface of earth and consists of a series of concentric ionised layers called D-layer, E-layer, F1 layer, F2-layer in the upper atmosphere. It makes long-distance wireless communication possible by reflecting radiowaves back to earth. *Exosphere* is the outermost region of the atmosphere where gas molecules travelling at high speed may escape into outer space.

Mars is the first planet beyond earth, away from the sun. Its diameter is about 4,200 miles. Mars takes about the same time as earth to rotate upon its axis. Temperature on Mars is lower than earth's while atmospheric pressure is as low as 1 percent to 2 percent of that on earth. The thin atmosphere appears to be largely carbon dioxide. Mars apparently has no magnetic field. It has seasons like earth's, only they are longer because the Martian year is longer. Mars has two satellites.

Jupiter is the largest of the planets (Diameter 88,000 miles, 11 times that of earth, and mass nearly 318 times that of earth, and more than twice the mass of all the other planets put together.) It has 16 known satellites. The clearly observable chemical constituents of Jupiter's atmosphere are methane and ammonia, while scientists reckon it also has a large fraction of hydrogen and helium, as also water.

Saturn, last of the planets visible to the unaided eye, is second in size to Jupiter (equatorial diameter about 71,000 miles) but its mass is much smaller. Saturn's specific gravity is less than that of water. There is confusion as to the number of satellites it has, though it has 21 for sure. Saturn has a ring system lying above its equator and extending about 35,000 miles into space. The rings are estimated to be no thicker than 10 miles.

Uranus, the seventh major planet in the order of distance from the sun, has

the following vital statistics: distance from sun 1,782,800,000 miles; diameter 30,900 miles; mass: 14.6 times that of earth; density 0.25 that of earth and 1.36 times that of water.

Neptune is so far from earth that it is invisible to the unaided eye, but is easily visible in a telescope no bigger than a spy glass. Vital statistics: mass 17.2 times that of earth; distance from sun 2,796,700,000 miles or 30.07 times that of earth; diameter 27,600 miles; mean density 2.47 times that of water or 0.45 times the density of earth; atmosphere cloud-covered surface of high reflecting power; most abundant gases hydrogen and helium; temperature on Neptune's visible surface = 337°F.

Pluto is the outermost known planet of the solar system. Vital statistics: distance from sun 39.5 times that of earth; mass 0.9 that of earth. Pluto's orbit is so eccentric that in 1989, it will be closer than Neptune to the sun.

Asteroids are minor planets which are comparatively very small and which have been found in the belt between Mars and Jupiter. The largest of these asteroids, called 'Ceres', has a diameter of nearly 1,020 km.

Satellites (natural) are smaller celestial bodies revolving around a planet and shining by reflected light. All the planets, except Venus and Mercury, have known natural satellites.

Artificial satellites are bodies hurled into an orbit around earth. Such bodies need to be given a velocity of nearly 28,000 kmph to enable them to move around the earth in an orbit. They are used to collect valuable information about the distribution of landmass, water, vegetation, etc., on the surface of earth and use it for human welfare. The first artificial satellite (Sputnik I) was launched by the USSR on October 4, 1957. The first manned space flight was performed by Yuri Gagarin (USSR) in 1961. Moon landing by man took place on July 21, 1969. The first man to land on the surface of the moon was Neil Armstrong, the pilot of the US Apollo XI mission.

Comet is a heavenly body consisting of a hazy, gaseous cloud containing a

brighter nucleus and a fainter tail, supposed to be made up of gaseous particles. *Halley's Comet* is in the news these days. It is seen after a period of nearly 76 years. It was last seen on April 19, 1910, and is expected to be visible again at 9.30 p.m. (GMT) on February, 9, 1986.

Scientists associated with India's space programme:

Satish Dhawan—Director, Indian Space Research Organisation (ISRO), Bangalore.

Vasant Gowarikar—Director, Vikram Sarabhai Space Centre, Trivandrum.

Ved Prakash Sandlas—Director, SLV Mission.

U.R. Rao—Director, ISRO Satellite Centre.

India's four major space centres
Space Applications Centre (SAC), Ahmedabad, Vikram Sarabhai Space Centre (VSSC), Trivandrum, Indian Space Research Organisation, Bangalore, Sriharikota High Altitude Range (SHAR), Nellore

which light or radio emission from one celestial body is cut off when another celestial body is interposed between it and an observer on earth. Such a rare phenomenon occurred recently when Jupiter was occulted by the moon on April 29, 1983. The duration of occultation was nearly two minutes.

Sound is a physiological sensation caused by a vibrating source and transmitted as longitudinal pressure wave motions. A material medium, such as air, is essential for the propagation of sound. Sound produced by a vibrating body is audible only when the frequency of the body, i.e., the number of vibrations made by the body in one second, lies between approximately 20 and 20,000. Frequencies beyond this audible range are called *ultrasonic frequencies*.

Velocity of sound in air is nearly 330m per sec at 0°C. Its value is more in liquids and maximum in solids. Its value increases as the temperature is increased.

at a distance less than its focal length. In this position, it can be used as a shaving mirror.

A *convex lens* converges a beam of light to a point when it passes through it. It normally gives a real, inverted image. It is used as a magnifying glass when held close to the object. It is used in microscopes, telescopes and in spectacles for persons who cannot see near objects clearly. A *concave lens* always forms a virtual and erect image. Persons suffering from myopia (inability to see distant objects clearly) use concave lens to correct their vision.

Conductors are substances through which an electric current flows easily. Usually, metals are good electrical conductors, whereas non-metals are not. Silver is the best electrical conductor. Copper, aluminium and mercury are other examples. Wood, plastic, etc. are examples of non-conductors or insulators. The current flowing through a conductor is given by *Ohm's Law*, i.e., $E = IR$, where E is the potential difference across the ends of the conductor, I is the current and R is called the resistance of the conductor. The resistance of a conductor increases with increase of temperature. **Energy consumed by a resistance R** in one second, when current I passes through it, is given by $I^2 R = \frac{E^2}{R}$, where E is the voltage across the resistance.

Semi-conductors are substances whose resistance decreases with increase in temperature and with the presence of impurities. Examples, germanium, silicon, selenium and lead telluride.

Accumulator is a storage battery. Those used in motor vehicles are normally lead accumulators, in which electrodes are of lead peroxide and spongy lead and the electrolyte is sulphuric acid. Another widely-used accumulator is the nickel-iron accumulator in which the positive and negative electrodes are nickel oxide and iron respectively and the solution used is potassium hydroxide. Nickel-iron batteries were kept aboard Rohini 2 satellite as a secondary source of power.

Rectifier changes alternating current (A.C.) to direct current (D.C.).

Transformer is used to increase or decrease the available A.C. voltage or current.

Dry cell used in torch, radios, etc. contains ammonium chloride in the form of a paste. The outer zinc container forms the negative terminal while the central rod is the positive terminal. The potential difference between the two terminals is 1.5 v.

Dynamo is a device in which the mechanical energy (of rotation) is

Solar and lunar eclipse A solar eclipse or an eclipse of the sun occurs when the shadow of the moon falls on earth. This happens when the moon comes in between the sun and earth. Light from the sun is then blocked by the moon, on some region of the earth, and a solar eclipse is said to have occurred in that region. A lunar eclipse occurs when the sun, the earth and the moon are in line so that the shadow of earth falls on the moon.

Tides are caused by the attraction of the seas by the moon and, to some extent, by the sun. At full moon the tidal force of the sun and the moon are in the same direction giving rise to high spring tides, low tides result at half moons when the forces of the sun and moon are opposite to each other.

Occultation is a phenomenon in

Mach number is the ratio of the speed of a body to that of sound. If the mach number of a body is greater than one, the speed of the body is said to be supersonic.

Sonic boom is a loud noise produced due to a shock wave set off by supersonic aircraft moving at top speed.

Lenses and mirrors: The image formed by a *plane mirror* is virtual, erect and of the same size as the object. It is as far behind the mirror as the object is in front of it. It is used as a looking glass (mirror).

A *convex mirror* forms a virtual, erect and a diminished image of an object. It is used by motorists to get a view of the traffic coming from behind.

A *concave mirror*, normally forms a real and inverted image of an object. The image is virtual, erect and enlarged when the object is close to the mirror —

ALPHA's specialised professional courses

★ MEDICAL ENTRANCE EXAM '84

Students of XII Std PUC start early to make sure of a medical seat

ALPHA's specialised course, designed on the new syllabus and past question papers of all medical colleges in the country, will guide you towards the goal. The examiner cannot go beyond the boundary of the QUESTION BANK (4,000 questions and answers) compiled by Alpha's experts. ★ **FOUNDATION COURSE FOR '85 EXAM** Students of XI Std first PUC etc strengthen your chances for the '85 medical entrance exam by undergoing the foundation course. Both the above courses will be useful for the regular courses also.

★ CIVIL SERVICES (Prelim) (IAS)'84

Graduates desiring to join the highly coveted Indian Administrative Service can prepare early to pass this highly competitive exam with ease. Alpha's QUESTION BANK (3,000 questions and answers) will guide you to the goal.

★ MBA ENTRANCE EXAM

Excellent coaching for MBA entrance exams conducted by the Indian Institute of Management (Ahmedabad, Bangalore and Calcutta) XLRI Jamshedpur, Bajaj Institute of management, foreign and Indian Universities. Study materials prepared on the basis of the previous question papers will help you to pass the exam in flying colours.

★ C.A. ENTRANCE EXAM

Result oriented coaching by experts PUC, HSC are now eligible to appear for the exam.

For detailed prospectus send Rs. 2/- by P.O. or M.O.

Practice Tests

In preparing these tests we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam. Not easier, not harder, but just what you may expect. It is, therefore, a practical yardstick for charting your progress and planning your course.

Rating: Evaluate your performance on the basis of the following score-card:

| | | |
|-----------------------------|---|-----------|
| 100 questions in 60 minutes | — | Excellent |
| 60 questions in 60 minutes | — | Good |
| 50 questions in 60 minutes | — | Fair |
| 35 questions in 60 minutes | — | Poor |

Tips: 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

Everyday Science

Now that you've got a working knowledge of Everyday Science, attempt these questions on the subject for a better score. They have been selected (and reframed) from the question papers of the Civil Services, PO, NDA, CDS, Assistants' Grade, Clerical Grade, Central Excise, Income-tax Inspectors' and Stenographers' exams of the last few years.

AGRICULTURE & ALLIED SCIENCES

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement.

- Mixed farming refers to
 - Rabi and cash crops
 - Kharif and cash crops
 - Growing more than one crop in the same field
 - None of the above
- soil best retains moisture.
 - Clayey
 - Black
 - Sandy
 - None of the above
- Cash crops are——crops.
 - Kharif
 - Rabi
 - Food
 - Non-food
- Rabi crops are sown during
 - March-April
 - June-July
 - October-November
 - January-February
- Black soil is used for——cultivation.
 - Jute
 - Wheat
 - Cotton
 - Sugarcane
- Rabi crops are harvested during
 - August-September
 - October-November
 - June-July
 - March-April
- What is the main reason for low crop yield per acre in India?
 - Poor soil
 - Less-developed technology
 - Unfavourable weather conditions
 - Natural calamities
- 'Green Revolution' refers to
 - Increase in milk production
 - A revolution started by Jim Green
 - Increase in crop production
 - Increase in vegetable consumption
- After independence, there was a spectacular increase in——production.
 - Sugarcane
 - Wheat
 - Rice
 - Maize
- Age of a tree can be deter-

mined by

- Counting the number of rings in its trunk
 - Counting the number of leaves
 - Its size
 - Counting the number of branches
11. Leaves are green due to the presence of
- Metallic ions contained in the soil
 - Chlorophyll
 - Haemoglobin
 - All the above

TO OUR READERS

Yet once again, "CCTimes" goes by its readers' wishes. At our request for your opinion on whether or not to change the pullout (Practice Test supplement) to full-size pages, over two-thirds of you wrote in for the change. Those of you who were against it feared that it would mean a reduction in matter or an increase in price. That is definitely not so. Accurate computation at our end showed that more matter can be accommodated in 16 full-size pages than 32 half-size pages with no change in production costs. There are yet more advantages:

- Supplement pages can be raised above the allotted 16 pages in special circumstances;
- Continuous running matter saves time: you have less pages to turn and fewer questions are carried on to the next page;
- It becomes easier to handle the magazine.

12. Food energy is measured in
(a) Kelvin
(b) Calories
(c) Erg
(d) Bushel
13. The chief constituent of gobar gas is
(a) Carbon dioxide
(b) Methane
(c) Ethane
(d) Ethylene
14. During daytime plants take in
(a) Oxygen and give out carbon dioxide
(b) Carbon dioxide and give out oxygen
(c) Nitrogen and give out oxygen
(d) Oxygen and give out nitrogen
15. Gelatin is added in ice-cream to
(a) Hasten freezing
(b) Avoid crystal formation
(c) Give flavour
(d) Act as a sweetening agent
16. ——— is not a plant product
(a) Lac
(b) Saffron
(c) Wax
(d) Silk
17. Fishes, in an aquarium with green plants, live longer even when water is not changed. Why?
(a) Green plants provide nutrition
(b) Green plants absorb the carbon dioxide released by fishes
(c) Green plants give out oxygen and absorb carbon dioxide released by fishes
(d) None of the above
18. Fertilisers do not contain
(a) Nitrogen
(b) Phosphorous
(c) Potassium
(d) Manganese
19. ——— is man-made and naturally-occurring
(a) Milk
(b) Honey
(c) Ice
(d) Cotton
20. ——— is a natural fertiliser
(a) Urea
(b) Ammonium sulphate
(c) Ammonium nitrate
(d) Compost
21. ——— is/are the richest source of protein
(a) Vegetables
(b) Milk
(c) Soyabean
(d) Peas
22. Fruits remain fresh in a refrigerator for a longer period. Why?
(a) There are no dust particles in the refrigerator
(b) At low temperature, biochemical processes proceed at a slower rate
(c) There is no oxygen available
(d) There is more oxygen available
23. Silk cotton or Kapok is produced in the ——— of the Kapok tree.
(a) Leaves
(b) Stem
(c) Roots
(d) Pods
24. ——— do not contain chlorophyll.
(a) Algae
(b) Fungi
(c) Angiosperms
(d) Gymnosperms
25. Leaves fall from branches because
(a) They complete their duration
(b) Of low atmospheric pressure
(c) Of leaf abscission
(d) Of all the above
26. *Shorea Robusta* (Sal) is characterised by
(a) Absence of leaves
(b) Absence of fruits
(c) Its valuable timber
(d) None of the above
27. How do you save a tree during droughts?
(a) By clipping the tree
(b) By shedding of its leaves
(c) By covering the tree with a black screen
(d) None of the above
28. Green ear disease in bajra is caused by
(a) *Sclerospora Graminicola*
(b) *Albugo Candida*
(c) *Plasmopara Viticola*
(d) *Bremi Lactucae*
29. Ecology refers to
(a) Economic trends of different countries
(b) Study of insects
(c) Study of the relation of plants and animals to their surroundings
(d) Study of the smallest plants
30. Bullock-cart wheels have a bigger diameter to
(a) Lower centre of gravity
(b) Distribute load evenly
(c) Decrease friction between wheel and road
(d) Increase friction between wheel and road
31. Why should irrigation facilities in India be improved urgently?
(a) Irrigation yields better output
(b) Monsoon is irregular
(c) Rivers are dry for most part of the year
(d) Land under irrigation is very small
32. What is the 'flame of the forest'?
(a) A tree with very bright flowers
(b) Forest fire
(c) A lady serving tribals in forests
(d) An insect that glows like a flame in the forest
33. Milk of grass-fed animals contains more fat in
(a) Summer
(b) Winter
(c) Spring
(d) Autumn
34. Why are honey bees called social insects?
(a) They visit all flowers to collect nectar
(b) They live among men
(c) They depend for their food on other insects
(d) They move socially with other bees
35. Hydroponics is
(a) Cultivation of plants without the use of soil
(b) Detection of sound in water
(c) Animals living in water
(d) Japanese arrangement of flowers
36. Pearls are formed in
(a) Squids
(b) Snails
(c) Oysters
(d) Octopuses
37. After sowing seeds, ——— fertilisers are used.
(a) Phosphate
(b) Nitrate
(c) Green-manure
(d) All the above
38. To keep seeds in good condition, they should be kept in a ——— place.
(a) Warm and dry
(b) Warm and wet
(c) Cool and dry
(d) Cool and wet
39. Contour bunding is used to
(a) Stop winds in sandy deserts
(b) Irrigate desert areas
(c) Prevent erosion in hilly areas
(d) Increase soil fertility

(d) Conserve soil water in terrace farms in hilly areas

40. Cows and buffaloes conceive best in

- (a) Summer
- (b) Winter
- (c) Spring
- (d) All the above. There is no definite relationship between conceiving and season

41. — is most preferred as poultry feed.

- (a) Maize
- (b) Barley
- (c) Wheat
- (d) Rice husk

42. — is a stem.

- (a) Turnip
- (b) Radish
- (c) Carrot
- (d) Ginger

43. To increase milk production rapidly, India should adopt— breeding.

- (a) Cross-
- (b) Out-
- (c) Selective
- (d) In-

44. In India, — are used in inorganic fertilisers.

- (a) Carbon, nitrogen, phosphorous, sulphur
- (b) Carbon, potassium, nitrogen, sulphur
- (c) Carbon, calcium, nitrogen
- (d) Nitrogen, phosphorous, potassium

45. It is — to feed grit and small stones to birds.

- (a) Beneficial
- (b) Poisonous
- (c) Injurious
- (d) None of the above

V.G.

- (a) 35
- (b) 50
- (c) 65
- (d) 80

14. Deficiency of iron causes

- (a) Anaemia
- (b) Goitre
- (c) Rickets
- (d) Scurvy

15. Haemoglobin combines with oxygen in the

- (a) Arteries
- (b) Blood
- (c) Lungs
- (d) Tissues

16. The richest source of Vitamin A is

- (a) Banana
- (b) Egg
- (c) Apple
- (d) Orange

17. Which of the following statements regarding Vitamin C is correct?

- (a) It keeps body tissues healthy
- (b) It helps heal wounds and mend fractures
- (c) The richest source of Vitamin C is milk and its products
- (d) Regular intake of Vitamin C is not essential as it is stored in the body

18. — is present in the highest percentage in living matter.

- (a) Carbon
- (b) Oxygen
- (c) Nitrogen
- (d) Hydrogen

19. A child living in a big industrial town stays indoors most of the time and develops bow legs. This is because of

- (a) Anaemia
- (b) Goitre
- (c) Polio
- (d) Rickets

20. Deficiency of — causes rickets.

- (a) Vitamin A
- (b) Vitamin D
- (c) Proteins
- (d) Fats

21. Vitamin D is found in

- (a) Sunlight
- (b) Fish
- (c) Fats
- (d) All the above

22. Loss of — causes dehydration in the human body.

- (a) Salts
- (b) Water
- (c) Vitamins
- (d) Hormones

23. The ready source of energy

EVERYDAY SCIENCE-II

PHYSIOLOGY & BIOLOGY

1. — is/are a rich source of iron.

- (a) Eggs
- (b) Green vegetables
- (c) Pulses
- (d) Milk

2. — resist diseases.

- (a) Vitamins
- (b) Carbohydrates
- (c) Red corpuscles
- (d) White corpuscles

3. Flood-hit areas are to be given medical cover immediately. Of the following, which is the most appropriate step?

- (a) BCG injection
- (b) Inoculation
- (c) Smallpox vaccination
- (d) None of the above

4. — is the universal donor blood group.

- (a) A
- (b) B
- (c) O
- (d) AB

5. Retina in the eye acts as a — in the camera.

- (a) Lens
- (b) Shutter
- (c) Film
- (d) None of the above

6. Vitamins do not act as a/an

- (a) Energy source
- (b) Stimulant in body growth
- (c) Agent in regulating the chemical processes in the body
- (d) All the above

7. — enters the human body

through skin.

- (a) Tapeworm
- (b) Hookworm
- (c) Ringworm
- (d) Threadworm

8. It is safe to wear a — dress while cooking.

- (a) Nylon
- (b) Terylene
- (c) Silk
- (d) Cotton

9. Floods hazard health through the spread of

- (a) Cholera
- (b) Malaria
- (c) Influenza
- (d) Diarrhoea

10. During cardiac failure, what first aid will you give?

- (a) Mouth-to-mouth resuscitation
- (b) External cardiac massage
- (c) Both (a) and (b)
- (d) Complete body massage

11. — is said to have been eradicated in India.

- (a) Cholera
- (b) Smallpox
- (c) Typhoid
- (d) Measles

12. — is not a water-borne disease.

- (a) Cholera
- (b) Dysentery
- (c) Typhoid
- (d) Malaria

13. The normal percentage of water in the human body is about

- for athletes is
 (a) Vitamins
 (b) Fats
 (c) Proteins
 (d) Carbohydrates
- 24 Maximum energy per gram is contained in
 (a) Fats
 (b) Sugar
 (c) Vitamins
 (d) Carbohydrates
- 25 The easiest way of finding out the nutritional status for a large number of children in a short time is by
 (a) Studying their physical behaviour
 (b) Studying their hair face and eyes
 (c) Measuring their height and weight
 (d) All the above
- 26 Carbohydrates are needed to
 (a) Build muscles
 (b) Provide energy
 (c) Strengthen bones
 (d) Increase blood supply
- 27 Which of the following statements is not true? Seasonal fruits and vegetables are often preserved by
 (a) Pasteurisation
 (b) Drying and dehydrating them

- (c) Freezing them
 (d) Keeping them in a concentrated solution of sugar and citric acid
- 28 Red corpuscles are formed in the
 (a) Bone marrow
 (b) Small intestines
 (c) Kidney
 (d) Colon
- 29 Organic matter decomposes due to
 (a) Fungi
 (b) Bacteria
 (c) Virus
 (d) Yeasts
- 30 —described protoplasm as the physical basis of life
 (a) Jan Swammerdam
 (b) Anton van Leeuwenhoek
 (c) T H Huxley
 (d) Comte Leclerc de Buffon
- 31 —is not a water-borne disease
 (a) Cholera
 (b) Influenza
 (c) Amoebiasis
 (d) Typhoid
- 32 —is the latest advancement in Genetic Engineering
 (a) Discovery of interferon
 (b) Gene splicing
 (c) Plasmids
 (d) DNA synthesis
- 33 Blood plasma is

- (a) Neutral
 (b) Acidic
 (c) Alkaline
 (d) None of the above
- 34 —carried out the world's first human-brain transplant.
 (a) South Africa
 (b) West Germany
 (c) The US
 (d) Sweden
- 35 A cockroach has—pairs of legs
 (a) Three
 (b) Two
 (c) Four
 (d) Five
- 36 —first proved that plants possess life
 (a) Birbal Sahni
 (b) J C Bose
 (c) P C Ray
 (d) C V Raman
- 37 Common cold is caused by
 (a) Virus
 (b) Protozoa
 (c) Fungi
 (d) Bacteria
- 38 Heart diseases are mainly caused by the high intake of
 (a) Cholesterol
 (b) Sugar
 (c) Proteins
 (d) Starch

V G

EVERYDAY SCIENCE III

PHYSICAL SCIENCES

- 1 The process of heat transfer in which there is movement of the particles from one place to another is
 (a) Convection
 (b) Conduction
 (c) Radiation
 (d) All the above
- 2 Neutron was discovered by
 (a) Ernest Rutherford
 (b) James Chadwick
 (c) J J Thompson
 (d) Niels Bohr
- 3 Light travels slowest through
 (a) Water
 (b) Glass
 (c) Vacuum
 (d) Air
- 4 —proposed that the sun was at the centre of the universe
 (a) Newton
 (b) Copernicus
 (c) Galileo
 (d) Kepler
- 5 —is/are in a liquid state at room temperature

- (a) Mercury
 (b) Bromine
 (c) Fluorine
 (d) Both (a) and (b)
- 6 —can be used as a magnifying glass
 (a) Convex lens
 (b) Convex mirror
 (c) Concave lens
 (d) Both (a) and (b)
- 7 The image formed by a concave mirror is
 (a) Always virtual
 (b) Always real
 (c) Virtual, except when the object is within the focus of the mirror
 (d) Real, except when the object is within the focus of the mirror
- 8 —is the lightest element
 (a) Boron
 (b) Oxygen
 (c) Lithium
 (d) Carbon
- 9 Sriharikota High Altitude Range is situated in

- (a) Kerala
 (b) Andhra Pradesh
 (c) Tamil Nadu
 (d) Karnataka
- 10 Rohini 2 satellite takes nearly —to go once around earth
 (a) 40 min
 (b) 97 min
 (c) 24 hr
 (d) 86 hr
- 11 —is a communications satellite
 (a) Bhaskara I
 (b) Rohini 2
 (c) APPLE
 (d) All the above
- 12 Water is treated with—to kill germs or microbes harmful to man
 (a) Alum
 (b) Chlorine
 (c) Fluorides
 (d) Ammonia
- 13 Aspirin is
 (a) Acetic acid
 (b) Citric acid
 (c) Ethyl alcohol
 (d) Salicylic acid
- 14 100 gram of each of the following substances is heated

through 20°C by supplying heat at a constant rate. — will take maximum time to be heated through 20°C.

- (a) Copper
 - (b) Silver
 - (c) Mercury
 - (d) Water
15. pH of pure water is
- (a) Zero
 - (b) -7
 - (c) 7
 - (d) 4.5
16. — measures a liquid's density.
- (a) Spherometer
 - (b) Hydrometer
 - (c) Manometer
 - (d) Hygrometer
17. Persons suffering from hypermetropia cannot
- (a) Distinguish between different colours
 - (b) See clearly at night
 - (c) See distant objects clearly
 - (d) See close objects clearly
18. The naturally-occurring element with maximum atomic number is
- (a) Uranium
 - (b) Plutonium
 - (c) Fermium
 - (d) Californium
19. Quenching means
- (a) Alternate heating and cooling of a substance
 - (b) Rapid cooling by immersion into a cold liquid
 - (c) Keeping a substance at a high temperature for a long time
 - (d) Coating the substance with a layer of zinc
20. SLV's Mission Director is
- (a) Satish Dhawan
 - (b) U.R. Rao
 - (c) Raja Ramanna
 - (d) Ved Prakash Sandlas
21. If water is kept in the freezer compartment of a refrigerator it will freeze
- (a) First at bottom and then upwards
 - (b) First at top and then downwards
 - (c) Simultaneously all over
 - (d) None of the above
22. — is farthest from the sun
- (a) Saturn
 - (b) Pluto
 - (c) Uranus
 - (d) Neptune
23. — has maximum number of satellites.
- (a) Jupiter
 - (b) Venus
 - (c) Saturn

- (d) Mercury
24. — is used to measure the intensity of earthquakes.
- (a) Sphygmomanometer
 - (b) Barometer
 - (c) Seismograph
 - (d) Hectometer
25. Ozone layers are situated above the earth's surface at a height of nearly — miles.
- (a) 100
 - (b) 15-30
 - (c) 5-8
 - (d) 2-3

The distance moved by the body in 4 seconds, as per the velocity-time graph shown in figure, is — m.

- (a) 20
 - (b) 40
 - (c) 80
 - (d) 120
27. Force acting on the body in Q. No. 26 is
- (a) Zero
 - (b) Constant
 - (c) Continuously increasing
 - (d) Cannot be determined from the given information
28. One nautical mile is nearly equal to — mile.
- (a) 0.6
 - (b) 0.86
 - (c) 1.15
 - (d) 1.63
29. Extremely high temperatures are needed for production of energy by
- (a) Nuclear fusion
 - (b) Nuclear fission
 - (c) Burning of coal
 - (d) Chemical processes
30. Aluminium is extracted from
- (a) Cryolite
 - (b) Hematite
 - (c) Magnetite
 - (d) Bauxite
31. Petrol is a mixture of
- (a) Methane and ethane

- (b) Heptane, octane and nonane
- (c) Pentane and hexane
- (d) Propane, butane and hexane
32. — is associated with the vulcanisation of rubber.
- (a) Good Year
 - (b) Mansfield
 - (c) Godrej
 - (d) Dunlop
33. — is used for making radio-valve and bulb filaments because its melting point is highest.
- (a) Germanium
 - (b) Carbon
 - (c) Tungsten
 - (d) Boron
34. Hailey's Comet is expected to be closest to the sun next on
- (a) July 17, 1984
 - (b) February 9, 1986
 - (c) December 23, 1983
 - (d) May 5, 1987
35. Part of the moon is never visible on earth because
- (a) Moon is not rotating
 - (b) Period of rotation of the moon is the same as the period of rotation of earth
 - (c) Period of rotation of the moon is equal to the period of its orbit
 - (d) None of the above
36. — has/have no known natural satellites.
- (a) Jupiter
 - (b) Venus
 - (c) Mercury
 - (d) Both (b) and (c)
37. The first rocket was launched in
- (a) 1901
 - (b) 1914
 - (c) 1919
 - (d) 1926
38. One astronomical unit is
- (a) 10^{-10} m
 - (b) Distance travelled by light in one year
 - (c) Distance between sun and earth
 - (d) A unit of time ($365\frac{1}{4}$ days)
39. Besides India, — has a joint space programme with the USSR.
- (a) Italy
 - (b) Poland
 - (c) France
 - (d) East Germany
40. The longest-ever space-walk was performed
- (a) On July 30, 1982, by two Soviet cosmonauts
 - (b) In 1973, during the US

Skylab 4 mission

- (c) In October '57, by Yuri Gagarin
(d) In July '69, by Neil Armstrong
- 41 The gas used in a refrigerator for cooling is
(a) Fluorine
(b) Freon
(c) Nitrogen
(d) Ammonia
- 42 Bronze is an alloy of
(a) 60% copper and 40% iron
(b) 80% iron and 20% tin
(c) 90% copper and 10% tin
(d) 75% copper and 25% zinc
- 43 There are ———naturally occurring elements
(a) 92
(b) 94
(c) 107
(d) 238
- 44 Two naturally occurring elements are liquids. One is mercury, what's the other?
(a) Sodium
(b) Water
(c) Bromine
(d) Iodine
- 45 ———are added to some tooth-pastes and drinking water at some places to help prevent tooth decay
(a) Fluorides
(b) Clove oil
(c) Chlorides
(d) None of the above
- 46 ———act(s) as (a) bleaching agent (s)
(a) Hydrogen peroxide
(b) Sodium hypochlorite
(c) Silver iodide
(d) Both (a) and (b)
- 47 Washing soda is
(a) Sodium carbonate
(b) Sodium hydroxide
(c) Sodium thiosulphate
(d) None of the above
- 48 Hypo used as a fixer in photography, is
(a) Silver iodide
(b) Silver bromide
(c) Sodium thiosulphate
(d) Sodium carbonate
- 49 ———is used in fireworks
(a) Potassium nitrate (salt-peter)
(b) Ammonium chloride
(c) Potassium sulphate
(d) All the above
- 50 The most abundant metal in the earth's crust is
(a) Iron
(b) Aluminium
(c) Copper

(d) Silver

- 51 An amalgam is an alloy of ———with one or more other metals
(a) Zinc
(b) Iron
(c) Gold
(d) Mercury
- 52 Dry ice is
(a) Solid helium
(b) Solid carbon dioxide
(c) Ice at a temperature much below 0°C
(d) Solid alcohol
- 53 The Shanti Swarup Bhatnagar Award is associated with research in
(a) Biological sciences
(b) Engineering sciences
(c) Physical sciences
(d) All the above
- 54 UNISPACE-82 was held in
(a) Zurich
(b) Rome
(c) Paris
(d) Vienna
- 55 The longest total eclipse of the moon took place on
(a) July 6, 1982
(b) April 15, 1981
(c) August 22, 1980
(d) None of the above
- 56 The 1982 Nobel Prize for Chemistry has been awarded to
(a) George Stigler
(b) Aaron Klug
(c) K G Wilson
(d) John Vane
- 57 ———are members of the International Telecommunication Satellite Organisation which owns INTELSATs
(a) The US, UK, France and West Germany
(b) The US, USSR, UK, France, West Germany, Japan, China and India
(c) All European countries, the US and Canada
(d) 105 countries
- 58 INSAT 1-A was launched aboard a———rocket
(a) Delta
(b) Atlas-Centaur
(c) Saturn
(d) Soyuz
- 59 Energy released in an H-bomb is due to
(a) Nuclear fusion
(b) Nuclear fission
(c) Burning of hydrogen in a dense atmosphere of oxygen
(d) None of the above
- 60 Light takes nearly———to reach earth from moon.

(a) 1.2 sec

- (b) 11 sec
(c) 0.8 min
(d) 8 min
61. Nobel laureate Abdus Salam was the recipient of the———of the Indian Physics Association.
(a) S S. Bhatnagar Award
(b) R D Birla Award
(c) Aryabhata Medal
(d) H J Bhabha Award
- 62 Tincture of Iodine is a solution of iodine dissolved in
(a) Carbon tetrachloride
(b) Water
(c) Alcohol
(d) Ammonia
- 63 ———has unusual properties at low temperatures
(a) Hydrogen
(b) Helium
(c) Fluorine
(d) Nitrogen
- 64 Trees release carbon dioxide
(a) During daytime
(b) During night
(c) During day as well as night
(d) None of the above
- 65 The image formed at the retina by the eye is
(a) Real and inverted
(b) Real and erect
(c) Virtual and erect
(d) Virtual and inverted
- 66 When a man goes from equator to poles, his mass
(a) As well as weight increases
(b) As well as weight decreases
(c) Remains same but weight decreases
(d) Remains same but weight increases
- 67 The speed of a supersonic aircraft is about———m/sec.
(a) 40
(b) 160
(c) 300
(d) 350
- 68 Atomic weight to atomic number of an element is
(a) Greater than 1
(b) Less than 1
(c) Greater than or equal to 1
(d) Less than or equal to 1
- 69 Water in a pressure cooker boils at
(a) 100°C
(b) More than 100°C
(c) Less than 100°C
(d) None of the above
70. ———is the set of primary colours.
(a) Red, green and blue
(b) Red, yellow and blue

- (c) Red, green and violet
(d) Green, blue and violet
71. The lowest possible temperature is nearly
(a) Minus infinity
(b) -273°C
(c) -73°C
(d) 0°C
72. A rocket is based on the principle of conservation of
(a) Momentum
(b) Mass
(c) Energy
(d) None of the above
73. Density of ice to that of water is nearly
(a) 0.9
(b) 1.1
(c) 990
(d) 1100
74. — measures electric current
(a) Wattmeter
(b) Voltmeter
(c) Electrometer
(d) Ammeter
75. The image formed by a convex mirror is
(a) Enlarged and erect
(b) Diminished in size and erect
(c) Erect and of the same size as the object
(d) Erect or inverted depending on the distance between the mirror and object
76. Vikram Sarabhai Space Centre's Director is
(a) Satish Dhawan
(b) U.R. Rao
(c) Ved Prakash Sandlas
(d) Vasant Gowarikar
77. Sky appears—to a cosmonaut in space
(a) Blue
(b) White
(c) Black
(d) Colourless
78. Kilowatt hour is used for measuring
(a) Power
(b) Energy
(c) Current
(d) Voltage
79. Rear-view mirror used by motorists is
(a) Convex
(b) Concave
(c) Plane
(d) None of the above
80. — is associated with photography.
(a) Sodium thiosulphate
(b) Silver bromide
(c) Sodium carbonate
(d) Both (a) and (b)
81. — is a space shuttle.

- (a) Columbia
(b) Apollo
(c) Challenger
(d) Delta
82. What causes ocean tides?
(a) Pressure fluctuations in the atmosphere
(b) Gravitational effect of moon
(c) Temperature variations in the atmosphere
(d) Temperature variations in the ocean
83. A thicker fuse wire can withstand—electric current as (than) a thinner fuse wire.
(a) The same
(b) More
(c) Less
(d) Depends on the wire
84. US spacecraft— is associated with Saturn.
(a) Pioneer
(b) Mariner
(c) Challenger
(d) Voyager
85. Rohini 2's major power source is
(a) Nickel-cadmium storage batteries
(b) Solar panels
(c) Acid storage cells
(d) An assembly of dry cells
86. What's the process in which a solid vapourises on heating?
(a) There's no such process
(b) Sublimation
(c) Vaporisation
(d) Evaporation
87. Two isotopes of a substance have equal number of
(a) Protons
(b) Neutrons
(c) Neutrons and protons
(d) Neutrons, protons and electrons
88. The earth is a/an
(a) Perfect sphere
(b) Ellipsoid
(c) Oblate spheroid
(d) Pear-shaped figure
89. The earth's outer shell is known as
(a) Exosphere
(b) Lithosphere
(c) Ionosphere
(d) Troposphere
90. The equatorial diameter of earth is nearly — km.
(a) 4,000
(b) 6,400
(c) 7,800
(d) 12,800
91. From the nearest star, light will reach earth in nearly
(a) 8 min

- (b) 42 min
(c) 42 days
(d) 4.2 years
92. Ice floats in a beaker of water. If the ice melts the level of water in the beaker will
(a) Remain the same
(b) Increase
(c) Decrease
(d) Increase and then decrease
93. — is(are) a common constituent of all acids.
(a) Oxygen and hydrogen
(b) Oxygen
(c) Hydrogen
(d) Nitrogen
94. The Director-General of the International Atomic Energy Agency (IAEA) is
(a) Hans Blix
(b) H.S. Hans
(c) S.K. Singh
(d) George Shultz
95. Headquarters of IAEA are in
(a) Zurich
(b) Vienna
(c) Paris
(d) New York
96. A person wears a lens of power -2.5 dioptries. Without glasses, he will
(a) Not be able to see distant objects clearly
(b) Not be able to see near objects clearly
(c) See curved images of objects
(d) Not be able to distinguish one colour from another
97. The earth's crust contains maximum amount of
(a) Aluminium
(b) Oxygen
(c) Silicon
(d) Iron
98. A gas turbine converts chemical energy of a liquid fuel to — energy.
(a) Electrical
(b) Mechanical
(c) Heat
(d) Nuclear
99. Substances which can be easily drawn into wires are called
(a) Malleable
(b) Elastic
(c) Ductile
(d) Plastic
100. — went out of our solar system.
(a) Soyuz VI
(b) Challenger
(c) Columbia
(d) Pioneer 10

B.L.A.

Central Excise, I-T Inspectors' Exam, Oct '82

GENERAL STUDIES

Questions published in this section appeared in the GENERAL STUDIES paper of the Central Excise/Income-tax Inspectors' Exam held in October 1982. These are based on the candidates' memory as they are not allowed to take their question papers out of the examination hall. Though we have compiled these questions as close to the original as possible, we take no responsibility for any discrepancies.

DIRECTIONS For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement.

- | | | |
|---|--|---|
| 1 Aswan Dam is situated in
(a) Syria
(b) Egypt
(c) Argentina
(d) Sudan | (b) Zaire
(c) South Africa
(d) The US | (b) Other name for lightning
(c) Phenomenon whereby earth, moon and sun are in the same line
(d) Newly-discovered star |
| 2 is the President of Burma
(a) Ne Win
(b) Maung Maung Kha
(c) Li Dong
(d) Kai Sin | 10 Which famous mathematician lived during the reign of Chandra Gupta II?
(a) Aryabhatta
(b) Varahamihira
(c) Bhaskar
(d) Banbhattacha | 18 When left out on a cold night a metal rod becomes colder than a wooden one because
(a) Density of metal is higher
(b) Metal is a good conductor of heat
(c) Metal is heavier than wood
(d) None of the above |
| 3 is the President of Egypt
(a) Gamel Abdul Nasser
(b) Hosni Mubarak
(c) Hafez Al Assad
(d) Amin Gemayel | 11 is the nearest planet to earth
(a) Venus
(b) Jupiter
(c) Saturn
(d) None of the above | 19 Most of the Gupta kings followed
(a) Buddhism
(b) Jainism
(c) Shaivism
(d) Vaishnavism |
| 4 is a member of the United Nations
(a) Taiwan
(b) Bhutan
(c) North Korea
(d) Switzerland | 12 Saturn has—satellites
(a) 1
(b) 6
(c) 14
(d) 21 | 20 The—is the most important body of the UN
(a) UNICEF
(b) IMF
(c) Security Council
(d) General Assembly |
| 5 The Silent Valley Project is in
(a) UP
(b) Tamil Nadu
(c) Kerala
(d) Karnataka | 13 The first Indian observational satellite was launched in
(a) 1962
(b) 1975
(c) 1979
(d) 1981 | 21 The General Secretary of the UN is elected for—years
(a) 3
(b) 4
(c) 5
(d) 6 |
| 6 The term duck is related to
(a) Football
(b) Duck hunting
(c) Cricket
(d) Hockey | 14 APPLE was launched into orbit from
(a) Sriharikota
(b) Cape Canaveral
(c) Moscow
(d) Thumba | 22 —general elections have taken place in India so far
(a) 4
(b) 5
(c) 6
(d) 7 |
| 7 Dr P K Sethi got the 1981 Magsaysay Award for
(a) New finds in cancer cure
(b) Designing a new artificial limb for the handicapped
(c) Discovering a vaccine to cure leprosy
(d) Research in microbiology | 15 —got the 'Swaran Kamal' for 1981
(a) <i>Dakhal</i>
(b) <i>Pathar Panchali</i>
(c) <i>Chokh</i>
(d) None of the above | 23 —is a Union territory.
(a) Tripura
(b) Arunachal Pradesh
(c) Manipur
(d) Sikkim |
| 8 —won the 1982 Wimbledon Tennis Championships
(a) Andrea Jaeger
(b) Billie Jean King
(c) Chris Evert Lloyd
(d) Martina Navratilova | 16 The World Bank agreed to give India \$—billion in 1982-83
(a) 6
(b) 12
(c) 21
(d) 3.4 | 24 The minimum number of members for a state Assembly is
(a) 60
(b) 200
(c) 345
(d) 500 |
| 9 The largest producer of diamonds is
(a) Ghana | 17 Aurora Borealis is the
(a) Meteoric phenomenon causing streamers of light in the North Pole | 25 The first Anglo-Afghan war was fought by the British under Lord
(a) William Bentinck
(b) Auckland
(c) Hardinge
(d) Dalhousie |
| | | 26 Madura was the capital of —dynasty.
(a) Chola
(b) Pandya
(c) Chera |

- (d) Pallava
27. The Sixth Five Year Plan has allocated the maximum amount to
- Industry and minerals
 - Irrigation
 - Power
 - Transport
28. The—administers the oath to the President during the swearing-in ceremony.
- Prime Minister
 - Speaker of Lok Sabha
 - Chief Justice
 - Vice-President
29. The Hunter Commission (1882) was appointed to
- Implement local self-government
 - Introduce social reforms
 - Review the progress of education in India
 - None of the above
30. Which of the following countries is not a member of the UN?
- Turkey
 - Uganda
 - Mauritius
 - Switzerland
31. —is not a member of NATO.
- Canada
 - Denmark
 - Italy
 - Sri Lanka
32. There are—major nuclear powers in the world.
- 2
 - 3
 - 4
 - 5
33. —is the minimum age for membership of Rajya Sabha.
- 25
 - 30
 - 35
 - 40
34. —had influenced Mahatma Gandhi's ideas.
- Vladimir Lenin
 - Karl Marx
 - Leo Tolstoy
 - Maxim Gorky
35. The Battle of Plassey took place in
- 1757
 - 1772
 - 1864
 - 1870
36. The—are the oldest mountain ranges in India.
- Aravalli
 - Vindhyas
 - Satpuras
 - Himalayas
37. Epsom salt is
- Magnesium sulphate

- (b) Calcium sulphide
- (c) Sodium chloride
- (d) Calcium carbonate
38. The Meenakshi Temple is in

- Tiruchirapalli
 - Mahabalipuram
 - Trivandrum
 - Madurai

- Canada
 - The US
 - The UK
 - Ireland
51. —has monarchy.
- Thailand
 - Philippines
 - Pakistan
 - South Korea
52. —Sea is an inland sea.
- Arabian
 - Kara
 - Caspian
 - Barents
53. Graphite is made of
- Iron
 - Coal
 - Lead
 - Carbon
54. A fuse is used to prevent—of current in an electric circuit.
- Leakage
 - High flow
 - Low flow
 - None of the above
55. Aspirin is a
- Medicine
 - Drug
 - Mathematical symbol
 - Protein
56. —measures the strength and direction of electric current.
- Ammeter
 - Multimeter
 - Galvanometer
 - Barometer
57. Muhammad Nadir was a painter in—'s court.
- Shah Jahan
 - Jahangir
 - Akbar
 - Aurangzeb

58. Bharatiya Jnanpith Award for 1981 went to
 (a) Ashapurna Devi
 (b) Naushad
 (c) S H Vatsyayan
 (d) Amrita Pritam
59. Tuberculosis affects the
 (a) Spleen
 (b) Liver
 (c) Lungs
 (d) Trachea
60. — is associated with the Peacock Throne
 (a) Shah Jahan
 (b) Humayun
 (c) Jahangir
 (d) Babar
61. The Ellora Caves date back to the reign of
 (a) Rashtrakutas
 (b) Satvahanas
 (c) Guptas
 (d) Mauryas
62. Anaemia causes
 (a) Deficiency of red blood corpuscles
 (b) Swelling in the intestines
 (c) Both (a) and (b)
 (d) None of the above
63. — was not founded by Mahatma Gandhi
 (a) Phoenix Settlement
 (b) Tolstoy Farm
 (c) Sabarmati Ashram
 (d) Vishwa Bharti
64. — was the first to discover

the sea route to India from Europe.

- (a) Christopher Columbus
 (b) Marco Polo
 (c) Vasco da Gama
 (d) Robert Magellan
65. Purna Swarajya resolution was adopted in 1929 at
 (a) Bombay
 (b) Lahore
 (c) Surat
 (d) Delhi
66. Rh is associated with
 (a) Blood cells
 (b) Skin colour
 (c) Respiration
 (d) Sight
67. The Davis Cup was started in
 (a) 1894
 (b) 1896
 (c) 1900
 (d) 1920
68. The Civil Disobedience Movement of 1922 was suspended because of
 (a) A resolution passed by the Congress
 (b) Chauri Chaura violence
 (c) British oppression
 (d) None of the above
69. The Indian Constitution recognises — languages.
 (a) 13
 (b) 14
 (c) 15
 (d) 17

4. "All animals are equal, but some animals are more equal" is attributed to
 (a) Winston Churchill
 (b) George Bernard Shaw
 (c) George Orwell
 (d) William Shakespeare
5. — was a member of the jury for the IX International Film Festival of India (IFFI) held in January 1983.
 (a) Sunil Dutt
 (b) Satyajit Ray
 (c) Ben Kingsley
 (d) None of the above
6. Baharul Islam, before entering Assam politics recently, was
 (a) The Governor of Assam
 (b) The Chief Minister of Karnataka
 (c) A professor in JNU
 (d) A judge in the Supreme Court
7. Who among the following is an English writer?
 (a) Amrita Pritam
 (b) Mahadevi Varma
 (c) Premchand
 (d) None of the above
8. Helmut Kohl, the Chancellor of West Germany, belongs to the
 (a) Christian Democratic Union
 (b) Social Democratic Party
 (c) Free Democratic Party
 (d) Labour Party
9. At the IX IFFI, which film won the Golden Peacock?
 (a) *Open Heart*
 (b) *Bus Driver*
 (c) *Chokh*
 (d) None of the above
10. Who performed the title role in the film *Gandhi*?
 (a) Naseerudin Shah
 (b) Ben Kingsley
 (c) Richard Attenborough
 (d) Roger Moore
11. Prakash Padukone of India did not play in the IX Asian Games because
 (a) He did not like to participate
 (b) He was ill at the time of the Games
 (c) Asian Games management committee did not let him play
 (d) He was not eligible to enter the Games
12. The controversial Khunjerab Pass runs between
 (a) India and China
 (b) Pakistan and Afghanistan
 (c) India and Pakistan
 (d) Pakistan and China

SBI (PO) Exam, June '83

COMPILED BY ABDUL RAHMAN & RAJAN R

GENERAL AWARENESS

Questions published in this section appeared in the GENERAL AWARENESS paper of the SBI (Associate Banks) PO Exam held in June 1983. These are based on the candidates' memory as they are not allowed to take their question papers out of the examination hall. Though we have compiled these questions as close to the original as possible, we take no responsibility for any discrepancies.

DIRECTIONS For each of the following questions, tick mark the choice that best answers the question. Do this before looking at the answers given at the end of this supplement.

1. A Soviet nuclear-powered satellite recently crashed into the — Ocean
 (a) Pacific
 (b) Atlantic
 (c) Indian
 (d) Arctic
2. Yuri Andropov, before being elected General Secretary of the Communist Party of the Soviet Union, was
 (a) Member of the Party

- Politburo
 (b) Head of the KGB
 (c) President of the USSR
 (d) Ambassador of the USSR in Hungary

 (a) Freedom of the press
 (b) Investigative journalism
 (c) Printing quality of the newspapers
 (d) Wages of journalists

13. Tamil Nadu CM M.G. Ramachandran undertook a seven-hour fast to protest against the Central Government for
 - (a) Not giving autonomy to his state
 - (b) Not supplying adequate food aid to the state
 - (c) Not reaching an accord regarding Krishna waters
 - (d) Not solving the dispute on the boundary of the state
14. Which country could not bag even one gold in the IXth Asian Games?
 - (a) Syria
 - (b) Iraq
 - (c) Afghanistan
 - (d) Singapore
15. Australia won the recently-held Australia-England cricket series
 - (a) 2-0
 - (b) 2-1
 - (c) 3-2
 - (d) 3-1
16. — won the last Essanda World Cup
 - (a) India
 - (b) Australia
 - (c) Pakistan
 - (d) China
17. The last Chairman of the Non-aligned Movement was
 - (a) Fidel Castro
 - (b) Indira Gandhi
 - (c) Saddam Hussain
 - (d) King Fahd
18. The Sixth Five Year Plan aims at a — per cent yearly increase in overall growth.
 - (a) 5.2
 - (b) 6.0
 - (c) 7.2
 - (d) 8.5
19. Regarding the Legislative Council, which of the following is not correct?
 - (a) Its tenure is normally for five years

- (b) Its members are citizens of India
 - (c) Its members should not be less than 30 years of age
 - (d) One-sixth of the strength is nominated by the governor from among persons distinguished in literature, science or social service
20. MX refers to
 - (a) An oil well in Bombay High
 - (b) Submarines developed by India
 - (c) ICBM missiles built by the US
 - (d) The artificial heart implanted in Barney Clark
21. An alleged secret report was published in the American press regarding Pakistan's nuclear programme. It stated that
 - (a) Pakistan will become self-sufficient by the end of the century
 - (b) Pakistan has already made an atom bomb
 - (c) Pakistan intends to modernise its armed forces
 - (d) The US will supply more F-16s to Pakistan
22. KLM is the national airline of
 - (a) The USSR
 - (b) Holland
 - (c) Saudi Arabia
 - (d) Thailand
23. — is the latest US fighter aircraft.
 - (a) Harrier
 - (b) Jaguar
 - (c) Mirage
 - (d) Tiger Shark
24. The resolution for complete independence of India was passed in the — Congress session.
 - (a) Lahore
 - (b) Madras
 - (c) Karachi
 - (d) Calcutta
25. To cultivate soil for growing crops is known as
 - (a) Sericulture
 - (b) Ecology
 - (c) Agriculture
 - (d) Horticulture
26. National Peoples' Congress is the name of the — Parliament.
 - (a) Indonesian
 - (b) Iranian
 - (c) Japanese
 - (d) Chinese
27. A multinational is
 - (a) A company operating in

- several countries
 - (b) A person touring various countries
 - (c) A ship going from one country to another
 - (d) The name of a satellite launched by India
28. Which of the following blood-group holders is the universal donor?
 - (a) A
 - (b) B
 - (c) O
 - (d) AB
29. Which of the following Indian universities first started a full-fledged course in computers?
 - (a) Madras
 - (b) Delhi
 - (c) Calcutta
 - (d) Bangalore
30. Ajanta Caves are situated in
 - (a) Maharashtra
 - (b) Madhya Pradesh
 - (c) Orissa
 - (d) UP
31. Helpage India aims at
 - (a) Giving help to the aged
 - (b) Rendering help to the orphaned children
 - (c) Giving lunch to children in their schools
 - (d) Giving monetary assistance to needy persons
32. The study of diseases is
 - (a) Pathology
 - (b) Osteology
 - (c) Conchology
 - (d) Ecology
33. Eugenics is the science of
 - (a) Production of better offsprings
 - (b) Environment
 - (c) Mental disorders
 - (d) Growing crops
34. Poll-rigging means
 - (a) Rigging oilwells
 - (b) Campaigning for elections beyond the time-limit
 - (c) Use of unauthorised means in the polling
 - (d) Slogan-shouting by the parties contesting the election
35. Linotype is associated with
 - (a) Oil painting
 - (b) Sculpture
 - (c) Music
 - (d) Printing
36. The first Non-aligned Summit was held in 1961 in
 - (a) Belgrade
 - (b) Lusaka
 - (c) New Delhi
 - (d) Havana

Test Of Reasoning

BY LT COL I R MANCHANDA, former Dy President, S S.B.

FOR BSRB (PO) EXAM

This section is designed to help those appearing in the BSRB (PO) Exam (Southern, Western and Central Groups) to be held this month.

Time: 15 minutes

Scores 1 Give yourself one mark for each correct answer.

2. Deduct one mark for each wrong answer. 3. Then rate your score as under

Excellent 27-31 Very Good 24-26 Good 19-23 Fair.. 14-18 Poor Below 14

DIRECTIONS For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of this supplement

Directions Questions 1 to 15 consist of problems commonly known as 'Data Sufficiency Test Items'. Each question is followed by two numbered facts. You are required to decide whether the data is sufficient for answering the question. Read each question and the two numbered facts that follow it and then mark your answer as explained below

- (A) If statement 1 alone is sufficient to answer the question, but statement 2 alone is not sufficient
 - (B) If statement 2 alone is sufficient to answer the question, but statement 1 alone is not sufficient
 - (C) If both statements together are required to answer the question, but neither statement alone is sufficient
 - (D) If either statement by itself is sufficient to answer the question
 - (E) If enough facts are not available to answer the question
- 1 How much did a person pay for the TV set which was being sold at a discount?
 - (1) 25% off the marked price of the TV set saved him Rs 1,500
 - (2) The marked price of the TV set was Rs 6,000
 - 2 What is the original price of sugar per kg?
 - (1) A reduction of $33\frac{1}{3}\%$ in the original price enabled a housewife to purchase 10 kg more sugar for Rs 123
 - (2) At the reduced price, a

housewife could get 20 kg sugar for Rs 82

In the diagram, triangle PQR is inscribed in a circle and TQS is a tangent to the circle. What is the measure of angle QPR?

- (1) Angle PQT measures 70°
- (2) Angle PQR measures 60°
- 4 What was the temperature at noon?
 - (1) From 10 a.m. to 2 p.m., the temperature rose from 34°C to 41°C
 - (2) The temperature rose at a constant rate from 11 a.m. to 2 p.m.
- 5 How many students in Delhi University study Physics?
 - (1) All Delhi University students who study Physics study Chemistry also
 - (2) In Delhi University, there are exactly 3,970 students who study Chemistry
6. What does $3A + 5B$ equal?
 - (1) $A = \frac{3}{5}$
 - (2) $5B - 3A$ equals 192
- 7 What does $x + y$ equal?
 - (1) $x^2 = 25$ and $y^2 = 9$
 - (2) x and y are negative integers
- 8 In how much time will A be able to catch up with B?

- (1) A does 60m while B does 40
- (2) B is given a 5-min start in the race

9 In a cyclic quadrilateral ABCD, what is the measure of angle ABC?

- (1) The sum of angles ABC and BCD is equal to 170°
- (2) Angle ADC is equal to 55°

10

What is the area of the trapezoid ABCD?

- (1) The diagonal AC equals 25
- (2) The trapezoid is isosceles
11. What is the speed of the current in stream 'Badli'?
 - (1) Ram's speed of rowing in Badli is 8 kmph when he goes upstream
 - (2) Ram is able to row in Badli a distance of 2 km in 10 min when he goes downstream
- 12 A sum of money deposited in a bank becomes Rs 64,000 in 3 years at compound interest. What is the rate of interest?
 - (1) The same sum of money becomes 1,25,000 in 6 years
 - (2) The sum of money deposited is Rs 32,768
- 13 How many members are there in Lal Desh's Parliament?
 - (1) There are 320 women members in Lal Desh's Parliament
 - (2) 20% of the members of Parliament of Lal Desh are men

14

What is the radius of a circle with centre R?

- (1) ASC is the semi-circle drawn on AC
- (2) $AP = PB = BQ = QC = 4$ cm
- 15 How much water can a bucket hold?
 - (1) The radii of the ends of the bucket are 35 cm and 7 cm
 - (2) The height of the bucket

is one-fourth the circumference of the larger end

Directions In questions 16 to 20, select the lettered pair wherein the words are related in the same way as the two capitalised words are related to each other.

- 16 DIPSOMANIAC LIQUOR
 (a) monomaniac cigarettes
 (b) kleptomaniac goods
 (c) pyromaniac fire
 (d) hydrophobe water
- 17 COMESTIBLE : FOOD
 (a) manageable : social
 (b) detestable : juice
 (c) pliable adult
 (d) potable water
- 18 ASCETIC AUSTERITY
 (a) martinet regulations
 (b) parsimonious luxury
 (c) tactician battle
 (d) snake poisonous
- 19 LUCENT LUMINOUS
 (a) limpid loath
 (b) loquacious talkative
 (c) mandatory optional
 (d) exceptionable : praise-worthy
- 20 ROUGH MELLIFLUOUS
 (a) melee fight
 (b) lugubrious profitable
 (c) magnanimous generous
 (d) magniloquent modest

Directions Questions 21 to 24 are based on the following. About 20 years ago, three friends—Bhatia, Malhotra and Kapoor—started a small-scale industry with equal investment. The three friends worked so hard that today they have three large-scale units—one producing cloth, the second manufacturing scooters, and the third manufacturing jewels for the watch industry. During the last three years, each partner tried to induct as many of his relatives as possible into various managerial posts in the group resulting in the fact that there have been family feuds which have adversely affected the business. In order to ensure stability and profitability, an agreement is reached.

- (a) Each partner will head one industrial unit at one time with the designation of a managing director. Every two years they will shift to another unit.
 (b) Each managing director will have two chief executives—one from each of the other families.
 (c) Each chief executive will

have a staff composed equally of members of his managing director's family and members of the third family. Each chief executive will have the same number of members on his staff.

- 21 When Bhatia is the managing director of the cloth unit, which of the following cannot be true?
 (a) Some of the staff members in the cloth unit are from Bhatia's family
 (b) Some of the staff members in the cloth unit are from Kapoor's family
 (c) Two of the chief executives in the other units are from Malhotra's family
 (d) Two of the chief executives in the other units are from Bhatia's family
- 22 When Kapoor heads the scooter manufacturing unit, which of the following will be true about the composition of the staff of the chief executives of the jewel manufacturing unit?
 I One-fourth from Kapoor's family
 II One-half from Bhatia's family, one-fourth from Malhotra's family
 III One-half from Malhotra's family, one-fourth from Bhatia's family
 (a) I only
 (b) I and II only
 (c) I and III only
 (d) I and II or I and III
- 23 If the office of the managing director of the jewel manufacturing unit passes from Bhatia to Kapoor, which of the following must be replaced?
 (a) The chief executive from Malhotra's family and all staff members from Kapoor's family
 (b) The chief executive from Kapoor's family and all of his staff members
 (c) The chief executive from Kapoor's family and his staff members from Bhatia's family
 (d) The chief executive from Bhatia's family and all his staff members belonging to Bhatia's family
- 24 Which of the following is permissible according to the agreement?
 (a) Half of the staff members

in one particular unit belonging to one family

- (b) More than half of the staff in one particular unit belonging to one family
 (c) Any person having a member of the same family as his immediate superior
 (d) Half the total number of staff in all three units combined belonging to one particular family

Directions Questions 25 to 31 consist of very common words, but the letters have been scrambled. Also, the letters have been allotted numbers according to the sequence in which these appear in the alphabet. You are required to find the correct word and state which of the alternatives gives the meaningful word so formed. Note that of the two similar letters, only one has been numbered.

TEST OF REASONING

- (A), i.e., statement 1 alone is sufficient to answer the question, but statement 2 alone is not sufficient. The first statement implies that the marked price of the TV set must have been four times Rs 1,500, since Rs 1,500 is one-fourth of it. A person would, therefore, have paid Rs (6,000 - 1,500), i.e., Rs 4,500. Statement 2 alone does not solve the problem since it gives only the marked price and mentions nothing about the discount.
- (A), i.e., statement 1 alone is sufficient to answer the question, but statement 2 alone is not sufficient. Since a reduction of $33\frac{1}{3}$ per cent, i.e., $\frac{1}{3}$ of 123, which is Rs 41, enabled a housewife to purchase 10 kg more sugar, the reduced price per kg of sugar works out to Rs 4.10 per kg. Since this price per kg represents $66\frac{2}{3}$ per cent of the original price, the original price of sugar per kg must have been $\frac{3 \times 4.10}{2}$, i.e., Rs 6.15.
- (C), i.e., both statements together are needed to answer the question, but neither statement alone is sufficient. From the two statements together, we get angle RQS equal to 50° . It is an established fact that the angle which a chord of a circle makes with the tangent to it at the point of contact in one of its segments is always equal to the angle subtended by the chord in the corresponding alternate segment. Angle QPR must, therefore, equal 50° .
- (E), i.e., not enough facts are available to answer the question. We cannot work out temperature at noon unless we know the rate of increase in temperature from 10 a.m. to 2 p.m. or, alternatively, the temperature at 11 a.m., besides other facts already given.
- (E), i.e., impossible to get the answer. "All Physics students study Chemistry" does NOT mean that all Chemistry students study Physics also.
- (C), i.e., both statements are required to answer the question. The first statement implies that $3B-5A$ is equal to 0. Using this equation and the one given in statement 2, we can work out the values of A and B, which are 36 and 60 respectively. The value of $3A+5B$ can then be found.
- (C) i.e., both statements are required to answer the question. If $x^2=25$, then x can be equal to both plus and minus 5; likewise, if $y^2=9$, y can be equal to both plus and minus 3. Without knowing whether x and y are positive or negative, we cannot arrive at any definite value for the expression $x+y$.
- (C), i.e., both statements are required to answer the question. The first statement gives their relative speeds while the second statement gives the lead that B is given at the start of the race. Assume that 5-min start given to B is equivalent

distance) in terms of minutes. If that be so, we are assuming the speed of B to be 8 m per min. In that case, the speed of A will be 12 m per min. The relative speed of A being 4 m per min, A will be able to catch up with B in 4 min.

9. (B), i.e., statement 2 alone is sufficient to answer the question, and statement 1 alone is not sufficient. A rough diagram will help. The opposite angles of a cyclic quadrilateral are supplementary. If angle $ADC = 55^\circ$, angle ABC will equal 125° . Statement 1 cannot give us the answer unless we know the measure of angle BCD also.
10. (C), i.e., both statements are needed to answer the question. The area of a trapezoid is equal to $\frac{1}{2}$ (sum of parallel sides) \times altitude. We cannot deduce the altitude from statement 1 alone. But when it is read in conjunction with statement 2, we can find the altitude from C on AB. It will be equal to $\sqrt{25^2 - 19^2}$.
11. (C), i.e., both statements are required to answer the question, since the speed of current is equal to *speed downstream*—*speed upstream*. Ram's speed downstream is 12 kmph, while that upstream is 8 kmph. Speed of current will, therefore, equal 2 kmph.
12. (D), i.e., either statement by itself is sufficient to answer the question. Using the given information in the opening statements and statement 1, we have $\frac{P(1+r)^4}{P(1+r)^3} = \frac{1,25,000}{64,000}$. This means $(1+r)^2 = (\frac{5}{4})^2$ or $1+r = \frac{5}{4}$ or $r = \frac{1}{4}$, i.e., 25 per cent. Since statement 2 gives us the money deposited, we can find out the rate, since everything else is given in the opening sentence. $32,768(1+r)^3 = 64,000$. $(1+r)^3$ is equal to $\frac{64,000}{32,768} = \frac{125}{64}$. $1+r = \frac{5}{4}$ or $r = \frac{1}{4}$, i.e., 25 per cent.
13. (C), i.e., both statements are needed to answer the question. Since 20 per cent of the MPs are men, women, whose number is 320, must represent 80 per cent of the total MPs. Total members in Lal Dosh's Parliament must, therefore, equal $\frac{320}{80} \times 100$, i.e., 400.
14. (C), i.e., both statements are required to answer the question. A perpendicular drawn at B touching the bigger semi-circle will equal 8 cm and shall pass through R. Assuming the radius of the circle with centre R to be equal to x , RB will be equal to $8-x$, while RP will equal $4+x$. Since $PB = 4$ cm, $(4+x)^2$ must equal $(8-x)^2 + 4^2$. $16 + x^2 + 8x = 64 + x^2 - 16x + 16$; this gives us x equal to $\frac{8}{3}$, i.e., $2\frac{2}{3}$ cm.

15. (C), i.e., both statements are needed to answer the question. A rough diagram of the bucket shall help. Thick lines represent the bucket with AB and CD as its two ends. X and Y are the centres of the two ends. Height of the bucket is $\frac{1}{2} \times 2 \times \frac{1}{2} \times 35$, i.e., 55 cm. Extend lines XY, AC and BD to meet at point Z directly below X and Y. Since triangles ZXB and ZYD are similar, distance YZ (the height of the smaller cone) can be worked out. Now, if you subtract the volume of the smaller cone with height YZ from the volume of the bigger cone with height XZ, you will get the volume of the bucket, and thereby the quantity of water it can hold.
16. (c), i.e., pyromaniac is to fire. A pyromaniac loves fires in the same way as a dipsomaniac loves liquor.
17. (d), i.e., potable is to water. Water which is fit to drink is called potable in the same way as food which is fit to eat is called comestible.
18. (a), i.e., martinet is to regulations. Martinet means a strict disciplinarian. A strict disciplinarian observes rules and regulations in the same manner as an ascetic practises austerity.
19. (b), i.e., loquacious is to talkative. The relationship is that of synonyms.
20. (d), i.e., magniloquent is to modest. The relationship is that of antonyms.

Note: The diagram shown below will be of great help in answering questions 21 to 24 speedily. Note that the relationships in the diagram are true irrespective of the unit each of the three partners heads.

- Legend:** (i) MD—managing director (ii) CE—chief executive (iii) (K)—Kapoor's family. Likewise, (B) and (M) stand for Bhatia's and Malhotra's families respectively. (iv) S—staff.
21. (c), i.e., "two of the chief executives in the other units are from Malhotra's family" cannot be true. If you check the diagram, you will find the answer self-explanatory.

- 22 (d) If I and II or I and III If Kapoor heads the scooter manufacturing unit, the jewel manufacturing unit can be headed by either Bhatia or Malhotra. Irrespective of which of these two gentlemen heads the jewel manufacturing unit, one fourth of the staff of its chief executives will be from Kapoor's family. However, if Bhatia heads the jewel manufacturing unit, one half of the staff of its chief executives shall be from Bhatia's family and one fourth from Malhotra's family. Further, if Malhotra heads the jewel manufacturing unit one half of the staff of its chief executives shall be from Malhotra's family and one fourth from Bhatia's family.
- 23 (c) If the chief executive from Kapoor's family and his staff members from Bhatia's family must be replaced. When the jewel manufacturing unit passes from Bhatia to Kapoor the chief executive from Malhotra's family and his staff stay put

since their presence does not violate the terms of the agreement. However, the chief executive from Kapoor's family will have to be replaced by the chief executive from Bhatia's family. Further, since the chief executive from Bhatia's family should have one-half of his staff from Kapoor's family, staff members from Bhatia's family will have to be removed and replaced by staff members from Kapoor's family after the change is effected.

- 24 (a), i.e., half the staff members in one particular unit belonging to one family. The diagram makes this answer self-explanatory.
- 25 (b), i.e., 817248563—WATCHWORD
- 26 (a), i.e., 152436354—COGNITION
- 27 (c), i.e., 154132—CLICHE
- 28 (c), i.e., 86571342—SPORADIC
- 29 (d), i.e., 6753142—PROFANE
- 30 (c), i.e., 364521—MYOPIC
- 31 (d), i.e., 457362417—INTERDICT

ECONOMIC TERMS

Economic growth Rate of increase in an economy's real output or income over time. That is, the rise in its full employment output in constant prices. Economic growth may be expressed in terms of either real GNP or real NNP on either a total or per capita basis over a period of time. The total measure is employed to describe the expansion of a nation's economic output or potential, whereas the per capita measure is used to express its material standard of living and to compare it with other countries.

Eurodollars Dollar deposits in banks outside the United States, mostly in Europe. They are held by American and foreign banks, corporations and individuals and represent dollar obligations which are constantly being shifted from one country to another in search of the highest return. Hence they may affect balances of payments and may even turn pressure on a currency into an international monetary crisis.

General price level Expression representing the average level of prices in the economy. It is often represented by the Implicit Price Index although no index can accurately reflect all prices.

Hyperinflation Situation in which prices are rising with little or no increases in output, hence it is also sometimes called 'runaway' or galloping inflation.

Index numbers Figures which disclose the relative changes in a

series of numbers, such as prices or production, from a base period. The base period is usually defined as being equal to an index number of 100, and all other numbers in the series both before or after that period are expressed as percentages of that period. Index numbers are widely used in reporting business and economic data.

Less developed (underdeveloped) country A nation which in comparison with the more advanced countries tends to exhibit such characteristics as (1) poverty level of income and hence little or no saving, (2) high rate of population growth, (3) substantial majority of its labour force employed in agriculture, (4) low proportion of adult literacy, (5) extensive disguised unemployment and (6) heavy reliance on a few items for export.

Market economy Economic system in which the questions of what to produce, how much to produce and for whom to produce are decided in an open market through the free operation of supply and demand. There are no pure market economies, but several specialised markets (such as the organised commodity exchanges) closely approximate some of the properties of a pure market system.

Money Anything which has at least these four functions: (1) a medium of exchange for conducting transactions, (2) a measure of

value for expressing the prices of current and future transactions, (3) a standard of deferred payments which permits borrowing or lending for future repayment with interest, and (4) a store of value which permits saving for future as well as current spending.

Money income Amount of money received for work done (Contrast with real income).

Real income Purchasing power of money income or the quantity of goods and services that can be bought with money income.

Terms of trade Number of units of goods that must be given up for one unit of goods received by each party (e.g. nation) to a transaction. In general, the terms of trade are said to move in favour of the party that gives up fewer units of goods for one unit of goods received, and against the party that gives up more units of goods for one unit of goods received. In international economics the concept of 'terms of trade' plays an important role in evaluating exchange relationships between nations.

Union Organisation of workers which seeks to gain a degree of monopoly power in the sale of its services so that it may be able to secure higher wages, better working conditions and other economic improvements for its members.

by Milton H. Spencer

THE FREEDOM MOVEMENT

BY RAJU MANSUKHANI

Our fifth instalment traces events leading to the growth of trade unionism and the onset of communalism.

Socialist ideas and the growth of terrorism

In the '20s and 30s, the activities of labour organisations and revolutionary terrorists gained momentum. While the Congress itself had a left wing, Socialist and Communist groups, too, came into existence. M N Roy was the first Indian to be elected to the leadership of the Communist International and the Communist Party of India came into existence in 1925. During the Great Depression which shook the world from 1929 onwards, the Communist Party grew in strength under the leadership of P C Joshi. The Congress Socialist Party, which was the left wing of the Congress, was founded by Acharya Narendra Dev and Jayaprakash Narayan.

The poor condition of the peasants and workers also led to the growth of trade unionism under the leadership of the All-India Trade Union Congress. A number of strikes occurred during 1928, including a railway workshop strike at Kharagpur, a South Indian railway workers strike and a strike by textile-mill workers at Bombay. In the 1930s, peasants from all over the country began to demand land reforms, abolition of zamindari, reduction of land revenue and rent, etc., while workers in factories and plantations demanded better working conditions and recognition of their trade-union rights. The first all-India peasant organisation, the All-India Kisan Sabha, was formed in 1936 and peasants became more actively involved in the national movement.

Revolutionary terrorist activity, too, grew in this period. The Hindustan Republican Association was founded in 1924 to organise an armed rebellion; later, under the influence of socialist ideas, the title was changed to Hindustan Social-

ist Republican Association. Among noted revolutionaries, the names of Ramprasad Bismil, Ashfaqulla, Chandrasekhar Azad, Bhagat Singh, Rajguru, B K Dutt, Jatin Das, Surya Sen and Sukhdev are prominent. Their strategy involved attacking and assassinating unpopular government officials, organising raids on government armouries and throwing bombs at the Central Legislative Assembly. The government struck hard at revolutionary terrorism and many leaders were arrested and hanged.

The Government of India Act, 1935

While the Civil Disobedience Movement was at its height, the Third Round Table Conference met at London in November 1932. The Congress again boycotted it. However, the deliberations at this Conference resulted in the Government of India Act, 1935. It proposed a federal government at the Centre and provincial governments with greater autonomy. The federation was to be based on a union of the provinces of British India and the princely states. This was to be a bicameral legislature in which the states were given disproportionate weightage, and the states representatives were to be appointed directly by the British. The control over defence and foreign relations was under the governor general. In the provinces, the governors had special powers to enact and promulgate their laws. They also retained full control over the civil services and police. The Congress was bitterly disappointed because political and economic power continued to be concentrated in the hands of the British Government. However, it decided to take part in the elections, which were held in 1937.

The Congress swept the polls in seven of the 11 provinces. In July 1937, Congress ministries took office. Later, the Congress formed coalitions in two other states and only Bengal and Punjab had non-Congress ministries thereafter. The Congress ministries worked for

moderation. The administration of law and order, the demands of the Kisan Sabha or labour unions were considered praiseworthy by the British themselves.

The Congress and the world

While the Congress was getting its first experience of administrative politics at home, it was also expanding its influence abroad. In February 1927, Nehru attended the Congress of Oppressed Nationalities at Brussels on behalf of the National Congress, and became a member of the League Against Imperialism that grew out of this Congress. The Madras session of the National Congress in 1927 warned the government that India would not support Britain in any war undertaken to further its imperialistic aims. In the 1930s, it became active in its condemnation of fascism in Germany, Italy and Japan. The Congress fully realised that India's future depended not only on its struggle at home but on international forces. In fact, at his presidential address to the Lucknow Conference in 1936, Nehru said, 'Our struggle was but part of a far wider struggle for freedom.'

Communalism

The one gloomy aspect in our struggle for freedom was the growth of communalist sentiment, which ultimately led to the partition of the country in 1947. The election to the legislative assemblies, organised on the basis of restricted franchise and separate electorates, created separatist tendencies. While the Muslim League secured barely 109 out of 480 seats, the Congress, too, failed to win many seats reserved for the minorities. The Muslim League, which was now under the leadership of Mohammad Ali Jinnah, began to create a fear psychosis among the Muslims that they would be swamped by the Hindu majority. The League propagated the two-nation theory that the Hindus and Muslims were two separate nations and could not live as one. By 1938, it began an

THE JUDICIARY IN INDIA

BY GAUTAM BANERJEE

The Indian judiciary is a massive machinery which guards a citizen's rights. Here, we take a look at what constitutes this machinery and how it functions

The judiciary an organisation of courts of law represents the third wing of any democratic government, the first two being the legislature and the executive. The Indian Constitution too provides for a systematic judiciary to safeguard the rights of its citizens and to ensure them justice.

While drafting the judicial provisions, the framers of our Constitution wanted the judiciary to be an extension of the fundamental rights granted to citizens. The idea of the judiciary was to uphold the equality that Indians had longed for during the British rule but had been denied. It was also to act as the guardian of the Constitution. To ensure that the courts would do so, independence of the judiciary was considered its cornerstone.

To other closely related issues, namely the judiciary's power to review and uphold the Constitution and the establishment of the Supreme Court as the final authority on the interpretation of the Constitution with special responsibility to safeguard the fundamental rights are the foundations of our judiciary. Besides, the judicial system was centralised by having a single hierarchy of courts unlike the dual system of courts in the US that is, state courts for enforcing state laws and federal courts for enforcing federal laws.

The Indian Constitution provides for an integrated system of courts for the Union Government as well as for the states. Nyaya Panchayats, which try small civil and petty criminal matters, are at the lowest level of the judicial hierarchy. Above them are the munsifs' courts which can try claims of amounts upto Rs 5,000. Above munsifs are the sub judges who hear civil suits and appeals

from munsifs. Appeals from sub-judges go to the district judges who also have original jurisdiction. The provincial small causes courts deal with small matters and summary suits of small amounts. Subordinate judges also preside over special courts under special statutes like the motor vehicles accidents claims tribunals, the labour courts, slum clearance authorities, insolvency courts, etc. The district judge represents the highest judicial authority for the district in civil and criminal matters from whose decisions appeals go to the high court. The procedures in civil courts are regulated by the provisions of the Code of Civil Procedure, 1908. Criminal cases in the districts are dealt with by judicial magistrates who are headed by the chief judicial magistrate (except in Nagaland and Jammu & Kashmir). Magistrates for the metropolitan areas and cities are called metropolitan magistrates. The system of magistracy has been provided under the Criminal Procedure Code, 1973, which regulates the functioning and procedure of criminal courts. For each state, the high court represents the highest judicial authority in the

state and has both original and appellate jurisdiction. Appeals from the high courts go to the Supreme Court, the highest court in India. It has original as well as advisory jurisdiction.

The Constitution provides a high court for each state. The Parliament has the power to set up a common high court for two or more states. Accordingly, there is a common high court in Assam for Assam, Nagaland, Manipur, Meghalaya, Tripura, Mizoram and Arunachal Pradesh, and at Chandigarh for Punjab and Haryana.

Every high court has a chief justice and other judges appointed by the President of India. The judges are appointed in consultation with the Chief Justice of India (the Chief Justice of the Supreme Court is the Chief Justice of India), the governor of the state and the chief justice of the state high court. Judges are appointed from persons who may be lawyers or judicial officers of eminence. A high court judge retires at the age of 62 years. He may vacate his office earlier by written resignation addressed to the President, by being appointed a judge of the

Supreme Court or being transferred to any other high court. Alternatively, he can be removed from office on grounds of proved misbehaviour or incapacity after an address by both houses of Parliament supported by the vote of two-thirds of the members present. This procedure is called impeachment and is the same for the removal of a judge of the Supreme Court. The chief justice of a high court draws a monthly salary of Rs 4,000 and the judges Rs 3,500. They are also entitled to allowances, leave and pensionary rights as provided by the Parliament. A high court judge must be a citizen of India, less than 62 years of age and must have held a judicial office in India or have been a high court advocate.

The territorial jurisdiction of a high court extends to the limits of the state or states for which it has been constituted. The Union territory of Delhi has a separate high court. The Union territories of Andaman and Nicobar Islands are served by the Calcutta High Court and that of Lakshadweep Islands by the Kerala High Court. The high courts have original jurisdiction to try suits of a high value, their appellate jurisdiction extends to both civil and criminal matters and have power of superintendence over all courts and tribunals in the state except military tribunals. This power grants the high courts revisional jurisdiction to intervene in cases of gross injustice or abuse of jurisdiction even where no appeal to the high court is made. Besides the high courts have the extraordinary power of issuing writs under Article 226 of the Constitution against the state or an inferior tribunal where the fundamental rights of a citizen have been violated. The high courts also

exercise administrative control over the subordinate judiciary and appoint district and subordinate judges who function under their direct control.

Prior to the Constitution, appeals from the Federal Court constituted under the Government of India Act, 1935 were made to the Privy Council in England. With the establishment of the Supreme Court, no further appeal can be made against the latter's decisions. Parliament has the power to make laws to regulate the organisation, jurisdiction and powers of the Supreme Court. There are 17 judges in the Supreme Court headed by the Chief Justice. Judges of the Supreme Court are appointed by the President in consultation with the Chief Justice and on the advice of the Council of Ministers. For the appointment of the Chief Justice, the President may consult the judges of the Supreme Court and the high courts. A Supreme Court judge must be a citizen of India, and should have been either a judge of a high court for at least five years or an advocate of a high court for at least 10 years. He retires at the age of 65 years but may vacate his office earlier by sending his written resignation to the President. Alternatively, he may be impeached by Parliament on the grounds of proved misbehaviour or incapacity. The Chief Justice gets a salary of Rs 5,000 p.m. and the other judges a salary of Rs 4,000 p.m. and are provided rent free residence.

The Supreme Court is a federal court, a court of appeal and a guardian of the Constitution and its rulings are binding on all courts in India. It has the authority to decide disputes between the Union and the states, and the states *inter se*. It thus maintains the distribution of power between the Union and the states. Appeals from the high

courts in civil cases are heard in the Supreme Court only if the high court certifies that substantial questions of law of general importance are involved. The Supreme Court has exclusive jurisdiction under Article 32 to issue writs where there has been a breach of fundamental rights. Appeals also lie by special leave of the court from any matter decided by any other court or tribunal. The opinion of the Supreme Court may be sought by the President under its advisory jurisdiction on any question of law or fact of public importance.

The independence of the judiciary has been ensured by providing for consultation with the Chief Justice about appointments of judges, by providing for removal of judges by the process of impeachment, by forbidding discussion about the conduct of judges except on a motion for impeachment before Parliament, by providing that after retirement a Supreme Court judge shall not plead or act in any court in India and a high court judge shall not plead or act in the same high court which he served, by providing that the salaries and allowances of judges shall be charged on the Consolidated Fund of the Union and the state respectively in the case of Supreme Court and high court judges and by providing that the allowances and terms of appointment of judges are not to be altered to their disadvantage after appointment.

Though there has been frequent criticism against some of its archaic features and dilatory procedures, the judiciary in India has stood the test of time. Judicial reforms down the years, amendments to the Constitution and the law together have strengthened the judiciary in this largest democracy of the world. □

THE FREEDOM MOVEMENT

(Continued from page 47)

active programme of political expansion. New branches were established in UP and Punjab and vast numbers of members enlisted.

Nehru wanted to reach out to the Muslim masses and organised a mass contact in March 1937. Men like K.M. Ashraf were involved in that secular and radical programme

But such radicalism remained only contractual, for the Congress once in government ceased to be so. On the other hand, such radicalism went a long way in alienating the Muslim landed classes.

Meanwhile, Hindu communal forces, too, gained ground. The Rashtriya Swayam Sewak Sangh had disciplined, trained volunteers in Maharashtra and the Hindu-speaking belt. Men like Malaviya and Lala Lajpat Rai had been

members of the RSS and the Congress simultaneously.

The Muslim League became even more popular as a result of the Hindu communalist propaganda. Its demands for separate electorates and provincial autonomy had already been met. In 1940, it passed a resolution demanding the partition of the country and the creation of a separate state—Pakistan.

HOW TO MAKE NOTES-5

BY YASMEEN LUKMANI

The lengthy narrative works in your syllabus can pose a major problem come exam time if you don't know how to draw out the important ideas from a narrative. Here are some ways that make it a simple job

In the last four issues we have been considering how we can analyse ideas in a given text and state them in point form indicating clearly which the important ideas are and which the subsidiary. Sometimes in running text important ideas are stated in a separate sentence from the minor ideas. Sometimes they are even underlined. But quite often this is not the case. The main idea of a passage may be spread out over a whole paragraph or more, or what is even more difficult, it may never be actually stated as such at all. What is presented in the passage may be just a narrative of various events, from which we have to draw out the main idea. In this issue we shall look at ways of drawing out generalisations or ideas from narrative style writing as we write notes on these passages.

Exercise 11

Read the following passage.

One Sunday in 1914 when the prevailing minimum wage for U. S. factory workers was a little over \$2 a day, news came from Detroit that rocked industry to its heels and created a sensation round the world. Henry Ford had announced a minimum wage of \$5 a day and cut the working day from nine hours to eight.

Immediately it was prophesied that Detroit would be ruined by an exodus of employers that those who remained and tried to meet the new Ford wage scale would go bankrupt, that the Ford company would fail, that Ford employees would be demoralised by this sudden affluence. They wouldn't know how to spend the money.

We can read about Ford and all the other weepers he set in the job he can save us \$5 a day by picking up small tools instead of working the most.

Later he wrote: 'The real progress of our company dates from the time we raised the minimum wage to \$5 a day then we increased the buying power of our own people and so on. Behind the prosperity of America is the enlargement of buying power by paying high wages and selling at low prices.'

Five years later when he increased the minimum wage to \$6 a day he said: 'Paying \$5 for an eight hour day was one of the finest cost cutting moves we ever made and the

\$6 a day is cheaper than the five

He defined proper wage and price this way: 'The right price is not what the traffic will bear, and the right wage is not the lowest sum a man will work for. The right price is the lowest an article can steadily be sold for. The right wage is the highest an employer can steadily pay.'

If we try to draw out the major ideas of the passage we could write the following notes on it. Remember that we are trying to write in point form and not in complete sentences.

Notes

1 Ford (1914) creates sensation by announcing

- 1 minimum wage of \$5 a day
- 2 reduction of working day to eight hours (prevailing conditions minimum wage \$2, working day nine hours)

2 Unfavourable reaction of others

- 1 Detroit would be ruined by
 - a) exodus of employers
 - b) bankruptcy of employers
- 2 The Ford Company would be ruined because
 - the employees would be demoralised by sudden wealth

3 The Ford Company makes great progress

4 Ford's analysis of his success

- 1 Importance of labour being interested in their work saved the company a great deal of money
- 2 Increase in buying power of employees in its turn increased buying power of other people (by purchasing their commodities) and so on leading to the prosperity of the Ford Co. and of US

5 Ford's definition of the proper wage and the proper price

'The right price is not what the traffic will bear, and the right wage is not the lowest sum a man will work for. The right price is the lowest an article can steadily be sold for. The right wage is the highest an employer can steadily pay.'

Point 1 cuts out details ('one Sunday') also the repetition of ideas in different words ('news came from Detroit that rocked industry to its heels'). It isolates the major idea, namely that Ford creates a sensation and states the two reasons for this.

The other points also cut out details and repetition of ideas. At this stage I suggest you stop reading further and instead compare the text with the notes and write down on your own, exactly what is left out from the text in each point as stated in the notes.

Going back to our analysis of the notes we find that in addition in point 2 a generalisation has to be drawn which is not explicitly stated namely 'Unfavourable reaction of others'. This emerges from the general sense of paragraph 2. Point 3 again is not stated as such in the text. Paragraph 4 takes it for granted in the line 'The real progress of our company'. Point 4 covers paragraphs 3, 4 and 5 under the general heading of 'Ford's analysis of his success'. This includes what he said in 1914 and what he wrote and said later. Only by putting together similar items can we make sense of the text.

Notice also that point 1 could be stated as 'The event Ford creates sensation by announcing' and point 3 as 'The result the Ford Co. makes great progress'. Point 2 is the evaluation of the event by others and point 4 the analysis of his success by Ford himself (which contains favourable evaluation of the event). The author's intention is to talk about the phenomenal success of Ford, so the reactions of others are not given much importance. If he had expanded that part it would have acquired more of the comparison-contrast structure we discussed last time. As it stands, it is about Ford's success story and the moral that can be drawn from it (point 5).

Exercise 12

Now read the following passage and write notes on it yourself.

The phenomenon of sleep walking has until recently confounded the medical

creature can walk, move, and behave normally and still be clinically in a state of sleep. Physically somnambulists are acting and moving in the real world. But their consciousness remains in the shadowy realm of sleep.

Until recently most doctors, psychologists and psychiatrists accepted that a person who walked in his sleep was acting out his dreams. A deeper understanding began in 1952 when researchers discovered that a sleeper's eyes invariably move rapidly beneath his closed lids during dreams. Subsequent experiments proved that everyone dreams at night and that we dream during periods of light sleep and seldom or never during the alternating periods of deep sleep.

Experiments beginning in 1960 swept them to an astonishing conclusion: sleep walkers aren't acting out dreams after all. Test subjects walked in their sleep only during the deep sleep periods when there were no rapid eye movements and no dream reported.

Further studies showed that all sleep walking episodes in very young children begin with a sudden paroxysm of high voltage brain wave activity. Bursts such as these occur naturally in 95 per cent of all infants six to 11 months old, less frequently in older children. As the child grows up his brain paroxysms stop. Usually sleep

Not all questions about sleep walking, of course, have been answered. For instance, is the tendency to walk in one's sleep inherited? Researchers have no proof of this in spite of isolated case histories to this effect.

Suggestion You may find the following headings helpful in analysing the passage.

- 1 Nature of sleep walking
- 2 Previously held belief
- 3 Evidence against this

Write out notes on the above passage and compare them against the key which will be given to you in the next issue.

Key to Exercise 10

Reaffores-

tation → a) Ecological develop-

- ment can
- 1 stop further damage to ecosystem
- 2 undo some of the harm already done e.g. soil erosion, flooding
- 3 increase rainfall
- 4 raise availability of

Answers to

TEST YOUR WORD POWER

- 1 **absorbent** C Substance capable of sucking or taking in. Cotton is used as an absorbent in surgical dressings.
- 2 **adhesive** D Substance that sticks things together. Animal glue is a strong adhesive.
- 3 **amoral** C Lacking moral responsibility. Animals are said to be amoral.
- 4 **amputate** A To cut off (limb etc) by surgery. The first operation under general anaesthesia in England was carried out by Robert Lister on December 21, 1846, when he amputated a leg at the thigh under ether.
- 5 **connotation** B An implied additional meaning of a word. The connotation of a disco in India is an antithesis to what a disco is in the West.
- 6 **contiguous** C Touching at the edge or along a boundary, neighbouring. Being geographically contiguous and culturally akin, India and Nepal have much to gain from economic interaction.
- 7 **debut** B First appearance in public. Mary Tyler Moore made her Broadway debut in 1980 with *Whose Life Is It Anyway?* in a part originally written for a man.
- 8 **effluent** D Discharge of waste liquid matter from a factory. All river life upto five kilometres downstream from Kanpur is said to have been destroyed by industrial effluents in the water.
- 9 **fatal** C Deadly, ending in death, disastrous. Scorpion stings of the poisonous variety of scorpions can be fatal for very old people and very young children.
- 10 **grandiose** C Imposing, striking, impressively grand. Sometimes history's most grandiose accomplishments have the most banal of origins.
- 11 **grievance** C Real or imaginary ground for complaint. Prisoners are perhaps the most vulnerable to injustice since

in our country there is no channel through which they can get someone to listen to their grievances.

- 12 **ingenuity** B Cleverness and skill, originality in design. Big ant cities are models of ingenuity and intelligence of these tiny creatures.
- 13 **ingest** A To take into the body. Wherever poppies grow in profusion, man is likely to ingest small amounts of the toxins through various agencies.
- 14 **lax** A Negligent, not strict, slack. Thanks to lax security, museums have become a special target of art thieves.
- 15 **nocturnal** B Active by night. Contrary to what many people believe, most snakes are timid, nocturnal creatures feeding mostly on rats, frogs, toads, lizards or birds.
- 16 **omit** A To leave out, fail to include. Richard Attenborough's script on *Gandhi* conspicuously omits some of the main events of India's freedom struggle.
- 17 **piracy** B Sea robbery, also the unauthorised use of another's production or invention. Two parts of the world still famous for piracy on the high seas are the west coast of Africa and the South China Sea.
- 18 **scourge** A Cause of suffering or trouble, grievous affliction. In 1935 the scourge of drowsy killed 1,500 people in Bengal and in 1966 an outbreak incapacitated hundreds of people in Bombay.
- 19 **transcend** A To rise above, to go beyond the range of human experience. To transcend the impossible is the mark of a courageous man.
- 20 **trounce** A To defeat, beat. In 1977 five non-communist parties came together as the Janata Party in a rare display of unity to trounce Indira Gandhi's Congress (I) in general elections.

Changing Relations

BY T V SATHYAMURTHY

Having discussed the reasons for friction between the Centre and the states in the last issue, the concluding part traces the ups and downs in Centre state relations since Independence to present day

We have so far identified the main categories of aggrieved state, the nature of their disagreements with the Centre regarding the federal set up in India as well as the precise balance to be maintained between the potentially contradictory interests of the Centre and the state. The general thrust has so far been to contrast the concept of unitarism which the Central leadership (including the Janata leadership during 1977-80) has consistently promoted against the emphasis placed by the non-Congress (I) ruled states on decentralising power. The odd differences must be seen in a historical perspective. For this purpose we shall trace the development of state power in India in the context of the development of Centre state relations.

(a) Between 1935 and 1947 the Congress Party's conception of the Constitution was based on the Government of India Act 1935 which was seen as possessing the makings of a federal polity. However as the Muslim League's demand for greater autonomy of Muslim majority areas grew in strength the Congress leadership showed itself to be more amenable to the idea of a flexible federation with considerable powers for states, or provinces, with the Centre's supremacy only in defence, communications, finance and external affairs. As the political demands of the Muslim League intensified to a point at which partition became a certainty the Congress suddenly got converted to the idea of a strong Centre with states being dependent on Central power and munificence for their development. A loose federal relationship between the Centre and states as a *modus vivendi* was given short shrift in favour of a degree of unitarism during the 1944-47 period. This was amply reflected in the discussions between the Congress leaders and the Cabinet Mission, Lord Wavell and finally Lord Mountbatten leading to the establishment of the Constituent Assembly. The Congress continued to maintain a pretence of supporting the idea of a strong Central power in combination with strong states in its public pronouncements.

(b) The arrangement envisaged in the Indian Constitution worked more or less as intended throughout Jawaharlal Nehru's prime ministership. But for a brief period of

friction in Travancore Cochin, Kerala and for a time in PEPSU during which non-Congress coalitions were able to form state governments. Congress hegemony remained unimpaired. The leadership of such veteran and powerful Congress chief ministers as Morarji Desai, Kamaraj, H K Mehta, B C Roy, C B Gupta and R S Shukla had a major hand in this. The victory of the CPI in the 1957 Kerala Assembly elections was the only development which gave the Congress and the Indian Government cause for concern. Unlike other opposition parties, the CPI had a fairly clear idea of the need to strengthen state governments and to increase their autonomy if they were to be successful even in implementing the economic programme of the Congress. Let alone a programme of a more radical and redistributive character. The Centre could not tolerate the CPI led government and arbitrarily dismissed it after political conditions had been created as a consequence of the agitational politics of the Congress under the presidentship of Indira Gandhi. Yet issues that the CPI Government raised in the arena of Centre state relations remained alive. During Nehru's leadership too, regional parties and mass movements were slowly gaining ground in a number of states though they had not as yet developed the power needed to supplant the Congress. Not so in Tamil Nadu where the DMK came close to ousting the Congress especially during the mid-60s when it demonstrated its mass following by launching successful anti-Hindi agitations and dramatic campaigns against famine and drought demanding

better distribution of food. These campaigns were a prelude to the DMK's resounding victory in the 1967 Madras Assembly elections.

(c) The new lease of life breathed into the forces of opposition in general and regional opposition parties in particular during the late 50s coincided with the erosion of the popularity of the Congress and the power of the Centre which had become evident during the last few years of Nehru's prime ministership. The efforts of his successor Lal Bahadur Shastri to achieve short term compromises and consensus on the question of Centre state relations were brought to an abrupt end with his untimely demise. What followed was a rather manipulative phase in Indian politics which represented an end to the process begun under the aegis of the so called Kamaraj Plan. As a result Mrs Gandhi emerged as the Prime Minister who at least initially was believed to be at the mercy of the syndicate. In the 1967 general elections though the Congress formed a government at the Centre it did not get a clear majority. At the same time the fragmentation of politics at the state level had reached a stage where at least eight state governments with anti-Congress coalitions of the left (Kerala and West Bengal) and the right (Orissa, UP, Bihar, Madhya Pradesh and Rajasthan) as well as the DMK (Madras) were elected to power. The period 1947-63 represented a brief epoch in which a strong Centre and strong states under Congress rule flourished side by side. But with 1963-67 began a phase in which a weakened Centre was in power with at least half the total number of state governments being weakened by the rise to power of the United Front and other kinds of coalitions. Such unions arose out of disunities within and between parties having no mutually agreed platforms. Their unity was based almost entirely on a negative anti-Congress stance. Thus a strong Centre strong states orientation of federalism characterising the first 15 years of independence gave place to a new weak Centre weak states syndrome in Indian politics.

(d) The 1967-75 epoch was remarkable for the determination with which the Centre sought to reverse this tide. In the Congress a purge was undertaken by forcing a division between the progressive or left wing of the Congress led by the Prime Minister and the reactionary bosses led by the syndicate. The conflict between the two sides arose over a variety of issues including the nationalisation of certain banks and the nomination of the Congress candidate for the 1969 presidential election. With the syndicate forced out as a result Mrs Gandhi rapidly mobilised popular support for the party and for her government on the basis of slogans such as *Ganbi Hatao*. The 1971 Bangladesh war which served the same purpose in Indian politics as did the Falklands war in Britain 12 years later was made good use of by the Congress. It rode to power with an overwhelming majority in the 1971 general elections. Between 1971 and 1975 the Centre attempted to consolidate its popular base and thrust the Congress into power in opposition ruled states such as West Bengal and Kerala. The anti-Congress coalitions were thus brought to an end in

almost all non-Congress states (only in Tamil Nadu was the DMK able to continue in power as it held undisputed sway in the Legislative Assembly). An era of strong Centre-weak states relationship was thus brought into existence during the heyday of Mrs Gandhi's electoral popularity.

(e) Yet neither the Centre nor the ruling party was satisfied with the curbs placed on state governments. The 1975-77 emergency sought to, as one of its many aims, further emasculate the political power of state governments by introducing such practices as appointing chief ministers from above. All but one state government was under Congress rule and the new method of choosing chief ministers by the ruling party in Delhi meant that the Congress ruled state governments were led by politicians who were approved by the Prime Minister. In fact, chief ministers who enjoyed wide local support were eased out in a number of cases. Example: H N Bahuguna in UP. The only state government to offer some opposition to the Centre DMK ruled Tamil Nadu— was peremptorily dismissed on its completing five years of rule. And President's rule was imposed in the state for the remainder of the emergency. The emergency thus witnessed a culmination of the conflict between an excessively strong Centre and hopelessly weak state governments.

(f) The victory of the Janata Party at the Centre, followed by the victory of a number of non-Congress coalition in a large number of states, created a situation similar to the one in 1967. Despite the overwhelming majority enjoyed by the Janata coalition in the Lok Sabha, it could not hold itself together for long. Its popularity began to wane rapidly. But in several states (notably West Bengal, Tripura, Jammu and Kashmir), a few of the Janata ruled states such as Maharashtra and Assam, certain north-eastern states, and ironically even the two bastions of Congress rule in the south, Karnataka and Andhra Pradesh), a mood of self-assertion vis-à-vis the Centre and a questioning of the Centre-state relations prevailed. The West Bengal and Tripura governments, for example, went to the extent of demanding extensive and far-reaching changes in the balance of Centre-state relations even if it necessitated changing the Constitution. Punjab and Jammu and Kashmir took up the same theme from a slightly different but no less important angle. The Janata Government responded to such pressures positively by taking the federal content of the Constitution seriously and attempting to meet the state governments part of the way. This is obvious from the working of the Seventh Finance Commission. The Janata Government thus sought to project an image of India as a country with strong states. But this image was short-lived as the Centre under the Janata coalition soon began to fight for its survival. Amidst the bickering of its leaders, such well-meant efforts were forgotten and the government collapsed.

(g) With the rout of the Janata Party in the 1980 elections, the Congress (I) came to power. But its victory was as much a negative vote as that in 1971 had been a positive

choice by the electorate. This meant that, despite the renewed preponderance of the Congress (I)'s power both at the Centre and in some states in a number of other states (notably West Bengal, Tripura and Kerala for a time in 1980-82 and Jammu and Kashmir), pressures continued in favour of a dominant role for the states in a federal equation. The present government at the Centre, unlike the one during 1971-77, has not been able to consolidate Centre-state relations for a number of reasons. First, controlling state power at a time of serious economic crises involves compromises which undermine the hegemony normally enjoyed by the ruling party.

Second, the Janata Government for all its defects, had done an excellent job of not only restoring but also bolstering the role of the Constitution, thus making it difficult for the Congress (I) Government to tamper with it or experiment in any way with a Presidential system as an alternative to parliamentary democracy.

Third, the existence of non-Congress (I) governments in West Bengal, Tripura, Tamil Nadu and Jammu and Kashmir, and the re-emergence of a strong opposition to the ruling party in Assam, Punjab, Andhra Pradesh and Karnataka (and even Maharashtra), as well as factionalism within the Congress (I) in all states, have contributed to a weakening of the Centre without necessarily leading to an increase in the power of the state governments.

The dynamic process underlying the rapid spread of disaffection against the ruling party at the Centre in a number of states has compelled the Centre to take note of the seriousness of the situation regarding Centre-state relations in a federal structure. The coming together of the chief ministers of Andhra Pradesh, Karnataka, Tamil Nadu and the Union territory of Pondicherry, at the behest of Karnataka CM R K Hegde in March 1983, showed that chief ministers of states faced with common problems can get together without the blessings of the Centre. At the same time, regionalism is asserting itself in a fundamental manner in Assam, Punjab, Andhra Pradesh and Karnataka. The chief ministers wish to initiate a study of Centre-state relations with a view to bringing the findings of the Rajamannar Committee report of the early 70s up to date. It is a Central Government Commission with a remit which encompasses the entire gamut of questions affecting Centre-state relations in India.

The Sarkaria Commission, which is to carry out its work over the next eighteen months, is to make recommendations on Centre-state relations so that states are once again able to display their strength by electing governments opposed to the ruling party at the Centre. This is of profound significance in view of the fact that almost all political parties at both national and regional levels have become increasingly vulnerable to fragmentation.

Much would, however, depend on how concrete problems such as those prevailing in Assam and Punjab are resolved, than on the recommendations of the Commission.

Some important chemicals/chemical terms

Alum (potassium aluminium sulphate) occurs naturally and is used as a mordant in dyeing and for fireproofing

Aqua regia is a highly corrosive liquid which dissolves gold and affects most substances which are unaffected by other reagents. It is a mixture of concentrated nitric and hydrochloric acid in the ratio 1:4 by volume

Aspirin (acetylsalicylic acid) is used in medicines as an analgesic and antipyretic

Bleaching powder (calcium oxychloride)

Caustic soda (sodium hydroxide) is used in soap manufacture

Chlorine is used to purify water in cities for human consumption

DDT (dichloro diphenyl trichloro ethane) is a contact insecticide. It has a fruity smell

Fermentation is a chemical change brought about in organic substances by living organisms

Fluorides help prevent tooth decay

Galvanised iron is coated with a layer of zinc by dipping into molten zinc. It helps prevent corrosion of the metal

Gun powder is a mixture of potassium nitrate, powdered charcoal and sulphur

Heavy water is a compound of deuterium (heavy hydrogen) and oxygen. It occurs in minute quantities in ordinary water and is quite useful in nuclear reactors as a moderator

Hypo (sodium thiosulphate) is used as a fixer in photography

Litharge (lead monoxide) is used in the manufacture of glass, paints, varnishes and glazes

Only **mercury** and **bromine** are liquid (elements) at room temperature

Nickel steel is a kind of steel containing nearly 5 to 6 per cent of nickel

NTP (also STP) Normal (or stan-

dard) temperature and pressure. The value of normal temperature is 0°C and of normal pressure, 760 mm of mercury

Phosgene (carbonyl chloride) is a poison gas used extensively in World War I

Phosphorescence is a type of luminescence in which a substance, having absorbed some radiation, emits a less energetic radiation. The emission continues even much after the absorption

Plaster of Paris is powdered calcium sulphate. It sets and hardens with water

Potassium nitrate is a constituent of gun powder and is also used in fireworks

Potassium permanganate is a water soluble salt used as a disinfectant

Quinine is an alkaloid occurring in cinchona bark. It is used to cure malaria

Red phosphorous is non-poisonous and is used in the manufacture of matches. White phosphorous is poisonous and highly inflammable

Soda water is water containing carbon dioxide under pressure

Sodium carbonate is the chemical name of washing soda used in laundry

Sodium chloride is the chemical name of common salt

Sodium hydrogen carbonate is the chemical name of baking powder

Sulphur is used as a disinfectant for houses and for destroying bacteria, fungi, etc.

Teflon which is resistant to the action of acids, alkalis and oxidising agents is a compound (tetrafluoroethylene) of fluorine

Urea is a nitrogenous fertiliser

Water gas is a mixture of carbon monoxide and hydrogen. It is produced by blowing steam through layers of incandescent coal

AWARDED

The **Gold Prize** at the Moscow Film Festival, jointly, to *Amok*, a Moroccan entry based on a village teacher's confrontation with apartheid in Johannesburg. Nicaragua's *Alcino And Condor*, about the people's liberation struggle; and Soviet film *Vassa*, based on Maxim Gorky's play *Vassa Zheleznova*

Best Actress Award: Judy Davis (Australia) for her performance in *Winter Of Our Dreams*, and Britain's Jessica Lange for *Frances*.

Best Actor Award: Virgiliusz Gryn in Poland's *Pastorale Heroica*, and Yoshi Kato in Japan's *Furusato*

Best Short Film Award: El Salvador's *The Letter* India's entry, *The Seventh Man*, did not win a prize but its director, K. Hanharan, was awarded a diploma by the Soviet Committee for Solidarity with Afro-Asian people for his "vivid depiction of the life of the working people in India"

Bharatiya Jnanpith Award, for 1982, to noted poetess Mahadevi Verma for her work *Yama*, a collection of poems regarded as a landmark in the history of lyric poetry in the country. The award carries with it a cash prize of Rs 1.5 lakhs

The **Nishan-i-Quaid-i-Azam**, Pakistan's highest award, to Malaysian Prime Minister Mahathir Mohammad and former Prime Minister Tun Hussein Onn, in recognition of their contribution to develop better Thai-Pak relations "in the true spirit of Islamic solidarity"

1982 Ramon Magsaysay Award for Public Service, carrying a cash prize of \$20,000 and a gold medal, to Thai public servant Hua Hanphitak, for Journalism, Literature and Creative Arts to Father Marcel-line Jayekody, a leading Sri Lankan lyricist, composer and poet

APPOINTED

S. Bashiruddin, Head of the Department of Communications and Journalism, Osmania University, as India's Ambassador in Qatar, succeeding J. Doodamani

N. S. Choudhary, Chairman and Chief Executive of the New Okhla Industrial Development Authority, New Delhi, as Minister, Economics, in the Indian High Commission in London.

Ram Lal, former Chief Minister of Himachal Pradesh, as the Governor of Andhra Pradesh, succeeding K.C. Abraham, who has retired.

Bishambar Nath Panda, former MP, as Governor of Orissa, succeeding C.M. Poonacha, who has retired.

K.M. Chandy, Lt-Governor of Pondicherry, as the Governor of Gujarat, succeeding Sharada Mukherjee, who retires.

S.L. Khurana, Governor of Tamil Nadu, will look after Pondicherry as its Administrator, till Chandy's successor is appointed

Lt-Gen G.S. Rawat, Corps Commander in the northern sector, as the Vice-Chief of the Army Staff, taking over from Lt-Gen S.K. Sinha

ELECTED

Vishwanath Pratap Singh, Union Minister for Commerce, to the Rajya Sabha, unopposed, in a by-election from the UP Vidhan Sabha constituency

K. Mooppanar, AICC (I) General Secretary, **Muasoli Maran** (DMK), **G. Varadaraju**, **V. Arunachalam**, **S. Khader Sha**, **Era Sambasivam** (AIADMK) in the biennial elections to the Rajya Sabha from Tamil Nadu Assembly. While Mooppanar and Maran retained their seats, P. Ramamurthy (CPI-M) lost his.

Wali Mohammad Itoo, former Minister of State for Revenue, as the Speaker of the newly-constituted Jammu and Kashmir Assembly.

Francesco Cossiga, former Christian Democrat Prime Minister, as the new President of Italy's Senate and **Nilde Jotti**, communist party member, as the President of the 615-member Chamber of Deputies

Yasser Arafat, Palestine Liberation Organisation Chairman, re-elected as Chairman and head of the financial department of the "Fatah", the largest group in the PLO

RESIGNED

Yagya Dutt Sharma, Speaker of the Madhya Pradesh Assembly, who had figured prominently in land-deal scandals in Indore reported in a section of the press, alleging he was encountering difficulties in the discharge of official duties.

SCIENCE

Cell Research: Dr Ivar Giaever, a Nobel laureate, and Dr Charles Keese, of General Electric Research and Development Centre, in a new technique for the mass cultivation of animal cells, have grown mammal cells on tiny droplets of oil in a watery emulsion containing protein and other nutrients. The traditional technique is to culture cells on plates flooded with protein-rich solution, which requires far too much space for large-scale production. The new technique enables the production of enormous quantities of scarce

biological substances

Of violence and hair: Scientists at the Argonne National Laboratory, in Chicago, have discovered a link between violence and imbalances in hair chemistry, which could lead to controlling violent behaviour by correcting body chemistry. A team of researchers lead by William J. Walsh studied 11 trace metals that normally exist in the body, many known to be vital for proper metabolism. Extremely small amounts of the metals, including copper, sodium and zinc, settle in hair shafts, providing a biological record of the levels of the compounds of the body.

DEFENCE

MBT to be ready by year-end: India's Main Battle Tank (MBT), fitted with the latest weapons systems and strong armour, a prototype of whose chassis rolled out of the Avadi factory near Madras in July, would be ready by the end of the year. Defence Minister R. Venkataraman told the Parliamentary Consultative Committee attached to his Ministry on July 20 that the furret of the MBT was now being fixed after which it would go through extensive trials. Venkataraman also disclosed that the state-owned Bharat Dynamic Ltd was engaged in setting up facilities for manufacturing second-generation missiles.

The US Senate, on July 26, approved a \$200-billion defence budget for fiscal 1984 — starting October — after earlier voting \$4.6 billion to build and deploy 27 new MX missiles. The vote gave Reagan half the 10-per cent increase in military spending he sought and voted funds for the new weapons, besides the MXs, essential to his rearmament programme— B-1 bombers and M-1 tank.

More US arms for Taiwan: The US has announced a \$530-million arms-sale package for Taiwan, including a variety of missiles, tank equipment and spare parts for fighter aircraft. The Reagan Administration had announced a total arms sale of \$800 million to Taiwan for fiscal 1983. The new package is the largest for the fiscal year starting last October.

The Canadian Government has given the US the go-ahead for testing cruise missiles on Canadian territory in the first three months of 1984. The authorisation for tests would cover five years. The missiles will not carry nuclear warheads and will be launched from B-52 bombers over the Arctic.

Israel and China have signed an agreement under which Israeli instructors and armament experts will help re-equip and reorganise the Chinese army, according to the Paris weekly, *VSD*. The agreement, reportedly, included the construction of Israeli-designed Markava tanks and Kfir jet combat planes in China under licence with the help of

Israel technicians

The US House of Representatives defeated 259-165 a move to ban the sending of US combat troops to Central America and rejected 247-120 an attempt to limit US advisers in El Salvador to 55

The Chinese navy has launched its first nuclear powered ballistic missile submarine and is building another. There are also plans to build six more such submarines according to a Japanese daily.

Harpoon missiles for Pak The US will supply to Pakistan \$50 million worth of non nuclear Harpoon missiles one of the latest weapons in its armoury under a modernisation programme for the Pakistan armed forces. The modern and versatile missile experts have said would be difficult to counter without electronic counter measures. The only remedy they have said is to match weapon for weapon.

Increase in Britain's defence spending Britain will spend £15.97 billion (\$24.53 billion) in the coming fiscal year on defence representing a 10 per cent increase in overall defence spending. Of that amount £624 million (\$958 million) will go towards maintaining the British garrison on the Falkland Islands. Britain is building three Type 42 destroyers and eight Type 22 frigates partly as a result of the five ships it lost in the Falklands last year. It will also go ahead with its Trident nuclear missile programme. The missiles are to replace Britain's ageing Polaris nuclear submarine fleet. The details were revealed by a defence white paper which was issued on July 6 by Defence Secretary Michael Heseltine.

HEALTH

Treatment of Leprosy The Health Ministry has set a target of 4,77,800 leprosy cases for treatment and detection this year against last year's 4,73,000. Leprosy prevalence rate came down from 20 per 1,000 to 14 per 1,000 in 1982 and incidence of the disease from 3 per 1,000 to 1.30 per 1,000. The two high endemic states—Andhra Pradesh and Tamil Nadu—and moderately endemic states—Haryana, Madhya Pradesh and Maharashtra—exceeded their targets last year. So far 90 per cent of the endemic areas have been covered by the leprosy eradication programme. It is estimated that of the total 12 million leprosy patients in the world 3.2 million are in India.

Nutritional anaemia in India The Geneva based WHO in a survey found that India has probably one of the highest prevalence of nutritional anaemia in women with about 60 per cent to 80 per cent of pregnant women in south India suffering from it. The study estimated that 65 per cent of pregnant women and 57 per cent of non pregnant women in Asia suffer from anaemia. For Africa the figures were 63 per cent and 40 per cent and for Latin America 30 per cent and 15 per cent.

EDUCATION

Education 2000 A group of prominent British educationists and industrialists calling themselves Education 2000, has worked out proposals, including abolishing examinations and revising radically current

school curricula, which it plans to present to the British Government. At a recent conference at London University's Westfield College the group launched last year with the Duke of Edinburgh as its patron, proposed to spend the next nine months collecting supporters before a second conference is held to work out a plan for what education should be like by 2000 A.D.

Caning to stay in British schools The British Government will retain caning and other corporal punishment in state schools while allowing individual parents the option of their children being spared. The new draft law on corporal punishment will be applicable only to state schools in England and Wales. Britain's practice of continuing with corporal punishment has been condemned by the European Charter of Human Rights whose convention it signed in 1957.

ECONOMY—National

Market borrowings The Central Government on July 8 announced the second instalment of market borrowings with two loans worth Rs 750 crore in the current financial year. The loans are (i) 7.75 per cent loan 1991 to be issued at Rs 100 per cent and repayable on July 15, 1991 and (ii) 10 per cent loan 2.014 (second issue) to be issued at Rs 100 per cent and repayable at par on May 10, 2014. The first instalment of the loan was worth Rs 500 crore. The 1983-84 budget provides for total marked borrowings of Rs 4,000 crore net of repayment.

India had a trade deficit of Rs 5,409.60 crores in 1982-83, a marginal improvement over the previous year's deficit of Rs 5,793 crores. Exports during the year totalled Rs 8,637.68 crores—increased of 17.4 per cent, and imports Rs 14,047.28 crores—an increase of 7.1 per cent.

The World Bank and its affiliates approved loans and soft credits totalling \$1,950.9 million to India during 1982-83 against \$2,164.8 million the year before. In fiscal 1983 the bank loans totalled \$1,987.9 million and International Development Association (IDA) credits extended for a 50 year period \$863 million compared to \$1,264.8 million and \$900 million during 1982. Among the major projects for which the World Bank and the IDA approved assistance during 1983 are railway modernisation (\$400 million), power transmission (\$250 million), hydroelectric project in Orissa (\$326 million), gas development in south Bassein (\$222 million) and the fourth petroleum project (\$165.5 million).

India will draw only \$1,200 million from the IMF from July 1983 to June 1984 against the \$1,500 million it is entitled to because of an improvement in its foreign exchange reserves position. After drawing \$900 million from November 1981 to June 1982 the government drew \$1,800 million from July 1982 to June 1983. It can draw another \$1,500 million and still have \$800 million left to draw during the rest of the three year loan period. The foreign exchange reserves have shown a net rise by Rs 158 crores compared to a drop of Rs 185 crore in the same last year.

IDA credit The IDA has approved a \$105 million credit for an irrigation project involving a total cost of \$140.6 million. The project will

help remove two constraints to increased agricultural production—adequate water supply and uneconomical water usage practices in major irrigation areas.

Deficit J & K budget presented A Rs 52,78-crore deficit budget for 1983-84 was presented by Jammu and Kashmir Finance Minister Abdul Rahim Rather in the state Assembly on July 16. Rs 45.78 crores of the deficit amount would be covered by special Central assistance and the rest by special measures the state government proposes to take including revision of the fee structure prescribed under the Motor Vehicles Act, enhancing the licence fee prescribed under the Cinematograph Act, raising electricity tariffs for large and medium industries and reviving the state lottery.

Five million Central Government employees will get interim relief ranging from Rs 50 to 70 a month under an agreement reached at the meeting of the joint consultative committee in New Delhi on July 18. The relief effective from June 1 would be at the rates of Rs 50 upto a basic pay of Rs 299, Rs 60 for those drawing a basic pay of Rs 300 to Rs 699 and Rs 70 for those drawing between Rs 700 and Rs 1,500. The relief would involve a financial burden of Rs 325 crores.

AP withdraws hike in sales tax of 12 items The Andhra Pradesh Government on July 20 withdrew the order enhancing the rate of sales tax in respect of 12 items announced recently. State Finance Minister N. Bhaskara Rao said the enhancement had caused apprehension of possible increase in the cost of living and representations were made to the government for relief. The reduction in the sales tax rate would result in an annual revenue loss of Rs 6.10 crores.

Antulay discharged Special Judge R.B. Sule on July 25 discharged former Maharashtra Chief Minister Abdul Rehman Antulay from trial for charges under the Prevention of Corruption Act for want of sanction from the state Assembly. The judge held that Antulay being an MLA was still a public servant and the Assembly alone could grant a valid sanction for prosecution under corruption charges rejecting complaints of Ras Das Nayak (BJP) and P.B. Samant that an MLA would not be called a public servant and that the governor's sanction obtained was enough to try him. He made it clear however that he was discharging Antulay for want of jurisdiction and not merit.

ECONOMY—International

World Bank lowers interest rates The World Bank on July 6 announced lowering of interest rate on loans to developing countries for the second time since adopting a variable interest policy last year, setting the annual rate on loans made during the second half of this year at 10.47 per cent down from 10.97 per cent during the first half. The rate during the second half of last year when the new policy came into effect was 11.43 per cent.

IMF loan for South Korea The International Monetary Fund (IMF) on July 8 authorised a \$613 million loan to help the South Korean Government continue its economic and financial adjustment programme. The South Korean economy which had run into difficulties in 1980 after 15 years of steady

advance, had to be supported by an adjustment programme to slow down inflation, reduce an external current account deficit and slow down growth of foreign debt. This was IMF's third loan to support the programme.

China's exports during 1982 hit a record high while its imports declined, giving it a trade surplus of \$6,278 billion, according to a CIA report. Chinese exports totalled \$22.36 billion while imports amounted to \$16.08 billion, with almost all trade with non-communist countries. Hong Kong was China's principal export market, buying \$5.38 billion worth of goods, with Japan ranking a close second with \$5.08 billion.

US assistance to Caribbean nations: The US House of Representatives on July 14 approved a trade assistance package to help economically-distressed nations in the Caribbean and encourage friendly ties with them. The measure, first proposed by President Ronald Reagan, would mean a mix of tax and trade incentives to the 28 non-communist Caribbean nations and suspension of tariffs on some products exported by the Caribbean nations to the US.

Sales of oil and gas comprised nearly 50 per cent of the Soviet Union's exports in 1982 while the share of manufactured goods slumped to less than 13 per cent—one of the lowest levels on record, according to the annual statistical handbook, *Foreign Trade Of The USSR*. At the same time, oil deliveries accounted for 40.2 per cent of all exports and gas sales for 9.3 per cent—a record high for energy sales, underlining fears that the Soviet Union is becoming too reliant on natural resources and falling behind on export of machinery.

Western bankers have offered to reschedule Poland's foreign debts, giving it 10 years to repay the \$15 billion principal it owes them this year, against the seven years upon last year's debt. The proposal also includes return of 60 per cent of 1983 interest payments as trade credits compared with last year's 50 per cent. The initial proposal came from the "working group" of commercial bankers representing 500 credit bankers, in the middle of July.

The EEC, on July 22, approved, emergency funding but failed to curb mounting farm spending that is exhausting its funds. The group's finance ministers approved unchanged a \$2 billion plan to stop the Community budget running out of cost in October and draft 1984 budget of about \$2.5 billion. They marginally trimmed the extra farm allocations for the year but left unchanged plans to spend almost \$15 billion on subsidising the 10-nation EEC's eight-million farmers in 1984.

A World Bank report had endorsed the stand of the developing countries at UNCTAD VI at Belgrade that global recovery by itself cannot produce accelerated growth in low-income countries without a roll back of protectionism and continued increase in real capital flows of all kinds. The *World Development Report, 1983*, warned that economic recovery in the industrial countries would be undermined by recession in developing countries. The Report also emphasises the importance of international private capital and a substantial increase in IDA aid to de-

veloping countries.

China and the US, on July 30, initiated a trade agreement permitting a moderate growth and further diversification in China's textile exports to the US and bringing to an end a long-simmering dispute that soured Sino-US relations for a year. China is the fourth largest textile exporter to the US after Hong Kong, Korea and Taiwan.

Pakistan and the US, on July 30, signed their 14th major economic assistance agreement, under the renewed 6-year \$1.62-billion US economic support programme for Pakistan. The new agreement provides the first \$13 million of planned \$30 million to finance a joint project designed to help Pakistan become self-sufficient in the energy sector. In the past one-and-a-half years, the US has delivered \$360 million in economic assistance to Pakistan.

US contribution to IMF: The US House of Representatives, on August 3, by a vote of 217-211, approved President Reagan's plan to increase US contribution to the IMF by \$8.4 billion. The House also voted 242-185 in favour of a proposal requiring the US representative to the IMF to oppose loans to any country practising apartheid or to nations with "communist dictatorships." The Bill now goes to a conference committee where House and Senate negotiators will work out differences.

EVENTS—National

Plan for expanding TV network: The Centre has approved a Rs 68-crore plan for the expansion of the country's television network, under which 112 low power and 13 high power transmitters will be added to the existing network. The Sixth Plan already provides for 13 more high power transmitters meaning that by the end of 1984 there will be 47 high power and 132 low power transmitters in operation, bringing 70 per cent of the country's population within the network. There are presently 21 high and 20 low power transmitters in the TV network.

Lakshmanan withdraws resignation: Deputy Speaker of the Lok Sabha, G. Lakshmanan, has withdrawn his resignation from the post. Lakshmanan had resigned on June 25 following the snapping of ties between DMK and the Congress (I) and the fall of the DMK-led coalition ministry in Pondicherry.

Plans to construct wall along Indo-Bangladesh border: Assam Chief Minister Hiteswar Saikia, on July 8, announced plans to construct a wall along the 270-km-long Indo-Bangladesh border, designed to prevent entry of infiltrators into the country. The boundary wall, to be built under an agreement reached between the Centre and the Assam agitation leaders during tripartite talks on the Assam crisis, would cover 186 km of land and 84 km of ravine border on the Bangladesh territory of Goalpara and Cachar districts of Assam. Construction is expected to start this year.

New legislation on dowry deaths: The Union Cabinet, on July 8, approved new legislative proposals under which offences relating to dowry deaths would be made cognisable and non-bailable and liable to deterrent punishment. New provisions include

cruelty leading to a woman's suicide being made punishable, with three years' imprisonment and fine, and an amendment to the Indian Evidence Act making circumstantial evidence on cruelty leading to suicide cognisable.

Capitation fee banned in Karnataka: The Karnataka Government, on July 11, banned capitation fees in new professional colleges while permitting the practice by existing ones solely dependent upon it.

The Punjab Government, on July 15, banned with immediate effect the driving of motorcycles of 3.5 horse power or more by civilians in the state as a measure to contain extremist activities. The decision was taken by the government a day before, following reports of culprits using motorcycles to make good their escape after committing murders in the wake of the year-old Akali agitation. The ban was, however, withdrawn on July 26 without assigning any reasons.

Punjab, HP reach accord on Shahnehar waters: Punjab and Himachal Pradesh, on July 14, reached agreement over the sharing of the waters of Shahnehar Canal, ending a five-year-long dispute between the two states. Work on the Shahnehar and Anandpur Sahib hydel projects, which was suspended a year back and on which Punjab has spent more than Rs 200 crores, will be resumed shortly. The dispute over the canal built by Punjab in Himachal was over the quantum of water to be released from the canal for irrigating fertile land adjoining the canal.

Bihar Press Bill withdrawn: The Bihar Press Bill, which had sparked off a wave of protests all over the country when it was introduced by the state legislature on July 31 last year, was finally laid to rest on July 21 with the state Vidhan Sabha unanimously adopting a resolution moved by CM Jagannath for its formal withdrawal. Jagannath reiterated his earlier explanation that his purpose behind introducing the Bill was merely to provoke a national debate on yellow journalism.

Death penalty upheld: The Supreme Court on July 20 laid down guidelines for imposition of death sentence based on the "rarest of rare cases" theory, ruling that the extreme penalty need be imposed only when life imprisonment appears to be an altogether inadequate punishment. Before opting for the death sentence, the circumstances of the offender also require to be taken into consideration along with the circumstances of the crime. Justices S. Murtaga Fazal Ali, A. Varadarajan and M. P. Thakkar said. The manner of commission of crime, motive for murder and social or socially abhorrent nature of the crime, magnitude of the crime and personality of the victim are other factors to be taken into context, they ruled.

The Bombay High Court, on August 3, rejected former Prime Minister Morarji Desai's plea for an interim injunction to restrain India Book Distributors from distributing Seymour Hersh's book *Price Of Power* in India. Mrs Justice Sujata Manohar felt an interim injunction would be futile as considerable publicity had already been given to the book which had alleged Desai was a paid CIA agent. She directed the distributors to put a

note on the title page of each book, saying, in part: "There are certain statements in the book relating to Morarji Desai. As far as the distributors are concerned, they have no reason to believe that the statements are true."

Committee to study public financial institutional investments into public-sector companies: The Centre, on July 16, appointed a high-level committee headed by N. Narasimhan, former Secretary to the Finance Ministry, to study all aspects of investments made by public financial institutions into private sector companies. The committee will also look into the existing system adopted by the financial institutions for safeguarding public interest in the invested companies and suggest measures for effecting improvements. It will submit its report by October 31.

Indian help to WHO: India has sanctioned \$45,000 to help the WHO implement its health projects. Of the amount sanctioned, \$25,000 would go towards the WHO special programme for research and training in tropical diseases and the rest to the diarrhoeal diseases control programme.

EVENTS—International

Press censorship in Sri Lanka: The Sri Lanka Government on July 5 announced the imposition of press censorship in the country, making obligatory clearance by a "competent authority" of all material meant for publication.

Operation Cobra Gold: About 6,900 US troops, along with air and sea support, on July 6, opened a joint military exercise, code-named 'Cobra Gold', with Thai forces around the Gulf of Thailand. Scheduled to last till August-end, the exercise will involve mine-laying, simulated air and sea battles, special warfare exercises and shore operations by US and Thai marines.

Reagan's request approved: The US Senate on July 13 narrowly approved by 50-49, President Ronald Reagan's request to end a moratorium on production of chemical weapons and allow the making of nerve gas shells, defeating an amendment that would have prohibited the production. The deciding vote was cast by Vice-President George Bush, the first time since 1977 that a Vice-President had broken a Senate tie, the only circumstance under which he is allowed to vote.

Emergency renewed in Zimbabwe: Zimbabwean Parliament, on July 13, renewed the country's 18-month-old state of emergency legislation by a vote of 58-8 for a further six months.

Foreign students attending school will be allowed to enter South Korea without visa according to a decision taken to exempt visa requirements for students of those countries with which South Korea has no visa exemption agreement.

Egypt's People's Assembly on July 20 passed a controversial law despite strong objections from opposition groups. The bill, unanimously approved by the deputies of the ruling National Democratic Party (NDP), disqualifies from parliamentary representation any party which fails to gain eight per cent of the vote. Opposition parties denounced the law which also bans independents from con-

testing elections unless they join a party, as unconstitutional.

The United Nations Special Committee on the Indian Ocean on July 22 ended its two-week third 1983 session without agreeing on the date or arrangements for a conference on that subject, the assignment given it by the General Assembly last December. A fourth session will be held tentatively between October 1 and 3. The committee before adjourning, however, agreed to revive a special group, which includes India, that had been working on a resolution for the General Assembly to hold the conference next autumn.

The 14-nation Antarctic Club on July 22 ended a two-week meeting at Bonn without agreeing to work out a new regime for exploiting oil and mineral resources on the Antarctica and protecting its environment. No date or venue for the next meeting was set.

Another coup in Upper Volta: Former Prime Minister Capt Thomas Sankara, who was dismissed as PM in May, seized power in the August-5 coup in Upper Volta, ousting Jean Baptiste Ouedraogo. Libyan-backed Sankara said he had overthrown Ouedraogo because the latter represented the interests of "enemies of the people and neo-colonialism". Early reports said 13 people died in fighting in the coup—and Ouedraogo was under house arrest.

Nepal's legislature has passed a controversial amendment to a bill, authorising military courts to try civilians charged with plotting against army personnel on duty. The bill, designed to "make the military law applicable to the individuals who kill those employed in the Royal Nepalese Army as well as those who serve under the military law", was signed by PM Lokendra Bahadur Chand in his capacity as Defence Minister. It would become law with King Birendra's approval.

Coup in Guatemala: Defense Minister Oscar Mejia Victores has replaced Gen Efraim Rios Montt as President of Guatemala, the national radio reported on August 8. But a senior official said Montt was holding out at his palace surrounded by loyal troops.

MISCELLANY

Fossils of dinosaurs discovered: The Geological Survey of India has discovered fossil remains of dinosaurs and their eggs in the lameta beds (sandy limestone) in Kheda district of Gujarat. The find included several clusters of eggs along with other skeletal remains of dinosaurs.

Ecological project declared open in Rajasthan: R. Venkataraman, on July 24, declared open a Rs 50-crore ecological project in the heart of Rajasthan desert, aimed at stabilising the shifting desert along a 150-km stretch of the Rajasthan Canal. The work, to be carried out by the Territorial Army under which an ecological task force is raised, will involve planting of trees, shrubs and grass over an area of 50,000 hectares.

World's longest pipeline completed: The Soviet Union on July 25 announced the completion of the laying of the entire 4,451-km-long gas pipeline—the world's longest—for supplying Siberian gas to Western Europe. The heavy-duty gas main was laid in less than 14 months and is to carry 32 billion

cubic metres of gas a year. The pipeline was the linchpin due to US President Ronald Reagan's attempts to impose sanctions on West European suppliers of pipeline equipment.

IA world's 10th largest domestic carrier: Indian Airlines has emerged the 10th largest domestic carrier in the world and outside the US, the third after Air Canada and Trans-Australian Airlines, according to the *World Air Transport Statistics* published by the IATA. IA, which entered the 31st year of its operation on August 1, 1983, is also the third-largest airline among all IATA member airlines in Asia. If the total number of aircraft departures for domestic operations are considered, IA will emerge the largest airline in the region.

India and the US have signed five project agreements totalling \$55.90 million for the Madhya Pradesh minor irrigation, irrigation management and training and social forestry, Rajasthan medium irrigation and development and management training projects. The Madhya Pradesh minor irrigation project would get \$46 million. For the irrigation management and training project, the agreement provides for \$51 million.

DIED

Gopi Nath Aman, 85, veteran freedom fighter, well-known Urdu poet and a minister in the erstwhile Delhi State in the 1950s, on July 7 in New Delhi.

Herman Kahn, 61, an optimistic visionary known for his studies of the Pentagon, Japan and Arizona, who predicted a golden age in which technology would free man from the drudgery of work, on July 7 in New York.

Ross Macdonald, 67, mystery writer and author of 24 novels, on July 11 after a year-long illness.

J.S. Anand, 50, Deputy Inspector-General of the Border Security Force and uncle of Maneka Gandhi, whose body was found floating in Chandigarh's Sukhna Lake, on July 13.

Philip Zec, 73, a radical British political cartoonist and tabloid newspaper editor whose work enraged Winston Churchill during World War II, after a brief illness. Zec's cartoons, which appeared before and during the war in the *Daily Mirror*, then Britain's largest selling daily newspaper, were considered influential in Churchill's defeat by the Labour Party after the war.

Satya Narain Sinha, 84, former Madhya Pradesh Governor and Minister for Information and Broadcasting and Communications from 1969 to 1971, on July 26 in Samastipur, after a prolonged illness.

David Niven, 73, British movie actor who appeared in almost 100 films, having a 40-year career in Hollywood and Britain, on July 29 in Chateau d'oere—his chalet in Swiss mountains—after a long illness.

Ivan Alexandrovich Benediktov, Soviet Ambassador to India from 1959 to 1967 and a recipient of the Jawaharlal Nehru Prize for strengthening Indo-Soviet friendship, on July 28 after a long illness.

Luis Buñuel, 83, Spanish film-maker regarded by critics as one of the world's greatest, on July 29 in New Mexico, US, of a complication from a metabolic disorder. A.P.

ENGLISH

HOW TO WRITE A PARAGRAPH

BY ANITA SHARMA

Coherence and conciseness—the two basic tenets of paragraph writing—are a source of considerable anxiety to many. As it figures in many exams, here are some guidelines on how to write paragraphs that are perfect units of logically flowing thoughts along with examples.

Precisely 30 minutes are left for the exam to get over and Sanjay has yet to start the last question, writing a paragraph. A time tick is away. Sanjay cannot help but sweat. He reads the quotation and starts writing at once only to cancel it the next moment. He starts again, writes one sentence and stops to stare or fumes at the question paper. He glances at his neighbour Mohan who appears relaxed as he studies the topic and occasionally scribbles something on the rough sheet.

After a while Mohan starts writing slowly, meticulously and with confidence. Poor Sanjay continues to chew his pen and scratch his head. When the time is up, Mohan strides out of the hall smiling while Sanjay looks dejected as the paper is taken away from him unfinished.

Though a paragraph is written more from instinct than a conscious effort, not many can write with the ease of Mohan. Most of us do not even remember the principles and intricacies that weave the fabric of a paragraph. However, it is never too late to learn or revive your knowledge of the grammatical and technical aspects of paragraph-writing.

The basic purpose of asking a student to write paragraphs during an exam is to test his capability of thinking fast and connecting different issues. Through this method the examiner tests a person's ability to argue a point convincingly, his way of organising his thoughts within a limited time frame and his general knowledge. Above all, paragraph-writing reveals just how sound a person's English is.

To make sure that your English is impeccable while writing a paragraph, you must know the essentials of paragraph writing—the nature of a paragraph, its thematic and structural organisation and the various kinds of paragraphs.

An independent paragraph is the development or expansion of an idea. It is a series of sentences conveying a series of connected thoughts dealing with a single topic. It should not be more than 200 words. Therefore, conciseness of thought and unity of theme and structure are its essential components.

The unity of theme and structure makes a paragraph a tight, well knit unit. So unity ought to be uppermost in your mind while writing one. The whole unit

should deal with one idea and all arguments and explanations should illustrate that idea. There should be no digression from the main topic and the examples given should be clear and unambiguous.

The arguments given to expand the basic theme ought to flow logically one after the other in such a way that they seem a chain of supporting thoughts rather than disconnected ideas. These subordinate ideas should be arranged priority-wise with the most important arguments and examples coming first. Use of conjunctions ought to be avoided as far as possible. Categorical statements which do not make a point are useless. For example, 'work is worship' is just a flat statement. A better way to express the same thought would be 'Constructive work like God's worship is the highest duty of man.'

A topic or a theme might have many facets, but a paragraph should deal with only one of them. To discuss all the aspects of a subject would be writing an essay on it. For our purpose, it is sufficient to take up the dominant idea having the closest link to our topic and develop it. For example, if the topic is 'Dowry and the plight of women', it would be quite irrelevant to discuss the origin and the socio-economic causes of dowry. There is also no need to debate on the subject unless specifically asked for. In an independent paragraph it is enough to carefully illustrate one aspect. Arguments ought to be either for or against a particular theme and not on both simultaneously.

The placement of theme is important to the effectiveness of a paragraph. The theme might be stated in the opening sentences or in the concluding part. While the former has the advantage of arresting the reader's attention and defining the scope of the paragraph, the latter is generally the logical conclusion of the whole unit. All sentences converge on to definite finale and by stating the theme in the last sentence, we clinch the issue. Often, however, the theme is not stated at all and is merely by explanations and illustrations.

Depending on the placement of the theme and the style, paragraphs can be

(Continued on page 62)

TIPS FOR YOU

With this basic knowledge, can you now write a good paragraph in 20 minutes? Because this is all the time you will get in an exam for expanding a topic quotation. In case you find it difficult to do so, here are some tips to help you along. You can divide your work strategy into three steps: thinking on the theme, organisation of thoughts, and writing and revising.

- Read the quotation carefully to understand its significance—two minutes

- Now start thinking about the topic. Simultaneously jot down in points (in rough) the anecdotes, allusions and examples that occur to you—five minutes

- Next, reorganise your points according to importance—three minutes

- All this should not take more than 10 minutes. Of the remaining 10 minutes meant for the last step, spend only eight minutes on actual writing. Two minutes must be kept for revision. During this time you must check out your paragraph for spelling mistakes, grammatical errors and inept phrases.

- Before the exam, try practising on these lines and see what an expert you become in the art of paragraph-writing.

IN THE NEWS SRI LANKA

BY SANJUKTA BANERJI, University of Delhi

Sri Lanka, the smallest of nations, is torn by strife between the Sinhalese majority and the Tamil minority. But there's nothing new in these riots—only, successive governments have been callous towards the Tamil underdogs. Events in Sri Lanka today serve as a pointer for still worse things to come—if the present Jayewardene government does not wake up to face the harsh facts of Tamil-Sinhalese relations.

The problem of ethnic minorities is not peculiar to large or developed countries alone, where the existence of such minorities is only to be expected. The smallest of nations also possess racial and ethnic minorities and, as in the case of Sri Lanka, majority-minority relations can turn sour enough to result in the senseless massacre of hundreds of persons belonging to the minority group. Anti-Tamil riots reached a peak in Sri Lanka in July and the government itself admitted that more than 200 Tamils had been killed in the last week and over 50,000 had been rendered homeless.

The ethnic problem is not of recent origin; in fact, it dates back to a 5th century A.D. chronicle, the *Mahavamsa*, which speaks

An unidentified body lies burning outside Colombo. Mayhem on Tamils

glowingly of the Sinhalese King Dutthagamani who killed the Tamil monarch, Elara, in single combat. The Sri Lanka Tamils have been living on the island for over 2,000 years, possibly before the arrival in the 4th or 5th century, of the legendary prince Vijaya with his band of 700 men from whom the present day Sinhalese claim descent. Although the two groups must have intermarried and many Tamils had been rulers of the Sinhalese Kingdom in medieval times, the present-day Tamils and Sinhalese rarely admit intermixture. The Tamils, in fact, hark back to the Tamil Kingdom of Jaffna which succumbed to the Portuguese in 1619. Many of them dream of the formation of an 18,000 sq km national homeland in Jaffna in future—the Republic of Eelam. The Tamils now form 10 per cent of the 14 million population of Sri Lanka. They are of Dravidian stock and are mainly Hindus whereas the Sinhalese claim Aryan origins and are primarily Buddhists.

In pre-British times, the problem was far from acute. The British, with their divide and rule policy, created a two-nation feeling between the two communities—and this has led to the tragic events of today. In order to contain the growing nationalism among the Ceylonese, the British cultivated the Tamil minority. With British missionary help in acquiring educational qualifications, the Tamils

virtually monopolised the administrative set-up right from the clerical cadre to the highest levels in the pre-independence days. They also gained control over non-governmental professional sectors like medicine, accountancy, architecture, universities, engineering, law etc. It was not surprising, therefore, that the Sinhalese majority became resentful and after the departure of the British, the full wrath of the Sinhalese descended on the Tamil minority.

The first indication of Sinhalese Buddhist revivalism came in 1931 when the Donoughmore Constitution prescribed territorial electorates, with no thought to ethnic distribution, thus ensuring majority rule with the minority at its mercy. The Tamils subsequently asked for 50 per cent reservation for the combined minority population in both legislature and Cabinet, but this demand was rejected. However, the 1946 Soulbury Constitution gave some weightage to Tamil representation in Parliament and forbade discriminatory laws.

Sri Lanka's first Prime Minister, D. S. Senanayake saw to it that the Tamils were given a fair deal. He assured them that 'no harm need they fear at our hands in a free Lanka'. But racial unity disappeared with his death soon after independence. Under Senanayake the country had decided on a two language formula but, in 1956 the Official Languages Act made Sinhalese 'the one official language of Ceylon'. As a result of ensuing protest riots, the 1957 Bandarnaik-Chelvanayakam pact recognised Tamil as 'the language of a national minority'. A Tamil Language Act passed in 1958 agreed to the "reasonable use" of Tamil in education, public service entrance exams and administration in the northern and eastern provinces. The pact and the 1958 Act, both, however, remained dead letters. Consequently, the educational advantage which the Tamils had so far enjoyed, disappeared. This in turn led to a vast reduction in the employment benefits of the Tamils.

The Tamil share of the civil services fell from about 30 per cent in 1948 to only five per cent in 1975. The Sinhalese discriminated against them in recruitment to the armed forces and the granting of industrial licences and loans. The government also followed a colonisation policy to dilute collective Tamil bargaining power by introducing Sinhalese settlers to break the continuity of Tamil-inhabited areas. The Tamils were also discriminated against in the field of education and Tamil admission to universities fell from 31 per cent in 1948 to 16 per cent in 1970. In the political field, a large number of Tamils were disfranchised by the Citizenship Acts of 1948 and 1949, which took away the political rights of one million Tamils who had migrated to Ceylon in the second half of the 19th century in search of work in the plantations.

work in the plantations. This seriously affected the political leverage of the Tamils.

To protest against these actions of the majority group, the Federal Party, headed by S. J. V. Chelvanayakam, the father of Tamil nationalism, launched a series of non-violent agitations in the 1950s in the Tamils areas and in Colombo. But with Chelvanayakam's death, the moderate stand among the Tamils came to an end. The Federal Party rechristened itself and is now called the Tamil United Liberation Front (TULF). Its leader, Appapillai Annathalingam, is a militant, but currently the wave of terrorism among the Tamil youth, who have lost faith in non-violence, is threatening to sweep him away. The Liberation Tigers, who have fixed their eyes on independent and fully sovereign Eelam, reject the more moderate demands of federalism and autonomy. While the TULF has been watching helplessly, terrorism has been growing by leaps and bounds since 1975, the targets of terrorist raids being anti-secessionist Tamils, the police force and the armed forces.

These attacks only encourage attacks by the police and armed forces, which are largely manned by the Sinhalese, and over whom the government seems to have little control. In the past 26 years, there have been six major outbreaks of racial disharmony, the last and perhaps the worst occurring in the final week of July this year.

The present crisis was touched off by the May 18 elections, when 46 seats in local bodies were contested and by elections for 18 parliamentary seats were held. On election day, 25 Tamil extremists engaged security forces at a polling booth in Kantharomadam

village in Jaffna in a gun battle. Bomb explosions were also reported from other parts of Jaffna. The idea behind this terrorism was to prevent candidates from standing for elections and the population from voting. The armed forces retaliated by burning down houses and beating up innocent villagers in Jaffna. The situation escalated and fresh spurts of Tamil terrorism were followed by retaliatory terrorism on the part of the Sri Lanka armed forces. The last straw for the Tamils came when extremists ambushed and killed 13 army patrol men in Jaffna on July 23. Three days later, 37 Tamil prisoners were slaughtered in Welikade prison in Colombo and more jail massacres took place. Anti-Tamil riots in Colombo, Galle, Gampaha, Kalutara, Nuwara Eliya, Trincomalee, Radulla and Kandy took a heavy toll; the actual number of Tamils killed is still unknown.

President Junius Jayewardene's government is trying to deal with the problem as best as it can. It appears, however, that the security forces do not feel honour bound to comply with the President's orders and act in a non-partisan manner. The country is in turmoil in other fields too and according to the government's own testimony, three leftist parties are involved in an effort to topple it. The left in Sri Lanka has traditionally been anti-Tamil. Following the July disturbances, Jayewardene banned three left-wing groups—the Communist Party of Sri Lanka, the Jathia Vimukti Peramuna and the Nava Lanka Sama Samaj—and warned that the sectarian strife was part of a foreign plot to overthrow the government. On August 4, the Sri Lanka Parliament began consideration of an amendment to the Constitution which

would make it illegal to advocate a separate Tamil nation. The TULF feels that this is aimed at banning the party and the 19 MPs of TULF, who form the Opposition in Parliament, boycotted the proceedings.

Meanwhile, the massacre of the Tamils aroused the ire of India, especially in the south. The External Affairs Minister P. V. Narasimha Rao, air-dashed to Sri Lanka and conveyed India's concern over the attack on Indian nationals and their property as well as the possible consequences that the killings could have on India's own national life and security. What gave India further cause for concern was a foreign news agency report that Sri Lanka had appealed for pledges of military assistance from the US, Britain, Pakistan and Bangladesh in case of foreign attack. The newspaper *Sun* also published a column saying that Jayewardene had warned his Cabinet that India might invade Sri Lanka. Although Sri Lanka later denied the report and expelled the UPI correspondent Stewart Slavin, who had filed the report, public opinion in India was not assuaged.

Prime Minister Indira Gandhi held consultations with Opposition leaders to evolve an all-party approach to the Sri Lanka problem. New Delhi is expected to take a major diplomatic initiative on the issue. However, as long as the government in Colombo does not deliberately discriminate against the people of Indian origin and seriously tries to end the violence against the Tamils, there is little that India can do except help it through medical and food supplies and the supply of other essential commodities to the 150,000 persons affected by the ethnic violence. □

ENGLISH

(Continued from page 60)

divided into three categories.

Illustrative paragraph In this category, the main theme is simply substantiated by instances from real life or experiences. For example, if the theme is 'A stitch in time saves nine', a few incidents can be quoted showing how men have suffered because they did not take timely action.

Explanatory paragraphs Here one elaborates upon the main theme, giving the necessary details. If the main theme is 'Democracy is a government of the people, for the people, by the people', then the paragraph should explain that it is a government people give to themselves by choosing the men who govern them.

Argumentative paragraphs Sometimes it is not enough to describe and explain the topic. You have to argue a viewpoint by giving proofs. For example, if you have to argue against 'A woman's place is at home', then you can support your stand by saying that a woman who goes out to work and meets a variety of people is better equipped to meet a crisis at home also.

However, these categories are not rigid and a paragraph can contain either or all of these features. Whatever the nature of the paragraph and whatever its theme, its purpose is to communicate.

"One religion is as true as another"

Down the ages men have preached and advocated the equality of all religions. The great Sufi poet Kabir preached similarity of purpose in Islam and Hinduism. He insisted that Rama and Rahim were the same. Akbar, the great Mughal emperor, possessed the same wisdom and held discussions with priests of all religions. In our times we had Gandhiji who, like his predecessors, believed that all religions were merely different paths leading to one destination—The Almighty God, who created this earth. But in spite of this, men have been unable to overcome their prejudices about others' religious beliefs. In ancient times, bloody battles were fought in the name of religion and called crusades and *jihad*. The intolerance and contempt for each other's religion continues and today there are riots between different religious communities—injuring and killing many. Driven by religious fanaticism, these men forget that the basic message of all religions is the same: Peace, Love

and Brotherhood.

"A man who fears suffering is already suffering from what he fears."

In *Julius Caesar*, Caesar says, 'Cowards die many times before their death; the valiant never taste of death but once.' Similarly, those who are afraid to suffer in fact undergo greater agony. It is cowardly to fear not only death but suffering, because it is that aspect of life which brings out the best in man. It is only in moments of crisis, under great mental and physical stress, that man's true calibre is revealed. The Indian sages of the past attained great spiritual powers because they dared to suffer. King Harishchandra of Hindu mythology was rendered homeless, had to face hunger, poverty and even his child's death, but he never gave in and emerged a better human being and a better ruler. Prince Siddhartha attained 'nirvana' (enlightenment) only after his body had faced the elements of nature at their worst and had gone through all kinds of misery. Only then did he become the Buddha. In the field of literature, sorrow over unrequited love made Keats a great poet. Prem Chand produced gems like *Godaan* and *Kafan* after facing the terrible miseries of poverty. So, why fear suffering, why not accept it as a challenge? □

SPORTS

ATHLETICS

The 100-m sprint world records, both for men and women, were shattered at the US National Sports Festival, in Colorado Spring, USA, on July 3. Calvin Smith (US) with a time of 9.93 sec broke the 15-year-old record set at the Mexico City Olympics in October 1968 by Jim Hines (US), clocking 9.95 sec. Evelyn Ashford (US) broke the month-old record when she crossed the line at 10.79 sec. Last month, Marlies Gohr (GDR) had clocked 10.81 sec in East Berlin.

Jarmila Kratochvilova of Czechoslovakia set a new world record of 1.53.28 sec for the women's 800 m at an international meet in Munich on July 26. The previous record of 1.53.50 was set by Nadezhda Olizarenko (USSR) at the 1980 Olympic Games in Moscow.

CRICKET

The MCC on July 13, voted against sending a team to South Africa—a proposal that had threatened to split the cricketing world. The 18,000 member Marylebone Cricket Club (MCC) decided at a special meeting in London that the 196-year-old club should not stage a tour in the face of fierce international opposition to South Africa's apartheid policy. The MCC, once the governing body of English cricket, when touring English sides carried its name; has been a private club since 1969. But it still remains guardian of the game's rules.

England won the First Test (July 14-18) against New Zealand at the Oval, London, by 189 runs. They have taken a 1-0 lead in the four-Test series.

Scores: England 209 (Chris Tavare 45, Derek Randall 75 n.o., Richard Hadlee 6 for 53) and 446 for 6 decl. (Graeme Fowler 105, Tavare 109, Alan Lamb 102 n.o.).

New Zealand 196 (Jeremy Coney 44, Hadlee 84, Bob Willis 4 for 43, Ian Botham 4 for 62) and 270 (John Wright 88, Geoff Howarth 67).

CYCLING

The toughest race in the annual sports calendar, the Tour de France cycle race, which started on July 1 and finished on July 24, after covering about 3,500 km in France, and which was contested in 22 stages, was won by Laurent Fignon of France in an aggregate time of 105 hours 7 minutes and 52 seconds. Angel Arroyo of Spain and Peter Winnen of Holland came second and third respectively.

Steve Ovett of Great Britain, after an injury-ridden 1982 and spiked during a jostling 800 m race of the British Amateur Athletic Association recently, will only go in for the 1,500 m at the Helsinki World Championships (August 7-14), the biggest sporting spectacle since the 1972 Olympics. Pic shows Ovett winning the Iveco Bislett Games in Oslo in late June.

GLIDING

The World Championship for the soaring category, which ended in New Mexico (USA) on July 10, was won by Ingo Renner of Australia.

HOCKEY

The 8th All India Indira Gold Cup Tournament, which concluded at Srinagar on July 15, was won by Indian Airlines (IA), Delhi, when they defeated Indian Air Force (IAF), Delhi, by 3 goals to 1, in the final. For IA, captain Zafar Iqbal played a tremendous game and was instrumental in all the three goals for his team, which were scored by Sukhbir Singh Grewal, Dawinder Singh and Varinder Singh. The lone IAF goal was scored by Sukhbir.

OLYMPIC GAMES

Peter Ueberroth, President of the Los Angeles Olympic Organising Committee, has said that the 1984 Olympic Torch Ceremony is expected to raise US \$30

million for youth athletic programmes by permitting runners to carry the torch for one kilometre, in exchange for \$3,000 in donation.

In early May '84, the Olympic Flame will be kindled in Greece (at Olympia) and then flown to New York for the start of the relay. The 19,000 km-nationwide run will begin on May 8, and pass through all 50 states, including 100 km swings through Alaska and Hawaii. More than 10,000 torches will be used in the run, with the Olympic Flame passed from torch to torch.

SHOOTING

The fifth Asian Championships, which ended in Jakarta (Indonesia) on July 30, was dominated all through by China. They finished with 17 gold, 9 silver and 5 bronze medals. Japan was way behind with a tally of 5-3-13 medals. South Korea pipped North Korea to take the third place. They had bagged 4-10-8 and 4-6-1 medals respectively.

India finished sixth with three medals.

1 gold Centre fire pistol—team— 1,728 pts (Sharad Chauhan 579 pts, Ashok Pandit 571 pts and Mohinder Lal 578 pts). **2 bronze Trap—Team—** 408 pts (Randhir Singh 142 pts, Mansher Singh 132 pts and Gurbir Singh 134 pts). **Individual—** Randhir Singh 189 pts.

SWIMMING

Probably the greatest distance swimmer of them all, Vladimir Salnikov (USSR), set yet another world record at the opening of the new pool for the 1984 Olympics, in Los Angeles on July 14. In this McDonald's International Invitational Meet, he bettered his own record by clocking 7:52.33 for the 800 m freestyle event. The earlier record was 7:52.83, set in Moscow in February '82.

TENNIS

Following were the major international tournaments held in July.

The top three Indians lost in the first round itself of the All England Lawn Tennis Championships (for results of all events, see facing page) held at Wimbledon, London on July 3. Mark Edmondson (Australia) b Vijay Amritraj 6-3, 6-4, 7-6. Vitas Gerulaitis (US) b Ramesh Krishnan 5-7, 7-5, 7-6, 5-7, 6-3. Tom Gullikson (US) b Shashi Menon 6-2, 6-1, 6-2.

Jimmy Connors (US) defeated Ivan Lendl (Czechoslovakia) 7-5, 7-6 to win the Million Dollar 4 man Exhibition Tournament in Sun City (South Africa) on July 10. He took home \$4,00,000, while Lendl received \$3,00,000. Third place and \$2,00,000 were won by Johan Kriek (US) with a 6-2, 6-0 win over Kevin Curren of South Africa.

The Management Page

is now a special feature in
THE ECONOMIC TIMES
Every Wednesday & Saturday
covering eight Management areas.

| Wednesday | Saturday |
|--|--|
| First Finance Management | General Management |
| Second Marketing Management
(including sales & advertising) | Information Management
(including systems & communications) |
| Third Legal Management | Taxation Management |
| Fourth Production Management
(including materials management) | Personnel Management
(including manpower development) |

The Management Page raises issues presents techniques and approaches studies the actual experience of decision makers at all levels and deals with specific problem oriented situations in all management areas. Mainly written by managers the articles are brief, practical and frank. Principles emerge wherever possible from the way specific problems are handled.

Plus three extra pages on these two days, focussing on many a sector of the economy - industries, commodities etc

Looking for a BANK JOB?

You also can secure a well-paid bank job by passing the qualifying examination conducted by banks from time to time. Every year about 25,000 candidates are recruited by banks for which over ten lakh candidates appear for the examination. But only well-prepared candidates can pass the examination. How can you become a successful candidate?

ALPHA, the largest specialised bank recruitment training institute in the country, offers excellent result oriented oral/postal coaching by experts for:

Probationary Officers
Clerical Cadre
CAIIB
RBI A & B Grade
LIC, GIC, etc.

Study materials prepared on the basis of the previous question papers will be despatched to the students at frequent intervals. Test of Reasoning and Numerical Ability/Quantitative Aptitude are made simple. Lessons on bank interview techniques will be given free to the successful candidates.

Every year Alpha's students are securing bank jobs. Why not you?

For detailed prospectus send Rs. 2/- by P.O. or M.O.

India's Anand Amritraj, pairing with American Mike Bauer, lifted the doubles title at the \$1,00,000 Grand Prix Tournament in Stuttgart (FRG) on July 17. They defeated the Czech Davis Cup players, Tomas Smid and Pavel Slozil, 4-6, 6-3, 6-2 in the final.

The \$1,00,000 Volvo Grand Prix Circuit Tournament in Kitzbuehel (Austria) was won by Guillermo Vilas of Argentina, when he defeated Frenchman Henri Leconte 7-6, 4-6, 6-4 in the final on July 24.

Third-seeded Czechoslovakia won the Federation Cup in Zurich on July 24, when West Germany's top-ranked player, Bettina Bunge, was forced to retire against Hana Mandlikova in the final due to injury. The score then was in favour of the Czech girl: 6-2, 3-0. Earlier, in the semi-finals, they had defeated top-seeded US (represented by Andrea Jaeger and Candy Reynolds). Thus, for the first time since 1975, the Americans failed to reach the finals, and only the seventh time in the 21-year history of the cup.

The Federation Cup is the International Lawn Tennis Team Championship for women (similar to the Davis Cup for men), which started in 1963. It is played on a knock-out basis, and is played only at one venue, where all the teams assemble. It has been won 11 times by the US (seven consecutively from 1976 to 1982), seven times by Australia, twice by the Czechs and once by South Africa.

WEIGHTLIFTING

The following world records were created at the Spartakiad in Moscow.

In the bantamweight (upto 56 kg) category, on July 23, Oksen Mirzoyan (USSR) lifted 127.5 kg in the snatch, to overhaul by 1 kg the record held by Wu Shude of China. Mirzoyan's total of 287.5 kg was also a world record.

In the middleweight (upto 75 kg) category, on July 26, Vladimir Kuznetsov lifted 165 kg in the snatch, to improve his own world record by 1.5 kg.

In the heavyweight (upto 110 kg) category, on July 30, the world record for the jerk was broken twice, within a few minutes. First, Olympic champion Leonid Taranenko lifted 242.5 kg to beat his own previous record by 0.5 kg, and then Vyacheslav Klovov, also of USSR, lifted 243.0 kg.

In the super-heavyweight (over 110 kg) category, on July 31, the snatch record was also broken twice. Anatoly Pisarenko, the double world champion, first stepped up to break his own previous record of 203 kg by lifting 205 kg. Few minutes later, his 23-year-old compatriot, Viktor Mossibite, produced a lift of 205.5 kg.

SANJEEV KUMAR

WIMBLEDON: TAME STUFF

Contrary to the nail-biting finals in the men's singles event over the last few years, involving Borg, McEnroe, Connors and Tanner, this year's was a damp squib. In just 85 minutes, the second-seed 24-year-old 'Superbrat', John McEnroe (US), steam-rolled the unseeded 26-year-old Chris Lewis (New Zealand) 6-2, 6-2, 6-2.

In the most one-sided final since Jimmy Connors (US) thrashed Ken Rosewall (Australia) in 1974, McEnroe gave a thorough performance of clinical precision. This was his fourth consecutive final, and second title win, which he achieved by holding his service throughout the match, losing only nine points in his 12 service games and never being further back than 15-30 in any of those games. In fact, he got in 36 of his 57 first serves.

The Kiwi, ranked 91st in the world, was only the eighth unseeded finalist since formal seedings began in 1927, and first since Wilhelm Bungert (West Germany) in 1967. And the last New Zealander to reach this stage was Anthony Wilding in 1914.

It was a battle royale which got Lewis into the final. Twelfth seed Kevin Curren (South Africa)—who had in the fourth round knocked out top-seeded Connors 6-3, 6-7, 6-3, 7-6 on that 'graveyard of the champs' court No. 2—was leading 3-0, 30-15 in the fifth set of the semi-final against Lewis. But the latter had other ideas and bounced back to trounce the tiring Springbok player 6-7, 6-4, 7-6, 6-7, 8-6 in 3 hours 45 minutes.

In contrast, in the other semis earlier, McEnroe carried out the third consecutive win of the year over Ivan Lendl of Czechoslovakia 7-6, 6-4, 6-4.

In the women's singles events, only nine seeds reached the fourth round—which excluded that gracious, but thoroughly professional, Chris-Evert Lloyd (US), seed No. 2, who, on one of her off-days, lost to compatriot Kathy Jordan 6-1, 7-6 in the third round.

Consequently, in the final, the Czech-born American citizen, top-seeded Martina Navratilova, had absolutely no problem in

McEnroe overstretched: Nothing like it happened this July in the Wimbledon finals.

eliminating Andrea Jaeger (US), the third seed, 6-0, 6-3 in less than an hour. In winning the title, Martina dropped only 25 games in seven matches, which occupied no more than 5½ hours in all. This 28-year-old left-hander has won 49 out of 50 singles matches this year (losing only to Kathy Horvath at the French Open).

In the first of the two semi-finals, both of which featured the same scoreline 6-1, 6-1, it seemed almost embarrassing when 18-year-old Andrea outplayed the 'grand old lady' of Wimbledon, 39-year-old Billie-Jean King (US), in just 56 minutes—until, that is, Martina demolished Yvonne Vermaak (South Africa) in a mere 36 minutes.

Having already won a record total of 20 titles at these championships (six singles, 10 doubles and four mixed doubles), it was an emotional moment for Billie-Jean, when she lost in the mixed doubles final, partnering Steve Denton (US) 6-7, 7-6, 7-5, to the Aussie Wendy Turnbull and Britain's John Lloyd. He, in fact, became the first male Briton to win a title here after Fred Perry's triumph in 1934-35-36.

For Wendy, too, it was sweet success as she had earlier lost the women's doubles final paired with veteran American Rosie Casals to that almost unbeatable team of Martina and Pam Shriver (US) by 6-2, 6-2. (This doubles pair have been beaten only once this year.)

It was also a grand double for McEnroe, who, with his partner Peter Fleming (since 1978), defeated the Gullikson twins, Timothy and Thomas, 6-4, 6-3, 6-4 in 1 hour 48 minutes, to win the men's doubles for the third time (earlier won in 1979 and '81). The Gulliksons, who put out second seeds Curren and Denton in the semis 7-6, 6-7, 7-6, 6-3, are the first twins to reach the finals this century. The British brothers, Herbert and Wilfred Baddeley, were the last, in 1879.

S.K. GUPTA

THE 'MYSTERY' OF THE BERMUDA TRIANGLE

The day December 5, 1945. Time, 2 10 p.m. Weather Clear. Flight 19 of the US Navy comprising five TBM-3 Avengers took off from Fort Lauderdale on a routine navigational training run between Florida and the Bahamas—and disappeared into thin air about two hours later. One *Avenger*, however, was one man short. He had requested removal from flying status because of a premonition and had not been replaced.

Two *Martin Mariners* were quickly despatched to search for Flight 19. Several hours later, when the wind kicked up to 30 knots and visibility became poor, they were ordered to return to base. Only one flew in. The other *Martin Mariner*, with a crew of 13, had disappeared as well.

Then followed one of history's most intensive searches involving 307 planes, four destroyers, several subs, 18 Coast Guard vessels, search and rescue cutters, hundreds of private planes, boats and yachts. But nothing was found. No life rafts, no wreckage and no oil slicks. A Naval Board of Inquiry went into all the evidences available but could come up

They flew into the 'Triangle of Death': Flight of TBM Avengers similar to the five planes of Flight 19 that disappeared in December 1945.

with no satisfactory explanation. Yet imaginations began to work overtime. Individuals came up with the most varied and imaginative explanations:

"They had vanished as completely as if they had flown to Mars."

"They are still here, but in a different dimension of a magnetic phenomenon that could have been set up by a UFO."

"We don't know what the hell is going on out there."

Subsequent unexplained disappearances in this section of the western Atlantic were noted by journalists, authors and others. A mysterious zone, triangular in shape, was identified with Bermuda, Puerto Rico and a point in the Gulf of Mexico west of Florida as its apex (see map)—and called the Bermuda Triangle after its northern apex. Also referred to as 'The Graveyard of the Atlantic', 'Limbo of the Lost', 'The Devil's Triangle', 'The

Triangle of Death', it encompasses about 1,40,000 square miles in the Atlantic.

It had long been known in maritime circles that many ships disappeared in this area and with increasing frequency since the 1860s, possibly because of more detailed reporting. Since 1945 alone, the Bermuda Triangle has reportedly claimed more than 100 vessels and aircraft and more than a thousand seamen and airmen. All disappearances beyond this date have been substantiated by US Navy and Coast Guard records. However, citing lack of evidence, the Navy has taken no official stand as to whether the disappearances were more than coincidence.

Like Flight 19, they too reportedly left no trace whatsoever. In most cases, the weather was good, no distress calls were sent and though searches were made, yet no survivors, wreckage, bodies or oil slicks were ever found. In some cases, boats were found in excellent condition, except that their crews were missing! In others, warm meals were on the table and animals (a talking parrot, however, was 'taken' away) were on board, completely unharmed.

Some of the most famous losses include:

- The 542-foot US Navy ship *Cyclops* in 1918 with 309 aboard—no bad weather, no radio messages, no wreckage ever found.
- Cuban freighter *Rubicon* in 1944—found by Coast Guard in Gulf Stream off Florida Coast; deserted, except for a dog.
- British commercial airliner *Star Tiger* in 1948 with 31 aboard—lost radio contact after last contact 380 miles north-east of Bermuda.
- A chartered DC-3 en route from San Juan to Miami in 1948 with 32 passengers plus crew—disappeared into the void under the most mysterious circumstances. The weather was excellent, the night clear. The captain even reported on the radio—"What do you know?... We are all singing Christmas carols!" The last message read: "We can see the lights of Miami now. All's well. Will stand by for landing instructions." All was *not* well for nothing was ever heard from the plane again. No survivors, no wreckage.

● *Star Ariel* in 1948—lost under similar circumstances as its sister ship *Star Tiger*.
 ● US Navy *Super Constellation* in 1954 with 42 aboard—vanished north of the triangle.

● The 425-foot American freighter, *Marine Sulphur Queen*, in 1963 with 39 aboard—disappeared without transmitting a radio distress message, only two life jackets found

● An American all-weather 46-foot racing yacht, *Revonoc*, in 1967—disappeared within sight of land.

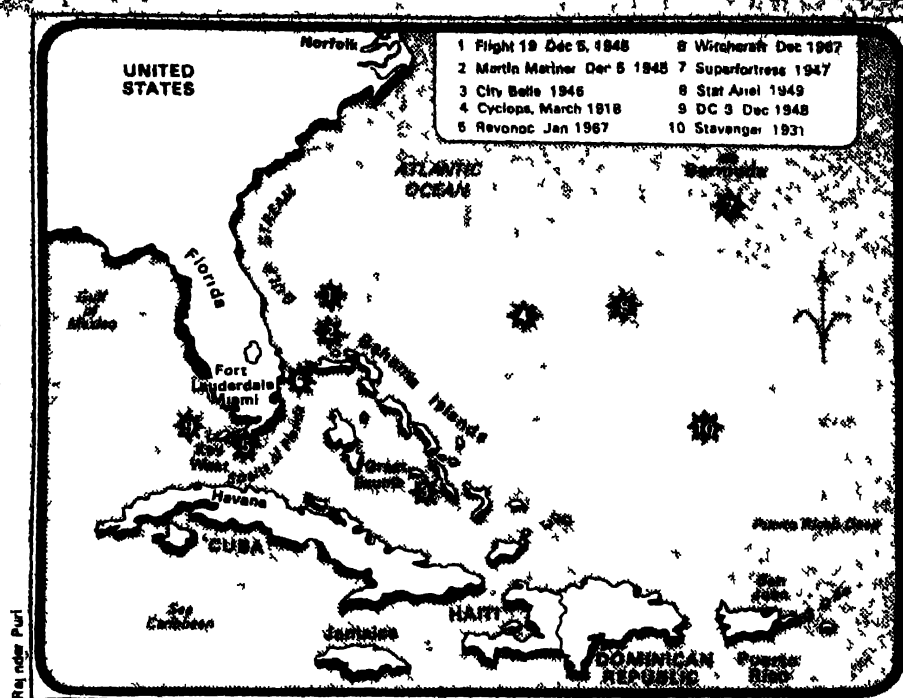

● A 20,000-ton freighter, *Anka*, in 1973 with a crew of 32—left no trace.

With so many disappearances being reported in the Bermuda Triangle, logical causes such as bad weather, human error and mechanical faults were quickly ruled out. Instead, the losses were attributed to mysterious, unknown and, what some may call, fantastic factors—timespace warps leading to another dimension electro magnetic or gravitational forces which cause planes to crash and ships to lose themselves at sea by having a strange effect on the magnetic compass and other electrical equipment sudden tidal waves caused by underwater earthquakes, capture and kidnapping by flying or submarine UFOs looking for specimens of earth inhabitants, death rays from an underwater civilisation, and so on. Some even put forward the theory that there was a 'hole in the sky' through which aircraft could enter but not leave.

Such spine-chilling theories were further spawned and nurtured by the mediamen. Books were churned out by the dozen and entered the bestseller charts in no time. Television came up with Bermuda specials, film makers had a made-to-order boxoffice 'true story'.

As interest mounted in the 'Triangle of Death' and apprehension spread among sailors and fliers, a counter-revolution set in. Lawrence David Kusche, a librarian at the Arizona State University, who felt the Bermuda mystery was all hogwash, painstakingly researched into all the disappearances and cases of abandoned ships and came up with a logical explanation for each loss. His book, *The Bermuda Triangle Mystery—Solved*, shows that the Bermuda cases are mere fables and that the fabulists, instead of looking for logical solutions, have copied each other's mistakes, embroidering details until what really happened was obscured behind romance.

According to Kusche, "The main causes are precisely what the creators of the legend said were not at fault: bad weather, human error and mechanical failure. In some cases writers even withheld information that contradicted their theories. For example, some of the losses occurred 1,000 miles or more from the triangle. One

A MYSTERY SOLVED?

One are the days when it was easy to give each disappearance—at sea or air—a touch of mystery. Now, with highly advanced radio communications, more sophisticated instruments and more highly developed search patterns, a disappearance in a majority of cases can be explained. Sense can often be made out of faint and unintelligible messages like "compass spinning crazily", "sky has turned yellow and hazy" (on a clear day), "the ocean doesn't look right". SOS signals are sent and acknowledged and immediate action taken.

The number of disasters has been considerably reduced by the many more safety devices that have been introduced on aircraft and ships. Some of these were not in use at the time of some of the more striking incidents. The 'omni', a radio-directed homing system which enables planes to find their way back to base even through the thickest of clouds, is now installed on small planes too. The seamer's apprehension of this area too has been markedly lowered as satellites are now used for search-and-rescue missions within the region and elsewhere.

An entire folklore of disappearances that had been built over centuries around this area cannot be wiped out in one fell swoop, but the decreasing disappearances tell their own tale.

took place in the Pacific Ocean."

More specifically, about the US ship *Cyclops*, Kusche wrote that in 1968 a diver spotted her wreckage resting on the sea bottom near Norfolk Virginia. Her end, according to the Coast Guard, may have been brought about by a sudden wave that caved in her hatch covers. Then seas filled her hold, waterlogging her top heavy cargo and tipped her over before anyone could send an SOS.

As for the many small craft that have disappeared in the Straits of Florida, which is one of the busiest waterways in the world, the Coast Guard thinks that large ships run down smaller ones in the haze that is so common here. This is what could have happened to the private yacht, *Revonoc*. The disappearance of the two British *Star* planes, in the Coast Guard's opinion, could be put down to thunderstorms that either blew them up or drove them beyond the range of their radio equipment, thus forcing them to crash into the ocean when they ran out of fuel.

Flight 19 was not lost because of mysterious forces but because its flight leader, Lt Charles Taylor, lost his bearings. As for the *Martin Mariner*, the freighter *Gaines Mills* reported a tremendous fiery bang in the area at the time the plane was flying there. "The known susceptibility of Martin Mariners to develop loose fuel connections in the face of turbulence and then to blow up supplies its own answer."

So much for the Bermuda Triangle. All the world loves a mystery and when it's repeated so many times, people begin to believe in it.

Manju Rastogi, New Delhi

CCTIMES QUIZ CONTEST-13

- 1 The Twin Towers comprising the World Trade Center in New York city, with a total of 4,370,000 sq ft (100.32 acres) in each. The taller tower (Tower Two) is 1,362 ft $3\frac{1}{2}$ in high
- 2 Khunjerab Pass, at the terminus of the Chinese-built Karakoram Highway
- 3 Gulf of Bothnia
- 4 Japan's massive air raid on the American naval base at Pearl Harbour, Hawaii, which completely devastated the American Pacific Fleet stationed there
- 5 The Telugu Ganga Project
- 6 United Kingdom
- 7 New Delhi
- 8 Aorta
- 9 Saturn, with at least 21 satellites
- 10 Shakuntala Devi, the mathematical wizard, for multiplying two 13-digit numbers in just 28 seconds with no calculations, and memory master Rajan Srinivasan Mahadevan for memorising and accurately reciting 31,811 random numbers in the true value of Pi (11-22/7) in three hours, 49 minutes, including rest period

Winners

First Prize (all correct) 1 M.G. Sampath Kumar, Bangalore. 2. Navendu Charu, Lucknow. 3. Surendra Kumar Jain, Gauhati. 4. Y.S. Murali Dhar, Tadepalli Gudem (Andhra Pradesh) 5 N.R. Premjeet, Mangalore 6. Goutam Bose, Calcutta. 7 C. Nagesh Varma, Kurnool. 8. M.S. Gowramma, Mysore

Centre Stage

INDIAN DANCES—3

Swapna Sunderi

Kuchipudi.

The name comes from that of a village called Kuchipudi in Divi Taluq, Andhra. The dance is also sometimes referred to as the *Bhama Kalpam*, i.e. the story of Bhama, a consort of Krishna.

This dance style is closely related to Bharat Natyam and is prevalent in

Andhra Pradesh. There is little difference between dance-drama (enactment of a story in dance form) and solo Kuchipudi. Though there are resemblances to Bharat Natyam, Kuchipudi is stylistically freer and less austere.

Solo dance repertoire It includes *sabdas*—dramatic characterisation in dance form of mythological episodes rendered by a single danseuse

The main *sabdas* are *Manduka sabda* The dance legend of the frog said to have been composed for a celebrated court dancer, Lakumadevi, in the 13th century by Jayappa Nayak, author of *Nritya Ratnavali*.

The dance was created from the story of a frog (*manduka*) that was transformed into a frog maiden, Mandodari, by Lord Brahma to divert demon King Ravana from seizing Goddess Parvati

Jakkala Purandari sabda This is the legend of Amrita Manthana, the churning of the Milky Ocean for the nectar of immortality. This was presented by a court dancer, Jakkala Kanta This *nritya* portrays the danseuse as Mohini (Maya of Siva) with a *kastur tilaka*, patterns of white dots on the forehead, braided hair with *ketaki* flowers and ornaments and jingling anklets.

Chhaya sabda A beautiful dance tells of the tale of the invincible Goddess Durga and the buffalo-headed demon, Mahishasura. The narrative mime and impersonations of Goddess Durga, Lord Siva and Mahishasura are rendered by a single danseuse Narrative sequences are chanted in forms of *slokas* which are mimed Musical accompaniment consists of chants and drums.

Ardhaneswara sabda *Arda-nari* is a composite form of Siva and Sakti, half male and half female, impersonated in theatrical dress The forceful dance of Siva is rendered by the right half of the body in dance and the lyrical style of Sakti by the left half of the body.

Dasavatara sabda An invocalional prelude to the dance-drama, it depicts the 10 incarnations of God Vishnu Each *avatara* is described in a chanted verse interpreted by gestures and dramatic postures, ending in a salutation with the *mudra* of the *avatara*.

Exponents The Vedantam family of Kuchipudi village—Vedantam Prahlad Sharma, Vedantam Satyam, Sitaramayya — Raja and Radha Reddy, Swapna Sunderi among others

V S, New Delhi

(To be continued)

Club Desk

Thanks to an immensely successful debate on 'Did Gandhi deserve the Oscar for the best film?', organised by CCTimes Club, Katras, Dhanbad, its members are now 'experts' on Gandhi—the movie and the man. This has encouraged members to hold an extempore debate contest shortly

CCTimes Club, Aligarh Muslim University (AMU), believes in doing things in a big way In May, in collaboration with the M.M. Hall Literary and Cultural Society, 100 contestants participated in a G.K test, 12 teams in a quiz contest and 52 people in an essay-writing competition (Urdu, Hindi and English) to make the event "a grand success"

CCTimes Club, Sangam Colony, Jalgaon, in April-May, organised a lecture series to help its members in various State Public Service Commission and UPSC exams. Lecturers of local colleges were invited to speak on various relevant topics.

CCTimes Club, Sahu Road, Muzaffarpur, organised two quiz contests in which Sagar Mezumdar and A.K Jha were the winners. Members are now looking forward to inter-club contests.

CCTimes Club, Prakash Nagar, Jullundur, arranged a quiz contest and a group discussion on 'India's problem No. 1—

Population' in June The first three position-holders in the quiz contest Atul Jain, Anita and Manoj, in that order and in the group discussion Kulbhushan, Anita and Kapil, respectively

CCTimes Club, Assam Agricultural University, Jorhat, held in June, a debate on 'Should the press be free for complete democracy in India?'

CCTimes Club, Putton Bhoj's Apartments, Bijnore, saw hectic activity in June, when a mixed fare of lectures, debate and

discussion was held Members also resolved to do their bit for the protection of endangered species of flora and fauna by presenting to the government a memorandum to this effect with signatures of 2,000 people on it

CCTimes Club, Sri Krishnapuri, Patna, held group discussions on 'Effects of J&K poll results on India' and 'Ways to promote nuclear disarmament'.

CCTimes Club, Bijnore Mixed fare.

Braz Molten Lava

Gonsalves with his gang
Making a splash

VETERAN JAZZMAN Braz Gonsalves is content to hibernate with his own axemen in the exclusiveness of Neptune Restaurant at Hotel Holiday Inn in Bombay where he has been holding up for the last two years. Occasionally he makes

a splash when he surfaces for a public concert. Like he did recently in late June, when he jammed in at the concert featuring the Jazz Workshop musicians in Bombay. Then, the suppressed musical energy flowed like molten lava, the solos rolled fast and furious.

From singing gospel music in church to India's pre-

mier jazz hornmen, the evolution has been slow but steady. "I had it in me", remarks Braz, "and from the age of 15 I was hung up on Charlie Parker and John Coltrane."

His career, including stints in the film studios, has taken him all over India and he has played alongside both Indian classical and Western musicians. Many still rave about his celebrated stint in Calcutta with Louis Banks and Pam Crain in the mid-seventies which resulted in the *Raga Rock Album*.

As one who pioneered raga-jazz fusion in India with compositions like *Sarang*, *Devapriya* etc, Braz has today moved onto more 'contemporary' forms of expression. "You cannot stay in the same phase," he maintains.

Braz has performed abroad in the Macao Jazz Festival in 1977 as part of the Asian All Stars Band. After that he was invited to play at the Cascais Jazz Festival in

Portugal and in late 1980 he toured Europe with the Jazz Yatra Sextet to ecstatic reviews.

His present outfit comprises Tony Dias (piano), Ashley Pinto (guitar, vocals), Ernest Flannigan (Fender electric bass, vocals), Lloyd Fishery (drums) and Braz's sultry wife Yvonne on lead vocals. The daughter of oldtime Jazzman Chic Chocolate, Yvonne performed with American gospel singer Chapman Roberts at the Jazz Yatra festival in Bombay in 1980.

The present repertoire of the band ranges from cool jazz to schmaltz pop tunes. "We have to oblige everybody," comments Braz, who would otherwise love to "rev things up a bit with some hot jazz."

But, as the diminutive drummer Lloyd quips, "A lot of people know of Braz's reputation. And they want jazz. So we give them a hard dose."

Melody Bombay

A Treasure Trove of Fascinating Reading

Each fortnight brings you action-packed adventures of the Phantom—the man who cannot die, Flash Gordon—the space hero, Mandrake—the Magician, and Bahadur—the hero of the masses. Their daring exploits, the triumph of good over evil, the life and deeds of illustrious heroes of India, revived through vivid, colourful illustrations that keep you spellbound. Liked by children and adults alike.

Indrajal Comics

Published in English, Hindi and Bengali.

News in Brief

An Exclusive Interview with

NORVICSUM
October 1983 2

“There must be a good reason why a vast majority of those who join Banks in India as Probationary Officers are NSB students.”

Obviously! Our un-matched Specialisation and Expertise.

Take, for instance, the results of last year's PO exams held throughout the country. A majority of students who were called for interviews for the post of Probationary Officers were NSB students.

This is possible only because of NSB's professional commitment in covering exhaustively all subjects for objective and descriptive tests through specialised practice papers and books.

A continuous research in past exams and on-going programme of preparing typical exam questions have also contributed to our present pre-eminence as the Central Institute for Bank Recruitment training in India today.

Success-oriented students join the NSB Courses and benefit immensely from them. The same opportunity is also open to you. So enroll now to reap a rich harvest of a rewarding career in India's fast growing Banking industry.

Injustice Of It All

Ending the life of a criminal is a real tragedy in this nuclear age. The heaps of nuclear arms are not for gentlemen alone. Criminals are also a part of society. Moreover, countries like the US can use atom bombs thus murdering masses and still boast of being great. Then why should any person be executed for just one murder?

Dinesh Sinha Varanasi

Best Letter: Rs 40

Flash In The Pan?

I think our former PM Morarji Desai was right in saying that Indians over react to everything. India's Prudential Cup win (When India Upset The Bookies August '83) is no exception to that. We compare

Kapil Dev with Mike Brearley and claim we should bring out special stamps to commemorate the victory. Let us not forget that the Windies are coming to India later this year, and they are no mere mice when it comes to taking revenge.

Indian sporting history is replete with such events. Look what happened to Ajit Wadekar, to the Indian hockey team at the Asiad, to Prakash Padukone. He is nowhere near his All-England triumph of 1979. Will the Indian World Cup victory too be just a flash in the pan?

Meanwhile, we forget our other poor sportsmen. The money spent on hosting the cricketers might have been better utilised by these other sportsmen.

M. Rajkumar, Coimbatore

Prize-winning Letter: Rs 25

A Shrewd Move

Pakistan has been shrewd in revealing an immaculate face to the world with it. No war Pact offer (Focus: Indo Pak Relations August 83). But as D.H. Lawrence said, loud peace propaganda only make war seem imminent.

Shashank Srivastava Bhopal

Pakistan fears that a close economic cultural relationship with India would eventually lead to a de facto absorption of Pakistan or in effect partly nullify the partition of 1947. India has no such aim. Yet, so obsessed Pakistan with such an nonexistent threat that it seems to feel an attitude of constant belligerency is the only way it can affirm its sovereignty.

Mohan Kumar N. Trivandrum

Self-reliance At Any Cost

Self-reliance in every sphere is India's declared policy (Focus: India's Defence Policy August 83) and the country cannot afford to neglect self-reliance in matters of defence also. Armed forces are as relevant today as ever and India must appear to be a strong country. Both economic and military strength count. The use and the capacity to use force

when national security is endangered is a potent weapon which no country can afford to discard. However peaceful its general approach to world affairs may be.

B. Rajeev Bhagalpur

Nation's Watchword

Actually, the from below upwards approach should not be the motto of the individual only, but the watchword of the whole nation (Hello Folks August 83). For instance, when we complain of lethargic officers, we must not forget the clerks who are equally lazy, or the general public who is as much apathetic. What a difference it would make if the clerks were active or the public vigilant!

Rizwana Akhtar Cuttack

Great Consolation

I am one of those who got a consolation prize in CCTimes Quiz Contest 9. The prize books I received are very useful to me in my everyday life.

E. Venkateshwar Rao, Warangal

Cunning Convivance

It is the duty of the majority group to create a sense of security and well being in the minds of the minority communities. Not so in Sri Lanka (Current Events August '83). President Jayewardene had taken a rabid pro-imperialist stand at the March NAM Summit in New Delhi over such crucial questions as the Indian Ocean, the US Rapid Deployment Force and Diego Garcia. To help the US get a base in Sri Lanka, he has now connived at Sinhalese majority's cruel massacre of innocent Tamils.

Vineeta Singh, Nasik

Democracy Not For Us

Is democracy the best form of government? (Group Discussion August '83) Not in

India surely. India has rulers in the form of capitalists and politicians who plunder public property. The young are irresponsible and fail to understand their duty towards the nation. There is no fear of punishment and the ratio of crime is going up. The voters are pressurised and bought.

Navdeep Shaikh Gandhinagar

Writing On The Wall

Please convey my special thanks to Purushottam Goyal for his timely advice. There should be no pre-considerations. All competitions should be open, including the IAS (The Achievers August 83).

This is the writing on the wall. Our government should delink jobs from degrees. This will improve our educational system which is in a mess at present.

Arvind Kumar Mukul Patna

Not So Similar

While discussing the Puerto Rico independence struggle in *In The News* (Aug 83) you have rightly judged that it can never be equated with the current situation in Punjab. Communal riots are bearable until they don't endanger the culture and common people. While Puerto Rico is justified in its struggle, Punjab does not deserve any support. However, it is a bitter fact that peace in both has reached its nadir.

Sunil Gautam Jullundur

THE TIMES OF INDIA RELIEF FUND

Floods have caused enormous damage to property, taken a heavy toll of life and brought great suffering to millions of people in the Saurashtra region of Gujarat and the Konkan region of Maharashtra.

In keeping with their tradition The Times Of India group of publications have decided to collect on behalf of The Times Of India Relief Fund money to provide help to the victims of the disaster with an initial contribution of Rs 25,000 from Bennett, Coleman & Co., Ltd. We sincerely appeal to our readers to contribute generously to this Relief Fund. The contributions will be eligible for tax relief under Section 80-G of the Income Tax Act, 1961. Individual contributions of Rs 25 and above will be acknowledged as usual in The Times Of India.

Cheques/drafts drawn in favour of The Times Of India Relief Fund or cash contributions may be sent to any of our offices in Bombay, New Delhi, Ahmedabad, Coimbatore, Madras and Pune.

WIN A PRIZE

Do our articles provoke you to say something? Is there anything else you feel strongly about? Here's your chance to say it and make some money in the bargain. The best letter will win Rs 40, the second Rs 25.

So, why don't you get cracking?

Your letters should be legibly written/typed, not exceed 200 words and include your full name and address. We may edit them for purposes of clarity or space.

Hello folks...

Twenty years back Ronald Segal, an eminent foreign author, visited India to collect material for his book *The Crisis Of India*. While travelling through Rajasthan, he stopped at a small village. Talking to villagers, he found that the local *bania* was not popular as he lent money at 72 per cent interest per year. Segal advised there were laws against such rates. His statement was received with a shout of laughter. The old villager sitting next to him smiled indulgently. "Who is the government? The *bania* pays at election time, and he charges interest on his money."

If India has progressed since then, corruption has also increased. It is so much a part of life now that people believe without it commerce and industry would come to a standstill.

Corruption is not new to India, or for that matter to the world. Worse cases of corruption have been reported from many developed countries. However,

one difference is worth mentioning. Whereas corruption in the developed countries does not affect the day-to-day life of the masses, in India it does. In England, Japan or the US, one need not pay hush money to get a telephone, electricity or water connection, or even one's groceries. Here, you cannot get any of these if you go by merit. In fact, we are moving towards the dictatorship of money, which does not promise anything to the poor. Instead, it profusely rewards the rich.

Why is India unique as far as corruption goes? There are several reasons. The foremost is that we are a scarcity economy. An American on his return to the US remarked that while it was difficult to sell a product in America, it was more difficult to buy one in India. But why should we have a scarcity economy when India is the tenth industrial power in the world?

India, after the adoption of planning, decided to establish a socialist society by expanding the public sector. More and more industries were brought under state control and in almost all the core sectors, the state acquired a monopoly. State undertakings, managed by politicians and run by bureaucrats, became centres of low productivity, high cost and wide corruption. The politician realised that the public sector was the milch cow as far as economic and political powers were concerned. So, state corporations and undertakings multiplied. In the states today, public sector corporations outnumber the districts, and their chairmen are the ministers.

The relationship of officials, businessmen and politicians has radically changed since the days of British rule. An alliance is fast developing among these three interest groups. They now constitute a new kind of caste, the members of which visit, inter-marry and assist each other while shunning contact with those of different castes. If you look around, you will find several examples where spouses, parents or in-laws of government officials are politicians. This close relationship, more than any other factor, is responsible for the corruption as it has given rise to an oligarchy—government run by a small group of all-powerful

persons.

Corruption, like sacrifice, starts at the top and percolating down, colours the whole society. It is not uncommon to find corrupt ministers. Some ministers, who have held office for over a decade, have enriched themselves illegitimately, obtained good jobs for their sons and relations through nepotism, and have reaped other advantages inconsistent with any notion of purity in public life. It is no wonder then if the man in the street says to himself, "Well, if everybody seems corrupt, why shouldn't I be corrupt?" The clerk, who finds his superior has taken a bribe, demands his own share. A small contractor reads in the newspaper how a big industrialist makes crores of rupees through fraudulent practices. He justifies his little profitable frauds. A teacher in a small primary school, earning a pittance, considers himself justified in taking a bribe to adjust the exam result when he reads about scandals in big and prestigious universities.

Corruption has acquired a status, a glorious position in society. In the past, a bribe was given and taken secretly. Both persons experienced a feeling of guilt while doing so. Now, no one feels that way. In fact, it is honourable to demand money for signing papers. Anyone who does not is considered abnormal.

The world has seen several governments falling because of rampant corruption. China under the Chiang Kai-shek rule is a good example. Chiang, obstinate, obsolete and surrounded by greedy parasites, was a victim of the rising corruption in the country. It was so widespread that the Chinese had to bribe the postal clerk to accept a money order. Slowly, the intellectuals withdrew from politics, the careerists controlled the party and strove to secure the favour of Chiang, upon whom all depended. The outcome was the complete collapse of the Kuomintang Government.

Are we not in a similar situation today?

KNOW YOUR GRAMMAR

It's Me If someone were to show an English teacher a picture of her class and ask her to pick out a certain boy she would surely not say That's him in the centre She would say That's he in the centre But what about the first person pronoun? If someone asked her who was standing in the last row might she not say That's me? It's me is certainly gaining at least in spoken language although it is not altogether established

-Ed Is it a four engined plane or a four engine plane? A teenaged girl or a teen age girl? In these examples either form is correct although that is not true of all such compounds It is a matter of idiom If there is anything approaching a rule it is that a noun formed into an adjective describing an animate creature usually takes the ed Thus we have a left handed man a yellow bellied sapsucker a floppy eared dog

By THEODORE M. BERNSTEIN

IAS TOPPERS

A SYSTEMATIC APPROACH

BY KESHNI ANAND

First among women and second in the Civil Services Exam '82 merit list, Keshni Anand says matter of factly, it's good luck and chance that made her a rank-holder. Not really true, if one looks at her academic career and her inherent qualities of drive and hard work.

Winning a position in the Civil Services Exam is at best a matter of good luck and chance, but one can fairly expect to get into the Indian Administrative Service (IAS) on the basis of systematic and dedicated work. I expected one of the first 25 positions in the exam after I had completed my Personality Test.

I regard my success in this exam as a logical conclusion to my good academic career. It was a challenge I had to take up. Another, and an equally important, factor was that my two elder sisters, Meenaxi Anand Chaudhry and Urvishi Gulati, had already got into the IAS in their first attempts and had been placed among the first 20, as the youngest in the family, had to prove myself.

I was born, bred and educated in the 'City Beautiful' Chandigarh and had my schooling at the DAV and government schools. I graduated from the Government College for Women and completed my M.A. and M.Phil. in Political Science from the Panjab University, Chandigarh. I secured a high first division in all my exams and won top positions in B.A. (Hons.) [67 per cent] I set a new record in my M.A. (Pol. Sc.) exam and secured record marks in all the M.A. (Social Sciences) exams. These records stand even today. I won a number of

university medals, including the Gadgil Gold Medal, and was also the recipient of the National Scholarship and the Panjab University M.Phil. Research Scholarship. In December 1981, I became a Political Science lecturer in the Panjab University.

My two optional papers in the Civil Services Exam were Political Science and Sociology. The first was a natural and logical choice. I offered Sociology as my second paper after some hesitation. I had never opted for it in any of my college or university exams. But after I read a few chapters in Robert K. Merton's *Social Theory And Social Structures*, I developed a taste for it. Moreover, I found that there was much in common between the two behavioural sciences of politics and sociology. In fact, Sociology fetched me more marks (72 per cent) than Political Science—and this vindicates my choice of the subject.

When I look back on my preparation, I feel I spent more time and energy on my Prelims than it deserved. I had to refresh my matriculation courses in physical, biological and social sciences. NCERT textbooks were the most useful in this respect. In retrospect, I feel that it is quite easy to cross the Prelims hurdle if one is good enough in the optional subject.

I started preparing for the Mains immediately after I had taken the Prelims. But while I was preparing for the Mains, I had also to submit my M.Phil. dissertation along with attending to my duties as a lecturer. It was only during the last two months that I could pay greater attention to my IAS papers.

It is, perhaps, not possible to lay down any single plan of work for this exam, for personal background, work habits and environmental conditions vary from person to person. I believe in extensive reading in the subject during the earlier months to be followed by intensive reading during the last two months prior to the Mains. I tried to acquaint myself with the latest research findings and trends in the subject. A mere reading of textbooks is not only insufficient but also risky.

The two papers on General Studies, however, call for some comments. The statistical part of Paper I requires basic knowledge of elementary Statistics as well as mental alertness and constant practice. Almost every year, the nature

of questions changes. Other questions in Paper I call for up-to-date knowledge in current affairs, precision, concise expression and clear exposition of what one knows. Paper II, in the General Studies, is heavily loaded in favour of economic, political and constitutional developments in India. As a student of Political Science, I had no difficulty in answering questions on constitutional and political affairs. At the same time, I had to acquaint myself fully with the problems of economic development—particularly rural development and national reconstruction. The Sixth Five Year Plan document proved to be very useful.

I regularly read two national dailies—*The Times Of India* and *The Statesman*—along with many other weeklies and journals such as *The Economic And Political Weekly*, *the Seminar*, *Yojna* and *The Illustrated Weekly Of India*. I also read the first two pages of the *Employment News* as well as relevant material from *The Economic Times*. I subscribed to two of the competition journals—*Career & Competition Times* and another. I found them very useful.

I must confess that I greatly benefited from discussions on various subjects with members of my family and my teachers. I frequently discussed problems relating to social and economic developments with them. The encouragement, love and affection of my parents created the right environment in which I could work.

Proper motivation is the most important prerequisite for success in this exam. Dedication and hardwork are, of course, necessary but they come by themselves, once a person is properly motivated. I cannot precisely estimate the number of hours I worked daily for I was working simultaneously for my teaching as well as for my M.Phil. The number of hours one puts in is not as important as the quality of work done, clarity of mind, grasp of the subject and suitable guidance available to a person.

My experience in teaching was very helpful to me in my Personality Test. It gave me a good deal of self-confidence as well as clarity of thought and expression. I did not attend any coaching institute for my IAS exams at any stage and I do not regret my decision.

I have opted for the IAS as I feel it will give me a greater opportunity to serve the people than the Indian Foreign Service. I sat for the Civil Services Exam partially because it had become a part of my family tradition and also because it provides a good career and offers a challenge to serve the country.

AT THE INTERVIEW

CIVIL SERVICES

I was scheduled to appear before the interview board on April 4, 1983. I received my call a fortnight before the interview date, and spent this time in looking through my clippings files which I had compiled for the Mains for the two papers on General Studies and which I had been up-dating regularly and systematically during all these months. I tried to anticipate various issues on which I expected the board to interview me. I also discussed some of the expected issues with my friends and family members. The interview experiences of toppers in the previous years, as published in the *Career & Competition Times* and some other magazines, were also useful. But I realised that the UPSC interview boards do not follow a set pattern of interview and it might even be changed from week to week during the same year.

The interview board was presided over by a senior member of the UPSC and comprised senior administrators from various ministries, including the External Affairs Ministry. I was the last candidate to be interviewed in the morning session and had to wait for at least three hours in the waiting room. The friendly and jovial atmosphere in the waiting room helped me to relax and face the interview board without nervousness.

My interview lasted for about 35 minutes. The interview was more in the nature of a pleasant dialogue than a mere question-answer session. The technique adopted by the board was such that I could not fall back on prepared answers even in response to questions I had anticipated. The board would move from one subject to another in such a way that I had to depend more upon my reflex action and basic understanding than on formal learning. In fact, I had to answer about 25 questions in a period of 35 minutes.

As soon as my bio-data had been read out by the chairperson, one of the members asked me about the North-South dialogue. But even before I had answered it fully, he shifted to the Indian situation and asked me whether the Green Revolution has not created a similar North-South situation between those states which have benefited from the Green Revolution and others that have not. I replied that such a situation existed even within states like Punjab,

which led the Green Revolution. I referred to some sociological studies undertaken by the Agricultural University, Ludhiana, which showed that there were large disparities of income between districts which have come under the Green Revolution (like Ludhiana) and those (like Bhatinda) that are still on its fringes. The same member suggestively deplored that there was little hope of bridging the gap between the Green Revolution states and the non-Green Revolution states in India, particularly when some essential inputs like irrigation facilities were not available in the latter. I responded that this may not be so, for dry-land farming techniques have been developed and are being implemented. These, as well as the development of high-yielding and quick-maturing varieties of various crops, are likely to benefit even those states which have remained outside the Green Revolution zone. He immediately asked me to name any quick-maturing variety of seed for dry-land farming. I gave the correct answer.

Another member posed a question on Chandigarh, stating that the residents of the city are highly gullible, for they describe something as a 'rock garden' which is neither a rock nor a garden. Another member raised various issues relating to the Punjab situation but before I could fully answer it, he shifted to the role of regional parties, with special reference to Telugu Desam. This led to questions on current politics in Andhra Pradesh.

Another set of questions required me to assume the role of an adviser to Pakistan President General Zia-ul-Haq and asked for the kind of advice I would give on various issues relating to Pakistan and international politics. I was also asked to assume the role of an adviser to the Akali Dal in Punjab. The discussion led to the issue of Centre-state relations, with particular reference to the 'autonomy demands' made by various states at various times.

I feel that mental alertness is necessary on the part of a candidate to score high marks in the interview. The interview board is more interested in assessing the quality of mind and the personality traits of a candidate than merely testing the information a candidate has gathered on various subjects and issues. In this sense, the interview is truly a personality test. K.A.

ASSESSMENT

Keshni Anand has given a brief resumé of her interview on the basis of which only a limited assessment can be made of her performance. Keshni thoroughly prepared herself for the interview and did her home-work meticulously. She was methodical in keeping newspaper and magazine clippings in files, and read through them regularly. She anticipated the topics which could be discussed by the interview board. From the resumé it seems that she prepared herself well on the contemporary problems and situations around the time of the interview.

The interview board, it may be necessary to point out here, consists of various experts from different professions. Efforts are made to maintain a balance so that the members can put questions on different topics to find out the varied interests of the candidate.

The greatest quality of Keshni is that she is cool, composed and balanced. She had to wait for three hours for her turn and despite this ordeal, she faced the interview board very comfortably. She was grilled for

full 35 minutes, questions were asked from international relations to local problems and she must have replied them logically, correctly and comfortably. I can say so because she has not only been selected, but is also on the merit list.

The interview board normally adopts two techniques to analyse the intelligent candidate. One, the topic of discussion is changed consistently and, second, abstract questions are asked. These two techniques were applied on Keshni too. A question was asked on North-South dialogue and then suddenly the Green Revolution was brought in. Questions were put in such a way that the candidate had to co-relate several factors and situations. Keshni was well-prepared on the North-South dialogue as well as the Green Revolution and its social implications. The second technique was adopted when she was asked questions on Chandigarh and the Rock Garden.

Throughout the interview, Keshni showed a high degree of mental alertness and handled difficult questions successfully.

THE ACHIEVERS

GEN VAIDYA: BORN TO COMMAND

BY COL PRITHVI NATH

The nation honoured him with a Mahavir Chakra after the '65 war... He merited another after '71... And in '83 was decorated with the Param Vishisht Seva Medal. Calm and collected, yet bold and daring, Gen A.S. Vaidya, India's new Army Chief, emerges as a many-faceted personality.

September 1965: Khemkaran Sector was vulnerable as Pakistani 1 Armoured Division had been unleashed to spearhead the force designed to capture the entire Punjab, upto river Beas. Bearing the brunt of the Pak armoured offensive were the aging 75 mm and 76 mm Shermans of World War II and Korean War vintage. Commanding the outgunned Sherman tanks of Deccan Horse in Asal Uttar and Cheema, Lt Col Arun Shridhar Vaidya was remarkably cool despite the heavy odds that faced his regiment. In the fierce battle that ensued, the dynamic Colonel inspired his men and organised his unit to inflict such severe casualties on the enemy tanks that Khemkaran became the 'graveyard' of Patton tanks and Pakistani ambitions. The nation honoured him with the Mahavir Chakra and his regiment—Deccan Horse—earned the sobriquet 'Patton Killers'.

December 1971: Brigadier Vaidya was leading his armoured brigade in Jaffarwal Sector on the western front

during the 1971 Indo-Pak operations. Moving relentlessly through difficult country during day and night and crossing deep minefields, his armoured brigade struck across River Basantar, 20 km deep in enemy territory. Calm and collected, he made his bridge head into the enemy defences so formidable that Pakistan lost 62 Patton tanks and the remainder retreated. The nation awarded him the Mahavir Chakra a second time.

Gen Vaidya, the new Army Chief, emerges as a man of many talents. His greatest quality, however, is compassion. As General Officer Commanding-in-Chief of Eastern Command, he played a notable part in bringing peace to the north-eastern states of Nagaland, Manipur and Mizoram. While in Assam, checking terrorist activities, Gen Vaidya applied the healing touch which helped establish a rapport between the Army and the people. Says the General, "The Army treats all people as their own kith and kin and this has resulted in the alienation of the extremists from the local population which is interested in peace."

This year, the nation awarded the Param Vishisht Seva Medal to the General for distinguished services of the most exceptional order. Gen Vaidya believes in fair play and justice and this has resulted in the establishment of confidence not only amongst the people of these remote areas but in the troops as well.

Gen Vaidya's association with the north-eastern states started in 1968 when he commanded a mountain brigade in Tuensang district of Nagaland. In a meticulously planned operation which involved walking 14 hours a day, he led a force that intercepted an underground party of 316 men who were returning after receiving training in China and carrying arms and money. Having carried out this operation in an admirable manner, the General was so humane to the underground that most of them left the path of violence and were subsequently rehabilitated.

Born on January 27, 1926, Gen Vaidya comes from Kulaba district in Maharashtra and had his education in Pune and Bombay. There he joined the University Training Corps and the University Officers' Training Corps. He was

commissioned in January 1945 into a famous tank regiment—Royal Deccan Horse (9 Royal Horse)—and saw action soon after commissioning in Burma.

Before becoming the Army Chief, Gen Vaidya held a number of posts. He was the Director, Military Operations, at Army Headquarters in 1975-76 and in 1980 became Master General of Ordnance. Later, he became the General Officer Commanding-in-Chief, Eastern Command.

An avid gardener, the General's green thumb is borne out by the excellent garden at his former residence in Calcutta. He is also a philatelist and possesses more than 10,000 stamps from all over the world. He is a keen horseman and starts his day by going out for a ride. Will he continue riding in Delhi despite his busy schedule? "When most of the people in Delhi will be asleep, I will ride. So will my soldiers be guarding the frontiers of our country so that others could sleep in peace." What is his advice to the youth? "The youth must learn to face danger and develop patriotism and a spirit of nationalism. They should take part in adventurous sports and games—football, hockey, boxing, riding and mountaineering." Talking of Army life, Gen Vaidya adds, "It needs adventurous and dedicated youth prepared to sacrifice their all for the nation. Our modern Army also needs intelligent and dedicated personnel for its technical branches like Electrical and Mechanical Engineering (EME), Signals, Engineers and even for its fighting arms which have been equipped with sophisticated and modern weapons." Gen Vaidya describes the Indian Army as a model of national integration. He says this integration is promoted in the Army in three ways—treating everyone equally and inculcating pride in the nation and in the regiment or unit, regardless of the region, caste or creed to which a soldier may belong; by officers learning the language of the men and the jawans learning Hindi; and, lastly, by jawans coming in touch with men from all parts of the country, when they work together and take part in sports and other activities.

Gen Vaidya has taken over as the Army Chief at a time when the security environment in the sub-continent and the Indian Ocean has deteriorated. Arms limitation and disarmament talks have got bogged down and the arena of superpower conflict has come nearer to our shores. In Gen Vaidya, we find a strategist and a military thinker who will lead the Army in the defence of the nation.

BACKGROUND OIL POLITICS

BY SHYAMA V RAMANI

From the day the first oil well was drilled, oil has revolutionised man's concept of energy, figured in geo-politics, made or marred governments. Why? What made OPEC the strongest cartel—and what sounded its death knell? A background on oil politics and OPEC.

Throughout history, man's progress has been marked by the harnessing of different forms of non-human energy. Concomitant to this evolution has been the search for different kinds of fuel. Now, there is at our disposal a gamut of fuels: wood, coal, oil, natural gas, hydropower and nuclear energy. Oil, perhaps, is more intertwined with politics than any other kind of fuel. Because, over the last 80 years, it has become the energy commodity that is most closely linked to the economic growth of a country. Because oil reserves are concentrated in a few regions, whereas the demand for oil is universal. Because it is known that most of its readily accessible reserves will be consumed within a single generation, spanning the years from 1960 to 1995.

The Seven Sisters ('Majors')

Production of crude oil had begun as early as the 1850s in the US and Eastern Europe. The first oil empire in the US was built by John D Rockefeller. By the 1880s, he had an international network with agents scattered across the globe, spying for him and driving others out of business. The anti-trust agents soon caught up with him; however, and in 1911 the Supreme Court ordered the empire to be broken into 38 bits. Three of those bits—Exxon or Esso (Standard Oil of New Jersey) Mobil and Social (Standard Oil of California)—rose to become giants in the next few decades. Two other big American companies were Gulf and Texaco.

These five American companies along with two British companies—BP (British Petroleum Ltd) and Shell (amalgamation of Royal Dutch Petroleum Company and Shell Transport and Trading)—were known as the seven sisters. The 'majors' dominated the oil industry outside the US and the Communist bloc for a whole century.

1920-1940

After World War I, the demand for oil rose higher than ever before and that meant there were more profits to be made than ever before. Due to the uncertainty of oil resources at home, the American companies decided to go abroad and join the British companies in the fray. Thus, from 1920-30, the seven sisters were busy carving out the Middle East amongst themselves. They concentrated on the Ottoman Empire—Turkey, Jordan, Syria, Iraq—at first. The companies operated by extracting concessions. A concession meant that the company paid a certain royalty in return for being allowed to drill for oil, build plants and export oil without any interference or imposition of taxes and custom duties.

During this time, supply of oil steadily increased. Reasons: the Russians were dumping their cheap oil in the market; in the existing plants, production was increased, and new deposits were found in Mexico and Venezuela.

Thus prices fell. And by the end of the '20s, three of the sisters—BP, Shell and Exxon—for the first time, formed a cartel and decided on a price floor.

Sisters vs nationalist governments

But hard times were ahead for them. In 1939, the Mexican Government nationalised the oil-fields when the companies refused to improve the terrible working conditions. But the companies did not suffer. They merely increased production in neighbouring Venezuela.

The Venezuelans, realising their importance, passed a law in 1948 which demanded 50 per cent of the profits. The companies agreed because this was the post-war period when demand was booming. This 50-50 rule was pressed for by Arab countries as well and soon the companies had to agree to it everywhere.

The 50-50 rule was a dramatic change because it meant that for the first time the producing countries also had a stake in prices and production.

In 1951, Mohammed Mossadegh was elected Prime Minister of Iran and he ordered the nationalisation of oil fields. This time the sisters cooperated with BP—which was then the only sister in Iran—and nobody bought Iranian oil. At the end of two years, the companies were still making enormous profits but the Iranian economy was in a shambles and Mossadegh was at his wit's end trying to find customers for

Iranian oil. The oil companies tried to this drama by staging a coup, allegedly murdering Mossadegh and bringing back the Shah. Thus, the seven sisters were firmly entrenched in Iran and formed the Iranian consortium.

1940-1960

From the thirties onwards, the sisters were joined by a number of 'independents' in the US. After 1950, some of them were big enough to move to the Middle East. One of the independents who made it big in the US and in the Middle East: Paul Getty. Supply of oil was again augmented by new bonanzas in Nigeria and Libya. The Russians were dumping their oil in the market as usual. Throughout this time, the Soviets managed to create havoc, by popping up in different places and dumping cheap oil in the market in attempts to play one company against another. Around 1958, the companies found the market to be in a glut and in order to sell their oil, they reduced the price.

Formation of OPEC

Keeping in mind that prices started falling from 1958, it should be noted that it was by no coincidence that the first Arab Petroleum Congress was formed in April 1959. Later that year the organisation of Petroleum Exporting Countries (OPEC) was formed by five of the biggest exporters: Saudi Arabia, Iran, Iraq, Kuwait and Venezuela. OPEC then began to hold regular meetings. Their primary objective: to prevent further reduction in price.

OPEC demanded that the 50-50 rule be adhered to on the basis of the posted prices. This placed the sisters in a tight spot: the market price was falling and so, in real terms, it meant siphoning away more than 50 per cent of the profits.

So, like a united family, the sisters sat down together and discussed the problem, and came to a solution: they entered into clandestine agreements to cut back production. Such collaboration could be made effective because they were inter-linked in joint ventures in various countries. They operated so well that nobody discovered this, till the sisters themselves started quarrelling. Smaller companies, like Mobil, were desperately in need of oil. There is speculation that the Shah of Iran came to know of such practices from one of the smaller companies.

Before the Shah could do anything, in June 1967 Israel attacked Egypt, Syria and Jordan. Arab countries rallied around to help. An embargo was placed on Western countries which was short-lived. Iran and Venezuela took it as an opportunity to expand their markets and the Arab countries realised they had everything to lose if they continued with the embargo.

Meanwhile, production of oil increased for a variety of reasons. The Shah of Iran, for having supported them during the crisis, wanted the rate of growth of production to be increased.

from 12 to 20 per cent. New oil deposits were discovered in Qatar, Dubai, Oman and Abu Dhabi. From 1964, the majors spent a lot of money and found oil in the North Sea—next to Holland, Norway and Britain—and Alaska.

The next chapter opens with Libya. Libyan oil was special for two reasons: it was very pure, and, being closest to Europe, transportation costs were low. Libyan oil became more important with the closure of the Suez Canal and breakdown of the Saudi Arabian pipeline. Realising their importance, the Libyans, under Muammar Gaddafi, demanded a higher price or a cut back in production. The cry was taken up everywhere and soon the posted price was increased. Now the local governments also asked for partial ownership.

In 1973, another Arab-Israeli conflict, this time instigated by Egypt, led to an Arab oil embargo on the US and Holland. Prices were raised to \$5.12 a barrel (nearly 100 per cent increase). This time the embargo was more effective because the situation had altered since 1967. In 1973, the West was much more dependent on oil. Decisions were taken not only by companies but also by oil-producing governments and a group of smaller companies.

As such, the embargo did not last very long; it was lifted in 1974. But it had been an effective demonstration of their strength. There was indeed a complete reversal of roles. Now the oil-producing countries were united but the oil companies split up. They vied with each other to get better terms from the local governments. Around this time, OPEC raised the price of oil to \$11.65 a barrel unilaterally when negotiations between the company and OPEC representatives broke down.

Impact of rise in prices

The impact of the OPEC price hike was felt worldwide. In developed countries, taxes were implemented to reduce consumption of petroleum. If people paid more money in taxes, it implied that they would have less money to spend on other goods. That in turn meant the demand for commodities would fall and a recession would develop. This is exactly what happened.

Before, when there was a recession in one country, it wasn't necessary that the neighbouring countries be similarly affected. Therefore, the first country would sell its goods to the second country and maintain production. But now, as all countries simultaneously experienced a spurt in inflation and synchronised recession, the problem was amplified to a much greater extent.

The problem created for the less developed countries (LDCs) was even more acute. They suffered from large increases in import bills. And they could not step up their exports because of recession in Western countries. At the same time, they were not able to borrow as much as before from the private

capital market because their credit standing was deteriorating.

The Arabs, in the meantime, were putting the oil revenues, or petrodollars, in US banks or in the banks of other developed countries. Thus, economists began to debate about the recycling problem, i.e. how to recycle the money to LDCs from where there was a steady outflow of money to pay for oil. This situation was different from that of the developed countries. Money was flowing out of the developed countries too, but it came back to their economy either because the Arabs bought their products or because they put the petrodollars in their banks. In the case of the LDCs, however, it was a one-way outflow.

Developments in the Middle East

Most oil-producing countries felt that prices of oil would never fall again. Thus, most of the countries in the Middle East spent heavily on Western military equipment. The industrialised countries encouraged this as it helped to alleviate the recession at home as well as the import bill burden. Many countries, especially Nigeria and Libya, launched ambitious plans to industrialise their economies.

Oil revenues helped to increase conflicts. Minor and major skirmishes increased in the Middle East. For example, Libya intervened during this decade in Tunisia, Chad, Uganda and Malta. The Iranian revolution (November 1978-79) started in the oil fields. Workers paralysed the export of crude oil, demanding that the Shah leave the country. Oil revenues also helped to finance the Iran-Iraq war, which started in 1980. They destroyed each other's oil facilities in an attempt to reduce the capacity to purchase arms. In the end, Iraq exhausted all its foreign exchange reserves and Iran was forced to reduce the price in order to increase sales and thereby revenue.

Oil bonanzas served to extend the cold war over space. When in 1970 the Libyan Government quarrelled with the companies, the Soviets took this opportunity to strengthen ties with them. Russia armed countries which bordered those with whom the US had ties: North Korea, Yemen and Ethiopia. In 1979, among other reasons, the Soviet Union invaded Afghanistan in order to be nearer to the Middle East oil deposits.

In the meantime, the US provided arms to Saudi Arabia, which in turn helped Yemen, Somalia, Pakistan and other Arab republics.

The OPEC crumbles

After the quadrupling of prices in 1973, demand fell but picked up by 1976. Then it rose steadily from 1976 to 1979. From then onwards, it has dropped steadily. Why?

- The international recession was streamlining all expenditures.
- Supply from non-OPEC areas—like North Sea, Alaska and Mexico—was in-

creasing. Supply was also increasing because even marginal deposits of oil were made profitable by the high price, which meant that anybody with a small deposit of oil was pumping it out as fast as possible.

- Other fuels like coal were being used more.

- Firms were switching over to more efficient machines that used up less oil.

Thus, in 1979, OPEC found itself facing an oil glut. They decided to maintain prices by cutting down production. However, Algeria, Nigeria, Libya, Venezuela and Iran did not abide by the agreement. While the first four countries could not afford to cut down production on account of their massive industrialisation programmes, Iran had to maintain production in order to finance its war with Iraq.

As supply failed to drop in line with the reduced demand for oil, OPEC hegemony began to crack in places. Officially, the price of oil increased from \$13 per barrel in 1979 to \$34 per barrel in late 1981, but in the spot markets the price began to fall. And companies began to question their premium contract.

On February 7, 1982, OPEC met again in Geneva in order to decide upon the production quota so that the present price of \$34 per barrel could be maintained. But they failed to come to an agreement. And thus prices began to fall even more. For certain oil-producing countries in dire straits like Mexico, this meant defaulting on payment of bank loans.

Future of oil prices

According to a MIT model of international petroleum exchange till about 1990, the demand for oil would fall in developed countries because of

- slower growth of the economy as compared to the sixties
- conservation measures and
- use of other fuels.

However, the demand for oil in the developing countries is likely to grow steadily. Thus, it is unlikely that prices would fall precipitously.

What has OPEC achieved?

The main achievement of OPEC has been that from 1973 to 1980, the price of oil did not fall. According to some economists, this steady level of prices was not so much due to the effective operation of OPEC as to the fact that demand had been high during this period. As soon as demand registered a fall, prices also began to fall because OPEC could not control production and reduce supply. Compared to this incompetence, the regulation of production and prices by the international companies from 1920 to 1973 seems to have been far more efficient and precise. However, OPEC should not be underestimated for it is most likely that they have been learning their lesson during the last decade and would apply it in the future.

Looking for a BANK JOB?

You also can secure a well paid bank job by passing the qualifying examination conducted by banks from time to time. Every year about 25,000 candidates are recruited by banks for which over ten lakh candidates appear for the examination. But only well prepared candidates can pass the examination. How can you become a successful candidate?

ALPHA the largest specialised bank recruitment training institute in the country, offers excellent result oriented oral postal coaching by experts for

**Probationary Officers
Clerical Cadre
CAIB
RBI A & B Grade
LIC, GIC, etc.**

Study materials prepared on the basis of the previous question papers will be despatched to the students at frequent intervals. Test of Reasoning and Numerical Ability/Quantitative Aptitude are made simple. Lessons on bank interview techniques will be given free to the successful candidates.

Every year Alpha's students are securing bank jobs. Why not you?

For detailed prospectus send Rs. 2/- by P.O. or M.O.

THE ART OF READING

BY KANAA SUBRAMANYAM

When you go to a library, do you stand and gape, wondering which book to read? Here's how to get out of the plethora of print, with just the right book under your arm.

"Reading maketh a full man"

That was an observation made by Lord Bacon some four hundred years ago at the beginning of the printing explosion in England and the West.

We have come a long way since then. What might have been completely true till the turn of the present century, might not be considered wholly true in modern times in this century of industrial, media and other revolutions. We have the electronic media which go to make more than half of man these days. We have distinct national and international emanations of culture which go to make a part of the man that we are in the modern age. So books and reading can not by any means be considered to make a full man. If at all, reading might make a quarter of the man that we are—and that, perhaps, a significant quarter.

It is a salient feature of the times that the vast majority of the young turn away from books. There are two or three recognisable facts for this trend. First, even good books make bad reading when they are made course books. But academic reading is not all the reading that can be done, and there might be ways of making even academic reading pleasanter, though we, in India, have not come down to experimenting with it. Today, most curricula in India are framed to frighten away the prospective reader, there might be methods of encouraging academic reading that can encourage the habit of reading throughout life—living vicariously on the experiences of others, experiences that one might not otherwise have arrived at ever.

Second, the number of old books that are already available and that we are told must be read are numerous, and currently quite a large number of books are being added annually to the already-crowded list. It is easier not to read all this plethora of print, especially when almost every book has, or seems to have, its devotees. The choice of books

becomes difficult and so we make no choice at all, opting for the easier way out.

Once one decides to make a choice among the books available to one, one faces further difficulties. How does one make the right choice? The easier way is to put it all off and read nothing, saying that there is no end to the making of books—all and sundry make them—and reading is only conducive to weariness of spirit and exhaustion of time as well as the blunting of native instinctive talent. The experience that books offer us can only be vicarious and partial. Indeed, the arguments against reading anything are numberless. It is better to go out and enjoy life instead of seeking make-believe life in the dull pages of books. After all, as the Indian proverb puts it, the vegetable on the printed page cannot be cooked. And again you cannot write sugar and taste it!

India is certainly not the leading publisher of books in the world. We might occupy only the fifth, if not the seventh, place in the world of book production. From developmental point of view, we do not have enough books even to cover our adult literates, much less have we produced any greatly impressive quality in our books. Even then we produce on the average about 20,000 books in the year but our choice of books is narrowed naturally because the better half of them are in any one of the score or so of languages that we do not read at all. Of the other half the number of publications might be in our link language English, that is more operative than others [and another small part in our mother tongue]. Happily a great number of the English books are pamphlets or semibooks and a great number are Ph.D. theses of some sort or the other, a greater part are religious books that we may or may not be interested in reading. Light reading might account for a greater part of the rest of the books published and a few are reprints of well-known and sometimes favourite reading of some, if not all.

Our choice of books is limited on all these counts, but we are still faced with the difficult task of finding out what would be of greater interest to us, implying the risk of wasting our time on books that may not be worth our while. The choice, though considerably narrowed down, is still formidable, the new

books may be reduced to a couple of hundreds in a year published in India, considerably more from among those published abroad in any of the English-speaking countries as well as the USSR. Add to this, the whole library of books of the past which are called classics by the critics—and we are faced with a task that is staggering because of its numbers.

From among the books published abroad, we have a choice for not all of them are available to us in India, even if we are willing to pay heavily. And even of the few hundreds or thousands, of titles you might be tempted to look into, you can make your choice by listening to critics of your own choice who have dealt extensively with classics both modern and ancient. Regarding current books you can make your choice by looking into the reviews of books that appear in most periodicals of your choice. But with regard to books published in India we find that the majority of the Indian publisher's books are not reviewed at all in the Indian press and even if reviewed, they are prejudiced reviews loaded this way or that for various reasons. If we come across a review which praises a book, we have a healthy suspicion that it is a 'placed' review, our state of authorship and level of criticism being such. And we have no strict accounting system of classics in India. Almost everything from the old which has survived seems to be considered worthwhile reading. Intelligent word of mouth reviewing of books is also largely absent in India.

One has to turn critic oneself, turn reviewer and make a choice which might turn out to be bad or good, according to how far you have been intuitively and instinctively successful. If you come across too many bad books in the process of choosing you are naturally inclined to give up reading altogether, and no one will blame you.

But exercise the choice and you will find that you enjoy reading. It might be only a 'minor' pleasure in life, but it is nevertheless a genuine one and you can become an addict to it as you can to drinks, or smoking, or drugs without the evil effects of any of them.

Learn to look into indexes, prefaces, blurbs—and you are taking the first step towards choosing your books and enjoying them. □

UNITED WE STAND

With the elections around the corner, opposition unity moves have started. In an expected move, the Bharatiya Janata Party (BJP) and Lok Dal joined hands to form the National Democratic Alliance (NDA) in Parliament. Lok Dal leader Charan Singh is the NDA's leader in Lok Sabha and BJP leader L. K. Advani is to represent it in the Rajya Sabha. Charan Singh is also the Chairman of the coordinating Committee of the Alliance. BJP President A. B. Vajpayee has been given the merely decorative post of the Chairman of the 'Parliamentary Party' of the Alliance. The Alliance has, however, not been recognised in Parliament.

Prime Minister Indira Gandhi has, characteristically, dismissed the Alliance as 'a joke', but the two concerned opposition parties are optimistic about it. They have declared that "it is not an ad hoc or loose arrangement, but the considered outcome of prolonged discussions, and a homogeneity of programme and approach".

The NDA has ruled out the inclusion of any Communist parties into the Alliance, but has left its doors open to others. The NDA leaders hope to draw some factions of the old Janata Party to its fold, but they have not yet approached the Alliance.

As a countermove to the Alliance the Janata Party has formed a united front comprising four non-communist political parties—Janata Party, Congress(S), Democratic Socialist Party and the Rashtriya Congress. Its aim will be to provide a "democratic, secular and progressive" alternative to Congress(I).

The front has an edge over the Alliance—as the latter contains certain elements known for their communal connections. Also, it is confined to the Hindi speaking areas. The united front has the Janata Party (already in power in Karnataka), which has pockets of influence in Maharashtra, Bihar, Gujarat, Madhya Pradesh, and Uttar Pradesh.

The communist parties are meanwhile watching the contest between the two groups and will probably join the one that emerges more powerful.

ASSAM SET FOR ANOTHER ORDEAL

Assam's brief respite from violence and disruption seems to be over. The Assam agitation, which had been under temporary suspension since March 1983, to help restore normalcy in the state, was resumed on August 15. The agitation leaders from the All Assam Students Union (AASU) and the All Assam Gana Sangram Parishad (AAGSP) launched their agitation again by calling a 36-hour bandh and obstructing the movement of ministers and MLAs in the state. This period of revived agitation has been marked by sporadic assaults, bomb blasts and blackouts. Assam seems set for another ordeal.

Given the circumstances under which the new government took over power, it has done a fairly good job over the past six months. Thousands of refugees have been rehabilitated, educational institutions have started functioning normally and the administrative machinery has been overhauled and tightened. Efforts have also been made to erase the scars in the minds of various communities—in short, a semblance of normalcy has returned to the state.

CM Hiteswar Saikia has himself taken initiative to set the state on road to complete recovery. The reorganisation of districts, pending since 1974, was completed with the forma-

tion of six new districts, a bridge is to be built on the Brahmaputra at the backward Jogighopha-Pancharanta point in western Assam.

Saikia has also expressed his sympathies for the cause of the Assamese people. He initiated the move to identify the post-1971 infiltrators through 20 tribunals in a bid to resolve the foreigner's issue. A barbed-wire fence is to be constructed along the Indo-Bangladesh border to protect the state from illegal entry. Both the moves will be taken in October. The tribunals have been delayed because initially no judge was prepared to go to Assam. Now, a number of retired judges have offered to set up the tribunals.

However, the AASU and the AAGSP have ignored the efforts of the government because they consider the Saikia Government to be invalid. They have refused to deal with a government set up by force. The Central Government's lack of initiative in the matter has led to a resumption of tension and violence in the state.

An Intelligence Bureau (IB) report has revealed the widespread piling up of arms by the Assamese as well as the immigrants. A large number of such seized arms have Bangladesh markings on them. This only shows that if violence erupts again the consequences would be worse than the February holocaust.

The agitationists, however, are adamant about their demands: dismissal of the Saikia Government; detection of foreigners on the basis of the national register of citizenship of 1951, and the voters' list of 1952; deletion of their names from the voters' list; and their deportation and dispersal throughout the country. In this phase of their agitation, they plan to hold conventions and rallies throughout the state. The AASU and the AAGSP also have the support of the Akhil Bharatiya Vidhyarthi Parishad (ABVP).

The task before the agitators is not easy. The February tragedy has alienated a large section of the people from the movement. The majority of the Boro and tea-labour community and the Muslim Assamese no longer support it. Many hold the agitators partly responsible for the early senseless killings.

Besides, there is dissension within the movement now. An IB report has established a direct link between the RSS and some members of the AASU and the AAGSP. It seems RSS played a destructive role in the Chalkocha communal violence. Due to this, a large number of Muslim members have broken away. Though efforts are being made to reinstate the suspended Vice-President of AASU, Nurul Hussain, a breach has occurred in the movement's unity and credibility.

With all these factors the AASU and the AAGSP might not be able to take the movement to its former pitch, but it can certainly create a dangerous situation by whipping up tension.

AKALI AGITATION WHAT 'ROKO' NEXT?

The country heaved a sigh of relief as the Akali 'kam-roko' agitation on August 29 passed off without much violence. Except for Amritsar and Gurdaspur, the agitation was fairly peaceful throughout the state.

Though the Akali supporters were armed with sticks, kirpans and swords, their actions were restrained to shouting slogans, etc., only. In Amritsar and Gurdaspur, however, the mob turned violent. Police used not guns and plastic bullets to disperse the crowds, which, while effective, did not cause any deaths. It was obvious the police had been instructed to use restraint and tact with the Akali supporters.

Meanwhile, the factional divisions in the Akali Dal are becoming more complex with differences between Dal President Harchand Singh Longowal and Sant Bhindranwale also surfacing. In an obvious dig at the extremist activities of Bhindranwale and his supporters, Sant Longowal said, "killing of innocents in Punjab is an act of a traitor and against the glorious traditions of Sikh religion". At this, certain extremist elements complained to the Akal Takht against Longowal. The Akal Takht, however, exonerated him of any blame.

The militant leader Bhindranwale, has also created a controversy by calling a meeting of clean-hearted Sikhs, even though Longowal has maintained that only he can call such a meeting.

While this tussle for power between the moderates and extremists in the Akali Dal goes on, the agitation is bound to continue to keep up a facade of unity. In its next phase the Dal has urged Punjab MLAs to sign a memorandum detailing the party's demands or else to resign.

The main interest, in the meantime, is—what 'roko' next?

INSAT 1-B

LUCKY THIS TIME ?

After a night-time lift-off from the Kennedy Space Centre, Florida, the US space shuttle Challenger catapulted the Indian satellite Insat 1B into the transfer orbit. The three-segment multi-purpose Indian satellite—designed by Indian Space Research Organisation (ISRO) and built by the Ford Aerospace and Communication Corporation—is being controlled from the Master Control Facility (MCF) at Hasan near Bangalore.

After the dismal failure of Insat 1A (which stayed in space for just 150 days), its successor's progress is being watched with considerable anxiety. Insat-1B had developed a major snag which could have proved 'critical' to its 'health'. The solar array which enables the satellite to use solar power had failed to open fully. This could have created a serious power crisis for the satellite while passing through eclipse periods. However, scientists at ISRO and the Ford Aerospace have overcome this anomaly.

ISRO has improved upon Insat-1A's design and Ford Aerospace has taken added precautions to ensure the success of Insat-1B. The micro-switch which had failed to indicate whether or not the solar sail of Insat-1A was deployed has been eliminated. In addition the satellite is under joint Indo-US command (from Hasan in India and Andover in the US) for the first 67 days. This important phase of the satellite covers the period from launching to placement in the pre-determined slot. In fact, the satellite will function even in the 'worst case', that is, failure of all major equipment.

The satellite has been insured for \$85 million and India has spent about \$14 million, for launching and other expenses, on the satellite.

If all goes well in its final phase the satellite will reach a permanent apogee (distance from earth) at 36,000 km and then stay steady above the equator over the Indian Ocean. It will start functioning fully from mid-October.

Insat-1B is being hailed as the harbinger of a revolution. If successful, it will provide a dramatic breakthrough in communications. The three-fold functions of the satellite are telecommunication, broadcast and TV facilities, and weather forecasting.

The high-resolution radio-meter aboard Insat-1B will provide round-the-clock synopsis of weather systems, water bodies and snow. The satellite will facilitate identification of cyclones at least 12 hours faster than by present means and will be able to give warnings of floods, etc., also much faster. It will transmit meteorological and oceanographic data and information as

well.

Two high-powered national coverage transponders for radio and TV will facilitate beaming of programmes to the remotest corner of the country. If judiciously utilised for educational and instructional purposes this can play a major role in the country's development.

The 12 transponders for telecommunication aboard the satellite have a total practical capacity of 4,300 two-way telephone circuits. Each of these is capable of handling two TV distribution channels or 1,332 one-way telephone circuits. With local and inexpensive dish-type receivers remote villages can be linked up with major cities through the satellite.

Though built at a great cost, the satellite will immediately start paying dividends. As soon as it starts functioning India will be able to save on the staggering sum paid as tariff for the use of the International satellite (Intelsat). The scientists behind the satellite are Prof. Satish Dhawan (Chairman, Space Commission), Prof. U. R. Rao (Director, ISRO), Prof. P. P. Kale, and Prof. K. P. M. Bhatt (Manager MCF at Hasan). The space shuttle Challenger was commanded by Richard Truly and the pilot was Daniel Brandenstein. The three mission specialists included Guion Bluford, the first black in space, and Dr. William Thornton (54), the oldest man in space.

INDO-BANGLA RELATIONS

COOPERATION AMIDST CONTROVERSIES

Indo-Bangla relations are passing through a complicated phase. On the one hand sincere efforts are being made to improve trade and mutual economic cooperation and on the other, acrimonious words are being exchanged on India's proposed barbed wire fence along the Indo-Bangla border. Both these matters were discussed by Narasimha Rao during his recent visit to Dhaka.

The economic and trade ties between the two countries were discussed by the Indo-Bangladesh Joint Economic Commission (JEC), which was co-chaired by Rao and the Bangladesh foreign minister. The Commission decided to reverse the declining trade trend between the two countries.

The JEC identified a number of new items of export from Bangladesh, such as leather, paper, pulp etc. India is interested in importing fresh-water fish, but Bangladesh is still considering the request. The two countries decided to establish a direct air link and fully automatic telex facilities between them.

India has offered a Rs 60 crore loan to Bangladesh—Rs 20 crores on a government-to-government basis and Rs 40 crores from the Exim Bank to finance projects in Bangladesh. Talks to finalise draft agreement on the avoidance of double taxation is to be held in New Delhi shortly. The Indo-Bangla Joint Rivers Commission is to meet in November to finalise recommendations on sharing the river waters.

Meanwhile, Bangladesh has expressed its displeasure over the Indian decision to construct a 3,300-km long barbed-wire fence (costing Rs 500 crore) on the Indo-Bangla border to keep out infiltrators. According to them the Indo-Bangla Friendship Treaty forbids defensive work on both sides of the border. India has been forced to take the decision as in the past few years there has been an increase in people entering India illegally.

Apart from refusing to cooperate in the matter, the Bangladesh Government does not even recognise the fact of infiltration. It considers the construction of the fence an unfriendly act. However, construction of barriers to protect one's borders is not an unprecedented act. Ages ago China built the Great Wall of China. A more contemporary example is the Berlin Wall dividing East and West Germany. The effectiveness of such barriers, possibly, strengthened India's decision.

JOB SCHEME COMBATING UNEMPLOYMENT

The government has launched two major employment programmes in an effort to combat the growing rural and urban unemployment in the country.

The scheme launched under the Rural Landless Employment Guarantee Programme, is to provide employment to one member from each landless household for at least 100 days in a year. A sum of Rs 100 crores this year and Rs 500 crores for next year have been provided for the scheme.

The other programme is for the educated unemployed youth in the urban areas. Under this programme, about 2.5 lakh youths would be helped to set up small-scale industries and find other forms of self-employment. Each entrepreneur would be assisted by the district industry centre (DIC) in getting the necessary technical know-how about a unit. The banks would give Rs 25,000 each as loan to the entrepreneurs, and an overall advance of Rs 160 crores in a year. The government would give a subsidy of Rs 50 crore to the new businessmen. The scheme will be applicable only in towns with a population of 10 lakh and above.

On paper these schemes look very impressive but in reality they are just a burden on the treasury. The experience of self-employment for the educated youth is far from encouraging and the rural scheme covers only 10 per cent of the rural unemployed. The self-employment scheme has some serious snags because the new entrepreneurs need not only money and information but also a market for their goods.

The rural scheme is totally non-productive, because jobs are to be created for the landless. Only production-oriented employment schemes can provide the rural poor with job security and lasting employment. The best way would be to create employment in the agricultural sector. This can be done by making some structural changes such as introducing modern techniques and stopping fragmentation of land below economic level.

Punjab and Haryana have shown that introduction of modern techniques increases employment opportunities.

ECONOMY A SUDDEN SLUMP

One of the maladies of Indian economy is its excessive dependence on monsoons. A good monsoon—and the economy stabilises and the prospects brighten; a bad monsoon—and the inflation rate rises, leading to a sudden slump.

The drought last year—one of the worst in the century—has had an impact on the economy in the current fiscal year and the prices of essential commodities have been rising rapidly. The surprise is that the inflation rate has not been greater.

The wholesale price index of essential commodities indicated a rise of 5.5 per cent in the first quarter of the current year. At this rate the inflation might go up to 15 per cent annually. The articles mainly responsible for the price rise are sugar, pulses and fruits and vegetables. Their prices have gone up by as much as 26.8 per cent, 10.9 per cent and 15.9 per cent respectively.

However, the price rise in foodgrains has been fairly moderate. As a rule, grain prices generally fall after Kharif harvest and rise rapidly in March-September. In the first quarter of the current financial year, wholesale prices increased by 6.5 per cent, possibly, a fallout of the 1982 monsoon failure. But after July there has been a visible fall in the price rise. The annual rate of inflation, on a point-to-point basis, is 6.9 per cent, which is moderate as compared to the price rise by 20.3 per

cent in 1979-80.

The control over the grain prices is a fair example of a degree of fiscal discipline and successful short-term economic management. This has been achieved by good procurement prices, which has insulated the market from frequent fluctuations. Procurement of cereal even in a drought year was above 15 million tonnes. Over three lakh fair price shops were opened to facilitate distribution.

The good rabi crop with wheat production rising by 10 per cent is another reason for the moderate price rise. It has also proved that land has been made drought-proof for at least the rabi season by good irrigation techniques.

India's foreign-exchange reserves have risen rapidly with a good inflow of money from the non-resident Indians' deposits. These funds, funnelled into the Indian banking system between March-May, is alone Rs 500 crores. This hike is mainly due to the high interest rate offered to the non-resident investors. The foreign-exchange reserves increased by Rs 120 crore by July end. This is without taking into account the drawal from IMF.

RBI has decided to mop up excess liquidity by increasing the cash reserve ratio of banks by 0.5 per cent. Also, against the sanctioned instalment of 1.5 billion SDRs from IMF, India would borrow 1.2 billion SDRs.

NON-RESIDENT INVESTMENT THE GOVERNMENT'S DILEMMA

The controversy of non-resident investment (NRI), involving non-resident Indian Swraj Paul and two Indian companies, has placed the Indian Government in a dilemma. And this is obvious from its inability to take action against DCM and Escorts Ltd for refusing to register Paul's shares.

The main cause of the indecision is that the companies' action not only reflects badly on the government, but may also effect the flow of NRI. At the same time, the government does not want the take-over of well-managed companies by non-residents. It is also not sure if Paul has violated any foreign-exchange regulations in the purchase of shares.

Meanwhile, Escorts has refused to register another batch of Paul's shares. Matters have been further complicated by the fact that Paul's Indian brothers, owners of Apeejay Group, are also buying the company's shares. This has naturally led to an increase in the price of Escorts' shares after a slump in July. Thus, the threat of takeover still looms large.

Furthermore, the payment of dividend by Escorts on the shares bought by Paul's Caparo Group has been suspended at the intervention of the government. A separate suspense account for the dividend is to be created, till a decision is reached on the transfer of shares.

The fact that the nominees of public financial institutions have generally abstained from voting either for or against the registration issue, further shows the government's indecision in the matter.

INDO - PAK TRADE ON THE DECLINE

Indo-Pakistan trade is on the decline. Since 1979, India's imports as well as exports from its neighbour have been falling rapidly. The trade has received a further setback with the postponement of the visit of a delegation from the Lahore Chamber of Commerce to New Delhi. The Pak Government's refusal to renew the Indo-Pak trade agreement in 1978 has dealt another blow to trade between the two countries.

According to latest estimates, while exports to Pakistan have been at rock-bottom levels over the last two years (Rs

(Continued on page 63)

PAKISTAN OPEN REBELLION

Has the fuse been finally lit in Pakistan? Will it explode or will the fuse sputter out and die? Questions are being raised all over the world about the situation in Pakistan. Throughout August, there were widespread political demonstrations and street riots in the country. The protestors demanding an end to the army regime, set fire to a number of banks and a court house and attacked a jail in Larkana, Sind, setting free about 50 prisoners. Incidents of violence, involving the burning and ransacking of government offices, have also been reported from Baluchistan. According to an agency report, several units of provincial armed constabulary in Sind have been disarmed by the army because they refused to open fire on demonstrators. A large number of political leaders, exiled in Britain, are rushing back to take part in the agitation. And on August 14, Pakistan's Independence Day, over 20,000 demonstrators gathered in Karachi, although rallies are illegal in Pakistan.

The immediate cause of all this turbulence, an announcement by President Zia-ul-Haq, on August 12, that effectively prolonged his martial law regime for at least 19 months. When he assumed office in 1977, after ousting Prime Minister Z.A. Bhutto, he had promised to hold elections within 90 days. The promise proved to be false as did another similar one in 1979. He has now scheduled elections for March 1985. The President has also restored the 1973 Constitution, which has been in abeyance all this while—'with a few minor amendments' to perpetuate his own power. Zia has proposed that the President should be given the power to hire or fire his Prime Minister and to dissolve the National Assembly at will.

There are deeper causes, however, for the present turmoil. Although Zia has been publicising his wish to set up an Islamic state (Nizam-e-Mustafa) all this while, he has based his regime on martial law and the *shariat* punishments have so far been carried out by the martial law administration. It is significant that right wing religious groups have joined the movement this time. The Pirs of Ranipur and of Hala have, in fact, spearheaded the movement in Sind, and the Jamaat-i-Islam has demanded the transfer of power to an elected government.

Furthermore, despite the fact that Pakistan has undergone long periods of military dictatorships since its independence, it has apparently not reconciled itself to the facts of military government. There has always been an undercurrent of democracy in the country as is evidenced by the popular revolts against military rule. They rose in revolt against Gen Ayub Khan in 1968, and were on the point of doing so in 1971 against Gen Yahya Khan. When Bhutto rigged the elections in 1977, the people revolted again.

The present agitation is being led by the eight-party Movement for the Restoration of Democracy (MRD). Its main demands, the immediate withdrawal of martial law, the release of all political activists, the restoration of human rights, and the resumption of a British-style parliamentary democracy. The Opposition, however, is not totally united and so far, the Movement appears to be concentrated largely in Sind. There is a chance that it may spill over into Punjab, but there is also a

chance that Zia may convince the Punjabis that they are facing a potentially secessionist movement in Sind. The Baluch militants, too, have not yet showed their hand. Despite these internal divisions, however, there is no doubt that Pakistan is facing another major crisis. This time it is not only the intelligentsia but also the feudal landlords and right wing elements who are involved.

SRI LANKA UNEASY CALM

Early in August the Sri Lanka Parliament passed a constitutional amendment making it illegal to advocate separatism or secessionism. Since then Sri Lanka President Junius R. Jayewardene's government has been taking a staunch and against secessionism in the country. Shortly before Prime Minister Indira Gandhi's emissary G. Parthasarathy was due to visit Colombo for talks with President Jayewardene, the President declared that there was no role for India to play until the Tamils give up their secessionist demand. He in fact attempted to whip up anti-India fears in Sri Lanka by telling *The Sunday Times* that the Sri Lankan Tamil terrorists were receiving support and sanctuary in Tamil Nadu.

G. Parthasarathy, however, did go to Colombo late in August and was due to visit the country again later in September. Although he may not have made a major breakthrough, he did hold extensive talks with Jayewardene and other members of the government as well as with the Tamil United Liberation Front (TULF) leader Amirthalingam. And as he told a news conference in Colombo, he was able to make both parties aware of the need to initiate the process of finding a political awareness. What has happened is that although direct talks between the government and the TULF are not being held, indirect ones with the help of the Indian envoy have been held. Jayewardene has also agreed to set up a judicial commission to inquire into the ethnic violence that rocked the island in July.

Whatever little constructive work that has taken place over the last month may go waste if ethnic violence were to erupt again in Sri Lanka. In late August, fresh violence did take place at Batticaloa district when some houses were set ablaze and fishing boats damaged. The violence erupted in reaction to the failure of a strike called to highlight the killing of 52 Tamil prisoners in two separate riots in a Colombo jail in July. Clashes had occurred between the two communities although no casualties had been reported.

SOUTH KOREA / USSR BARBARIC ACT

On September 1, a Russian fighter aircraft shot down a South Korean Airlines (KAL) Boeing 747 with 269 people aboard. The plane which was flying from New York to Seoul, had apparently strayed into Russian airspace over Sakhalin island, which by all accounts bristles with military installations. According to Soviet statements, the South Korean plane, in violation of international regulations, flew without navigation lights and did not react to radio signals, international wing signals and tracer warning shots fired by Soviet fighter planes to warn it and ask it to land on a designated

airfield. Instead it continued on its flight, and the Soviet plane apparently shot it down into Soviet territorial waters. In a later statement the Russians claimed that the Soviet pilots had felt the silhouette of the South Korean plane had looked like a RS 135 US reconnaissance aircraft especially so because the plane was flying without navigation lights.

The straying of the plane has raised some questions all over the world. Was there anything wrong with the computer of the aircraft? Was there anything wrong with the communications system of the plane since the pilot did not respond? Or was the plane actually on a spy mission over Russian territory? The Russians in fact ask why the Americans who were apparently keeping the aircraft under close observation did not notify the South Korean pilot about the violation and get the flight back to its international route?

The Security Council met to discuss the issue and the participants were almost unanimous in their denunciation of the explanation offered by the Soviet Union. While the Soviet Ambassador, Richard Ovinnikov read out a TASS statement which implied that the South Korean plane was on a special intelligence mission the American, French, Australian, British, Pakistani, Japanese, Canadian and South Korean delegates denounced the Russians and demanded an investigation into the incident. However, fears that this may lead to a further chill in relations between the US and USSR appear to be unfounded because so far the US has taken no retaliatory measures against the Soviets. The Secretary of State, George Shultz, intends to go ahead with a scheduled meeting with the Soviet Foreign Minister later in September. The US has also shown no signs of nullifying a \$10 billion grain agreement which it signed with USSR recently in Moscow.

US-USSR RELATIONS SIGNS OF THAW

Meetings between Soviet President Yuri Andropov and American Labour leader William Winpisinger and nine Democratic senators marked a thaw in Soviet-American relations and it appeared that the two sides are trying according to a Moscow hand to position themselves for some warming of the atmosphere. The Soviets have recently agreed to a 9 million metric ton grain purchase accord with the US and Andropov has offered to declare a moratorium on the development of anti-satellite weapons to be followed by a treaty banning killer satellites. The Russians have also not said much about the Reagan Administration's aggressive measures in Central America, Lebanon and Chad. The Americans in response have cancelled export controls on some oil pipeline equipment which the Soviets require.

Andropov however is still intransigent on the question of intermediate range nuclear missiles. He told Winpisinger that the Geneva negotiations may end if NATO began to deploy the cruise and Pershing II missiles on European soil in December. American officials however feel that Andropov will soon make a fresh offer on arms reduction. It is likely that they may revive the "walk in the woods" formula discussed by Paul Nitze (US) and Yuri Kvitsinsky (USSR) last summer in Geneva. The proposal which was rejected by both Washington and Moscow suggested that the US would cancel its 108 Pershing II's to be deployed in West Germany and install only 300 cruise missiles instead of the planned 464, throughout Europe. In return the USSR would reduce the number of SS 20s targeted on West Europe from 250 to 75 and freeze the number of SS 20s in Asia at 90. It is also significant that West Germany has shown interest in renewing this formula lately. A number of anti-Pershing II demonstrations have been taking place all over Germany, and these are likely to increase as December, the month scheduled for deployment, nears.

Victims of power politics: Over 520 rebel prisoners gathered in Chad's capital N'Djamena

CHAD FOREIGN INTRUSION

The war in Chad has suddenly turned ugly with the threat of foreign interference looming large. The two contenders are President Hissene Habre and former President Goukouni Oueddei. While France supports Habre, Oueddei has the backing of Libya's Col Muammar Gaddafi.

Chad's problems go a long way back. In 1960 civil war broke out between the black southerners who were mainly Christians and animists and the Muslim northerners. But since 1979, the conflict has been between the two northern Muslim warlords, Habre and Oueddei. Initially the two were allies against the south but shortly after the northerners seized power in 1979, the two fell apart. In December Habre, who was then the Defence Minister with Oueddei as President, fled to Sudan after failing to unseat Oueddei. Gaddafi announced that he would "merge" Chad (with which his country shares a common boundary on one side) with Libya. Shortly afterwards, however, he withdrew his offer partly as a result of the disapproval of France and some African countries. In June 1982 Habre returned to Chad and unseated Oueddei. About two months back the latter in turn, decided to return to Chad with the help of Gaddafi who has entered the war on his side with troops and air power. He has been winning impressive victories.

Gaddafi's interest in helping Oueddei lies in that he wants to set up a Libyan-led Islamic empire. To add to his hopes, his friend and supporter Captain Thomas Sankara, seized power in Upper Volta on August 4. The Organisation of African Unity (OAU), which could act as an effective deterrent to his ambitions if it could unite, is at present in disarray and Nigeria, which may have presented an obstacle, is preoccupied with its internal affairs.

The US and France have reacted sharply to Gaddafi's actions. The US cannot entertain the extension of Libyan power in the region because it would mean the strengthening of Soviet influence in Central Africa. France, too, is sensitive about Libyan intrusion into French-speaking Africa, especially if it affected France's valued allies and trading partners like Senegal and Zaïre. However, neither country wants direct involvement in the war. According to President Reagan, Chad "is not our primary sphere of influence. It is that of France."

French President Francois Mitterrand, who had earlier opposed interventions by Presidents Charles de Gaulle and Valéry Giscard d'Estaing in the affairs of France's former

colonies, faces a bit of a dilemma. The French operations in Chad in 1968 and 1978 had been expensive and had had little effect. Furthermore, a majority of Frenchmen oppose direct French intervention in Chad. According to a recent poll, 53 per cent of the persons questioned disapproved of sending troops to Chad, and 62 per cent feared that the conflict would turn into a serious confrontation.

However, pressured by the US, Mitterrand has been forced to take a definite stand on the issue. Initially he had sent only 300 elite paratroopers as 'trainees' and 'advisors' to the region. Towards August end, he ordered the largest deployment of French forces in Africa in the last 20 years. French reinforcements, in the shape of four Mirage F-1, four Jaguars and 2KC-135 refuelling aircraft, sophisticated anti-aircraft systems and 2,000 French troops, arrived at Chad's capital, Ndjamena. The French troops have taken up positions along the 15th Parallel, which is getting to be known as the Mitterrand line. They are acting as a buffer between the two warring factions and are under orders to fight if attacked. The Americans, in their turn, have sent \$25 million worth of military aid, two AWACS electronic surveillance planes, eight F-15 fighter escorts and a reconnaissance plane to the area.

The French want a negotiated settlement, preferably within the framework of the OAU. It is an encouraging sign that a large number of heads of state of nearby nations like Cameroon, the Central African Republic, Gabon, Guinea, Niger, Senegal and Togo share France's views on the Chad conflict. Egypt and Sudan have also denounced Gaddafi's flagrant military intervention. In Chad and Zaïre has sent troops to Ndjamena to help Habré. Unless the problem is solved quickly, it may even escalate into an East-West conflict.

PHILIPPINES

MURDER MOST FOUL

Five seconds after Benigno Aquino set foot on Philippine ground, he was gunned down by an assassin, who in turn was immediately shot dead by a soldier. Aquino, a former Senator, was the sole rival of Philippines President Ferdinand Marcos as a national political figure. He had spent the last three years in the US in exile and had decided to return home to clean up charges of murder, subversion and treason levelled against him by the government and take part in the parliamentary elections scheduled for next May. On August 21, however, he was shot dead on his return to Manila, despite three military escorts. The assassin, according to official sources, was a man in a blue aviation mechanic's uniform, who was immediately killed. But conflicting reports say Aquino was murdered by a soldier.

Whatever the truth, some basic questions have been raised: how did the killer get to Aquino, since everybody else around him was a soldier? How did he know about the time of Aquino's arrival, since that was supposed to be top secret? And why was the assassin killed rather than captured? Official circles appear to be heavily involved. A panel of judges has been appointed to investigate the incident but they are all allies of Marcos.

Following the death of Aquino, a power struggle may take place in the Philippines. Political life stagnated between 1972 and 1981, when there was martial law in the islands, and a younger generation of leaders did not emerge. Marcos himself is unwell and is getting old. Relations with the US, too, may become strained. The Reagan Administration appeared to view Aquino as a political successor to Marcos. Relations between the two were strained during former US President Jimmy Carter's time as a result of Carter's human-rights policy, but had improved in recent years. Aquino's murder may upset the balance again.

NIGERIA

DEMOCRATIC ELECTIONS

During the six-month-long election campaign about a hundred people died in political violence and the political invective often turned ugly. It is not surprising therefore, that people expected the worst on election day. But contrary to expectations, President Shehu Shagari of Nigeria was re-elected leader of the world's fourth-largest democracy—after India, the US and Japan—in a relatively peaceful election in early August. Shagari received 12 million votes out of a total of 25.4 million votes cast and won a quarter of the votes in 16 of Nigeria's 19 states, thus more than satisfying the constitutional requirement of 25 per cent of the vote in 13 of the 19 states.

The last civilian run elections were held in 1965 when continual rioting, violence and falsification of results culminated in a military coup in 1966. There was civil war in the region between 1967 and 1970 and the country returned to civilian rule only in 1979. Although there were charges of irregularities, and instances of violence were reported from some states, the present elections were relatively peaceful.

Shagari's main concern during his second term will be the state of Nigeria's economy. In 1979 Nigeria was undergoing a boom period as a result of high oil prices and expanding production. The picture, however, is quite different now. Nigerian oil revenues, which account for 90 per cent of the country's export earnings, have fallen from \$2.5 billion a year in 1980 to \$1.0 billion projected for this year. Nigeria in fact is at present negotiating with the IMF—for a three-year \$4-billion to \$5-billion loan to help ease its balance-of-payment deficit and put some of its idle factories back into production. The democratic experience of holding a successful election however, has infused new enthusiasm into Nigeria and it may face its economic crisis with renewed vigour.

TIBET

CHINA'S PLACATORY GAMES

The world's rooftop may become a harmwring ulcer in China's body politic. Ever since Chinese troops invaded Tibet in 1959, there have been many Tibetans who have resented Chinese presence in their country. Although most organised resistance groups were broken up and their leaders executed some years ago, Tibetans still protest. Appeals addressed to the UN are stuffed into the pockets of Western visitors; there is a spate of anti-Chinese violence and according to some sources, a group of Tibetans hijacked a bus and lynched seven Chinese passengers earlier this year. The last serious revolt, however, took place in 1968 when four villages near Tibet's capital revolted unsuccessfully against Chinese occupation. It was suppressed and 87 rebels were executed and many others imprisoned. In fact, about 500 Tibetan political prisoners are said to be in Chinese prisons.

The Chinese have been trying to placate the Tibetans by a programme of Tibetanisation. Buddhist temples, which were destroyed after 1959, have been rebuilt and religious worship is permitted. Economic reforms were introduced in 1980 and these have resulted in peasants' income being doubled in the last three years. According to reports, there are now twice as many Tibetans as Chinese among the senior bureaucrats, although the Chinese still have the last word on all matters.

Despite all these measures, the Tibetans remain intractable. The Chinese feel that the problem would be solved if the Dalai Lama, the spiritual leader of Tibet's Buddhists, were to return from his exile in India, where he has been residing since 1959. According to Yong Pei, Director of the Department of Minorities in Tibet, the Dalai Lama would be named Vice-

Chairman of the Standing Committee of the National People's Congress, China's nominal Parliament, if he were to return to China. The Dalai Lama, however, has expressed no desire to return from his exile to take up a desk job in Beijing.

US-MEXICAN RELATIONS TOUCHING A NEW LOW

Mexican President Miguel de la Madrid warned US President Ronald Reagan that regional stability may be endangered by "shows of force that threaten to touch off a conflagration", in an obvious reference to the US decision to send a naval flotilla to the Nicaraguan coast. In answer, Reagan indulged in a bit of double talk: "We believe people should be able to determine their own solutions, and that's why we've responded to calls for help from certain of our Latin American neighbours."

The goodwill that exists between Mexico and the US has come up for a serious test, and this was quite evident at the meeting between Reagan and de la Madrid in mid-August. Although the two countries signed an agreement to protect their common border from pollution, and Reagan announced that the US would extend commodity credits to help Mexico buy more American agricultural produce, in the diplomatic field, relations touched a special low. Mexico is in favour of quiet diplomacy and negotiations, while the US has begun to wield its 'big stick'. Mexico had joined France two years back to declare that the leftist insurgents in El Salvador were a "representative political force". The declaration had suggested that the leftists should be invited to join in negotiations with the government. Mexico is also the moving force behind the Contadora group, which has been trying to find a solution to Central America's troubles. (The other members of the group: Colombia, Panama and Venezuela.) Last July, the group proposed a peace plan that called for the removal of all foreign military bases and advisors from the region, an end to arms traffic and the creation of demilitarised zones in Central America. Reagan's decision to dispatch the naval flotilla to the region, and hold military exercises in the Honduras, however, overshadowed the peace plan and made it ineffective.

While the US is interested in defusing the situation in the fastest way it can think of, Mexico is afraid that the US is seeking a military solution to the problem and wants to establish US hegemony in the region.

US DEPLOYMENT WAR FOR PEACE

Speaking at a press conference recently, President Reagan revealed that the US role "is to recognise that the threats can be widespread, the threats to our security". In pursuit of security from threats, the US has picked up the night stick of the international cop. About half of the 7,91,000 troops US Army is involved in, or going to be involved in, manoeuvres in different parts of the world, the basic idea being to be within striking distance of the hot spots of the world. The first of more than 5,500 troops and marines landed in Honduras in mid-August to begin months of deadly war games—Operation Big Pine II—while aircraft carrier Ranger took up station on the Pacific side of Central America. Battleship New Jersey and another carrier, Coral Sea, were also expected to join the games shortly. In Sudan, 550 air force personnel arrived in mid-August with eight F-15 fighters, two KC-10A tankers and AWACS radar planes to track Libya's Soviet-made jets bombing Chad. This was codenamed Operation Natural Bond. The aircraft carrier Eisenhower was also stationed in the Mediterranean in early August. In Somalia, Operation Eastern Wind involves

2,800 troops to demonstrate amphibious tactics and in Egypt, Operation Bright Star 83 began in August, involving some 5,500 US troops. There are 1,800 US troops in Lebanon, as part of a peace-keeping force, as well as a 1,000-man peace-keeping force in the Sinai.

This willingness of the Reagan Administration to send men and material around the world is consistent with Reagan's starkly anti-communistic world-view. In fact, some of the decisions were taken during Carter's time and Reagan has only been implementing the plans of the earlier administration. It was the Carter Administration that promised to send an army battalion to the Sinai Peninsula to separate Israeli and Egyptian forces and it was Carter again who had resumed 'non-lethal' military aid to El Salvador. Reagan's policy, in the light of the policies of the last administrator, are the logical culmination of a process. Nevertheless, Reagan's police tactics sometimes appear too blatant. The Reagan Administration appears too eager to help fight small, tangentially-anti-Soviet battles in any part of the world. Unless the US steps softly, it may find itself involved in a long drawn out messy affair like Vietnam.

NEPAL SIMMERING DISCONTENT

Under the apparent calm, the pot is simmering. Recently, about 50,000 Nepalese congregated at Kathmandu's Ratna Park for Nepal's first political rally in three years. They demanded the dissolution of the National Assembly, free elections and drastic amendments to the Constitution.

Nepal has a system of 'partyless democracy' instituted by its former King, Mahendra, who had ended a brief experiment in parliamentary rule in 1960 by arresting many politicians, executing two for treason, and banning all political parties. 'Partyless democracy' entails a system of indirectly elected councils at various levels, with a politically ineffective Rashtriya Panchayat (National Assembly) at the top. Mahendra's successor, Birendra, is more liberal, and he has initiated free primary education and has tried to ease the grip of feudal landlords over peasant holdings. All these measures were, however, not enough for the Nepalese and after bloody student riots in 1979, the King was forced to hold a referendum to decide whether the people wanted parliamentary democracy or a revised version of the status quo. There were more votes for the latter proposition.

Trouble has been brewing again, however, for the past year. Prime Minister Surya Bahadur Thapa was ousted from the National Assembly by a no-confidence vote and his replacement, Lokendra Bahadur Chand, was hand-picked by the King. The King is under popular pressure to restore political democracy, and Nepal's poor economic prospects—it is one of the world's 25 least-developed countries, according to World Bank reports—have contributed to a growing disaffection among the younger people.

SLAVERY NEW KIND OF SERFDOM

Is slavery prevalent today? Yes, says Britain's Anti-Slavery, which is the world's oldest human rights organisation, having been founded in 1839. It claims there are about 100 million slaves or victims of slave-like practices in the world today, which is more than what existed 150 years ago. Recently, the society persuaded a UN mission to go to Mauritania to investigate instances of chattel slavery, involving the actual ownership of one man by another.

Besides slavery, it has drawn the world's attention to other unsavoury, inhuman practices. On August 8, the society's

Develop "POWER PACK" Muscles.

Free

Bullworker Carrying-Pouch
made from the finest synthetic
leather worth Rs 30/-
If you order the new
BODY SHAPER
within 10 days!

Are you looking for a muscle builder that's
EASY, EFFECTIVE and GUARANTEED quick results?

TRY **NEW BODY SHAPER**

FREE for 14 DAYS.

GUARANTEED RESULTS or it costs you NOTHING!

EASY Lightweight and portable this unique rubber expander ensures you don't miss out on a single workout. EASY to perform with a series of exercises demonstrated step-by-step in the FREE illustrated exercise chart — The BODY SHAPER can be used for just 15 minutes a day to achieve positive results F-A-S-T!

EFFECTIVE Developed and perfected for the first time in India the BODY SHAPER has satisfied thousands of body-building enthusiasts all over the world! Based on a simple scientific design, the BODY SHAPER fully satisfies the need for an easy proven-effective muscle builder to tone up EVERY SINGLE PART OF YOUR BODY

IT'S GUARANTEED TOO! Get yourself a BODY SHAPER and start your muscle building programme right away. You simply HAVE TO GET RESULTS, and get them FAST. Use it sincerely and **ACTUALLY MEASURE YOUR IMPROVEMENT** within 2 WEEKS. If results prove unsatisfactory, return the BODY SHAPER to us within the 14-day FREE TRIAL period for a full refund (less handling & forwarding charges). **NO QUESTIONS ASKED!** Mail the SPECIAL OFFER coupon TODAY!

Bullworker Pvt. Ltd.
Mehta Mahal, 15 Mathew Road Bombay 400 004

HURRY!
This offer is
only valid till
Oct 30th
1983

Feel the difference from
the very first workout

① Adds Solid
muscle to your
back and chest

② Firms your waistline
flattens your tummy

③ Powerizes your
arms and shoulders

Plus 13 other beginner and advanced
exercises with BODY SHAPER Powerize
your complete body in just 15 minutes a day

Thousands sold for Rs 160/- NOW for only Rs 130/-

SEND NO MONEY NOW!

BULLWORKER, Mehta Mahal, 15 Mathew Road, Bombay 400 004

BS-201
CC717

Yes, rush me the new BODY SHAPER bodybuilding exerciser. If within 14 days I am not delighted with the results, I may return everything for a complete refund (less handling & forwarding charges). No questions asked.

GEOGRAPHY

BY VINOD GUPTA

Next to Everyday Science, Geography is the most important constituent of competitive exams like the Civil Services, Assistants' Grade, NDA, CDS, PO, Income-tax Inspectors, Senior Observers, Clerks' Grade and so on. Research reveals that usually 25 per cent of all questions in G.K. are on Geography—physical, world and India. To take your score to greater heights, here's a special feature on Geography.

PHYSICAL GEOGRAPHY

THE EARTH Due to its size the earth appears flat but is actually an oblate spheroid. That is like a slightly flattened orange. This is because of centrifugal force being maximum at the equator and causing the earth to bulge out there. For all practical purposes we consider it as a sphere. The difference in the equatorial and polar diameters is only a few kilometres—the former is 12 756 km and the latter 12 714 km.

Proof of earth being an oblate spheroid

(a) At sea first the mast of the ship appears on the horizon and then its lower parts. (b) The shadow of the earth on the moon during a lunar eclipse. (c) Photographs of the earth taken by astronauts in space. (d) An air flight at fixed height confirms the polar circumference is lesser than equatorial circumference.

Equator is the imaginary line on a map which divides the earth into two equal parts: the northern and the southern hemispheres. It runs around the centre of the earth. Here the days and nights are equal throughout the year.

Equinox (equi equal, nox night) is the day when the sun shines vertically over the equator. These are March 20/21 (vernal equinox) and September 22/23 (autumnal equinox).

Solstice is the date when the sun shines vertically over the tropics giving the longest day or longest night. On June 20/21 the sun shines vertically on the Tropic of Cancer and the northern hemisphere here has the longest day (summer) or shortest night and the southern hemisphere the shortest day or longest night (winter). The reverse happens on September 22/23 when the sun shines vertically over the Tropic of Capricorn.

Rotation The earth rotates on its own axis from west to east once every 23 hrs 56 mins and 4.09 secs. This causes day and night. Since the International Date Line is taken as the starting point, the first major country where the eastern sun would rise or shine is Japan giving it the epithet 'Land of the Rising Sun'.

Revolution Besides rotating on its own axis, the earth also revolves around the sun in an elliptical orbit once every 365 days 5 hrs

48 mins and 45.51 secs. The revolution in an elliptical orbit gives the different seasons—summer, winter etc.—depending upon the distance of the sun from the earth. Rotation takes place with the earth's north-south axis inclined at $66\frac{1}{2}^\circ$ from the plane of orbit. It should be noted that for the first six months of the year the North Pole faces (and is nearer) the sun and for the next six months the South Pole. The inclination of the axis gives varying periods of day in different parts of the earth, making it maximum at the poles where each day and night lasts for six months. For instance in the Scandinavian countries which are nearer the North Pole the sun never sets in summer. That's why Norway is called 'The Land of the Midnight Sun'. In other words the sun can be seen well above the horizon even at midnight.

Leap year The time period for one revolution (one year) as seen from above is more than 365 days. To adjust the balance $1/4$ day every fourth year is taken as leap year (366 days) with February having 29 days. But the exact time of revolution is less than $365\frac{1}{4}$ days by a few minutes. This adjustment is made every 400 years. Thus any year divisible by four is a leap year. But if it happens to be a century year (1900 to 2000 etc.) it should be divisible by 400. Thus 1980, 1984, 2000 etc. are leap years but not 1800, 1900 etc. because though they are divisible by four they are not divisible by 400.

Light year a unit of measure is the distance travelled by light in one year—that is 9.4605×10^{15} m. It is used for measuring the distance between stars.

North Pole Northern end of the earth's axis.

South Pole Southern end of the

earth's axis.

Lines of Latitude (or parallels) Imaginary circles drawn from east to west round the earth. They are 180 in number.

Lines of Longitude (or meridians) Imaginary circles round the earth passing through the North and the South Poles. They are 360 in number.

First Meridian (or prime meridian) The meridian passing through Greenwich near London.

Latitude The distance of a place north or south of the equator.

Longitude The distance of a place west or east of the first meridian. Two degrees of longitude—69 miles. 15 degrees give a difference of one hour in time.

Zones The globe is divided into five zones—north frigid, south frigid, north temperate, south temperate, equatorial.

Tropic of Cancer Name of a parallel $23\frac{1}{2}^\circ$ north of the equator.

Tropic of Capricorn Name of a parallel $23\frac{1}{2}^\circ$ south of the equator.

Arctic Circle Name of a parallel $23\frac{1}{2}^\circ$ from the North Pole.

Antarctic Circle Name of a parallel $23\frac{1}{2}^\circ$ from the South Pole.

Standard Time If one travels eastwards from the first meridian one loses time by four minutes for every degree. For example if at first meridian the local time is noon at one degree east of longitude, the time will be 12.04 p.m. Similarly if one travels westwards one gains time by four minutes for every degree travelled. This is the uniform time adopted by all placed within a certain area irrespective of their longitude.

Indian Standard Time (IST) In India the standard time is the local time of Mirzapur (near Allahabad) which is located at $82\frac{1}{2}^\circ$ east longitude.

Greenwich Mean Time (GMT) In Great Britain the standard time is the local time of Greenwich. Difference between IST and GMT— $82\frac{1}{2}^\circ \times 4$ minutes = $5\frac{1}{2}$ hours.

Bangladesh Standard Time is ahead by half an hour of the IST.

Pakistan Standard Time is half an hour behind IST.

International Date Line A line along the 180° meridian marking the difference in time between East and West. (For the westward bound traveller crossing the line the date would be put forward by one day for the eastward bound traveller back by one day. To avoid difference of date in adjacent land areas the line deviates from the 180° meridian where this crosses land.)

Rocks are of different kinds, depending on the method of their formation (origin), degree of hardness, texture, colour and chemical composition. Geologists generally divide them into three classes: (a) Sedimentary (b) Igneous (c) Metamorphic.

Sedimentary rocks are those formed by the action of wind and running water. Examples: limestone, dolomite, sandstone, shale and conglomerates.

Igneous rocks are formed by the solidification of molten rock. The hot liquid mineral mass is called magma and comes from deep within the earth. Examples: granite and pumice.

Metamorphic rocks are formed from igneous or sedimentary rocks. As the name suggests, they undergo a pronounced change (metamorphosis) in their physical form due to heat and pressure. Examples: slate, marble, gneiss and coal. Gneiss is made from granite, marble from limestone, and slate from sandstone.

Artesian wells are wells in which water gushes to the top of the well on its own. It derives its name from 'Artois', a place in France where such wells are quite

common.

Aurora Borealis is a phenomenon of light seen at night near the North Pole in the Tundra region.

Evening Star is the planet of Venus which is seen setting in the west immediately after the sun sets.

Gulf Stream is a warm ocean current emerging from the cold Labrador current near Newfoundland, it follows the Westerlies to Europe from where it moves towards north-west Africa as a cold current.

Milky Way, also called the Galaxy, is a large group of stars of which the solar system is a part.

Roaring Forties are westerly winds blowing throughout the year over the ocean in the southern hemisphere between latitudes 40° to 60°.

Tundras are vast stretches of snowland in the Arctic and Antarctic regions. No trees or vegetation grow here except moss and lichen. Eskimos inhabit these lands.

Salt lakes are those having salty water, e.g., Sambhar Lake in Rajasthan.

York, Washington, San Francisco, Chicago, Montreal and Mexico City; longest river: Mississippi-Missouri.

South America comprises countries like Argentina, Brazil, Chile, Paraguay, Uruguay and Venezuela. It has the largest river in the world: Amazon.

Important features: Principal cities: Rio de Janeiro, Buenos Aires, Sao Paulo, La Paz and San Salvador; population: 252 million; area: 17.6 million sq km.

OCEANS are huge masses of water on the earth's surface. There are three great oceans—the **Pacific**, the **Atlantic** and the **Indian**—and two minor ones—the **Arctic**, which is an extension of the Atlantic, and the **Antarctic**, which is supposed to be an extension of all the first three. The Pacific Ocean is the largest and the deepest and, approximately, equals in area the other oceans taken together.

Primary producers of different crops in the world:

| Crop | Country |
|-----------|----------|
| Barley | USSR |
| Cocoa | Ghana |
| Coffee | Brazil |
| Cotton | USSR |
| Groundnut | India |
| Jute | China |
| Maize | USA |
| Millet | China |
| Rice | China |

| Tungsten | China |
| Uranium | USA |
| Zinc | Canada |

WORLD GEOGRAPHY

CONTINENT is a huge mass of land. At present, there are seven continents in the world: Asia, Africa, Antarctica, Australia, Europe, North America and South America. Asia is the largest continent and Australia the smallest. Asia and Europe are joined together and sometimes called Eurasia. Africa was also once joined to Europe and Asia but is today separated by the Suez Canal, as also the Indian Ocean. Similarly, America was earlier one continent but now divided into two by the Panama Canal.

Asia is the largest continent accounting for almost one-third of the earth's landmass. It has the highest peak—Mount Everest—which lies between Nepal and Tibet. It has also the lowest land—shores of the Dead Sea—which are 392 m below sea level. The coldest place in the world—north of Siberia—is in this continent, as also one of the hottest regions—Saudi Arabia. India lies in the south of Asia and is cut off from the rest of the continent by the Himalayas.

Important features: Chief mountain ranges: Himalayas, Pamirs and Altai; chief rivers: Ganges, Brahmaputra, Indus, Yangtze, Kiang, Hwang Ho, Amur and Irrawaddy; largest and most populated country: China; important cities: Tokyo, Shanghai, Calcutta, Bombay and New Delhi; area: 43,999,000 sq km; population: 2,738 million (more than half the world's total).

Africa is the second largest continent of the world. Very few people live here because it is either covered by deserts or dense forests.

Important features: Highest mountain: Mt Kilimanjaro (5,895 m), principal rivers: Nile (longest river of the world), Zaire, Niger, Zambezi and Congo; largest lake: Victoria; population: 498 million; area: 29.8 million sq km.

Australia is an island continent. It is one

country (capital: Canberra), made up of the following states: New South Wales, Queensland, South Australia, Western Australia, Victoria and Tasmania. The population is around 15 million spread over an area of 7.7 million sq km, concentrated mostly in the coastal cities. Chief river: Murray-Darling. The Great Dividing Range runs parallel to the east coast. Not far from the east coast lie the beautiful coral islands called the Great Barrier Reef.

Antarctica is as large as Europe but very cold. No one can settle here because it is covered with ice and snow all the year round and no food can be grown. Day and night each lasts for about six months. The large black-and-white penguins which cannot fly are the only living creatures on this white continent. It was discovered in 1820-21 by Nathaniel Palmer (USA) and Fabian Gottlieb von Bellingshausen (USSR). It was explored in 1840 by Charles Wilkes (USA). R. Amundsen was the first to reach the South Pole in 1911. India is one of the few countries to have set foot on Antarctica. Dr S. Z. Qasim was the leader of the first expedition and the camp set up by the Indian team is called 'Dakshin Gangotri'.

Europe is the second most-populated continent. Principal rivers: Volga, Danube, Drinker and Rhine; chief mountain range: Alps; important cities: London, Paris, Moscow, Bern, Geneva, Vienna, Rome, Bonn and Berlin. The world's largest country, the USSR, is situated in it.

North America is one of the world's richest areas. The longest chain of mountains runs from Alaska in the north to Tierra del Fuego in the south. In North America, these are called the Rocky Mountains while in South America they are called the Andes.

Important features: Important countries: the US and Canada; important cities: New

INDIA

General: India is the seventh largest country in the world with an area of 32,87,782 sq km. It has the second largest population with 68,39,97,512 (1981 census) people inhabiting it. This gives an average density of 221 per sq km.

Location: Lying entirely in the northern hemisphere, the mainland extends between latitudes 8°4' and 37°6' north and longitudes 68°7' and 97°25' east. It measures 3,214 km from north to south between the extreme latitudes and about 2,933 km from east to west between the extreme longitudes. It has a land frontier of 15,200 km and a coastline of 6,083 km.

Physical background: India is adjoined in the north by China, Nepal and Bhutan. A series of mountain ranges in the east separate India from Burma. Also in the east lies Bangladesh. In the north west, Afghanistan and Pakistan border India. In the south, India is separated from Sri Lanka by the Gulf of Mannar and the Palk Strait. The Andaman & Nicobar Islands in the Bay of Bengal and Lakshadweep in the Arabian Sea are parts of the territory of India.

The mountain system: India has eight principal mountain ranges. (i) the Himalayas, comprising the Hindu Kush, Shivalik and Karakoram in the north; (ii) the Patkai, Garo, Jaintia, Naga, Khasi and Arakan; range in the north-east; (iii) the Vindhyas and (iv) the

Satpura Range in the west; (v) the Aravalli in the north-west; (vi) the Sahyadri in the west coast; (vii) the Eastern Ghats; and (viii) the Nilgiri Hills in the south. The Himalayas, though the highest mountain system in the world, is one of the world's youngest. The Aravalli range in north-western India is one of the world's oldest mountain systems.

Demographic background: As compared to the 1971 census, the country's population showed an increase of 24.78 per cent. Compared to the last decade the birth rate fell slightly but still the population showed an increase. UP has the largest population. 110,885,874 persons. This is equal to the population of the UK and France combined. The second greatest number is 62 million in Maharashtra. Nagaland comes second-last with 0.7 million and Sikkim last with 3,14,999. For every 1,000 males, there are 935 females in the country. Kerala is the only state which has more females than males. Maharashtra has the highest urban population and Tamil Nadu the second highest. Calcutta remains the most populous city. Highest population density among the states is in Kerala.

Literacy: Of the total population, nearly 64 per cent are still illiterate.

Languages: Of the various languages and dialects spoken in India, only 15 are specified in the Eighth Schedule of the Constitution. These are: Assamese, Bengali, Gujarati, Hindi, Kannada, Kashmiri, Marathi, Oriya, Punjabi, Sanskrit, Sindhi, Tamil, Telugu, Malayalam and Urdu. English is the official

language. While most states have their own state or regional language, two states in the east—Nagaland and Meghalaya—use English as their state language.

Major communities: Scheduled castes (SCs) and tribes (STs), who are part of the Hindu community, form over 21 per cent of the country's population. The highest number of SCs are in UP; highest number of STs in Madhya Pradesh; and highest population of SCs and STs combined is in Bihar. Hindus predominate and the least population is of Zoroastrians (Parsees) and second least of Jains. Jains are found in most numbers in Rajasthan; Buddhists in Maharashtra; Sikhs in Punjab, and Christians in Nagaland (66.76 per cent). As percentage of total population, Muslims are in largest numbers in Lakshadweep (94.37 per cent), followed by Jammu & Kashmir (65.85 per cent).

Soil is made up of (i) small pieces of rocks which have been weathered or worn away by the sun, the rain, the wind and frost; and (ii) dead leaves and plants called humus.

Types of soil: There are five different kinds of soils found in India: *Regur* covers the north-west Deccan. It is a black, volcanic soil, very good for growing cotton. Black soil cracks in hot weather, allowing air to enter and mix with the soil. Water cannot easily drain through this soil. *Alluvium soil* is that which covers the river valleys and coastal plains. It is washed down from the hilly regions by running water. Alluvium contains a lot of minerals and humus which make it very fertile. Most of India's crops are grown in alluvial soils. *Red soil:* The red soil of

Karnataka is thin, sandy and not very fertile. In Orissa and Andhra Pradesh, however, red soil gathers in hollows in the ground, becoming slowly richer in minerals and humus. Crops can grow in it quite easily. When red soil contains a lot of sand, it looks yellow, as in Madhya Pradesh. Hill soil covers the mountains and valleys of the Himalayas, the Khasi Plateau and the southern hills. Loose pieces of large rock are found on the slopes. These tumble into the valleys to settle in river beds where the water slowly grinds them into sand. Dead leaves from the hill forests change into humus and also gather in the valleys. This makes valley soil a mixture of fertile alluvium and large stones. Desert soil. Very few plants can grow without water. This means that in places like Rajasthan, there are no dead plants which can be changed into humus. This makes the soil very thin and sandy. It looks yellow because it has been weathered from yellow rocks called sandstone.

Types of crops

Jute Among crops it is the highest

foreign-exchange earner for India. While Bangladesh is the largest producer of jute, India is the second largest. The plant needs a very warm climate and very heavy rainfall. It grows best in places where river silt is spread over the land every year when rivers are flooded. That is why the Ganges delta is one of the few places in the world where jute can be grown.

Sugarcane The soil should have lime and salt in it besides being well-irrigated. For successful cultivation, three conditions must be satisfied: (i) high temperature, (ii) ample rainfall and (iii) frost-free climate. The annual rainfall must be somewhere between 110 and 115 cm. But a spell of dry weather just before harvesting helps in storing up sugar. It grows best on the seacoast.

Rice requires high temperature and rainfall. It requires swamp conditions and the crop must remain flooded for a considerable part of the period of its growth. Deltas and valleys are best suited for cultivation of rice. The alluvial soil that gathers up here is particularly suitable for rice cultivation.

Wheat requires light sandy and highly fertile soil. At the time of sowing, it requires a fair amount of moisture and cool weather. A little rain just before the grain ripens can be helpful, but afterwards, clear weather and sun is required. This crop grows best in the steppe type of climate.

Cotton requires a warm and moist climate. It requires salt in the soil and is grown in the black soil area found in the Deccan. It is grown in the states of Gujarat, Maharashtra, Madhya Pradesh, UP, Punjab and Tamil Nadu.

Tea requires soil rich in iron. It should be well-fed by rain but the water should not be allowed to stand. The weather must be cool. In India, it is grown in Assam, Darjeeling and the Nilgiri Hills.

National parks: Corbett National Park (UP); Hazaribagh National Park (Bihar); Kanha National Park (Madhya Pradesh); Shivpur National Park (Madhya Pradesh); Bhitia National Park (Daltonganj, Bihar).

Sanctuaries: Gir Forest game sanctuary (Gujarat); Kaziranga Sanctuary, game sanctuary (Assam); Periyar Sanctuary (Kerala); Ghana Bird Sanctuary (Gujarat); Manas Sanctuary (Assam).

Rivers which fall into the Bay of Bengal: Ganges, Godavari, Krishna and Cauvery.

Rivers which fall into the Arabian Sea: Tapi, Narmada and Indus.

International airports: Calcutta, Bombay, Delhi and Amritsar.

Major ports of India: Calcutta, Bombay, Madras, Cochin, Visakhapatnam, Kandla, Mormugao, Paradeep, Mangalore and Tuticorin.

Major ports on the east coast: Calcutta (West Bengal), Visakhapatnam (Andhra Pradesh), Madras (Tamil Nadu), Paradeep (Orissa), Tuticorin (Tamil Nadu).

Major ports on the west coast: Kandla

| Agra | Yamuna |
| Delhi | Yamuna |

Q With which rivers are the following projects associated?

(i) Hirakud (ii) Bhakra Nangal (iii) Nagarjunsagar (iv) Gandak (v) Farakka (vi) Rihand

A (i) Mahanadi (Orissa) (ii) Sutlej (Punjab) (iii) Krishna (Andhra Pradesh) (iv) Gandak (UP) (v) Ganges (UP) (vi) Rihand (UP)

Q Explain the uses of the following metals

(a) Mica (b) Copper (c) Manganese (d) Bauxite (e) Gypsum

A (a) Mica is used mostly in the manufacture of electrical equipment as it is a bad conductor of electricity
(b) Copper is used in electrical industries as it is a very good conductor of electricity. Mixed with other metals copper is also used to make brass, bronze etc.
(c) Manganese is used in the manufacture of steel
(d) Bauxite. Aluminium is extracted from Bauxite
(e) Gypsum is used in the manufacture of cement and fertilisers

Q. What are monsoons?

A Monsoons are periodic winds which blow from sea to land for six months in summer. India gets its rains from the south west monsoon

Important places and towns

Adyar (Tamil Nadu) Headquarters of the Theosophical Society of India

Anand (Gujarat) Known for milk products. Amul Dairy is located here

Mt Abu (Rajasthan) A hill station, sacred place for Jains. Dihwara temples

Aga Khan Palace It is in Pune (Maharashtra) where Mahatma Gandhi was kept interned with his wife Kasturba. Gandhi Kasturba died in the palace

Agra (UP) Famous for the Taj Mahal. Sikandra, Fatehpur Sikri and Agra Fort

Ahmedabad (Gujarat) Known for its cotton textile industry

Ajanta Caves (Maharashtra) They are famous for Buddhist cave temples, richly sculpted and carved with paintings of exceptional skill

Ajmer (Rajasthan) Pilgrim centre for the Muslims, tomb of Khwaja Moin ud din Chisti

Alwaye (Kerala) Monazite factory

Amarnath (Jammu & Kashmir) A place of pilgrimage for the Hindus, known for an ancient Shiva temple

Ambernath (Maharashtra) Machine Tools Prototype factory is located here

Ankleshwar (Gujarat) Oil deposits

Allahabad (UP) An important place of pilgrimage for Hindus, confluence of three rivers, the Ganges, the Yamuna and the mythical Saraswati. Sacred ashes of Mahatma Gandhi, Jawaharlal Nehru and Lal Bahadur Shastri were immersed here. Anand Bhawan, the ancestral home of the Nehru family and now donated to the Indian National Congress, is also located here

Arvi (Maharashtra) India's first TV reception station

Aurangabad (Maharashtra) Tomb of Emperor Aurangzeb and his wife Ellora and Ajanta Caves are near it

Auroville An international township in Pondicherry constructed with the help of UNESCO

Avadi (Tamil Nadu) Known for the manufacture of tanks

Amritsar (Punjab) The famous Golden Temple and Jallianwala Bagh are located here

Bhagalpur (Bihar) Known for its silk industry. It was in the news recently for the atrocious binding of undertrial

Bangalore Capital of Karnataka. Industries located here are Hindustan Aeronautics Limited, Indian Telephone Industry and Hindustan Machine Tools

Barauni (Bihar) Famous for a big public sector oil refinery

Bareilly (UP) Known for wood and match works

Bhilai (Madhya Pradesh) One of the public sector steel plants constructed with the help of Russian engineers and credit is

RIVERS AND DAMS

| Dam | River | States associated |
|------------------------------|-------------|------------------------------|
| Nagarjunsagar | Krishna | Andhra Pradesh |
| Bhakra | Sutlej | Punjab |
| Hirakud | Mahanadi | Orissa |
| Tungabhadra | Tungabhadra | Andhra Pradesh and Karnataka |
| Damodar Valley Project (DVC) | Damodar | West Bengal and Bihar |
| Gandak | Gandak | UP |
| Farakka | Ganges | Bihar and West Bengal |

Bolpur (Karnataka): Known for the tomb of Mohd Adil Shah (the second largest dome in the world).

Bolpur (West Bengal): Seat of the University of Shantiniketan, which was established by Rabindranath Tagore.

Bombay: Capital of Maharashtra. It is the second largest city of India. Known for textile and film industry and also called 'Manchester of India'. Its new name is Mumbai.

Bodh-Gaya (Bihar): The place where Buddha got enlightenment.

Buland Darwaza (UP): Gateway of Fatehpur Sikri built by Akbar.

Belur (Karnataka): Famous for Cheena Kesava temple of Hoysala period.

Bhubaneswar: Capital of Orissa; known for Lingaraja temples.

Bharatpur (Rajasthan): Famous for Ghane Bird Sanctuary and a historic fort.

Calcutta: Capital of West Bengal and the largest town of India. Biggest jute manufacturing centre of India. It is a big port and an international airport.

Cape Comorin (Tamil Nadu): Also called Kanya Kumari after the famous temple of the same name. It is the southern-most tip of India where the Arabian Sea and the Bay of Bengal meet the Indian Ocean. The Vivekananda Rock Memorial is also located here.

Chandigarh: A Union territory and joint capital of Punjab and Haryana; a well-planned city designed by Le Corbusier.

Chhindwara (Madhya Pradesh): Known for coal and limestone.

Cherrapunji (Meghalaya): Place of heaviest rainfall.

Chidambaram (Tamil Nadu): Famous for its great Shiva temple.

Chittaranjan (West Bengal): Famous for its locomotive works.

West India

Chittorgarh (Rajasthan): Known for the Tower of Victory and Mira Bai's temple.

Churk (UP): Known for cement factory.

Dakshineswar: Near Calcutta, where Swami Vivekananda started his religious life under Ramakrishna Paramhansa.

Dholbaba: A town in Punjab, where many interesting geological and archaeological relics were found.

Dandi (Gujarat): Famous for salt satyagraha (Dandi March) by Mahatma Gandhi in 1930.

Dhariwal (Punjab): Centre of woollen textiles.

Dalal Street (West Bengal): Share market in Calcutta.

Dhanbad (Bihar): Famous for coal mines, the Indian School of Mines and the National Fuel Research Institute.

Digboi (Assam): Known for rich oil-fields and the private sector Assam Oil Refinery.

Dindigul (Tamil Nadu): Famous for cigars and tobacco.

Elephanta: An island in Bombay harbour, famous for rock-cut temples known as Elephanta Caves.

Ellora (Maharashtra): Famous for Buddhist cave temples richly sculpted and carved with paintings of exceptional skill.

Ferozabad (UP): Famous for its glass-bangle industry.

Gangotri: Name of a glacier in the Himalayas said to be the source of the Ganges.

Gateway of India: In Bombay harbour, erected in 1911 on George V's visit to India.

Golconda (Andhra Pradesh): A ruined city of India near Hyderabad.

Ghaziपुर (UP): Known for the government opium factory.

Gomteswara (Karnataka): Famous for the

of a single stone.

Guntur (Andhra Pradesh): Known for cotton manufacture.

Hampi (Karnataka): Site of ruins of Vijayanagar, the ancient capital of the Vijayanagar Empire.

Hardwar (UP): A sacred place of pilgrimage for the Hindus on the Ganges.

Howrah Bridge: A cantilever span bridge constructed over the river Hooghly, connecting Howrah Railway Station with Calcutta.

Hyderabad: Capital of Andhra Pradesh. Known for Charminar and Salar Jung Museum.

Haldia (West Bengal): Site of a public sector oil refinery.

India Gate: A war memorial in New Delhi facing the Rashtrapati Bhawan. The Amar Jawan Jyoti has been lighted here.

Jaipur: Capital of Rajasthan, also known as the 'Pink City'. A beautifully laid-out city, famous for its brasswares as also for the Hawa Mahal.

Jama Masjid (Delhi): Built by Shah Jahan; India's biggest mosque.

Jamshedpur (Bihar): Centre of iron and steel industry. Tata Iron and Steel factory is located here.

Jantar Mantar: Situated in Delhi, it is an observatory constructed during the days of Maharaja Jai Singh II of Amber.

Jharia (Bihar): Known for coal mines.

Jog Falls (Karnataka): One of the highest waterfalls in the world.

Jullundur (Punjab): Known for surgical and sports goods industry.

Kalpakkam (Tamil Nadu): Site of India's third atomic power station.

Kandla (Gujarat): A major port on the western coast.

Kanjeevaram (Tamil Nadu): Famous for ancient temples.

Kanpur (UP): A big industrial centre known for sugar, cotton and woollen mills and leather industries.

Katni (Madhya Pradesh): Known for lime and cement factory.

Kaziranga (Assam): A game sanctuary. It is the home of the great Indian one-horned rhino.

Khadakvasla (Maharashtra): The National Defence Academy is situated here.

Khajuraho (Madhya Pradesh): Famous for its group of highly ornate Hindu temples, having exquisite Hindu sculpture and architecture. It has become a tourist spot.

Kulu (Himachal Pradesh): It rivals the Kashmir Valley in beauty. Known for its apple orchards.

Khetri (Rajasthan): Famous for its copper mines.

Kodaikanal (Tamil Nadu): Famous for an observatory for the study of Solar Physics.

Kodarna (Bihar): It is a mica-mining centre.

Kolar (Karnataka): Known for gold mines.

Konark (Orissa): Famous for Black Pagodas and the Sun Temple.

Koyali (Gujarat): Known for its petrochemical complex.

Korba (Madhya Pradesh): Known for coal mining and a public sector aluminium plant.

(Continued on page 54)

STORM IN A TEA CUP

Tea is a major export earner for India. A disconcerting feature is the increasing trend in tea prices which may adversely affect our export earnings by making the price uncompetitive in international market. Higher prices are due to the unsatisfactory beginning of this year's tea season. Production during 1982 was only 564 million kg, almost the same as in 1981, which shows that our tea production has reached a plateau of stagnation. To improve the output, an estimated Rs 60 crores are required each year so that new plantings can be put on virgin land. To inject this quantum of funds implies assistance from world financial institutions. Some have even advocated rationalisation of taxation as taxes on this industry are heavy. Tea is subjected to agricultural income-tax but does not enjoy easy bank credit facilities provided to the agricultural sector. Besides, there are multipoint levies. The state governments fix their own agricultural income-tax and each state chooses its own rate. Together with the corporation tax, the total incidence works out to something like 59 per cent, which is higher than the general rate applicable to all industries.

Another interesting trend is that south Indian tea prices are ruling higher than the all-

India average. This is partly due to the preference for the south Indian variety. A disturbing trend is that the price increase is more pronounced in the cheaper varieties of tea. This may adversely affect the home consumption.

While India is the largest producer of tea, Sri Lanka is the largest exporter of tea in the world. Exports in 1982-83 by India registered a fall of 29 million kg compared to 1981-82 because of the export duty levied by the government. Therefore, while boosting tea exports, greater care has to be exercised on domestic prices which should not rule at an unnecessarily high level.

However, the outlook is not all that dismal. This is due to several factors: (i) the price realisation on exports is improving; (ii) Sri Lankan tea production is expected to receive a setback in view of the recent disturbance as the Tamils, accounting for the major portion of the workforce, are now compelled to leave; (iii) the export duty of Rs 4 a kg levied in 1976 has now been withdrawn by the government as it has realised that Sri Lanka, our major competitor, took full advantage of it and blunted whatever competitive edge Indian tea had over theirs in international markets.

Practice Tests

In preparing these tests we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating: Evaluate your performance on the basis of the following score-card.

| | | |
|-----------------------------|---|-----------|
| 100 questions in 60 minutes | — | Excellent |
| 60 questions in 60 minutes | — | Good |
| 50 questions in 60 minutes | — | Fair |
| 35 questions in 60 minutes | — | Poor |

Tips: 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not guess the answer.

Geography

Having read the short notes on Geography, you must by now have a fairly good idea of the subject. To further better your score, attempt these restructured questions selected from the GK test papers of various exams like the Civil Services, NDA, CDSE, Assistants' Grade, BSRB and SBI (PO) and SCRA held over the last few years.

FOR UPSC, SSC & BANK EXAMS

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of this supplement.

1. India occupies first position in the production of
 - (a) Rice
 - (b) Wheat
 - (c) Sugarcane
 - (d) Tobacco
2. Rourkela Steel Plant is situated in
 - (a) Orissa
 - (b) Madhya Pradesh
 - (c) West Bengal
 - (d) Bihar
3. A sanctuary for rhinoceros in India is at
 - (a) Bandipur
 - (b) Chandraprabha
 - (c) Corbett
 - (d) Manas
4. The headquarters of the Geological Survey of India are located in
 - (a) New Delhi
 - (b) Calcutta
 - (c) Bombay
 - (d) Madras
5. _____ is the largest producer of Mica.
 - (a) Bihar
 - (b) West Bengal
 - (c) Orissa
 - (d) Andhra Pradesh
6. The largest number of Jews live in
 - (a) The US
 - (b) France
 - (c) Israel
 - (d) The USSR
7. On December 22, the sun is vertical over
 - (a) Tropic of Cancer
 - (b) Tropic of Capricorn
 - (c) The Equator
 - (d) None of the above
8. The diameter of the earth is
 - (a) 6,400 km
 - (b) 12,800 km
 - (c) 25,000 km
 - (d) 40,000 km
9. _____ is the biggest ocean
 - (a) Atlantic Ocean
 - (b) Pacific Ocean
 - (c) Indian Ocean
 - (d) Antarctic Ocean
10. Equinox refers to
 - (a) The phenomenon which occurs in a leap year
 - (b) The day on which the sun shines vertically over the Tropic of Cancer
 - (c) The day on which the sun shines vertically over the Tropic of Capricorn
 - (d) The date on which days and nights are equal
11. A strata of land surrounded by water on all sides is known as a/an
 - (a) Strait
 - (b) Continent
 - (c) Island
 - (d) Peninsula
12. The approximate radius of the earth in km is
 - (a) 12,800
 - (b) 6,400
 - (c) 8,000
 - (d) 4,500
13. The statute mile is equal to _____ yards.
 - (a) 1,460
 - (b) 1,560
 - (c) 1,660
 - (d) 1,760
14. _____ is used to keep the correct Greenwich Mean Time.
 - (a) Barometer
 - (b) Chronometer
 - (c) Clinometer
 - (d) Brunton's Compass
15. The small bodies between the orbits of Mars and Jupiter are
 - (a) Asteroids
 - (b) Superior planets
 - (c) Satellites
 - (d) Comets
16. Nautical mile is a unit of distance used
 - (a) For space travel
 - (b) In races
 - (c) In aviation
 - (d) In ocean navigation
17. The 66½° north circle is also known as
 - (a) Tropic of Cancer
 - (b) Tropic of Capricorn
 - (c) Zenith
 - (d) Arctic Circle
18. Earthquake waves are recorded on a
 - (a) Barograph
 - (b) Hydrograph
 - (c) Seismograph
 - (d) Pantograph
19. The place of origin of earthquakes is called
 - (a) Epicentre
 - (b) Focus
 - (c) Seismic zone
 - (d) None of the above
20. A huge mass of ice and snow

- moving down the valley and slopes of mountains till it melts after passing the snow line is called a/an
- (a) Avalanche
(b) Iceberg
(c) Glacier
(d) Typhoon
- 21 _____ is most commonly found in the earth's crust
(a) Oxygen
(b) Silicon
(c) Hydrogen
(d) Aluminium
- 22 The atmospheric layer which reflects radio waves is called
(a) Exosphere
(b) Stratosphere
(c) Troposphere
(d) Ionosphere
- 23 Condensation occurs
(a) When the air is saturated
(b) When the moisture content is high
(c) When the air is cold
(d) None of the above
- 24 Humidity refers to
(a) Brackishness of water
(b) Latent heat
(c) Water vapour in the atmosphere
(d) Hygroscopic nuclei in the atmosphere
- 25 Monsoon climate is caused by
(a) High temperature
(b) Low temperature
(c) Temperature variations
(d) Seasonal reversal of winds
- 26 India receives most of her rains from
(a) The North east monsoon
(b) The retreating South west monsoon
(c) The South west monsoon
(d) Tropical cyclones
- 27 Humidity in the air is measured by a/an
(a) Hydrometer
(b) Hygrometer
(c) Opismeter
(d) Barometer
- 28 Pressure conditions can be shown on a map by
(a) Isotherms
(b) Isobars
(c) Isohyets
(d) Isohalines
- 29 _____ records the highest rainfall in India
(a) Mahabaleshwar
(b) Moushinram
(c) Nilgiri
(d) Cherrapunji
- 30 Sky is blue because of the
(a) Blue colour of oceans
(b) Scattering of blue light by dust particles
(c) Scattering of red light by dust particles
(d) Reflection of various lights producing blue colour
- 31 The atmosphere gets heated mainly by
(a) Direct rays of the sun
(b) Radiation from the earth
(c) Heat from the interior of the earth
(d) Volcanic activity
- 32 _____ per cent of the earth's surface area is covered by oceans.
(a) 20
(b) 40
(c) 70
(d) 90
- 33 The equatorial diameter of the earth is
(a) Larger than the polar diameter
(b) Equal to the polar diameter
(c) Smaller than the polar diameter
(d) None of the above
- 34 The line passing through places which have the same height above sea level is known as
(a) Contour
(b) Isohyet
(c) Parallel
(d) Isobar
- 35 _____ is the capital of Hungary
(a) Budapest
(b) Brasilia
(c) Philadelphia
(d) Kobdo
- 36 Oslo is the capital of
(a) Norway
(b) Denmark
(c) Belgium
(d) Switzerland
- 37 _____ receives the highest rainfall in the world
(a) Cherrapunji in India
(b) Johannesburg in Africa
(c) Brasilia in Brazil
(d) Salvador in South America
- 38 _____ is known as the Land of the Rising Sun
(a) China
(b) Korea
(c) Philippines
(d) Japan
- 39 _____ is the capital of Tibet
(a) Shanghai
(b) Gangtok
(c) Mongph
(d) Lhasa
- 40 Where is the origin of the Brahmaputra river?
(a) Mahasarovar
(b) Ladang Valley
(c) Kailash
(d) Nepal
- 41 _____ is the largest city in Asia
(a) Tokyo
(b) Singapore
(c) Beijing
(d) Bombay
- 42 _____ is the world's highest mountain peak
(a) Mt Blanc
(b) Mt Everest
(c) Mt Aconcagua
(d) Mt Kilimanjaro
- 43 _____ is the 'Roof of the World'
(a) Pamir Plateau
(b) The Apinines
(c) The Andes
(d) The Alps
- 44 _____ is the world's highest city
(a) Kyoto
(b) Lhasa
(c) Addis Ababa
(d) None of the above
- 45 The capital of Himachal Pradesh is
(a) Dehra Dun
(b) Tripura
(c) Simla
(d) Nahan
- 46 The famous hill station in south India is
(a) Ootacamund
(b) Trivandrum
(c) Tiruchirappalli
(d) Tirupati
- 47 The twin cities of India are
(a) Hyderabad - Secundrabad
(b) Mysore - Bangalore
(c) Bombay - Poona
(d) Delhi - New Delhi
- 48 The planned city of India is
(a) Varanasi
(b) Auroville
(c) Hyderabad
(d) New Delhi
- 49 The capital of Orissa is
(a) Puri
(b) Cuttack
(c) Bhubaneswar
(d) Jabalpur
- 50 The capital of Arunachal Pradesh is
(a) Shillong
(b) Gauhati
(c) Itanagar
(d) Manipur
- 51 _____ is the youngest Indian state
(a) Sikkim
(b) Arunachal Pradesh
(c) Nagaland
(d) Bhutan
- 52 India has _____ states
(a) 16
(b) 32
(c) 22
(d) 23
- 53 Panaji is located in
(a) Andaman & Nicobar Islands
(b) Arunachal Pradesh
(c) Dadra & Nagar Haveli
(d) Goa, Daman & Diu
- 54 The most important temple for Sikhs is at
(a) Patalla

- (b) Amritsar
(c) Ludhiana
(d) Jullundur
55. McMahon line is an international boundary between
(a) France and Germany
(b) India and Pakistan
(c) India and China
(d) India and Bangladesh
56. 'Vidarbha' is the regional name for a part of
(a) Gujarat
(b) Maharashtra
(c) Madhya Pradesh
(d) None of the above
57. Kharif crops are raised during
(a) Winter
(b) Summer
(c) Spring
(d) Autumn
58. _____ has the largest acreage of wheat.
(a) Madhya Pradesh
(b) Punjab
(c) UP
(d) Maharashtra
59. _____ is the largest producer of wheat.
(a) UP
(b) Punjab
(c) Madhya Pradesh
(d) Haryana
60. _____ has the largest acreage under rubber.
(a) Kerala
(b) Karnataka
(c) Maharashtra
(d) Orissa
61. _____ is the largest producer of sugarcane
(a) UP
(b) Maharashtra
(c) Andhra Pradesh
(d) Tamil Nadu
62. _____ is the largest producer of coconut.
(a) Tamil Nadu
(b) Kerala
(c) Karnataka
(d) Andaman & Nicobar Islands
63. _____ is the largest producer of tobacco.
(a) Gujarat
(b) Andhra Pradesh
(c) Tamil Nadu
(d) West Bengal
64. _____ is the largest producer of tea in India.
(a) Assam
(b) West Bengal
(c) Tamil Nadu
(d) Kerala
65. The proportion of India's population depending totally on agriculture is _____ per cent.
(a) 70
(b) 50

- (c) 30
(d) None of the above
66. The largest jute producer in India is
(a) West Bengal
(b) Assam
(c) Bihar
(d) UP
67. The largest producer of cashewnut in the country is
(a) Andhra Pradesh
(b) Karnataka
(c) Kerala
(d) Tamil Nadu
68. Floods and droughts are common in India because
(a) Monsoon rainfall is highly variable from year to year
(b) Monsoon rainfall is of short duration
(c) India is a large country
(d) India is a poor country
69. _____ is privately-owned.
(a) Bhilai Ispat Ltd, Bhilai
(b) Hindustan Steel Ltd, Durgapur
(c) Rourkela Ispat Ltd, Rourkela
(d) Tata Iron and Steel Company Ltd., Jamshedpur
70. Salem, Vijaynagar and Visakhapatnam have been selected for locating three new _____ plants.
(a) Cement
(b) Fertiliser
(c) Paper
(d) Steel
71. Paraffin is a by-product of
(a) Coke
(b) Petroleum
(c) Gasoline
(d) Kerosene
72. The first cotton mill in India was started in
(a) Mysore
(b) Bombay
(c) Calcutta
(d) Coimbatore
73. The aircraft industry at Bangalore is known as
(a) Aircraft Manufacturing Depot
(b) Airframe Factory
(c) Aero-engine Factory
(d) Hindustan Aircraft Limited
74. The first HMT factory was started at
(a) Bangalore
(b) Pinjore
(c) Kalemassery
(d) Hyderabad
75. Antibiotics are manufactured at
(a) Rishikesh
(b) Hyderabad
(c) Pimpri
(d) None of the above
76. The Indian Telephone Industries are located in
(a) Pinjore

- (b) Bangalore
(c) Kanpur
(d) None of the above
77. _____ iron and steel plant is financed by Russia.
(a) Rourkela
(b) Bhilai
(c) Durgapur
(d) Bhadravati

78. The height of Mt Everest is
(a) 2,900 m
(b) 8,848 m
(c) 6,378 m
(d) 11,075 m
79. Iron and steel works are found at
(a) Varanasi
(b) Chittaranjan
(c) Durgapur
(d) Asansol
80. Hindustan Aeronautics Limited is located at
(a) Delhi
(b) Bangalore
(c) Madras
(d) Hyderabad
81. _____ is associated with the silk-weaving industry.
(a) Ludhiana
(b) Delhi
(c) Kancheepuram
(d) Bombay
82. _____ is associated with the cotton-textile industry
(a) Pune
(b) Ahmedabad
(c) Varanasi
(d) Ludhiana
83. Chota Nagpur Plateau is the heart of industrial India because
(a) It possesses rich coal deposits
(b) It is a big hub of transport
(c) It produces crops needed for industries
(d) None of the above
84. Korba is
(a) In Madhya Pradesh. A big public-sector aluminium plant has been set up there.
(b) In Andhra Pradesh. The fifth public-sector steel plant is being set up there
(c) A hill station in Tamil Nadu. It is

- famous for beautiful lakes
(d) In Maharashtra A new port is being developed there
- 85 Sindri fertiliser factory is located in
(a) Tamil Nadu
(b) West Bengal
(c) Karnataka
(d) Bihar
- 86 Bokaro is located in
(a) Punjab
(b) Bihar
(c) Gujarat
(d) Orissa
- 87 Jute mills are mainly located in
(a) Bombay
(b) Calcutta
(c) Madras
(d) Bangalore
- 88 The steel industry is located in
(a) Madras
(b) Chittaranjan
(c) Bhilai
(d) None of the above
- 89 Ship building industry is located at
(a) Madras
(b) Calcutta
(c) Visakhapatnam
(d) None of the above
- 90 Jamshedpur is located by the side of river
(a) Subarnarekha
(b) Damodhar
(c) Hooghly
(d) None of the above
- 91 Bombay is an important centre for
(a) Sugar industry
(b) Jute industry
(c) Cotton textile industry
(d) None of the above
- 92 Irrigation is practised in India because
(a) Wet crops are grown over large areas
(b) Rainfall is highly variable
(c) There are many rivers
(d) None of the above
- 93 Sambhar lake is located in
(a) Rajasthan
(b) Gujarat
(c) Jammu & Kashmir
(d) Madhya Pradesh
- 94 Diesel locomotive works are located at
(a) Mughal Sarai
(b) Madras
(c) Visakhapatnam
(d) Varanasi
- 95 Himalayan rivers are perennial because
(a) The region gets rainfall throughout the year
(b) They are fed by melting of snowfields during summer
(c) They have many tributaries
(d) None of the above
- 96 In respect of size India ranks
(a) 5th

- (b) 6th
(c) 7th
(d) 9th
- 97 _____ occupies the first place in literacy
(a) Tamil Nadu
(b) Kerala
(c) West Bengal
(d) Maharashtra
- 98 The state owned Nepa newsprint factory is located in
(a) Arunachal Pradesh
(b) Himachal Pradesh
(c) Madhya Pradesh
(d) UP
- 99 _____ has the highest population density
(a) Kerala
(b) West Bengal
(c) Tamil Nadu
(d) UP
- 100 The growth of population is mainly due to
(a) Decline in the mortality rate
(b) Increase in birth rate
(c) Development of industries
(d) Application of modern techniques in agriculture
- 101 The highest urban population is found in
(a) Calcutta
(b) Bombay
(c) Bangalore
(d) Delhi
- 102 _____ coalfield is the largest producer of coal in India
(a) Raniganj
(b) Jharia
(c) Kothagudem
(d) Talcher
- 103 Neyveli lignite mine is located in
(a) Karnataka
(b) Tamil Nadu
(c) Kerala
(d) UP
- 104 _____ is famous for its copper industry
(a) Varanasi
(b) Khetri
(c) Tarapur
(d) Titagarh
- 105 The chief petroleum-producing states of India are
(a) Assam and Gujarat
(b) Andhra Pradesh and Rajasthan
(c) Madhya Pradesh and Assam
(d) Gujarat and Bihar
- 106 _____ leads in the production of uranium
(a) Kerala
(b) Bihar
(c) Tamil Nadu
(d) Orissa
- 107 The major producing area of iron ore in India is
(a) Singhbhum and Keonjhar

- (b) Kemman Gundi fields
(c) Lohare and Pipalganoni fields
(d) Salem and Tiruchirappalli fields
- 108 India has a good source of monazite in
(a) Andhra Pradesh
(b) Bihar
(c) Kerala
(d) Gujarat
- 109 The ore of aluminium is
(a) Hematite
(b) Biotite
(c) Bauxite
(d) Lignite
- 110 Oil refining is done at
(a) Kanpur
(b) Barauni
(c) Kandla
(d) Masulipatnam
- 111 India's population is now over _____ million
(a) 400
(b) 500
(c) 600
(d) 700
- 112 The largest number of people are found in
(a) Bihar
(b) Madhya Pradesh
(c) UP
(d) West Bengal
- 113 India's urban population formed nearly _____ per cent of the total in 1981
(a) 14
(b) 30
(c) 20
(d) 10
- 114 The first nuclear power station in the country was commissioned in
(a) Gujarat
(b) Maharashtra
(c) Rajasthan
(d) Tamil Nadu
- 115 The first nuclear reactor in India is
(a) Apsara
(b) Cirus
(c) Zerlina
(d) Rana Pratap Sagar
- 116 India's first nuclear explosion was conducted at
(a) Pokharan
(b) Dhuvanan
(c) Champaran
(d) None of the above
- 117 Sutlej is a
(a) Religion
(b) Mountain
(c) River
(d) Fault
- 118 Badrinath is located on the banks of river
(a) Ravi
(b) Narmada
(c) Alaknanda

- (d) Jhelum
119. The source of River Ganges is
 (a) Gangotri
 (b) Manasarovar lake
 (c) Mahabaleswar
 (d) None of the above
120. The west-flowing river in peninsular India is
 (a) Narmada
 (b) Cauvery
 (c) Brahmaputra
 (d) Mahanadi
121. Calcutta airport is called
 (a) Dum Dum
 (b) Meenambakkam
 (c) Santa Cruz
 (d) None of the above
122. Black soils are favourable for cultivating
 (a) Cotton
 (b) Paddy
 (c) Wheat
 (d) Jute
123. The South Central Railway has its headquarters at
 (a) Bangalore
 (b) Mangalore
 (c) Secunderabad
 (d) Visakhapatnam
124. _____ is an international port
 (a) Hyderabad
 (b) Bombay
 (c) Bangalore
 (d) Patna
125. In India the first railway line was constructed between
 (a) Calcutta Madras
 (b) Bombay Thana
 (c) Delhi Calcutta
 (d) Madras Delhi
126. The Ganges does not pass through
 (a) UP
 (b) Bihar
 (c) West Bengal
 (d) Orissa
127. _____ is the world's largest wheat producer
 (a) The US
 (b) China
 (c) The USSR
 (d) India
128. The hydro-electric project constructed to harness the river Penyar is
 (a) Purely indigenous
 (b) US-aided
 (c) USSR-aided
 (d) Canada-aided
129. The new name of the Burmah Shell Refinery taken over by the Indian Government is
 (a) Hindustan Petroleum
 (b) Barauni Refineries
 (c) Bharat Refineries
 (d) Assam Refineries

130. Jog Fall is in the course of the river
 (a) Cauvery
 (b) Saraswati
 (c) Krishna
 (d) Godavari
131. Deposits of water like rain snow, etc in either liquid or solid form reaching the earth are called
 (a) Hailstorm
 (b) Thunder
 (c) Precipitation
 (d) Glacier
132. The headquarters of Southern Railway is at
 (a) Bombay
 (b) Olavakot
 (c) Madras
 (d) Secunderabad
133. _____ has highest population
 (a) UP
 (b) Madhya Pradesh
 (c) Bihar
 (d) Maharashtra
134. The commodity for which India spends the largest amount to import is
 (a) Crude petroleum
 (b) Manufactured fertilisers
 (c) Iron and steel
 (d) Wheat
135. The artificial harbour along the west coast is
 (a) Madras
 (b) Kandla
 (c) Mormugao
 (d) Cochin
136. The country having common borders with the largest number of countries is
 (a) Brazil
 (b) The USSR
 (c) Zaïre
 (d) China
137. _____ is
 (a) Kandla
 (b) Bhavnagar
 (c) Porbandar
 (d) Navakhli
138. The biggest port of West Bengal is
 (a) Calcutta
 (b) Madras
 (c) Masulipatnam
 (d) Paradeep
139. Which is the world's longest river?
 (a) The Amazon
 (b) The Nile
 (c) The Ganga Jamuna
 (d) The Mississippi and Missouri
140. _____ is the world's biggest centre for gold mining
 (a) Johannesburg
 (b) Kalgoorlie
 (c) Kolar
 (d) Kuwait
141. The capital of Uganda is
 (a) Zomba
 (b) Kampala
 (c) Khartoum
 (d) Umtali
142. The capital of Egypt is
 (a) Alexandria
 (b) Victoria
 (c) Alberta
 (d) Cairo
143. Jute production is mainly in
 (a) The US
 (b) Bangladesh
 (c) India
 (d) Pakistan
144. The land of five rivers is
 (a) The east coast of Andhra Pradesh
 (b) The Malabar coast
 (c) The Coromandel coast
 (d) Punjab
145. Rubber is derived from
 (a) Chemicals of nitrogen
 (b) Fats of animals
 (c) Latex of plants
 (d) Fruit juice of plants
146. What is sericulture?
 (a) Cultivation of spices
 (b) Production of silk
 (c) Cultivation of grapes
 (d) None of the above
147. _____ may be called the 'Ruhr of India'
 (a) Chota Nagpur
 (b) Kanpur
 (c) Ahmedabad
 (d) Singhbhum
148. Panama Canal is a
 (a) Small channel connecting Europe and the British Isles
 (b) Small canal connecting the Pacific and Atlantic Oceans
 (c) Small canal connecting great lakes with the Atlantic Ocean

- (d) None of the above
- 149 What do you mean by international trade?
 (a) Trade within the state
 (b) Trade between different nations
 (c) Trade on a very large scale
 (d) None of the above
- 150 The great one horned Indian rhino is found in
 (a) Corbett National Park
 (b) Kanha National Park
 (c) Kaziranga Game Sanctuary
 (d) Periyar Game Sanctuary
- 151 The revolution of the earth causes
 (a) Day and night
 (b) Seasons
 (c) Diastrophism
 (d) None of the above
- 152 _____ is the world's largest producer of sugar
 (a) Cuba
 (b) The Soviet Union
 (c) Brazil
 (d) India
- 153 Steep sloping roofed houses are characteristics of regions having
 (a) Heavy rains and snows
 (b) High temperatures and sunshine
 (c) Strong winds
 (d) Hilly terrain
- 154 The winter snowhouse of Eskimos is known as
 (a) Tupic
 (b) Igloo
 (c) Yurt
 (d) None of the above
- 155 The oldest iron steel mills are at
 (a) Bhilai
 (b) Durgapur
 (c) Rourkela
 (d) Jamshedpur
- 156 _____ ranks first in petroleum production
 (a) The US
 (b) The Soviet Union
 (c) Saudi Arabia
 (d) Kuwait
- 157 The staple food of Asians is
 (a) Coffee
 (b) Maize
 (c) Rice
 (d) Wheat
- 158 _____ is the world's most populated city
 (a) New York
 (b) Tokyo
 (c) Shanghai
 (d) Beijing
- 159 _____ is the world's most populated country
 (a) India
 (b) China
 (c) The US
 (d) None of the above

- 160 Four noble paths were outlined by
 (a) Jainism
 (b) Buddhism
 (c) Sikhism
 (d) Judaism
- 161 _____ is the most widespread religion
 (a) Christianity
 (b) Islam
 (c) Hinduism
 (d) Judaism
- 162 Rural settlements are associated with
 (a) Agriculture
 (b) Mining
 (c) Industry
 (d) None of the above
- 163 What is apartheid?
 (a) Inter mixture of races
 (b) A policy of segregation between whites and blacks
 (c) Establishment of white superiority
 (d) Universal suffrage
- 164 Dispersed settlements are found commonly in
 (a) Tamil Nadu
 (b) Kerala
 (c) Andhra Pradesh
 (d) Himachal Pradesh
- 165 The important transport animal in the deserts is
 (a) Camel
 (b) Donkey
 (c) Buffalo
 (d) Cow
- 166 _____ industry is located in Churk
 (a) Textile
 (b) Glass
 (c) Silk
 (d) Cement
- 167 The hydel project that produces maximum power is
 (a) Bhakra Nangal
 (b) Damodar Valley Corpn
 (c) Tungabhadra
 (d) Hirakud
- 168 Where is the National Defence College?
 (a) New Delhi
 (b) Dehra Dun
 (c) Khadakvasala
 (d) Bombay
- 169 The planet nearest to the sun is
 (a) Mars
 (b) Saturn
 (c) Venus
 (d) Mercury
- 170 Congo Basin partly comes under which type of climate?
 (a) Desert type
 (b) Tropical-monsoon type
 (c) Equatorial-monsoon type
 (d) None of the above
- 171 _____ is a Union territory
 (a) Patna

- (b) Chandigarh
 (c) Lucknow
 (d) Bhopal
- 172 London is situated on the
 (a) Moskava
 (b) Nile
 (c) Thames
 (d) Seine
- 173 Celestial bodies moving round the sun having a tail are called
 (a) Asteroids
 (b) Apogees
 (c) Comets
 (d) Meteorites
- 174 The largest river basin in the south is that of
 (a) Krishna
 (b) Cauvery
 (c) Godavari
 (d) Mahanadi
- 175 Kalahari desert is in
 (a) India
 (b) China
 (c) Africa
 (d) The USSR
- 176 _____ is famous for its petroleum industry
 (a) Digboi
 (b) Gwalior
 (c) Howrah
 (d) Sindri
- 177 The mouth of a volcano is called
 (a) Pipe
 (b) Crater
 (c) Hole
 (d) Door
- 178 Somnath temple is in
 (a) Darjeeling
 (b) Siliguri
 (c) Mysore
 (d) Patna
- 179 New York is situated on the banks of the
 (a) Mississippi
 (b) Hudson
 (c) Potomac
 (d) St Lawrence
- 180 Rabi crop is harvested during
 (a) August and September
 (b) October and November
 (c) June and July
 (d) March and April
- 181 _____ is not an international airport
 (a) Delhi
 (b) Cochin
 (c) Calcutta
 (d) Bombay
- 182 The longest dam is the
 (a) Bhakra-Nangal
 (b) Tungabhadra
 (c) Hirakud
 (d) Nagarjunsagar
- 183 Coimbatore is associated with
 (a) Coal mines
 (b) Rubber
 (c) Cotton textiles

(d) Oil factories

- 184 Which of the following statements is false?
 (a) Rameshwaram temple is in Tamil Nadu
 (b) Meenakshi temple is in Madurai
 (c) Lingaraja temple is in Bhubaneswar
 (d) Mahabaleswar temple is in Madras
- 185 White House is situated in
 (a) London
 (b) Washington D C
 (c) Moscow
 (d) New York
- 186 India's first rocket launching station is located in
 (a) Baroda
 (b) Thumba
 (c) Hyderabad
 (d) Delhi
- 187 Rameshwaram temple is in
 (a) Andhra Pradesh
 (b) Maharashtra
 (c) Tamil Nadu
 (d) Kerala
- 188 Percentage of India's population to that of the world is
 (a) 5
 (b) 10
 (c) 15
 (d) 20
- 189 Maximum woollen clothes are knitted in
 (a) Punjab
 (b) Gujarat
 (c) UP
 (d) Rajasthan
- 190 What is the circumference of earth?
 (a) 25 000 km approximately
 (b) 40 000 km approximately
 (c) 13 000 km approximately
 (d) 8 000 km approximately
- 191 Which is the brightest planet?
 (a) Venus
 (b) Mars
 (c) Jupiter
 (d) Mercury
- 192 Which is the largest planet?
 (a) Jupiter
 (b) Mercury
 (c) Mars
 (d) Saturn
- 193 _____ is known as 'Evening Star'
 (a) Saturn
 (b) Venus
 (c) Mercury
 (d) Jupiter
- 194 _____ was the first European to reach India via Cape of Good Hope
 (a) Vasco da Gama
 (b) Christopher Columbus
 (c) Marco Polo
 (d) Michael Anderson
- 195 What is the main reason for the

low crop yield per acre in India?

- (a) Poor soil
 (b) Less-developed technology
 (c) Unfavourable weather conditions
 (d) Natural calamities
- 196 _____ is a natural satellite of earth
 (a) Mars
 (b) Jupiter
 (c) Moon
 (d) Pluto

- 197 The Gateway of India is in
 (a) Cochin
 (b) Bombay
 (c) Visakhapatnam
 (d) Calcutta
- 198 In terms of value _____ leads in mineral production
 (a) Madhya Pradesh
 (b) Bihar
 (c) West Bengal
 (d) UP
- 199 _____ is the biggest state in India
 (a) UP
 (b) Maharashtra
 (c) Bihar
 (d) Madhya Pradesh
- 200 What is the correct order of states in descending order in coal production?
 (a) West Bengal, Bihar, Orissa
 (b) Bihar, Orissa, Assam
 (c) Bihar, West Bengal, Madhya Pradesh
 (d) Madhya Pradesh, Assam, Bihar
- 201 Which group among the following is under public sector steel plants?
 (a) Bhilai, Jamshedpur, Bokaro
 (b) Bhilai, Rourkela, Durgapur
 (c) Rourkela, Bhilai, Jamshedpur
 (d) Salem

- (c) Rourkela, Bhilai, Jamshedpur, Salem
 (d) Jamshedpur, Bhilai, Durgapur, Salem

- 202 _____ top in copper production
 (a) Bihar and Rajasthan
 (b) Rajasthan and Orissa
 (c) Madhya Pradesh and West Bengal
 (d) UP and Bihar
- 203 Hindustan Shipyard is located at
 (a) Madras
 (b) Calcutta
 (c) Visakhapatnam
 (d) Bombay
- 204 Where is Meenakshi temple located?
 (a) Kenya Kumari
 (b) Hyderabad
 (c) Madurai
 (d) Calcutta
- 205 Which of the following statements is incorrect?
 (a) Konarak in Gujarat is famous for its Sun Temple with the biggest Buddha stupa
 (b) Khajuraho is famous for medieval Hindu temples
 (c) Sarnath is famous for its Buddha temple
 (d) Auroville is an international township near Pondicherry
- 206 What was the primary aim of building the Farakka Barrage?
 (a) To instal a giant hydroelectric project
 (b) To preserve and maintain Calcutta port and to improve the navigability of the Hooghly river
 (c) To prevent Bangladesh from being flooded in rainy months
 (d) To divert the Ganga waters to Bihar for irrigation
- 207 What is Sagar Samrat?
 (a) A newly-constructed ship in India
 (b) A tunnel for transporting petroleum products through the sea
 (c) India's first self propelled drilling ship anchored at Bombay High
 (d) A military vessel used in naval warfare
- 208 The world's largest peninsula is
 (a) India
 (b) Saudi Arabia
 (c) Siberia
 (d) None of the above
- 209 _____ is not a rabi crop
 (a) Wheat
 (b) Mustard
 (c) Gram
 (d) Rice

V G

Test of Reasoning

BY I R M

FOR BSRB CLERICAL CADRE EXAM

This section is designed to help those appearing in the BSRB (North-Eastern Region) Clerical Cadre Exam to be held this month.

Time 40 minutes

Scores 1 Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer 3 The rate your score as under:

Excellent 38-42 Very good 33-37 Good 29-32 Fair 25-28 Poor ... Below 25

DIRECTIONS For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of this supplement

- What number comes next in the series 7 25 61 121 ?
(a) 211
(b) 215
(c) 251
(d) 364
- Two trains A and B leave stations P and Q at the same time and move towards each other at 30 and 50 kmph respectively. When they meet it is found that train B has covered $4\frac{1}{2}$ km more than train A. Stations P and Q are—km apart
(a) 12
(b) 14
(c) 16
(d) None of the above
- Walking at a speed of $3\frac{1}{2}$ kmph a boy reaches his school 4 mins late. But when he increases his speed by one fourth he reaches school 2 mins early. How far is the school from his house?
(a) 750 m
(b) 1250 m
(c) 1750 m
(d) 2300 m
- A manufacturer makes two types of gadgets—A and B—and has three machines installed for this purpose. The time (in mins) required for each gadget on the machine is as under

| Gadget | Machines | | |
|--------|----------|------|-----|
| | I | II | III |
| A | 24 | 36 | 12 |
| B | 12 | Zero | 18 |

Each machine is available for a maximum of 12 hrs in a day. If the profit margin on gadget A is Rs 3 and that on gadget B Rs 2, how many gadgets of each type should be manufactured in a day to derive the maximum profit?

- Gadget A—10, gadget B—30
 - Gadget A—15, gadget B—30
 - Gadget A—16, gadget B—32
 - None of the above
- 5 A and B can do in 60 days a piece of work which B and C take 40 days to complete. All the three work on

the first day. Thereafter, however, both A and C together absent themselves on every alternate day. In how many days will the work finish?

- 24 days
 - 36 days
 - 48 days
 - Can't be worked out
- 6 The number of twelfths in three wholes and five sixths is
- 42
 - 44
 - 46
 - 48

Directions: Questions 7 to 9 are based on the following. The above cube can be rotated about any of its three axes x, y or z. The rotation of the cube 90° about x in the clockwise direction will be denoted by " $\rightarrow x$ ", the rotation of the cube 90° about y in the anti-clockwise direction by " $\leftarrow y$ ", and the rotation of the cube 90° about z by " $\rightarrow z$ " or " $\leftarrow z$ ", respectively, depending on whether it is rotated in the clockwise or anti-clockwise direction.

If operation x is performed thrice, the whole operation will be indicated by " $\rightarrow x^3$ " or " $\leftarrow x^3$ ", depending upon the direction in which the operation is performed, if four times, as " $\rightarrow x^4$ " or " $\leftarrow x^4$ ". Likewise, " $\rightarrow xy$ " means two operations performed in the anti-

clockwise direction: first rotation of the cube 90° about x axis followed by its rotation by the same amount about y axis. Axis x passes through side C, axis y through B, and axis z through A.

- After the operation " $\rightarrow x^3 y z$ ", where will face B be?
(a) Back
(b) Bottom
(c) Left
(d) Top
(e) Right
- Where was the face which is at the bottom after operations " $\rightarrow y^2 z^3$ " before the operation?
(a) Back
(b) Left
(c) Right
(d) Top
(e) Bottom
- After which of the following operations will face A come at the bottom?
(a) " $\rightarrow z^3 y x^3$ "
(b) " $\rightarrow z^3 y^2 x^4$ "
(c) " $\rightarrow z^3 y^2 x^3$ "
(d) None of the above

Directions: Questions 10 and 11 are based on the following. (1) All national level swimmers wear blue blazers, (2) None of the sportsmen from Gangtok wear blue blazers or take part in the marathon race held at national level, (3) If Raja is a national level swimmer, Rahim is a national level marathon runner.

- If the statements above are all true, which of the following must be true?
(a) Either Raja or Rahim wears a blue blazer
(b) If Raja wears a blue blazer he is a national-level swimmer
(c) None of the sportsmen from Gangtok are national level swimmers
(d) If Raja is a national level swimmer, Rahim does not wear a blue blazer
- The conclusion—"Raja is not a national-level swimmer"—could be validly drawn from the statements given above if it were proved that
I Raja does not wear a blue blazer, II Rahim is not a national-level marathon runner, III Raja is not a sportsman from Gangtok
(a) I only
(b) II only
(c) III only
(d) I and II
(e) I and III

Directions: Questions 12 to 16 are based on the following graph

CONSULTANCY AT BLUE LAND INSTITUTE OF TECHNOLOGY

- 12 In the graph the percentage increase in consultancy earnings over the preceding year was the highest in
 - (a) 1976-77
 - (b) 1978-79
 - (c) 1980-81
 - (d) 1981-82
- 13 The percentage increase in the turnover per job compared with the one in the preceding year was the highest in
 - (a) 1978-79
 - (b) 1979-80
 - (c) 1980-81
 - (d) 1981-82
- 14 In — Blue Land Institute of Technology undertook the maximum number of consultancy jobs
 - (a) 1976-77
 - (b) 1977-78
 - (c) 1978-79
 - (d) 1979-80
- 15 If the consultancy earnings during 1979-80 were 40% more than those shown in the graph and there being no change in average turnover per job the number of jobs undertaken by Blue Land Institute of Technology during that year must have been
 - (a) 725
 - (b) 875
 - (c) 925
 - (d) Can't be worked out due to insufficient data
- 16 In — consultancy earnings were closest to the average of the consultancy earnings for the period

- 17/5/76 to 1982/83 both years inclusive
 - (a) 1977-78
 - (b) 1978-79/1979-80
 - (c) 1980-81
 - (d) 1981-82/1982-83

Directions In questions 17 to 24 select the lettered choice that bears almost the same relation as exists between the capitalised words

- 17 ABERRATION ECCENTRICITY
 - (a) kidnap release
 - (b) small large
 - (c) sophisticated charming
 - (d) ingenuous unsophisticated
- 18 NIGGARDIY PARSIMONIOUS
 - (a) catholic uncultured
 - (b) profligate epicurean
 - (c) materialistic philistine
 - (d) uxorious misogynist
- 19 JUDAS DECEIT
 - (a) teacher god
 - (b) pedant virtuoso
 - (c) athlete sublimite
 - (d) patriot sacrifice
- 20 PHLEGMATIC EXCITABLE
 - (a) complacent constant
 - (b) punctilious careful
 - (c) indefatigable tireless
 - (d) gullible shrewd
- 21 FUTILITARIAN OPTIMISTIC
 - (a) ugly adonis
 - (b) charming graceful
 - (c) gourmet food
 - (d) sycophant hypocritical
- 22 HYPOCHONDRIA ILLNESS
 - (a) amnesia digestion
 - (b) somnambulism sleepwalking

- (c) dipsomania eve-teasing
- (d) kleptomania sleeplessness
- 23 COMPUCTION WRONG DOING
 - (a) ennui inactivity
 - (b) demonstration laboratory
 - (c) crime punishment
 - (d) doctor medicine
- 24 VAPID REPULSIVE
 - (a) ascetic mountains
 - (b) catholic taciturn
 - (c) insipid boring
 - (d) pompous attractive

Directions Questions 25 to 34 contain two numbered statements Decide whether the data given is sufficient for answering the question Mark your answer thus

- A —if statement (1) alone is sufficient to answer the question but statement (2) alone is not
- B —if statement (2) alone is sufficient to answer the question but statement (1) alone is not
- C —if both statements together are required to answer the question but neither statement alone is sufficient
- D —if either statement by itself is sufficient to answer the question
- E —if enough information is not given to answer the question

- 25 In circle O how many degrees are there in angle AOB?

- (1) The diameter of the circle is 8 cm
- (2) Arc AB = 63 cm
- 26 What was the percentage decrease in the sale of the number of items at a store on one particular day?
 - (1) Sales decreased from Rs 1100 to Rs 1075 on a particular day
 - (2) The number of items sold on the particular day were 65
- 27 In the diagram below what is the measure of ?

- (1) $\angle 1 = 30^\circ$
- (2) $\angle 3 = 135^\circ$

28 What is VZ equal to?

(1) PQVU, QRWV, RSXW and STYX are congruent rectangles

(2) $TY = 21$

29 In circle O, what is the area of the shaded portion?

(1) POR is the diameter of the circle and is equal to 8 cm

(2) PQRS is a cyclic quadrilateral and $PQ = QR$

30 For how much should a landlord get his house insured, if he wishes to recover the cost of the house and yearly premium in case of total loss?

(1) The house cost him Rs 95,000

(2) The yearly premium is 5%

31 What is the distance from P to R?

(1) P and Q are 12 cm apart

(2) Q and R are 10 cm apart

32 What could be the maximum score of X in any one of the three subjects, if his average score in the three subjects was 93?

(1) In no subject did his score exceed 111

(2) In no subject did he score less than 84

33 In a right-angled triangle, what is the length of the hypotenuse?

(1) The triangle is isosceles also

(2) One of the sides other than the hypotenuse is 6 cm

34 What is $x^4 \cdot \frac{1}{x^2}$ equal to?

$$(1) x - \frac{1}{x} = 4$$

$$(2) x + \frac{1}{x} = 2\sqrt{5}$$

Directions Questions 35 to 40 are based on the following. An Indian, an Italian, a German and an American win the top four international awards given by the World Parliament in recognition of their contributions to the advancement of science in the service of mankind. One of them is an atheist, the second an agnostic, the third believes in Christianity, while the fourth

believes in Judaism, not necessarily in that order. Their names are Oscar, Peter, Quintal, and Romeo, not necessarily in that order.

(1) The one who believes in Christianity wins neither first nor second prize; (2) The German wins the first prize; (3) Romeo wins the second prize; (4) Oscar is an Indian; (5) The agnostic, i.e., the American, wins the fourth prize; (6) Peter believes in Judaism.

35 Who won the first prize?

(a) The atheist

(b) The scientist who believes in Judaism

(c) Romeo

(d) Oscar

36 Who believes in Christianity?

(a) The German

(b) The Italian

(c) The Indian

(d) The one who wins the

IN MY OPINION

CCTimes values your opinion. Of the flood of letters we received inviting your opinion for changing the supplement to full-size pages, 50 have qualified for a prize—an immensely readable book—from a draw of lots. We appreciate the interest you've taken in CCTimes and hope it will grow still more.

Winners

1 T Appa Rao, Kharagpur 2 Rakesh Jaiswal, Udaipur 3 V K Upadhyay, Indore 4 Mohsin Ali Khan, Hiraakud (Orissa) 5 Anand Shankar, Varanasi 6 V V Kulkarni, Hubli 7 V Naga Rajan, Madurai 8 Prem Sinha, Patna 9 M L N Rao, Calcutta 10 Ravindranath V, Baroda 11 Sanjay Minocha, Pili 12 A J Abdul Tamee, Madras 13 Anant Kumar Fio, Roorkee 14 Vin eeta Singh, Nasik 15 D R Garg, Patiala 16 Prakash Chandra, Ahmedabad 17 Pradeep Kumar, Gharaunda (Karnal) 18 Parmod Kumar Wadhwa, New Delhi 19 Pankaj Kumar Bhutani, Gulabpura (Rajasthan) 20 Subhas Mewar, Bombay 21 Rajiv Boolchand, New Delhi 22 Rohit Awasthi, Pathankot 23 Rajeev Kumar, Allahabad 24 Leo Lalit Chorana, Gauhati 25 Arun Kumar, Muzaffarpur 26 Mahesh Menon, Bombay 27 A Subhani, Patna 28 Sushil Kumar, Palghat 29 Pradeep Kumar Bhatt, Mathura 30 Anuj Srivastava, Allahabad 31 Vasin Iqbal Panhar, Jaipur 32 Ajay K Saxena, Chandausi (UP) 33 Amichand Aggrawal, Danpur Cantt (Patna) 34 Jayanta Nath, 24 Parganas 35 Mira A Shah, Bhavnagar 36 G Mahambare, Pune 37 Kishore H Sharma, Ahmedabad 38 Ravindra Kumar Amatya, Lucknow 39 Anurag Prashar, Lucknow 40 N Mahendran, Coimbatore 41 N Nagendra, Bangalore 42 Navdeep Sodhi, Ludhiana 43 Harjit Singh, New Delhi 44 A Arjunan, Tiruchy 45 Susanta Kr Som, Gauhati 46 K Sare Rama Murthy, Yanam 47 A T Kandaswamy, Madras 48 N Parthasarathy, Bangalore 49 Rawal Bhaskar Pune 50 K.A.V Kulkarni, Hubli City (Karnataka)

second prize

37. Which statement correctly lists the scientists in descending order of their prizes?

I Peter, the Indian, the atheist; II The Italian, the one who believes in Christianity, Oscar; III The atheist, the Indian, Quintal.

(a) I only

(b) II only

(c) III only

(d) I and III

(e) II and III

38 Quintal is an/the

(a) Agnostic

(b) Atheist

(c) Italian

(d) German

(e) One who wins the third prize

39 Based on statements (1), (3), (4), (5) and (6) only, which of the following may be deduced?

I Romeo is an Italian, II The American is Peter or Quintal, III Oscar wins the third prize

(a) I and II

(b) I and III

(c) II and III

(d) I, II and III

(e) Neither I, II nor III

40 On the basis of statements (1), (2), (3), (4) and (6) only, which of the following may be deduced?

I Either Oscar or Quintal (but not both) believes in Christianity II The atheist wins the first or second prize, III Peter is a German

(a) I only

(b) II only

(c) I and II

(d) I, II and III

41 A man sells an article at a profit of 25% of the selling price. What is the ratio between his cost and the selling price?

$$(a) \frac{3}{4}$$

$$(b) \frac{4}{5}$$

$$(c) \frac{5}{4}$$

(d) Can't be worked out

42 A lake is surrounded by birds on all sides. A lotus flower is seen $\frac{1}{2}$ cubit above the water level. With the onset of wind, the lotus sinks in the water 2 cubits, away from its place, slowly. The water in the lake is—cubits deep.

$$(a) 2\frac{1}{4}$$

$$(b) 2\frac{3}{4}$$

$$(c) 2\frac{3}{4}$$

(d) Can't be worked out

Senior Observers Exam, Nov '82

BY K.R. RAJA LAKSHMI

GENERAL KNOWLEDGE

Questions published in this section appeared in the GENERAL KNOWLEDGE paper of the Senior Observers Examination held in November 1982. These are based on the candidates' memory as they are not allowed to take their question papers out of the examination hall. Though we have compiled these questions as close to the original as possible, we take no responsibility for any discrepancies.

DIRECTIONS For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of this supplement

- | | | |
|--|--|--|
| 1 Copenhagen is the capital of
(a) Denmark
(b) Finland
(c) Sweden
(d) Netherland | 10 It is necessary to know both longitude and latitude of a place in order to determine its
(a) Local time

 (b) Raises boiling point of liquids
 (c) Has no effect on the boiling point
 (d) Reduces volume of liquids

ordinary life
 (d) archaeology lacks the romantic appeal of history

SYNONYMS

II Select the word which is nearly the same in meaning as the given word.

1. ADVANCE
 (a) succeed
 (b) delay
 (c) ignore
 (d) go forward
2. EUPHONY
 (a) discord
 (b) pleasant sound
 (c) racket
 (d) concert
3. DILEMMA
 (a) contract
 (b) puzzle
 (c) hard choices
 (d) complexity
4. EMPHATIC
 (a) important
 (b) basic
 (c) vital
 (d) forceful
5. PROFICIENT
 (a) profitable
 (b) deficient
 (c) capable
 (d) sufficient
6. ABDICATE
 (a) execute
 (b) renounce
 (c) kidnap
 (d) escape
7. ABHOR
 (a) annoy
 (b) loathe
 (c) displease
 (d) disapprove
8. SMUGNESS
 (a) stupidity
 (b) foolishness
 (c) shrewdness
 (d) complacency
9. CONGREGATE
 (a) assemble
 (b) join
 (c) return
 (d) migrate
10. DERIDE
 (a) display
 (b) entertain
 (c) mock
 (d) tell

ANTONYMS

III Select the word which is nearly the opposite of the given word.

1. ARROGANT
 (a) mild
 (b) lowly
 (c) humble
 (d) graceful

BY THE AARBEEES

FOR ASSTS' GDE, CDSE ...

This section will be of help to those appearing in the Clerical Cadre (BSRB North Eastern Region), Assistants' Grade and Combined Defence Services exams to be held this month, and Senior Observers and Central Excise, Income-tax Inspectors exams in November.

DIRECTIONS For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of this supplement

READING COMPREHENSION

I Read the following passage carefully and answer the questions that follow by choosing the best alternative

Archaeology, by drawing back the curtain which concealed the life of man during the half-a-million years before written records were kept, has given to our view of past ages a perspective which was entirely lacking when our knowledge was restricted to the comparatively limited time-span covered by written records. The archaeologist has unearthed materials far more intimately concerned with people's daily lives than are the documents of the historian. It is true that he cannot fire our imagination by the romantic appeal of famous names; he cannot, like the historian, marshal an impressive company of heroes and kings. Instead, he can tell us about people's houses, the pots from which they ate and drank, their weapons and implements. Such things bring him much nearer to the essential components of history than the historian. The historian is concerned mainly with a few outstanding individuals who focus our attention on single moments of history, but the archaeologist is interested in the multitude of ordinary folk who play anonymous but vital parts in the constantly unfolding drama of mankind's

development.

1. According to the author archaeology has
 (a) given more information about the past than history
 (b) added to the information already given by history
 (c) laid bare the pre-historic past
 (d) covered a longer period than history has
2. Archaeology serves as a better instrument than history in our understanding of mankind because it
 (a) deromanticises the past
 (b) does not deal with kings and heroes
 (c) gives us basic information about the pre-historic people
 (d) tells us a lot about unknown people
3. The main concern of the historian is with
 (a) single moments of history
 (b) written records
 (c) essential elements of human life
 (d) persons of extraordinary importance at certain points in time
4. According to the author
 (a) history has greater objectivity
 (b) archaeology gives us more colourful details about our past
 (c) history gives a better view of

2. DEPOSE

- (a) allow
- (b) permit
- (c) extend
- (d) retain

3. AMBIGUOUS

- (a) straight
- (b) explicit
- (c) positive
- (d) certain

4. EXTENUATE

- (a) compound
- (b) multiply
- (c) heighten
- (d) open

5. VIGILANT

- (a) asleep
- (b) careless
- (c) unconcerned
- (d) unmindful

6. MALIGNANT

- (a) beautiful
- (b) benevolent
- (c) growing
- (d) inventive

7. HYPOCRISY

- (a) sincerity
- (b) charity
- (c) honesty
- (d) crudity

8. TEMPORAL

- (a) early
- (b) final
- (c) spiritual
- (d) physical

9. SPONTANEOUS

- (a) laboured
- (b) planned
- (c) unnatural
- (d) thoughtful

10. ACERBITY

- (a) wit
- (b) happiness
- (c) geniality
- (d) simplicity

SPOTTING ERRORS

IV Spot the errors if any

- 1 Many a man was opposed to
a b c
the idea of making attendance in
d
the lectures compulsory No error
e
- 2 Because of the undoubted excess-
a
ive official formality prevalent in go
b
vernment offices you may not rece
c
ive a reply for much time No error
d e
- 3 Thanks to an insight and persistence
a b
of the local doctor, hundreds of
c

victims have been able to resume
d

normal life No error
e

4 When at last, we got to the theatre
a b
the much publicised play was
c d
already begun No error
e

5 I am sorry I did not know
a
you have left your coat here
b
when you came to see me last
c d
Thursday No error
e

6 I am wondering why are you
a b
tinkering with the wires you might
c d
get a shock No error
e

7 He promised he would do best he
a b
could to help me get a first
c d
No error
e

8 A lots of people go to the hill resorts
a b
during the summer vacation even
c
though it has become extremely
d
expensive to travel these days

WHAT ONE WORD?

Can you find the single word which will be a synonym for both the words in each pair that follows? For example the word that would be a common synonym to Sort and Benevolent is Kind. You should be able to supply 7 double-duty words for the remaining groups but 9 or more is excellent

- 1 Sort—Benevolent
- 2 Results—Belongings
- 3 Curtsy—Prow
- 4 Stays—Corpse
- 5 Railing—Duel
- 6 Tresses—Fastens
- 7 Dissertation—Try
- 8 Ray—Timber
- 9 Intersect—Peevish
- 10 Raise—Back
- 11 Eruption—Reckless
- 12 Calculate—Shape

Answers

| 8 | Beam | 2 | Effects |
| 7 | Easy | 1 | Kind |

From Reader's Digest Tests And Teasers

No error

- 9 The committee appointed to investigate into the said murder will
a b c
convene next week to further
d
discuss their strategy No error
e
- 10 What I did say was that just as
a b
meteorologists have classified
c
clouds so they have classified
winds No error
e

SELECTING WORDS

V At certain points in the following passage you are given a choice of three words, one of which fits the meaning of the passage. Choose the best word.

I envy the man who enjoys — [1 (a) some (b) the (c) a] trip by train. Such a man is — [2 (a) never (b) always (c) forever] in a hurry. He has all the — [3 (a) freedom (b) time (c) leisure] in the world. He plans his — [4 (a) strategy (b) time (c) routine] so thoroughly that there is enough — [5 (a) adjustment (b) capacity (c) margin] for unexpected developments, like a — [6 (a) slow (b) sudden (c) brief] downpour or a breakdown. On his — [7 (a) journey (b) trip (c) way] to the station no jumps or — [8 (a) unexpected (b) frustrated (c) calculated] drives. No struggle with the windows — [9 (a) or (b) and (c) nor] doors and latches. No arguments with — [10 (a) porters (b) employers (c) workers]

RECONSTRUCTING PASSAGES

VI In the following item the first and the last sentences (S1 and S6) have been given in the beginning. Sentences 2, 3, 4 and 5 have been jumbled and marked PQRS. Point out their correct order.

- S1 And then Gandhi came
S2 S3 S4 S5
S6 Political freedom took new shape then and acquired a new content.
- (P) Get off the backs of these peasants and workers, he told us, all you who live by their exploitation.
- (Q) He was like a powerful current of fresh air, like a beam of light, like a whirlwind that upset many things.
- (R) He spoke their language and constantly drew attention to them of their appalling conditions.
- (S) He did not descend from the top; he seemed to emerge from the masses of India.

TEST OF REASONING

- (a) i.e. 211 Series pattern is $2^3 - 1$ $3^3 - 2$ $4^3 - 3$ $5^3 - 4$
The next number should therefore be $6^3 - 5 = 211$
- (d) i.e. none of the above The correct answer is 18 km The ratio between the speed of the two trains is 3 : 5 During the time A covers 3 km B covers 5 km If the distance between P and Q is assumed to be 8 km it will be found that train B has covered 2 km more than train A by the time the two trains meet According to the question train B has covered $4\frac{1}{2}$ km more Therefore the distance between P and Q must be $\frac{8}{2} \times (4\frac{1}{2}) = 18$ km
- (c) i.e. 1750 m Increased speed will be $\frac{7}{7} + \frac{7}{8}$ kmph

Assume distance from house to school to be 35 km (This figure of 35 km is taken to facilitate calculations. You can take any distance.) Time taken in the first case would be $\frac{35 \times 2}{7} = 10$ hrs and in the second case $\frac{35 \times 8}{35} = 8$ hrs Difference in

the time taken comes to 2 hrs, i.e., 120 mins, when we assume the distance between the school and house to be

35 km But actual difference in the time taken in the two cases according to the question is 6 mins only Therefore, distance between the school and the house must be $\frac{35 \times 6}{120}$ km or $\frac{35 \times 6}{120} \times 1000$ m = 1,750 m

- (b), i.e. gadget A—15, gadget B—30 Suppose x gadgets 'A' and y gadgets 'B' will give the maximum profit Machines I, II and III will, therefore, devote 24x mins, 36x mins and 12x mins respectively to produce x number of gadgets A. Machines I and III will, therefore, be available for manufacturing of number of gadgets B for $(720 - 24x)$ mins and $(720 - 12x)$ mins, respectively, on one particular day since each machine is available for a maximum of 12 hrs To ensure maximum profit 12y must equal $720 - 24x$ and 18y equal $720 - 12x$ In other words, $\frac{720 - 12x}{18} = \frac{720 - 24x}{12}$ or $40 - \frac{2}{3}x = 60 - 2x$ or $4x = 60$ or $x = 15$ If $x = 15$, then $y = \frac{720 - 24 \times 15}{12}$ or $\frac{720 - 12 \times 15}{18}$, which is equal to 30
- (c) i.e., 48 days A and B, in 1 day, can do $\frac{1}{40}$ of the work while B and C, in 1 day, can do $\frac{1}{40}$ of the work A, B and C all work on the opening day, on the second day only B works In other words, work put in over a period of two days is equivalent to the work put in by A, two Bs and C in 1 day Since $A + 2B + C$ in 1 day do $(\frac{1}{60} + \frac{1}{40})$, i.e., $\frac{1}{24}$ of the work the work will, therefore finish in 48 days
- (c), i.e., $46 \frac{3}{6} = \frac{23}{6}$ Therefore the number of twelfths in three wholes and five sixths will equal $\frac{23}{6} \times 12 = 46$
The diagram below will help you understand the solution speedily

Each whole if divided into 12 parts will mean 36 parts Five sixths is the same as ten twelfths i.e.

- Therefore, three wholes and five-sixths equal 46
(a), i.e., back $\frac{1}{3} \times 3$ will bring face B to the bottom, face A to the front, and face C will remain where it was $\frac{1}{3} \times 3$ will bring face C to the front, face A to the left, and face B will remain at the bottom $\frac{1}{3} \times 3$ will take face B to the back The complete operation is shown diagrammatically on the next page

- 8 (d), i.e., top
 9 (b), i.e., $z^3 y^2 x^4$
 10 (c) i.e., none of the sportsmen from Gangtok are national level swimmers. The diagram below clarifies why (c) is correct

Choice (a) is obviously wrong. Statement 2 does not imply that nobody other than national level swimmers can wear blue blazers. Nor does it imply that all who wear blue blazers are national-level swimmers. Choice (b) is, therefore, wrong. Choice (d) is obviously wrong.

- 11 (d), i.e., I and II. All national-level swimmers wear blue blazers (I) and since Raja does not wear it, we can conclude that Raja is not a national-level swimmer. Further if A, then C means 'Not C', then 'Not A'. Therefore, it will be quite appropriate to conclude from II, read in conjunction with (3), that Raja is not a national-level swimmer. III is quite illogical.
 12 (a), i.e., 1976-77. Though the maximum increase took place during 1981-82, percentage-wise the highest increase took place during 1976-77. In 1975-76, consultancy earnings were Rs 0.75 million while in 1976-77, these were Rs 1.50 million, an increase of 100%. The percentage-wise increase in 1981-82 over 1980-81 was $\frac{1.5}{3} \times 100$, i.e., 50%.
 13 (d), i.e., 1979-80. Turnover per job in 1978-79 was Rs 2,000, while that in 1979-80 was Rs 4,000. Percentage-wise, it was a 100% increase.
 14 (c), i.e., 1978-79. The number of consultancy jobs, during each of the years mentioned can be worked out by dividing the total consultancy earnings by the turnover per job. $1976-77 = \frac{1.5m}{1.750}$, $1977-78 = \frac{2m}{1.750}$, $1978-79 = \frac{2.5m}{2.000}$, $1979-80 = \frac{2.5m}{4.000}$. The maximum number of consultancy jobs undertaken was, therefore, in 1978-79. A quick glance

at the graph will indicate that the maximum number of consultancy jobs undertaken will be during that year where the gap between the curves showing total consultancy earnings and that showing turnover per job is the widest. And this happens to be in 1978-79.

- 15 (b), i.e., 875. During 1979-80, consultancy earnings were Rs 2.5 million and turnover per job was Rs 4,000. 140% of 2.5 million is equal to $\frac{2.5 \times 7}{5} = 3.5$ million. Since there is no change in the turnover per job, the number of jobs undertaken under the assumed conditions would be $\frac{Rs\ 3.5\ million}{Rs\ 4,000} = 875$ jobs.
 16 (b), i.e., 1978-79/1979-80. Total consultancy earnings during the period 1975 to 1982 = Rs (0.75 + 1.50 + 2.00 + 2.50 + 2.50 + 3.00 + 4.50 + 4.50) million = Rs 21.25 million. Average of 8 years is therefore, $Rs\ \frac{21.25}{8}$ million = Rs 2.65 million approximately. This figure is closest to the consultancy earnings during 1978-79 and 1979-80.
 17 (d) i.e., ingenuous, unsophisticated. They are synonyms.
 18 (c), i.e., materialistic, philistine. They are synonyms. Philistine means a narrow-minded man—a man without liberal culture. A materialistic individual is narrow-minded. Niggardly and parsimonious mean stingy.
 19 (d), i.e., patriotic sacrifice. Judas was the disciple who betrayed Christ. Judas means infamous traitor. An infamous traitor is known for deceit in the same way as a patriot is known for sacrifice.
 20 (d), i.e., gullible, shrewd. Phlegmatic means one who does not get easily angered/agitated/excited. Gullible is a person who gets easily duped/fooled. They are antonyms.
 21 (a), i.e., ugly, adonis. Futile is a pessimist and a cynic who sees no particular point to anything in life. Adonis means extremely handsome, Greek-god type. The relationship is that of antonyms.
 22 (b), i.e., somnambulism, sleepwalking. A hypochondriac always imagines that he suffers from all sorts of diseases. A somnambulist sleepwalks. Other choices have no logical relationships. Amnesia is loss of memory. Dipsomania is compulsive drinking while kleptomania is compulsive stealing.
 23 (a), i.e., ennui, inactivity. Wrong-doing results in compunction, i.e., self-reproach, slight regret, inactivity results in ennui, i.e., a feeling of listlessness, weariness, boredom.
 24 (c), i.e., insipid, boring. Vapid means inane, insipid. Anything vapid is repulsive in the same way as anything insipid is boring. In fact, choice (c) merely gives the spirit of the relationship between capitalised words in another manner.
 25 "C", i.e., both statements together are required to answer the question but neither statement alone is sufficient to answer the question. To know the circumference of the circle, we need information contained in statement (1) and to find out the angle subtended by arc AB we need to know its length. $2\pi(4)^2\text{ cm} = 360^\circ$. Therefore, 6.3 cm will equal $\frac{360^\circ}{32\pi\text{ cm}} \times 6.3\text{ cm}$.
 26 "E", i.e., not enough information is available to answer the question. Statement (1) will tell us the percentage decrease in the sale proceeds, i.e., the amount in rupees, but gives no indication as to the drop in the number of items. Statement (2) is also incomplete to get the answer.
 27 "C", i.e., both statements together are required to answer the question. $x = 180 - 135 = 45^\circ$, $\angle 1$, which is 90° , must equal $\angle x + \angle 2$. In other words, $\angle 2$ must equal 45° also.
 28 "C", i.e., both statements together are required to answer

the question. Since the rectangles are congruent, $TY = SX = RW = QV = PU$, also, $UV = VW = WX = XY$. SX , which is 21, becomes zero over a uniform horizontal distance of 3 equal units, i.e., UV, VW , and WX . Distance VZ must, therefore, equal $\frac{21}{3} = 7$ or $21 - 2 \times 7 = 21 - 14 = 7$

29 "E", i.e., not enough information is available to answer the question

30 "C", i.e., both statements together are required to answer the question, but neither statement alone is sufficient. If Rs x is the amount for which the house is insured, then the cost of the house plus premium paid on the insured value must equal the insured value. In other words, $95,000 + \frac{x}{20}$

must equal x or x must be $\frac{20 \times 95,000}{19} = \text{Rs } 1,00,000$.

Alternatively, you should think like this: Rs 95,000 must represent 95% of the value for which the house is insured. Therefore, value for which the house should be insured must equal $\frac{100}{95} \times 95,000 = \text{Rs } 1,00,000$.

31 "E", i.e., not enough information is available to answer the question. Since we do not know the direction at which point R is lying with respect to P or Q, we cannot find out the distance from P to R.

32 "D", i.e., either statement by itself is sufficient to answer the question. Statement (1) is giving the answer straightaway. Since his average score in the three subjects was 93, his total score must have been 279. Assuming that in the two subjects he scored 84 each as set out in statement (2), his maximum score in any one of the three subjects would be $279 - 168 = 111$.

33 "C", i.e., both statements together are needed to answer the question. Statement (1) tells us that the two sides other than the hypotenuse are equal. Since we know the measure of these two sides as indicated in statement (2), we can find out the length of the hypotenuse, which is $\sqrt{6^2 + 6^2} = \sqrt{72} = 6\sqrt{2}$.

34 "D", i.e., either statement by itself is sufficient to answer the question. Statement (1), i.e., $x - \frac{1}{x} = 4$ means $x^2 + \frac{1}{x^2} - 2x \cdot \frac{1}{x} = 16$ or $x^2 + \frac{1}{x^2} = 18$. $x^4 + \frac{1}{x^4} + 2x^2 \cdot \frac{1}{x^2} = 324$ or $x^4 + \frac{1}{x^4} = 322$. Statement (2) gives us $x^2 + \frac{1}{x^2} + 2x \cdot \frac{1}{x} = 20$ or $x^2 + \frac{1}{x^2} = 18$ or $x^4 + \frac{1}{x^4} + 2 = 324$ or $x^4 + \frac{1}{x^4} = 322$.

Note Questions 35 to 38 can be answered speedily if the statements given in the setting are tabulated as shown below. The underlined entries in the table, though not directly stated, can be inferred logically from the available information by a process of simple reasoning.

| Prize | Nationality | Religious belief | Name |
|-------|-------------|------------------|---------|
| 1 | German | Judaism | Peter |
| 2 | Italian | Atheist | Romeo |
| 3 | Indian | Christianity | Oscar |
| 4 | American | Agnostic | Quintal |

35 (b), i.e., the scientist who believes in Judaism

36 (c), i.e., the Indian

37 (c) or III only, i.e., the atheist, the Indian, Quintal

38 (a), i.e., Quintal is an agnostic

39 (d), i.e., I, II, and III may be deduced. Tabulating the information given in statements (1), (3), (4), (5) and (6), only, we get the following picture

| Prize | Nationality | Religious belief | Name |
|-------|-------------|------------------|---------------|
| 1. | German | | Peter/Quintal |
| 2. | Italian | | Romeo |
| 3. | Indian | | Oscar |
| 4. | American | Agnostic | Peter/Quintal |

40 (c), i.e., I and II may be deduced. Summarising the information contained in statements (1), (2), (3), (4), and (7), the following picture emerges:

| Prize | Nationality | Religious belief | Name |
|----------|-------------|------------------|-------|
| 1. | German | | Romeo |
| 2. | | Christianity | |
| 3. or 4. | | Judaism | Peter |

According to the above table, it is clear that Romeo does not believe in Christianity. Since according to statement (7), Peter believes in Judaism, it is correct to infer that either Oscar or Quintal believes in Christianity (I). Since the person who believes in Christianity wins neither the first nor the second prize, it leaves the atheist, the agnostic, and the person who believes in Judaism to win the first or the second prize. Taking into account the ambiguities that arise from the incomplete information, we can say that statements I and II may be deduced.

41 (a), i.e., $\frac{3}{4}$. If SP is 100, profit would be 25. In that case CP would be 75. The ratio between cost and selling price will, therefore, be $\frac{75}{100}$, i.e., $\frac{3}{4}$.

42 (c), i.e., $3\frac{3}{4}$ cubits. A cubit was an ancient measure of length: 18 to 22 inches. Look at the diagrams below. Diagram (1) shows the position of the lotus before the onset of wind. Diagram (2) shows the position of the lotus with the onset of wind. Assume that the depth of the lake is x cubits.

From diagram (2), it is clear that $(x + \frac{1}{2})^2$ must equal $(x)^2 + (2)^2$

In other words, $x^2 + \frac{1}{4} + 2 \times \frac{1}{2} = x^2 + 4$, or $x = 4 - \frac{1}{4} = 3\frac{3}{4}$ cubits

HOW TO WRITE A PRECIS

BY RAGHU BHATNAGAR & RAJUL BHARGAVA

A **precis** is a restatement in shorter and clear form of the chief ideas, points, etc. of a piece of prose. The aim is to present the essential facts with clarity and brevity without any attempt at elaboration.

Difference between a precis and a summary

According to the dictionary there is no difference between the two. However, many examining bodies make a formal distinction restricting the word 'precis' to mean a version which is about one-third the length of the original and written in reported speech. A summary, on the other hand, could be any length depending upon the requirements of the situation. Also, a summary need not be as highly controlled and structured as a piece of writing as a precis.

Two basic requirements

The most essential thing is a full and clear understanding of what the passage is about and its main content. Comprehension is a vital step to precis writing. Another basic requirement is the ability to rewrite the main points of the passage briefly, clearly and accurately.

Method and general principles

As part of comprehension, noting down the essential points or skeletonising the passage helps the student to see whether and to what extent rearrangement is necessary. After it has been done, the student has to apply the two basic tools of **compression**.

1. Suppression which are in fact two sides of the same coin, both aiming at making a shorter version of the original. Compression can be both of words and of ideas.

Compression of words

(a) By vocabulary

(i) He is one of those persons who treats people suffering from certain diseases by the manipulation of the bones and muscles. → He is an osteopath.

(b) By ellipsis (leaving out words)

(i) I shall buy a car if it is necessary for me to do so. → I shall buy a car if necessary.

(ii) You must continue typing, however tired you may be. → However tired, you must continue typing.

(c) By shorter construction

(i) As we had been exhausted by the

work we had a short rest. → Exhausted by the work, we had a short rest.

Compression of ideas

(a) By generalisation

(i) Germans, Frenchmen, Spaniards, Scandinavians, the Dutch and the Swiss usually know at least one foreign language. → Most Europeans usually know at least one foreign language.

(b) By selection and rejection

(i) The wanted man, who wore a silk necktie and gold rimmed spectacles disappeared from view. → The wanted man disappeared from view.

(The original sentence contains three separate facts: the wanted man wore a silk necktie - he wore gold rimmed spectacles - he disappeared from view. Of these the first two can easily be omitted as they only give some additional information about the wanted man.)

(ii) Most weekends in the year the two brothers went cycling, but now and then they went fishing for a change. On one of their cycle rides the elder brother, senior by some 10 years, crashed into a stationary truck and had to be taken to hospital. → Most weekends in the year the two brothers went cycling. On one of their cycle rides the elder brother crashed into a stationary truck and had to be taken to hospital.

(It is not difficult to see that, but now and then they went fishing for a change, and senior by some 10 years, are the two parts which can be easily rejected since they do not contain any essential information.)

(iii) The other day I met a man who maintained that both tea and coffee are harmful to human health and should be never drunk more than a cup at a time. After a couple of days I saw him again, this time sitting in a restaurant, where I often went for an afternoon cup of tea in a far corner, three tables away from me. He had a big teapot in front of him and within the brief space of 10 minutes I saw him gulp three cups of tea. It is obvious that most people do not practise what they preach. → Most people do not practise what they preach.

(Here we have a lot of illustrative or elaborative detail and if asked to reduce the whole passage to approximately

eight words, we can safely omit everything except the main point made by the author as our precis.)

Let us now attempt a precis of the main points we have stated above for reducing the length of a given passage.

We can shorten a piece of writing by substituting words or phrases for clauses and sentences by combining two or more sentences into one, using the shortest possible linkers like *because* though yet however etc. by omitting figurative language, repetitions, elaborations and illustrations wherever possible and by retaining the main facts and ideas of the original passage in plain language, ensuring that the precis is approximately one-third the length of the original.

Example

We will now take up a passage and illustrate the step by step process of making its precis.

1. Citizen's high job far beyond voting, paying taxes, sitting on a jury and the other duties expected by a nation from its members. 2. Properly conceived it involves all a man's actions which touch his fellow citizens and affect the health and well-being of the State. It is almost co-extensive with his duty to his neighbour. 3. It includes everything which the law requires but also many duties about which it is silent and which are left to the individual conscience. 4. It is not passive, not mere abstention from unbecoming conduct. 5. It is active. 6. We regard the man who holds aloof from public duties not as quiet but as useless. 7. Public life is a situation of power and energy; he trespasses against his duty who sleeps upon his watch. 8. Well as he that goes over to the enemy. 9. The ideal state is one where every citizen is determined to be a part of the community to share its burdens, to put its interest before his own, to sacrifice if need be his own welfare, convenience, time and money to that of the machine of which no part is idle or inefficient, none rusted, broken or ill-fitting, in which each pulley and cog takes up its full share of the load and plays its part in the swift and smooth running of the whole. 10. A man who evades his taxes is so far a bad citizen, but so is one who, in giving a vote for Parliament, thinks only of his private interests, or is too indifferent or lazy to vote at all. So is the bad employer whose treatment of his employees is not only a breach of the moral law but adds to the social problems of the country, so are profiteers and the traders and clients of the black market, so are workmen who strike for some private interest when the existence of their country is at stake, so is the man who would be useful in local government but evades the burden, not because he cannot but because he will not spare the time.

The first step is understanding the main points or 'skeletonising' the passage. If we read it intelligently, we will easily discover that it contains three distinct though interrelated parts. The first

passage from the beginning of the passage to 'who sleeps upon his watch as well as he that goes over to the enemy'. The second, from 'the ideal state is one' to 'swift and smooth running of the whole'. And the third from 'a man who evades his taxes' to the end of the passage.

The above division automatically yields three main ideas—the author's ideas of good citizenship, ideal state and bad citizenship. How does one get to know it? Initially, the search should be for the topic sentence, which in a large number of cases, including the present one, is the very first sentence of the passage. Thereafter, one has to look out for supportive props which can be looked upon as sub-topics. In the pre-

MAIN TOPIC-1

passage, the idea of good citizenship, is further clarified and made precise by reference to the rather philosophical idea of the ideal state and the countervailing (counter-balancing) idea of bad citizenship.

The structure of the passage can thus be graphically represented as in Main Topic 1.

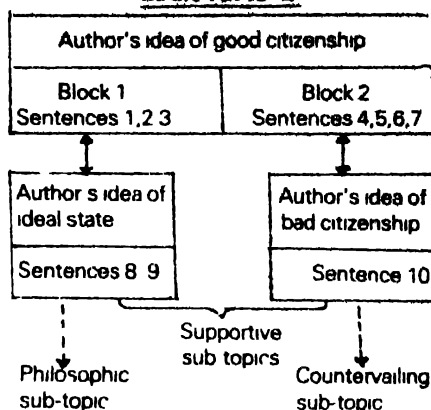

It follows that the author has adopted the strategy of expressing his views on who is a good citizen by first telling the reader about the need for having not a narrow but a comprehensive view of citizenship, and then by making citizenship a part of what constitutes an ideal state as well as by sharply distinguishing it from the negation or violation of the principles of good citizenship.

Once we have understood the theme of the passage and the strategies the author has used for developing it, it remains for us to apply the tools of selection and rejection or compression and suppression, in order to be able to restate the basic ideas in one-third the length of the original. Let us examine the passage from this point of view (see table below).

The above exercise enables us to slightly modify the earlier graphic representation of the structure of the

passage

MAIN TOPIC-2

It is easy now to see how the precis has been arrived at through the omission of all that is inessential in the original text. For example, we have completely eliminated the analogy contained in the sentence 'It is a machine running of the whole' (sentence 9). Similarly, we have made use of generalisation in relation to the last sentence of the passage 'a man who evades spare the time' (sentence 10).

You might like to apply the techniques tried here to a few representative passages in order to master them.

| TEXT | CONTENT | PRECIS |
|--|-----------------------------------|---|
| Sentence 1
Citizenship members

Sentence 2
Properly conceive his
neighbour
Sentence 3
It includes conscience | Comprehensive view of citizenship | Citizenship is a comprehensive concept. It includes all actions which directly or indirectly contribute to the social good and well-being of the state and goes far beyond the expressly stated prescriptions of law. A good citizen often acts following the dictates of his conscience. |
| Sentence 4
It is not conduct

Sentence 5
It is active.
Sentence 6
We regard useless
Sentence 7
Public life the enemy | Citizenship—an active principle | |
| Sentence 8
The ideal state money
to it

Sentence 9
It is a machine the whole | Citizenship and the ideal state | |
| Sentence 10
A man who evades
spare the time | Qualities of a bad citizen | Likewise, any activity, be it social or private, which harms the interests of the community or the country by placing the interest higher than that of society, makes for bad citizenship. |

GEOGRAPHY

(Continued from page 33)

Kurukshetra (Haryana) Here the great battle, Mahabharata, was fought between the Kauravas and the Pandavas.

Ludhiana (Punjab) Known for its woollen hosiery industry

Lumbini (Nepal). Birthplace of Gautam Buddha.

Madurai (Tamil Nadu) Famous for Meenakshi temple, dedicated to Lord Shiva.

Mahabaleshwar: Health resort and principal hill station of Maharashtra

Mahabalipuram Near Madras, famous for rock-cut temples, figures, etc

Mathura. A holy city in UP, birthplace of Lord Krishna, Hindu temples

Meenakshi temple: Famous Hindu temple in Madurai

Mirzapur (UP) Known for carpets, brassware and lac industry

Murshidabad Known for silk and ivory carvings, gold and silver embroidery

Nagda (Madhya Pradesh). Known for rayon silk industry

Nalanda (Bihar). Seat of ancient Nalanda University

Nasik (Maharashtra) Known for Government Security Press

Nepanagar (Madhya Pradesh) Known for government-owned newsprint factory

Nilgiris Mountain range in Tamil Nadu, known for tea plantations

Ootacamund (Tamil Nadu) A hill station. Photo films are manufactured here

Panipat (Haryana) Scene of three successive historical battles in 1526, 1556 and 1761 A.D

Panna (Madhya Pradesh) Known for diamond mines

Perambur (Tamil Nadu) The Integral Coach Factory is located here

Pichola Lake. A well-known man-made lake in Udaipur (Rajasthan) In the middle of the lake, there is a palace which has now been converted into a hotel by the Maharaja of Udaipur

Pimpri (Maharashtra) Known for penicillin factory

Pondicherry Formerly a French possession, now a Union territory Aurobindo Ashram is established here

Porbunder (Gujarat) Birthplace of Mahatma Gandhi

Puri (Orissa) Famous for Jagannath temple, a place of pilgrimage for the Hindus

Pantnagar (UP) Known for the agricultural university

Qutab Minar Located in Delhi, it is the highest minar in the world It was built by Qutab-ud-Din Aibak

Ragbir (Bihar) Place of pilgrimage for the Buddhists.

Raj Ghat On the banks of Jamuna in Delhi, samadhi of Mahatma Gandhi

Rameshwaram (Tamil Nadu) A place of Hindu pilgrimage.

Rana Pratap Sagar (Rajasthan): Atomic power plant.

Pushkar (Rajasthan). Famous for ancient temples of Brahma.

Pokhran (Rajasthan): On May 18, 1974, India carried out its first nuclear test here.

Raniganj (West Bengal): Coal-mining

AWARDED

Aryabhata Medal, 1983: By Indian National Science Academy once in three years, to Satish Dhawan, Chairman, Space Commission, as also Secretary, Department of Space

Golden Peacock Award at the IXth International Film Festival held in New Delhi in January 1983 to no film.

National Award: Best Feature Film (Swaran Kamal) to *Chokh*

Dada Saheb Phalke Award, 1983: To L V. Prasad, maker of Hindi, Tamil and Kannada films. Last year, the award went to Naushad Ali, music director. This award was instituted by the Information and Broadcasting Ministry in 1970, when it was presented to Devika Rani Roenck.

Bhartiya Jnanpith Award, 1981 To Punjabi poetess, Amrita Pritam, for her work *Kagaz Te Kanwas*. She is the first Punjabi and second woman writer to receive this honour. For 1982, the award goes to Hindi poetess Mahadevi Verma. She has been chosen for her distinguished work *Yama*.

Bharat Ratna, 1983 To Acharya Vinoba Bhave posthumous.

Last recipient. Mother Teresa, in 1980

Third World Prize, 1982 To Dr M S. Swaminathan

UN Population Award: To the PM, along with Chinese Family Planning Minister Qian Qinzhong. They are the first winners of this newly-instituted award

Olympic Order Gold, 1983. To the PM. She is the seventh person, first Asian and first woman to receive this coveted honour.

Kalinga Prize, 1982. To Apristides Bastidas (Venezuela). Given by UNESCO

Jawaharlal Nehru Award for International Understanding, 1981 To Prof Gunnar Myrdal and his wife Alva. They are both Nobel Prize winners. Gunnar Myrdal for Economics in 1974 and Alva Myrdal for Peace in 1982.

Nobel Prizes, 1982

Physics: Prof Kenneth G. Wilson (USA)
Chemistry: Dr Aaron Klug (UK)
Literature: Gabriel Garcia Marquez (Colombia) for his novel *One Hundred Years Of Solitude*
Economics: George Stigler (USA); Peace: Alva; Alfonso Garcia Robles (Mexico); Medicine: Dr S Bergstrom (Sweden); Dr Bengt Samuelsson (Sweden); John Vane (UK)

PEOPLE IN THE NEWS

Acharya Vinoba Bhave: Leader of Bhodan Movement; died on November 15, 1982, at Paramdham Ashram in Paunar.

Anandmayi Ma: Spiritual leader; died on August 27, 1982.

Mrs Bina Dattatraya Shetty: Disciple of Mahatma Gandhi and recipient of Padma Vibhushan award; died on July 20, 1982.

George P. Shultz: US Secretary of State; visited India June 29, 1983.

Lech Walesa: Leader of Poland's outlawed independent trade union Solidarity.

Sally Ride: First US and the world's third woman to go up in space in the space shuttle, Challenger. Two Soviet women have earlier gone in space. Sally is, however, the first woman to go in a space shuttle.

Svetlana Savitskaya (Russia): Second woman cosmonaut to go in space. The first was Valentina Tereshkova.

Leonid Ilyich Brezhnev: President of USSR; died on November 10, 1982.

H.M. Ershad: Chief Martial Law Administrator of Bangladesh.

Hosni Mubarak: President of Egypt after Anwar Sadat's assassination

PLACES IN THE NEWS

Razole (Andhra Pradesh): In the Krishna-Godavari basin. A substantial gas reservoir has been struck here recently

Kakarpara (Gujarat): Location of India's fifth atomic-power plant.

Falkland Islands: Issue of war between Argentina and the UK. Argentina forcibly occupied the islands which lie in the Atlantic Ocean. On Great Britain's victory, Argentine President Leopoldo Galtieri resigned.

Harare: New name of Salisbury, capital of Zimbabwe

Tehri dam: Asia's biggest and the world's third-highest dam, being built on the river Bhagirathi in UP.

Salal hydro-electric project: Coming up in J & K

Thain dam: Hydel project on the river Ravi in Punjab.

Silent Valley project (Kerala): Subject of controversy as hydro-electric project is being set up at the cost of deforestation.

Damanjodi (Orissa): India's largest and one of the world's biggest aluminium projects being built with French assistance.

Kahuta: Near Islamabad. Site of Pakistan's secret nuclear operation.

Cholistan: Site of Pakistan's probable nuclear explosion

Chashma: Near Lahore. Pakistan's nuclear reprocessing plant is located here.

MISCELLANY

Challenger: Second space shuttle. It was first launched in April 1983 and a second time in June 1983. This was the seventh flight of any space shuttle. **Columbia**, the first space shuttle, had made four test flights and one operational mission. Both the space shuttles were launched by the US. The USSR has sent none.

Pioneer 10, the first man-made spacecraft to pass beyond the farthest planet and cross the earth's solar planetary system, was launched on June 13, 1983.

Indian space exploration: Ravish Malhotra and Rakesh Sharma have been selected for manned space flights to be conducted with Russian help. They are presently undergoing training in the USSR.

SLV-3 Four-stage rocket carrying the 660-

kg Rohini satellite, RSD-2, it was launched on April 17, 1983. Expected life of the Satellite is two to three years. The rocket was built by the Vikram Sarabhai Space Centre, Thumba, Trivandrum Tracking stations (a) Trivandrum; (b) Ahmedabad; and (c) Calicut.

Mandal Commission was set up to study the social and economic backwardness of various sections of people in India. The backward classes in the country comprise 52 per cent of the population. The present representation of SCs and STs is 22.5 per cent.

Sarkaria Commission was set up to study Centre-state relations. The Commission is headed by Justice R S Sarkaria.

ASEAN is the acronym for Association of South-East Asian Nations. There are five member nations: Indonesia, Singapore, Malaysia, Philippines and Thailand.

OPEC: Members: Algeria, Ecuador, Gabon, Indonesia, Libya, Nigeria, Iran, Iraq, Kuwait, Qatar, Venezuela, Saudi Arabia and United Arab Emirates.

Value of rupee: 19.92 paise in March 1983 (base 1960=100, source: finance minister's statement in the Rajya Sabha).

Rice: Andhra Pradesh retains the position of largest producer and West Bengal second largest as per statistics compiled for 1981-82. According to earlier figures (1980-81), West Bengal was the largest and Andhra Pradesh the second-largest producer.

Wheat: India ranks as the fourth largest producer of wheat in the world (as per 1980 figures), having recorded a production of 36.4 million tonnes as against the world total of 44.4 million tonnes. In India, wheat is the second most important crop after rice.

Foodgrains: UP retains the position of being the largest foodgrain producer (242.2 lakh tonnes as per 1981-82 figures), with Punjab coming up second (133.26 lakh tonnes).

Tea: India is the largest producer of tea in the world with a production of 5,67,000 tonnes in 1982. Corresponding figures for China and Sri Lanka: 3,81,000 tonnes and 1,88,000 tonnes.

Group of 77 refers to the 77 developing countries which formed this conglomerate initially in 1964. Today, the number of members is 125.

UNCTAD: The 6th UNCTAD was held at Belgrade, Yugoslavia, in 1983. Before this, it was held at New Delhi in 1982. Secretary-General (1983 meet): Gernan Coreas.

Poverty line: In India, 304.6 million (43 per cent) people were below the poverty line in 1977-78. Of this, 252.3 million were in rural areas. A person is said to be below the poverty line if his consumption expenses are less than Rs 65 per month in rural areas and Rs 75 per month in urban areas. Or, if the consumption is less than 2,400 calories for those in rural areas and 2,100 calories for those in urban areas. Tripura (59.73 per cent) had the highest share of population below the poverty line and Punjab the lowest (15.3 per cent). The Sixth Plan aims at reducing the poverty percentage from 48 in 1979-80 to 39 in 1984-85, mainly through implementation of the National Rural Employment Programme (NREP) and the Integrated Rural Development Programme (IRDP).

Uranium supply for the Tarapur Atomic

Power Station was stopped by the US. However, at Washington's behest, France has agreed to resume the supplies. George Shultz, US Secretary of State, who visited India in July 1983, has assured supplies of certain critical spare parts for the atomic plant to keep the radiation hazards below the accepted norms.

Per capita income: In 1981-82, at current prices, the per capita income was Rs 1,689, while in real terms (at 1970-71 prices) it was Rs 716.

Food target (1983-84): 142 million tonnes. During the last three years, India has had a record food production each year. Procurement price of wheat has been fixed at Rs 151 per quintal (last year it was Rs 142 per quintal) and the issue price is Rs 172 per quintal.

Oil refineries: The one at Mathura was inaugurated recently in May 1983. Two more are likely to be set up, one each at Kamal and Mangalore.

Dul-Hasti hydro project is the 700 Mw power project on the river Chenab in J & K. Its foundation stone was laid recently by Indira Gandhi.

'Gandhi': Produced by Sir Richard Attenborough of the UK, the film *Gandhi* has won eight Motion Pictures Academy Awards (Oscars). Ben Kingsley, an Anglo-Indian, played the role of Mahatma Gandhi. Rohini Hattangadi played the role of Kasturba. Bhanu Atharya became the first Indian to win an Oscar. She was given this award for best costumes for the same film. Sir Richard Attenborough won an Oscar for Best Director and Ben Kingsley for Best Actor.

IX International Film Festival of India Held in New Delhi from January 3 to 17, 1983.

Commonwealth Conference: Last held in 1981 at Melbourne, the next one will be held in New Delhi in November 1983.

Seventh Non-aligned Meet (NAM): Held in New Delhi in March 1983. A record total of 101 states became NAM members. The Kampuchean seat was left vacant because of certain controversies. The last meeting was held at Havana (Cuba) and the next is scheduled to be held at Baghdad (Iraq).

The non-aligned movement was first launched in 1961 by Jawaharlal Nehru (India), Josip Broz Tito (Yugoslavia) and Abdul Gamel Nasser (Egypt). Ever since, the movement has been gaining momentum. It has taken up the cause for early independence of Namibia.

Saturn: According to the latest pictures received, it has 21 moons, the largest number of any planet in the solar system.

Coemoe 1448: Soviet nuclear-powered satellite which crashed in the Indian Ocean on March 16, 1983, less than 12 hours after launch.

Antarctica expedition: The first one was led by Dr S Z Qasim, the second by Dr V K Raina. Name of the unmanned station set up: Dakshin Gangotri.

20-Point Economic Programme: The first such programme was announced in 1975, the present one in January 1982.

Sixth Plan Objectives: Removal of poverty—which is feasible only in the long run. Other objectives: substantial increase in the rate of growth of national income, self-reliance, development of indigenous sources of energy, improving the quality of life of the people, reduction in regional inequalities, population control, ecological and environmental improvements, and people's participation in Plan implementation. Total outlay: Rs 172,210 crores. Public sector: Rs 97,500 crores. Private sector: 74,710 crores. Aim: 5.2 per cent growth rate of gross domestic product.

Time period: 1980-85 (earlier 1979-84).

Maximum allocation: Energy.

1983-84 annual budget

Deficit: Rs 1,555 crores.

Total receipts: Rs 33,281 crores.

Total disbursements: Rs 34,836 crores.

Gross national product (GNP) growth rate 1982-83 (estimated): 7 per cent.

Average growth rate during first three years of the Sixth Plan: 5 per cent.

Thirty-six per cent of the Central outlay or Rs 5,014 crores has been earmarked for development of petroleum, coal and power.

Minimum taxable income envisaged: Rs 15,000.

Standard deduction: Rs 6,000.

Minimum rate of income-tax proposed: 25 per cent.

Surcharge: 12.5 per cent.

Indian Railways: One of the largest public-sector undertakings with capital-charge at Rs 7,000 crores as on March 31, 1982. It is the fourth-largest in the world and the second-largest in Asia.

46th Constitution Amendment Bill became an Act on February 3, 1983. It enables the government to plug loopholes and

Vayumail: Third level air-service started in 1981.

SPORTS

Olympics

Venue: Last 1980 Moscow, next 1984 Los Angeles (USA), 1988 Seoul

At the 1980 Olympics held in Moscow, the Soviet Union won the largest number of medals followed by East Germany. In the hockey event, Pakistan did not participate and India won the gold.

Badminton

WORLD CHAMPIONSHIPS: Icuk Sugianto (Indonesia) was declared world champion (men's) at Copenhagen on May 8, 1983, when he defeated fellow Indonesian Liem Swie King. Li Lingwei (China) was declared world champion (women's).

NATIONAL CHAMPIONS: Syed Modi (men's), Radhika Bose (women's)

THOMAS CUP: China defeated Indonesia in London. Luan Jin represented China and

Rudy Hartono Indonesia.

Asian Games

IX Asian Games held in New Delhi in 1982. Other venues: Bombay—yachting; Jaipur—rowing. Next venue (1986): Seoul. The first Asian Games were held in New Delhi in 1951. The mascot at the 1982 New Delhi Games was Appu, a prancing baby elephant.

Some Indian gold winners

1. Lance Dafadar Raghurib Singh
2. Chand Ram
3. Bahadur Singh
4. Farokh Tarapore and Zarir Karanja
5. Charles Borromeo
6. Indian women's hockey team defeated Singapore 3-0
7. Satpal (Haryana)
8. Kaur Singh
9. M.D. Valsamma (Kerala)
10. Laxaman Singh (also Asian champion) Golf

which symbolises power and prosperity. The slogan was 'Friendship, Fraternity Forever'. China won the maximum medals (61 gold and 153 total). India got the fifth largest medal tally: 57, of which 13 were gold.

Cricket

WORLD CUP: India defeated West Indies, twice world champions. Skippers: India—Kapil Dev, West Indies—Clive Lloyd.

RANJI TROPHY: It was won by Karnataka, defeating Bombay on March 15, 1983. Earlier, the Trophy was won by Delhi when they had beaten Karnataka.

INDIA-WEST INDIES SERIES: Played in West Indies. West Indies won 2-0.

Skippers: India—Kapil Dev, West Indies—Clive Lloyd.

INDIA—PAKISTAN SERIES: Played in Pakistan. Pakistan won 3-0.

Skippers: India—Sunil Gavaskar, Pakistan—Imran Khan.

C.K. NAYUDU TROPHY: Gujarat beat UP.

1982 Commonwealth Games

Venue: Brisbane (Australia)

Largest number of medals won by Australia.

Football

JAWAHARLAL NEHRU CUP: Mohammedan Sporting, Calcutta, defeated holders Mohan Bagan 2-0 in Cannanore. (Note: A cup of similar name is also associated with basketball and volleyball.)

DCM TOURNAMENT, 1983: The young stars from Incheon University (South Korea) lifted the trophy defeating Mohammedan Sporting of Calcutta, 3-0, in a replay in Delhi. The earlier match had ended in a draw.

SANTOSH TROPHY: Shared by Bengal and Goa as they were locked in a goalless draw in Calcutta on March 6, 1983. This is the first time the Trophy has been shared. Last year, Bengal had defeated Railways.

DURAND CUP: East Bengal and Mohan Bagan emerged joint champions in the finals played at New Delhi on February 10, 1983.

WORLD CUP: Italy beat West Germany 3-1 at Madrid, Spain. Next venue: Mexico.

Hockey

This game was first introduced at the Olympics in 1908, when England won the gold. India first participated in 1928 and won the gold. Our captain then: Jaipal Singh.

BEIGHTON CUP: EME, Jullundur, beat CRPF, Neemuch, 1-0 at Calcutta on April 30, 1983. Last year, Eastern Railway Athletic Association, Calcutta, and EME, Jullundur, were joint winners at Calcutta.

AGA KHAN CUP: Pakistan International Airlines beat Indian Airlines of Delhi 5-4 in Bombay on May 21, 1983.

Event

Equestrian (show jumping)

20-km walk (athletics)

Shotput

Yachting

800 m (athletics)

Hockey

Wrestling

Boxing

400-m hurdles (athletics)

RANGASWAMY CUP: Punjab beat Bombay 1-0 in Meerut on March 13, 1983.

NEHRU HOCKEY CHAMPIONSHIP: Punjab Police beat ASC, Jullundur, 3-2 in New Delhi on January 16, 1983.

WORLD CUP (men): Pakistan defeated West Germany in Bombay in 1981. Next venue: London (1985).

WORLD CUP (women): Holland defeated Canada 4-2 in Kuala Lumpur in 1983. India was 11th.

Table Tennis

WORLD CHAMPIONSHIPS: Guo Yue Hua of China won the world TT championship title (men's) in Tokyo on May 9, 1983. Amongst countries, China emerged as the champion. Cao Yanhua, also of China, was declared world champion (women's). Next venue: India (1987). Table tennis will be included for the first time in the Olympics in 1988 at Seoul.

NATIONAL CHAMPION (Men's): Kamlesh Mehta (Maharashtra) (Women's): Indu Puri.

BARNA—BELLACK CUP (men): Delhi beat Tamil Nadu.

JAYALAKSHMI CUP (women): Maharashtra 'B' beat Railways.

Chess

WORLD CHAMPION: Anatoly Karpov.

NATIONAL CHAMPION: Jaishree Khadilkar (women).

Billiards

WORLD CHAMPION: Michael Ferreira (India).

R.K. Kaul, Additional Secretary (banking) in the Finance Ministry, as Deputy Governor of RBI and Chairman of the National Bank for Agriculture and Rural Development (NABARD).

Kona Prabhakar Rao, a former Andhra Pradesh minister, as the Lt-Governor of Pondicherry, succeeding K.M. Chandy, who retired last month

ELECTED

Daniel Arap Moi, President of Kenya, for a second term of five years. His nomination as the sole candidate for the office of the president was filed on August 24 but the formal announcement was made on August 29 after he was returned unopposed as MP for the fifth consecutive term from his Baringo parliamentary constituency. Under Kenya's Constitution, the President of the republic must also be a member of Parliament.

India, as one of the five Vice-Chairmen from Asia at the UN International Conference on Palestine, which opened in Geneva on August 30. The others include Malaysia, the United Arab Emirates and PLO. The fifth post remained vacant due to a tussle between Afghanistan, Vietnam and China.

Sarojini Maheshi (Janata Party), to the

Rajya Sabha from the Karnataka Assembly constituency in the by-election necessitated by the resignation of Ramakrishna Hegde upon his election to the State Assembly. Sarojini secured all the 129 votes polled.

RESIGNED

M. Karunanidhi and **K. Anbaz Hagan** DMK President and General Secretary respectively, from the Tamil Nadu Assembly, protesting against what they called the "Centre's inaction on the developments in Sri Lanka"

Mohammad Abdul Baker Markar, as the Speaker of the Sri Lanka Parliament, saying he was quitting to enable President Junius R. Jayewardene to make certain changes. A member of the ruling United National Party (UNP), Markar had been Speaker since 1978. His place was taken by Land and Agriculture Minister E.L. Senanayake following the Sri Lanka Cabinet's decision to recommend his name to the ruling UNP's parliamentary board

SCIENCE

Soviet doctors have restored normal rhythm to an abnormal heart using laser-radiation technology for the first time. Flexible fibreglass was introduced into the cavity of the heart of the patient, a 43-year-old labourer, and laser radiation passed through it. The operation apparently required neither a stoppage of the heart nor artificial blood circulation apparatus

Cosmic-ray Conference opens: An 11-day 18th International Conference on Cosmic Rays opened in Bangalore on August 24 with about 500 scientists from all over the world participating. The Conference, which opened with the hope of "rich veins of discovery" in the cosmic ray field, is being sponsored by the Department of Atomic Energy, Science and Technology and Space, the Indian National Science Academy and the Tata Institute of Fundamental Research. A special session was held on August 24 to celebrate the birth centenary of Austrian physicist Victor Hess, who discovered cosmic rays in 1911

Brains differ with sex: Dutch Institute for Cerebral Research specialists have found that men's brains are different in size and shape from women's and some scientists believe the abilities of the sexes may differ as a result. Male hormones affect the shape of the brain which is usually more symmetrical in men than in women. Another theory is that in men and women of equal intelligence, men are better at math and women at languages.

New drug to combat AIDS: A new drug, which may help combat the dreaded Acquired Immune Deficiency Syndrome (AIDS), has been discovered by US researchers. The new drug, isopravismine, has restored immune reactions in cell samples taken from patients with the disease, which has killed 700 of the 2,000 people who have contracted it in the US since it was first recorded in 1979.

DEFENCE

US Congress agrees to \$187.5-billion defence expenditure: Congressional negotiators have agreed to let the US Department of Defence spend up to \$187.5 billion, i.e. \$10.5 billion less than what President Ronald Reagan had requested, but including the MX missiles and B-11 bombers he sought. The negotiators—members of the Senate and the House of Representatives Armed Services Committee—provided \$2.1 billion for production of 21 MX missiles and \$2.64 billion for research and development on the weapons.

US military aid to Sudan: The US has dispatched eight twin-engine F-15 fighters along with AWACS, two KC-10 tankers and about 550 personnel to the Sudanese capital, Khartoum, to protect two radar command-post aircraft sent earlier to monitor Libyan air strikes against Chad. The dispatch reflects a stepped-up US willingness to commit military forces to trouble spots around the globe, even as the Reagan Administration becomes more deeply involved militarily to combat "communist" subversion in Central America.

Another US N-weapons reactor: The US has announced plans to proceed with a \$3-billion to \$6-billion nuclear-weapons reactor for manufacturing more explosives for atomic bombs by 1995. The site of the new reactor will be at the government's Idaho Falls National Engineering Laboratory. The new reactor will raise to six the number of atomic plants in the US now producing plutonium and tritium, the main explosive materials in nuclear weapons.

China develops nuclear submarine: China, which has the third-biggest submarine fleet in the world, has joined the select group of the US, Soviet Union, France and Britain by developing a nuclear submarine capable of hitting targets 900 km away while submerged. Believed to be the first of five submarines of a new class called XIA, it weighs about 8,000 tonnes and has 16 missile tubes like Britain's Polaris nuclear-missile submarine, to which it is identical in size and weight.

The Indian Navy is the most powerful naval force in the Indian Ocean area after detachment from the US's Seventh Fleet, according to *Jane's Fighting Ships*, the standard reference of the world's navies. Editor John Moore points out that India had decided to build her own submarines, was looking for a replacement aircraft carrier and pressing ahead with her frigate construction programme, while Pakistan still relies on second-hand Western ships for its surface strength and Chinese craft for patrolling.

ECONOMY—National

Britain for reduced IDA loan to India: Britain has, in a white paper outlining its attitude towards the second report of the Brandt Commission, made it clear that India's share in credits from the International Development Association (IDA) would have to be subject to limits. The British stand on the IDA comes amid indications that the Reagan Administration is trying to hold down IDA assistance to the poorer countries to \$3 billion a year and reduce its own contribution

from 27 to 25 per cent. India has traditionally received 40 per cent of the IDA concessional loans amounting to about \$1 billion a year.

Mukherjee presents 83-84 supplementary demands: Finance Minister Pranab Mukherjee, on August 8, presented to Parliament the first batch of supplementary demands for 1983-84 amounting to Rs 636.56 crores, of which Rs 535.73 crores would go to meet additional Plan expenditure. The expenditure on revenue accounts would be Rs 321.68 crores and the balance of Rs 314.88 crores for capital outlays, including disbursement of loans and advances.

The ceiling on remuneration of managing directors, whole-time directors and managers of public-limited companies and private subsidiaries of public-limited companies has been raised with effect from April 1, 1983. The highest total emoluments under the new ceiling would be Rs 2,02,500 against Rs 1,32,000 hitherto. If profits are inadequate or in event of loss, the remuneration will be reduced by 10 per cent.

Saudi loan for India: India will get a loan of \$30 million from the Saudi development fund for modernising its railway system, according to an agreement signed between India and Saudi Arabia on August 10, in New Delhi. India had earlier secured two loans from the fund in 1977 and 1981 totalling \$134 million, for its hydel projects.

AP budget: Andhra Pradesh Finance Minister N. Bhaskara Rao, on August 12, presented the Telugu Desam Government's budget for the current year showing an overall deficit of Rs 75.80 crores to be covered by "economising on expenditure". Highlight of the budget—the 100-per cent increase in the provision for social and community services—Rs 333.96 crores—in addition to 80 crores provided for the scheme to supply rice at Rs 2 a kg to the poor. During budget discussions on August 23, he announced sales-tax relief, totalling Rs 7.34 crores, for diesel (12-11 per cent), pump-sets (9-7 per cent), lorry chassis (12-8 per cent) and bullion (4-2 per cent).

British aid for India: Britain will provide India with grants worth Rs 82 crores under two agreements signed between the countries on August 19. Under one agreement Britain will provide India Rs 59 crores as local costs aid in lieu of debt relief for 1983-84 and under the other, a grant of Rs 23 crores for the oil and natural gas sector.

Beef tallow has been brought under appendix 4, banning the item's imports, according to a public notice issued by the Chief Controller of Imports and Exports on August 23. Initially, import of beef tallow was channelised through the State Trading Corporation (STC) and, on July 29, it was decided that a monitoring committee would set the terms for its pricing and distribution.

Assam budget: A tax-free budget showing a deficit of Rs 100.56 crores for 1983-84 was presented in the Assam Assembly by State Finance Minister Mohammed Idris. The budget contained a provision of Rs 270 crores for the general plan and Rs 21 crores for the hill plan, Rs 31.32 crores and Rs 5.67 crores for the tribal sub-plan and scheduled caste plan respectively. Provision under Centrally-sponsored schemes was raised by Rs 24 crores.

ECONOMY—International

Contribution to IMF: Till August 8 only 19 of the IMF's 146 member nations completed action on contribution increases of \$32 billion, pledged in February to rescue developing countries in financial trouble. The 19 are: Britain, Burma, Costa Rica, Cyprus, Denmark, Ethiopia, Gabon, Gambia, Honduras, Kuwait, Malaysia, Malta, Nigeria, Norway, Philippines, Seychelles, South Africa, Swaziland and Uganda. Contributions are due by February 28, 1984, when the increase would become effective if member countries with 70 per cent of voting power approve. The 19 countries above account for 13.2 per cent of the voting power.

Third World arrears in payment of interest on loans totalled \$14.3 billion last year against \$6.1 billion in 1982, according to an IMF study. Brazil alone accounted for more than \$2 billion. The IMF study said that in addition to the Third World, there was "an increasing tendency for relatively more developed countries in Eastern Europe and Central America to incur arrears".

The US economy grew at a 9.2 per cent annual rate during the second quarter of 1983, the fastest growth rate in five years. The US Commerce Department had predicted 8.7 per cent during the quarter. The actual rise is the biggest since the 11 per cent registered in 1978 and the 2.6 per cent in the first quarter. The second-quarter corporate profits after taxes rose by \$15.9 billion to an annual rate of \$124.1 billion—the largest increase on record.

Needy Britons: Seven million Britons—one-eighth of the population—are too poor to pay for their needs, according to a survey conducted by the independent Market and Opinion Research International (MORI), which asked people to name items they considered essential for a reasonable standard of living. More than three million cannot afford to heat their homes and 3.4 million wear second-hand clothes. Ten million Britons cannot afford to have a vacation.

The US trade deficit with the rest of the world worsened last month, expanding to a near-record \$6.36 billion as imports rose and

LECTURES FOR CIVIL SERVICES EXAM

Come September and the fever is on for the approaching Civil Services Mains. Just the right time to augment your own preparations with helpful lectures. We are sponsoring eight such lectures in the first two weeks of October in collaboration with Kirori Mal College, Delhi University. Well-known economists, administrators and journalists will participate. The topics under discussion are: Planning in India—Vth Plan Appraisal; Rural Development; Centre-state Relations; Nonalignment; Arms Race; North-South Debate; Unity in Diversity; Energy Imperatives; and India And its Neighbours.

For exact dates of these lectures, look up *The Times Of India*, September 20-September 30, 1983.

imports fell. The Commerce Department foresees a deficit of \$65 billion to \$70 billion this year against last year's record of \$42.7 billion. US exports have suffered as the result of business activity's revival, which has increased demand for imported oil and other products. Again, debt problems facing the developing countries—traditional import markets for US products—prevent them from increasing their imports.

EVENTS—National

Bill on dowry deaths: A Bill designed to deal effectively with dowry deaths and other forms of cruelty to women, was tabled in the Rajya Sabha on August 8, containing provisions for inquest by executive magistrates and post mortem in case of a woman's unnatural death within seven years of marriage. Cruelty to a woman by her husband or his relatives would be punishable with imprisonment upto three years, cruelty itself meaning "wilful conduct of such a nature as is likely to drive the woman to commit suicide or with a view to coercing her or any of her relatives to meet any unlawful demands for property."

Goa CM wins vote of confidence: Goa Chief Minister Pratapsinh Rane, on August 14, won a vote of confidence with 14 of 25 Congress (I) MLAs expressing confidence in him at a special Legislature party meeting. Ten dissidents, led by Health Minister Wilfred De Souza, boycotted the meeting while Rane did not cast his vote. The immediate fall-out of the meeting, De Souza's resignation.

India is virtually assured of a seat in the 15-member UN Security Council for a two-year term beginning January 1, 1984, following endorsement of its candidature by the Asian group at the UN on August 19. Elections for five non-permanent seats, which will be vacated by Jordan, Guyana, Poland, Togo and Zaire at the end of 1983, will take place during the 38th General Assembly session beginning September 20. India was last on the Council in 1977 and 1978, having held the Council seat three times before—1950-51, 1967-68 and 1972/73. Also endorsed were the candidatures of Bhutan, Lebanon, Nepal, Pakistan and Singapore for the posts of Vice-Presidents of the General Assembly and Japan's for the Chairmanship of the UN Budgetary Committee.

Consumer Protection Council set up: The Union Government has set up a 28-member Consumer Protection Council under Food and Civil Supplies Minister Bhagwat Jha Azad to give direction and purpose to the consumer protection movement in the country. The term of the Council, three years, it will meet twice yearly.

US aid for family planning: India and the US, on August 30, signed a project agreement to provide funds for the first year of a seven-year project designed to increase fertility awareness, promote the small-family norm and the use of safe and inexpensive contraceptive methods. The US will grant about Rs 47 crores to the project, which involves the setting up of a semi-automatic contraceptive marketing organisation for procurement, promotion and marketing of contraceptives.

EVENTS—International

Swaziland Queen dethroned: Queen Regent Dzeliwe has been removed as Head of State in the little African kingdom of Swaziland, to be succeeded by another widow of the late King Sobhuza, the government announced on August 9. This followed a power struggle between Queen Dzeliwe and various princes and government figures seeking a more constitutional monarchy in Swaziland. Queen Dzeliwe had assumed the throne on the death of King Sobhuza in August last year after an unchallenged 61-year rule.

Nkomo back home: Zimbabwe Opposition leader Joshua Nkomo returned home on August 16, five months and a week after going into self-imposed exile in Britain. Nkomo's return followed assurances from Prime Minister Robert Mugabe that he would not be jailed upon his arrival. Nkomo and Mugabe are bitter rivals in Zimbabwe politics.

Emergency ends in Chile: In a major step to meet Opposition demands, Chile's military junta announced an end to the state of emergency with effect from August 28. Emergency was imposed when armed forces seized power in 1973, toppling the Socialist government of Salvador Allende.

GCC's new anti-Israeli move: The six states of the Gulf Cooperation Council (GCC) have decided to suspend economic and other aid to any country restoring relations with Israel. GCC Secretary-General Abdalla Yaquob Bishara said the decision was taken during the Council's eighth session held in Saudi Arabia in August.

Thirty criminals were sentenced to death and later executed by the Chinese authorities in an attempt to curb a soaring crime rate. About 10,000 people in a sports hall in Beijing were shown the accused to voice their approval of the sentence on August 23. Among the 30 were 19 murderers, 10 rapists and one car thief.

UN for Puerto Rico freedom: The UN Special Committee on Decolonisation, on August 25, voted 10-2 to approve a resolution calling for an independent Puerto Rico. The Committee, however, asked that the resolution be placed on the agenda of the UN General Assembly session beginning mid-September. The two nations that voted against the resolution: Australia and Norway.

The 41-nation Committee on Disarmament ended its 1983 session in Geneva, on August 31, without reaching its goals of promoting a test ban on nuclear weapons or general disarmament.

US-USSR grain deal: The US and the Soviet Union, on August 26, signed a five-year 45-million-tonne grain deal in Moscow, obliging Moscow to buy eight million tonnes of wheat and corn a year for five years and another one million tonnes of wheat, corn, soya bean and soya bean meal in a variety of combinations. The Soviet Union said it regards the US as residual supplier after purchases have been made in other countries like Canada and Argentina, from which they have been buying grain since former US President Jimmy Carter's embargo on grain sales to the USSR. After

President Ronald Reagan lifted the embargo, the USSR confined itself to buying the previous minimum of 20 per cent of its estimated shortfall of six million tonnes.

Liberia and Israel signed a cooperation agreement on August 25 agreeing to exchange ambassadors, 10 years after Liberia severed relations with Israel. In an additional conciliatory move, Liberia recognised that Israel had legitimate national interests in South Africa.

NASA's future plans: America, in the next 50 years, will fly civilians into space to the edge of the universe and will begin preparations for a manned mission to Mars, according to NASA administrator James Beggs. NASA's ambitious plans include probing the planet Venus, orbiting Jupiter and flying weekly shuttles to a permanent space station. The first to fly will be artists, writers and journalists—who can translate their experiences for a broad section of the public—by 1985, if NASA has its way. NASA also plans to launch a 250-cm reflector telescope this decade "to peer further and with greater clarity at events in space than ever before", Beggs said.

MISCELLANY

Amnesty report on emergency: More than 30 countries in Africa, the Americas, Asia and Europe lived under "state of emergency or comparable situation" in 1982, the Amnesty International said before the UN Human Rights Sub-committee in Geneva, on August 25. The suspension of human rights made it easier to torture, carry out arbitrary arrests and execute without trial, the report said, singling out Syria, Brunei and Paraguay, which have been under emergency for more than two decades.

World population swelled by 82 million in the past year. Now standing at 4.7 billion the population went up by nearly one billion in a decade—the greatest leap ever recorded—according to the US census bureau. While the annual growth rate remained steady at 1.75 per cent for 1982-83, the gain in numbers was the largest ever. In 1980, the global population was less than 4.5 billion. India, with 15.5 million, had the highest population growth, China was second with 15 million and Indonesia third at 8.3 million. A few countries experienced population declines during the year, with the reasons ranging from people leaving Afghanistan in the face of Soviet intervention to successful birth control campaigns.

DIED

Najmul Hassan, 37, New Delhi-based correspondent of Reuters, the international news agency, in an explosion caused by a landmine in the border town of Mehran in western Iran, on August 11.

Sir Nikolaus Pevsner, 81, one of Britain's most eminent architectural writers and editor of an authoritative 37-volume series, *The Buildings Of England*, on August 18 in London.

Dr R.V. Sethe, 78, noted heart specialist and former Vice-Chancellor of Bombay University, on August 28, in Bombay, after a prolonged illness.

ANIL PENNA

CURRENT EVENTS: NATIONAL

(Continued from page 22)

4.97 crores), imports from Pakistan have also dropped (from Rs 56.01 crores in 1981-82 to Rs 29.32 crores) over the past nine months.

The joint commission formed early this year has failed to produce any results. The two sub-commissions on bilateral trade and economy have also not arrived at any conclusive agreement. So far even the question of avoiding double taxation between the two countries has not been resolved.

The postponement of the visit has also quashed any hopes raised by the visit of S.M. Ishaq, Director, Trade Corporation of Pakistan, last month.

The Pakistan trading community had shown considerable interest in Indian drilling rigs, textile spares, escalators, potato diggers, and know-how and machinery to manufacture cloth and dyes. They had offered cotton fabrics, fresh fruits, handicrafts and precious stones as exports.

ELECTRONICS INDUSTRY DUTY RELIEF

In a much-awaited change of policy, the government announced some concessions for the electronics industry.

The Finance Ministry has provided duty relief of Rs 98 crores on various electronic goods as an incentive for the development of the industry.

The cut in the excise revenue is expected to be Rs 11 crores and revenue loss from customs duty will be Rs 87 crores in a full year. The excise duty on music systems has been reduced from about 40 per cent *ad valorem* to 20 per cent *ad valorem*.

Customs duty relief has been provided on computers, components and project imports.

The basic duty on computers (including central processing units and peripheral devices) will be reduced to 15 per cent *ad valorem* against the existing rate of 20 per cent *ad valorem*. Electronic goods will be fully exempted from payment of special excise duty, now charged at the rate of 5 per cent of the basic excise duty.

The government's decision is laudable, but whether it proves to be a catalyst for the development of the industry is hard to say. India's electronics industry has been neglected for long. Other developing countries like Taiwan, Singapore and Hong Kong have developed much faster than India. In the developed countries, advancement in this industry has totally revolutionised their technology. India's contribution in the world electronic production is miniscule.

DISARMAMENT TALKS LEADING NOWHERE

With the disarmament talks between the two superpowers leading nowhere, perhaps the best way to force their hand is to motivate public opinion for it. At the regional meeting of World Disarmament Conference in New Delhi (held in India for the first time), the UN Department for Disarmament Affairs (UNDDA) launched a campaign to educate, inform the public and generate understanding in favour of disarmament.

Speaking at the five-day meet, Jan Matenson, Under-Secretary-General of UNDDA, revealed that already more than 40,000 nuclear warheads exist, with a destructive capacity of one million Hiroshima bombs. He said, a single submarine equipped with nuclear arms possessed more explosive power than all the munitions of World War II.

External Affairs Minister Narasimha Rao in his inaugural speech called for complete disarmament in all the countries, covering all the weapons.

ANITA SHARMA

CURRENT EVENTS: INTERNATIONAL

(Continued from page 26)

Director, Peter Davies, told the UN that "ethnocide"—the extermination of ethnic groups—is taking place in five countries. The Indians of Guatemala, the Hmong of northern Thailand, the Chittagong hill people of Bangladesh, the Melanesians of Indonesia and a number of Taibes in the Philippines are facing extinction, and their crime is their failure to conform to the majority's ideas and in some cases, live on land that someone else wants. The society, which has also campaigned against debt bondage and child labour in India, has done much good work in the past by bringing instances of inhumanity before the public eye and persuading the UN to investigate the matter.

US POVERTY ON THE RISE

The US Bureau of the Census' report on poverty in America 1982, was published in early August. In 1982, more Americans were below the poverty line than at any time since the days of President Lyndon Bain Johnson. The number of Americans living in poverty rose from 31.8 million (14 per cent) in 1981 to 34.4 million (15 per cent) in 1982, the percentage being the highest since 1965. Blacks, Hispanics and families headed by women were the worst hit—the respective percentages being 35.6, 29.9, and 36.3. The report also showed that the American south is poorer than the north.

The Reagan Administration has emphasised that the poverty rate will go down by 1984, but, meanwhile, the President has expressed his perplexity at the persistence of a problem which "should not exist in this great and wealthy country". One reason for the high poverty rate in 1982 may be Reagan's economic policies, which stress the importance of private-sector economic growth. Reagan and his conservative aides feel this would help the needy more than federal aid. Actually, budget cuts affected by the government have resulted in further hardships for the poor.

EX-NAZIS GOING SCOT FREE

Klaus Barbie, the Nazi 'Butcher of Lyons' who supervised the murder, torture and deportation of thousands of French Jews during World War II, was helped by the Americans in the immediate post-war period. This confession came in the form of a 218-page US Justice Department report, which confirmed that US intelligence agents had recruited Barbie in 1947 and helped him escape to Latin America under the noses of the French authorities in 1951. The report came in the wake of Barbie's extradition from Bolivia six months ago. He now faces charges for war crimes committed about four decades ago.

The US, probably, did not help any other Nazi criminal still alive, but a large number of ex-Nazis are still scattered all over the world. The most blatant fugitive from justice: Walter Rauff, the 'Murderer of Milan', who invented the Nazi 'gas wagons' to murder Jews through suffocation. He now lives openly in Santiago, Chile. Neither Israel, which does a thriving arms business in Chile, nor the US, which does not wish to offend the American ally, Chilean strongman Gen Augusto Pinochet, are pushing for his extradition. Besides Rauff, there are over 500 top-level ex-Nazis still at large. Among them, Josef Mengele, the 'torture doctor' of Auschwitz lives in Paraguay; Heinrich Muller, SS Chief Heinrich Himmler's number two, is reported to be in Brazil; Alois Brunner, Adolf Eichmann's top assistant, is believed to be in Syria; and Walter Kutschmann, lives at Miramar, near Buenos Aires.

SPORTS

BASKETBALL

The Soviet Union won the 9th women's world championship when they just edged out defending champions USA by 84-82 points (half-time 37-40) in the final played at Sao Paulo in Brazil, on August 6

The Commonwealth Championships ended in New Zealand on August 28 with a good performance by England. The men's title was claimed in Christchurch, when a well-disciplined English team defeated the defending champions Canada 86-80. For the women's title, Australia overwhelmed England 85-51 in a fast, and at times, physical final, in Auckland.

CHANNEL SWIMMING

Twenty-two-year-old Irene Van Der Laan (Holland) became the third woman, on August 18, to swim the English Channel both ways without a break and set a new record with her time of 18 15 0 min. The channel is about 22 miles (35 km) wide at its narrowest point, but swimmers cover up to 35 miles (56 km) as they zig-zag to beat tides and currents. Other records set at the Channel:

Two Indians set records for swimming across the English Channel, on August 18. Aranath Shenoy, a Bombay youth, became the first deaf and dumb to swim the Channel. His timing 10 54 0 min, from the French coast to Dover in England. About 100 minutes later, an 18 year old architecture student from Bombay, Bijoy Jain, became the fastest Asian, and the fourth fastest swimmer, to cross the Channel. His timing, 8 42 0 min, from Dover to Cape Grisnez (France). He is the seventh Indian to swim the Channel.

The same day, Alison Watherly (UK), aged 12 years and 163 days, became the youngest girl to swim across. Her time just over 16 hours. But Alison held this record only for about four hours. Another British girl, Samantha Druce, also completed her swim across the Channel—and she is 43 days younger than Alison.

MODERN PENTATHLON

The Soviet Union earned double honours at the 27th World Championships, which concluded at Warendorf (FRG) on August 7. The 23 year-old Russian, and reigning Olympic champion, Anatoly Starostin, won the individual title, after being the runners-up three before—in 1978, 81 and 82. He amassed 5,506 pts. The team title was also won by the Russians.

CRICKET

Hosts England beat New Zealand 3-1 in the four Test series. The break-up results: England won the First (July 14-18, Oval, London), Third (August 11-16, Lords, London) and Fourth Test (August 25-29, Trentbridge, Nottingham), and lost the Second Test (July 28-August 1, Headingley, Leeds).

Flying high: Alena Drebjano of Czechoslovakia leaps high over the balance beam to take the gold in the women's individual finals of the McDonald's 1983 International Gymnastics Championships in Los Angeles, U.S.A.

SWIMMING

The following world records were set at the US National Championships (men's section), which concluded on August 7 at Clovis, California: (i) 100m backstroke—Rick Carvey broke the record twice, first in the heats, when he clocked 55.44 sec, and again in the final, with 55.38 sec. (ii) 200m backstroke—Carvey clocked 1 58.93 sec. (iii) 100m butterfly stroke—In the heats, Matt Gribble clocked 53.44 sec. (iv) 100m breaststroke—Steve Lundqvist broke his own record by clocking 1:02.34 sec. The earlier record was 1 02.53, set in August 1982.

Michael Gross (FRG) broke his own world record in the 200m freestyle event, clocking 1:47.87 sec, at the European Championships in Rome on August 22. His earlier mark of 1:48.28 was set in Hanover in June 1983. He also shattered the 200m butterfly world-record when he clocked 1:57.05 sec. The previous mark of 1:58.01 was set by Craig Beardsley (USA) two years ago. Other world records set in Rome:

In the women's 100m breaststroke, East Germany's Ute Geweniger (19 years) clocked 1:08.51, to break the record she set at the last European Championships at Split in 1981. The East German quartet set a new record in the 4x100m medley relay with a time of 4:05.79, erasing their old mark of 4 05.88 set at the World Championships last year.

TENNIS

Following were the major international tournaments held in August.

The Players' International Tournament, which ended in Montreal on August 14, was won by second-seeded Ivan Lendl (Czechoslovakia), when he beat unseeded

Head, shoulders & bike above double-decker buses: Chris Bromham, 26, flies 5,948 m through the air over 18 of them on his 495 cc Moto-Cross bike in Bromley, England and sets a new world record.

Swede Anders Jarryd 6-2, 6-2. Earlier, in the first round, Ramesh Krishnan beat Henri Leconte 4-6, 6-2, 6-2, but lost to another Frenchman, Georges Goven, 4-6, 1-6 in the second round.

Top-seeded Martina Navratilova (USA) overwhelmed the second-seeded Chris Evert Lloyd (USA) 6-1, 6-3 in 58 mins to win the \$ 1,50,000 Virginia Slims Los Angeles Tournament at Manhattan Beach, California, on August 14. Later, Martina and her partner of long-standing, Pam Shriver (USA), teamed up to win the doubles title with a 6-1, 6-0 rout of Betsy Nagelsen (USA) and Virginia Ruzici (Romania).

WEIGHTLIFTING

Daniel Nunez (Cuba) set a new world record in the featherweight (upto 60 kg) category, when he registered a 138.0 kg snatch lift at the Pan-American Games in Caracas (Venezuela), on August 16. He had set the previous record last year in November at Copenhagen with a lift of 137.5 kg. Unfortunately, his record has been erased from the record books and his gold medals taken back because of illegal use of muscle-building drugs: anabolic steroids.

ATHLETICS

Ullrich Meyfarth FRG, despite an injured foot, and Tamara Bykova (USSR) cleared 2.03m (6ft-8in) to set a joint world record in the women's high jump, on August 21, at the European Cup Finals in London (Crystal Palace Stadium). Just four days later Tamara broke her own record by clearing 2.04 m at an international meet in Pisa, Italy.

HOCKEY

The International Pentagonal tournament, for the Raja Azlan Shah Cup, which ended on August 28, in Kuala Lumpur, was won by Australia, who beat Pakistan by a solitary goal in the final. The tournament was played on a round-robin basis, with the top two teams meeting in the final. India gave a pathetic display in the league matches, ending up

and New Zealand (1-1) and lost to Australia (3-1) and Malaysia (3-2).

But in the match for the third place, they came back into their own and trounced hosts Malaysia 5-0.

The European Championships, which ended at Amsterdam on August 28, was won by Holland, who beat surprise finalists Soviet Union 8-5 in the tie-breaker, following a 4-all draw after extra time.

QUADRATHON

This is a new event on the world sporting scene, consisting of four disciplines and covering 256 km. It ended in London on August 21, and was won by 29-year-old Richard Crane (UK). Crane took 16:26:49 sec to complete the 3.2-km sea-swim, 51.5-km walk, 161-km cycle race and 41.8-km marathon race.

SANJEEV GUPTA

HELSINKI MEET BREAKING NEW RECORDS

The feet that ran away with the gold: Steve Cramm (325) in the 1,500 m event; world record holder Steve Ovett (341) fell to fourth place

Amongst major sports, athletics was the only one not to have an official world championship, until August 7, 1983: Helsinki, the capital of Finland, hosted the 1st World Track and Field Championships from that day.

A record 158 countries participated—the maximum at any world meet—and after the fiascoes at the Munich, Montreal and Moscow Olympics, this meet was free of any political interference and bungling. Among the major highlights.

Sprints

Carl Lewis (USA) consolidated his position as the supreme sprinter of modern times, with world-record-holder Calvin Smith (10.21 sec) second and Ermit King (10.24 sec) third. Lewis's time: 10.07 sec.

This trio, along with Willie Gault, set up a new world record in the 4 x 100 m relay.

Tragedy struck the Americans in the long relay (4 x 400 m): in the third leg, Willie Smith

made an effort to overtake Gault, but fell on the second bend and all was lost: anchorman Ed Moses ran the race of his life—past at least three runners—yet could not make it into the medals.

Marita Koch emerged as the all-round sprinter among the women as she collected 3 golds (200 m, 4x100 m, 4x400 m) and 1 silver (100m), the maximum medals at the meet. The major duel was for the fastest woman in the world: world record-holder, Evelyn Ashford (USA) and Marlies Goehr (GDR) took off in the 100 m final. The American seemed to be gaining when around the 60 m mark, she pulled up with a hamstring injury. Unfortunately, this ruled out the American's from the sprint relay.

The 400 m was a cakewalk for the Czech Jarmila Kratochvilova, as she became the first woman to crack the 48-sec barrier—to set a new world record.

The middle distance

Veteran West German—and 10 times national champion—Willie Wuelbeck out-sprinted Joachim Cruz (Brazil) to win the 800 m.

In the women's race, Jarmila merely toyed with the opposition: at the finish, there was about 10 m of daylight between her and the two Russians, Lyubov Gurina and Yekaterina Podkapayeva.

The Czech girl collected 2 golds and 1 silver at the meet. Now, onto the 'blue riband' event of the meet—the 1,500 m or the 'metric mile'. The assembled athletes would have sent any connoisseur into raptures. Steve Ovett, Cramm (both UK) and Scott (USA), the new French find, Said Aouita (Morocco), Jose Abascal (Spain), John Walker (New Zealand), Dragan Zdravkovich (Yugoslavia) and Mike Boit (Kenya), to name a few.

The start of the race was low key—none was willing to set the pace. But into the final lap and the Moroccan went ahead, Ovett got boxed-in, and on the home stretch it was Scott. But Cramm had other ideas: to prove that his European and Commonwealth titles in the absence of Ovett, were no fluke, he outkicked the entire field. Ovett finished fourth!

Long distance

Both the 5,000 m and 10,000 m were won by outsiders. Alberto Cova (Italy) outsprinted the East Germans, Werner Schildhauer and Hans Kunze to take the 10,000 m gold.

The Irishman, Eamon Coghlan, made a tactical change when he elected to participate in the 5,000 m, instead of his usual event the 1,500 m. The move paid off.

Mary Decker (USA) proved to the world that the East bloc girls (specially the Soviets) could be beaten in the long-distance races. She recorded the 1,500 m and 3,000 m double (equivalent to the men's 5,000 and 10,000 m double).

The hurdle

There was no stopping Moses, the greatest low hurdler of all time—absolutely unbeatable! He easily demolished the field, and won his 90th consecutive race, about 8 m ahead of Harold Schmidt (FRG)—the last man to beat Moses, back in 1977.

Jumps

Lewis collected his third gold when he led another US clean sweep by winning the long

jump (leading 8.95 m). Jason Gifford (USA) and Mike Conley (B.12) were second and third.

In the triple jump, Willie Banks (USA) suffered one of his rare defeats: Zdzislaw Hoffman (Poland) set off on his last run—and produced the best jump.

Throws

The greatest ovation by the packed stadium was reserved for their heroine, Tiina Lillak (Finland), the world javelin record holder. Right upto the last throw, Fatima Whitbread (Great Britain) was leading with a throw of 69.14 m. The crowd went wild as Lillak's last throw sent the javelin beyond the 70-m mark.

Decathlon

The battle for the best all-round athlete of the world—between Daley Thomson (UK) and Jurgen Hingsen (FRG)—was one of the most eagerly-awaited events. Hingsen had taken the world record from Thomson, while the latter was recovering from nagging groin injuries just prior to the world championships. But despite the lack of training, Thomson earned an easy victory, to add the world champion title to his Commonwealth, European and Olympic titles.

Break-up results of the Helsinki meet:

Men

100 m: Carl Lewis (USA)—10.07 sec; 200 m: Calvin Smith (USA)—20.14; 400 m: Bert Cameron (Jamaica)—45.05; 800 m: Willie Wuelbeck (FRG)—1:43.65; 1,500 m: Steve Cramm (UK)—3:41.59; 500 m: Eamon Coghlan (Ireland)—13:28.53; 10,000 m: Alberto Cova (Italy)—28:01.04; Marathon: Robert De Castella (Australia)—2:10:03.0; 110 m hurdles: Greg Foster (USA)—13.42; 400 m hurdles: Edwin Moses (USA)—47.48; 3,000 m steeplechase: Ilg Partz (FRG)—8.15.06; High jump: Gennady Adveenko (USSR)—2.32 m; Pole vault: Sergei Bubka (USSR)—5.70 m; Long jump: Lewis—8.55 m; Triple jump: Zdzislaw Hoffman (Poland)—17.42 m; Shotput: Edward Sarul (Poland)—21.39 m; Discus: Imrich Buga (Czechoslovakia)—67.72 m; Hammer throw: Sergei Litvinov (USSR)—82.68 m; Javelin: Detlef Michel (GDR)—89.48 m; Decathlon: Daley Thomson (UK) 8,666pts; 4x100 m relay: USA—37.86 (WR); 4x400 m relay: USSR—3:00.79; 20-km walk: Ernesto Canto (Mexico)—1:20:49.0; 50-km walk: Ronald Weigel (GDR)—3:43:08.0.

Women

100 m: Marlies Goehr (GDR)—10.97sec; 200 m: Marita Koch (GDR)—22.13; 400 m: Jarmila Kratochvilova (Czechoslovakia)—47.99; 800 m: Jarmila 1.54.68; 1,500 m: Mary Decker (USA)—4:00.90; 3,000 m: Mary—8:34.62; Marathon: Grete Waitz (Norway)—2:28:09.0; 100 m hurdles: Bettina Jahn (GDR)—12.35; 400 m hurdles: Yekaterina Fesenko (USSR)—54.14; High jump: Tamara Bykova (USSR)—2.01 m; Long jump: Heike Dauter (GDR)—7.27 m; Shotput: Helena Fibingerova (Czechoslovakia)—21.05 m; Discus: Martina Optiz (GDR)—68.94 m; Javelin: Tiina Lillak (Finland)—70.82 m; Heptathlon: Ramona Neubert (GDR)—6,714 pts; 4 x 100 m relay: GDR—41.76; 4 x 400 m relay: GDR—3:10.7.

S.K.G.

CAREER NEWS

SBI (PO) Exam

The Central Recruitment Board, State Bank Group, will hold a competitive exam on 11.12.83 for the recruitment of POs to fill approximately 500 vacancies. To be eligible, candidates must have a degree or an equivalent qualification and their age must not be below 21 years or above 28 years as on 1.7.83. For details and format of application form, see *The Hindustan Times* dated 3.9.83. Last date for receipt of applications is 10.10.83.

Auditors, Jr Accountants, UDCs Exam, SSC

The Staff Selection Commission (SSC) will hold a competitive exam on 19.2.84 for recruitment of Auditors, Junior Accountants and Upper Division Clerks (UDCs) in different offices of the Government of India. To be eligible, candidates must be degree-holders and in the age group of 18 to 25 years as on 1.1.84. Application forms

are available from head/main post offices on payment of 70 paise. If these are not available, candidates may send their applications on plain paper in the standard format. For details and format of application form, see *Employment News* dated 3.9.83. Last date for receipt of applications is 18.10.83.

National Overseas Scholarships

The Ministry of Home Affairs will award 21 National Overseas Scholarships to SC/ST members for pursuing postgraduate studies or research abroad in subjects for which suitable facilities are not available in India. Preference will be given to those who propose to go in for studies in Engineering, Technology or Science. For details and application form, write at the following address along with a self-addressed envelope (28 x 12 cm) and a crossed I.P.O. worth Re 1 (drawn in favour of the Secretary, Ministry of Home Affairs, New Delhi): Deputy Secretary, Ministry of Home Affairs, Protection of Civil Rights Cell, Room No 624, 'A' Wing, Shastri Bhawan, New Delhi-110 001.

Last date for receipt of applications is 30.11.83.

Opportunities Abroad

Are you looking for information on employment or higher education abroad? The Overseas Employment and Education Information Service, USA, can help you by providing you the required information on current employment opportunities, export-import leads, names of employers, educational institutions, scholarships, assistantships, financial aid, etc. in the USA, Canada, Europe, Middle East, Africa, New Zealand and Australia, among other countries. Send your bio-data with a short statement of your specific needs and a self-addressed air mail envelope (23 x 10cm) to the above-mentioned service at the following address: 3721, Poplar Street, P.O. Box 3364, Erie, Pennsylvania (16508), USA. The letter should be accompanied by five International Reply Coupons if you desire an answer immediately by air mail and two coupons if you require it in three-four months time by sea mail. [E]

Answers to

TEST YOUR WORD POWER

1. **accessible:** B: easy or possible to reach or enter. Barely two hours away by train from Kowloon in Hong Kong, Kwangchow (Canton) is the most accessible city of China.
2. **antidote:** D: something that counteracts poison, disease or bad mood. Work is a good antidote for stress.
3. **attorney:** B: one legally appointed to represent another in business or law. There are 6,00,000 practicing attorneys in the US, or one for every 400 Americans.
4. **bigotry:** B: narrow mindedness or prejudice. The time has come when liberal Hindus must condemn the intolerance and bigotry that is affecting their religion.
5. **catastrophic:** C: disastrous, calamitous. Unless positive action is taken now, the energy situation could get out of control with catastrophic consequences to the economy.
6. **convulsion:** C: violent disturbance, spasms. Although still pole apart from their Western counterparts, the Middle East women are also experiencing the convulsions of change.
7. **discriminate:** A: to act toward someone with partiality or prejudice, treat differently. White South Africans discriminate against non-whites in that country because they fear them.
8. **erupt:** A: to break out suddenly, burst open violently. When Britain and Egypt gave up their claims to Sudan in 1956, a bloody civil war erupted between Arab north and African south.
9. **genius:** D: one who possesses a high degree of intelligence, person with exceptional ability. By applying the right mental skills, people of average intelligence can at times act like geniuses.
10. **innovation:** C: something newly introduced. Microform publishing or the method of forming microimages is more of a technical innovation than a scientific discovery.
11. **integral:** C: necessary for completeness. The police box or

Koban is an integral feature of Japanese existence

12. **jitters:** A: a sense of panic or extreme nervousness. Coffee lovers have been given the jitters by recent reports on the health hazards of caffeine.
13. **parable:** B: story with a moral lesson. The story behind the writing of the book, *Schindler's Ark* by Thomas Keneally, provides an apt epilogue to a parable depicting the triumph, however marginal or momentary, of good over evil.
14. **profligate:** C: reckless; shamelessly immoral; insensible to principles, wasteful. Edwina Mountbatten was willing to be profligate in all things, and that included the waste of her brain and the years of her prime.
15. **reconcile:** A: to harmonise. Today's Japanese women—urbanised, educated, middle class and seeking to reconcile traditional identities with present realities—sound like American women of 10 years ago.
16. **rupture:** A: to burst, break open; sever. AVMs—artery and vein malformations in the brain—form tangled masses of abnormal blood-vessels that can rupture at any time, causing brain damage, stroke or death.
17. **strife:** C: conflict; quarrelling. For centuries, the world has witnessed strife and bloodshed over the treatment of minorities.
18. **susceptible:** B: sensitive; easily affected by. The skin is very susceptible to the vagaries of nature.
19. **tenuous:** A: slender, thin; flimsy. Nuclear power's now tenuous foothold was established because it was sold to the public as the only answer to humanity's future energy needs.
20. **virtual:** A: so in effect, but not in name. Since the American takeover of Diego Garcia, the island has been turned into a virtual floating fortress.

Vocabulary Ratings:

20-18 correct exceptional
17-15 correct excellent
14-12 correct good

ECONOMY

CASH RESERVE RATIO

BY BECO

Recently, the Reserve Bank of India raised the Cash Reserve Ratio of banks. What is the Cash Reserve Ratio, and what are its objectives and implications? Here we explain it all.

The Reserve Bank of India (RBI) raised the Cash Reserve Ratio (CRR) of commercial banks to 8.5 per cent with effect from August 27, 1983. Earlier also this very year, CRR was raised from 7 to 7.5 per cent with effect from May 27, 1983, and then again to 8 per cent with effect from July 29, 1983. This raises certain fundamental and interesting questions: What is CRR? What is the object behind maintaining it and changing it from time to time? What is the purpose of the recent change?

What is CRR?

CRR represents the proportion of cash which the banks have to keep with RBI, to their net Demand and Time (D & T) liabilities, otherwise called deposits. The principle of requiring member banks to maintain a minimum percentage of their D&T liabilities with a central bank began in the US, with a view to ensuring liquidity, solvency of commercial banks, as also to influence and ultimately to restrict commercial banks' expansion of credit.

In India, originally under section 42 (1) of the RBI Act, scheduled banks were required to maintain with RBI a minimum of cash reserve of 5 per cent of their demand liabilities and 2 per cent of their time liabilities at the close of business on any day. Subsequently, the rates were revised many times, the latest being 8.5 per cent, as applicable from August 27, 1983.

Banks in India, as also in other countries, have two major functions to perform: to secure deposits from the public; and to lend money to the public for socially useful purposes. Not all the deposits are given for lending: a portion of it is kept for meeting day-to-day needs and other obligations. Whatever this proportion, one thing is logically clear: the capacity of banks to lend depends upon the amount of deposits they have.

An inflationary situation exists when too much money chases too few goods or in other words when increase in money supply is much out of proportion with increase in the supply of goods and services. Under such a situation traders and manufacturers build undesirable level of inventories with the help of bank funds and there is a general rise in the price level, causing inconvenience and hardship to the community at large. Since the credit is likely to be misused, it is desirable to check its expansion.

Why change the CRR?

RBI has several ways at its command for doing this. These include a raise in the bank rate, i.e., the rate at which RBI refines the commercial banks, or the use of selective credit controls under which credit against selected commodities can be restricted through certain stipulations. Another important and convenient method is the use of variable reserve ratios, of which CRR is one. RBI has used the technique of changing the CRR quite often during the last few years and the latest raise is one in the series. Other methods have also been used from time to time, though with little success.

What is the purpose of the recent change?

The rationale behind the latest move comes from certain recent developments in the economy. One of the bright spots of the economic scenario in 1982-83 was the welcome behaviour of prices. The annual rate of inflation in consumer prices came down to 8 per cent in December 1982 compared with 12.7 per cent in December 1981. Of late, however, the general price level has again charted an upward course. Consumer Price Index during April-June 1983 recorded an increase of about 6.2 per cent. Increase in wholesale prices, particularly of primary products, during the first seven weeks of the financial year 1983-84 was nearing 3.9 per cent, which was causing concern.

It was discernible, on the other hand, that growth of bank deposits was much higher than anticipated. RBI had estimated the deposit accretion of Rs 4,000 crores for the first half of the financial year 1983-84, i.e., upto September 1983.

But the growth of deposits upto the third week of July 1983 itself had crossed Rs 3,800 crores, despite providing for all other obligations, which meant some drain on banks' deposit resources.

It was thus felt that the growth of 'primary money', of which bank credit is an important component, has been significantly larger than in the corresponding period of the previous year, and that there is a need to further immobilise the excessive liquidity of the banking system. Acting on this logic, RBI has directed the banks to maintain with effect from the week beginning August 27, 1983, a CRR of 8.5 per cent of net D & T liabilities. This step is expected to siphon off an amount of about Rs 275 crores from the banking system.

The principal stance of the credit and monetary policies in India has been to contain inflation and at the same time, ensure the availability of sufficient credit to meet the genuine needs of production in various spheres. Whenever such steps have been taken in the past, stipulations have been provided on the above-mentioned count and it has been ensured that banks do not face hardship in supporting really productive efforts. The same has been stressed again now, and the banks have been assured of provision of discretionary refinance, based on merits, for short periods to enable them to undertake a smooth adjustment to the higher cash reserve requirement.

The step is one of various measures taken to contain the inflationary situation that was causing concern to the authorities. It is purely temporary and can be withdrawn at any moment if it is felt to be redundant or is thought to be impeding the productive processes. This is amply borne out by the assertion of the Finance Minister, Pranab Mukherjee: 'These measures were introduced to absorb excess liquidity with the banking system and will remain effective until conditions emerged for the suitable deployment of funds as productive credit.'

Frequent changes in CRR sometimes prove counter-productive as they disturb the functioning of commercial banks. Despite this, this technique of influencing the availability of commercial bank credit is considered important. □

The Right Approach To Thematic Apperception Test

BY L. L. R. MANCHANDA former Dy President, S.S.B

It's said novelists can't be made; so can't be story-tellers. It has to come from within—and that's what the Thematic Apperception Test examines

Introduced in 1935 by Morgan and Murray of the US Thematic Apperception Test (TAT), commonly known as 'Picture Story Test' has proved to be a very powerful instrument in the hands of expert assessors to evaluate various facets of an individual's personality. It is one of the projective techniques employed at our Services Selection Boards (SSBs).

The test makes use of a series of pictures which are fairly ambiguous and unstructured, and a candidate is instructed to make up stories around them. The objective interpretation of the stories enables the psychologist to find out a great deal about the candidate's motives, intellectual capacity, ability to withstand stress, both mental and physical, and other aspects of the personality make up. In case the psychologist has any doubts, he is at liberty to call the candidate and interview him.

The psychologists at the SSBs, however, seldom interview the candidates since there are other tests like the Word Association Test (WAT) and the Situation Reaction Test (SRT), which help them clarify their doubts. Despite this, if they still fail to resolve any issue, they convey their doubts to the interviewing officers (the president/ deputy president, SSB) so that the latter probe certain specific areas more deeply when the candidates appear before them for a personal interview.

A large number of privately run institutions in our country, besides various guide books and magazines, attempt to instruct the prospective candidates as to the kind of stories they should write to get selected. However, based on my long experience in this field, I am of the firm opinion that such coaching, instead of helping a candidate, proves a great hindrance in his selection if the experts at the SSBs do their job conscientiously. Is it possible to convince an expert tester that water in a particular container is pure by merely painting it from outside? I would say it is not. Unless a candidate

responds to the pictures naturally and spontaneously, he will fail to reveal his true personality which, I can assure you, is invariably better than the pretended one. Nothing irks the expert more than artificiality displayed by the candidate in his responses. One should remember that all of us have our strengths and shortcomings and that no two personalities are ever identical. In order that candidates are able to do well in this test, coaching should aim at elimination of personality defects rather than practice in writing stories, since practice only helps a candidate to project an affected personality.

It would not be wrong to say that institutions, guide books and magazines which attempt to teach candidates how to respond to psychological tests artificially are doing disservice to both the youth and the country, since quite a large number of candidates who are otherwise good fail to make the grade by learning to reveal what they really are not.

Hence, I suggest that a candidate should fortify his strong points and eliminate his shortcomings rather than waste time in learning the kind of stories which do not project his true personality. An applicant who takes pains to eliminate his personality defects will automatically write stories which will show him in good light. I recommend the following books for this purpose: *Hints For Self-Culture* by Hardayal, *Thoughts Of Power* by Swami Vivekananda, biographies of Guru Gobind Singh, Shivaji and Napoleon; and *Ideals Scrap Book* published by Ideals Publishing Co, Milwaukee 1, Wisconsin, USA.

The best way to overcome one's shortcomings is to carry out an objective self analysis. Insight into one's weaknesses coupled with a strong motivation to eliminate them will amount to winning a major phase of the battle. The recommended books will go a long way in achieving your aim of developing a well-balanced personality.

CAREER COUNSELLING

I want to take up tourism as a career. Please provide the necessary details.

Ajay Sharma, Guna (Madhya Pradesh)

You have two options. First, secure a degree or diploma in tourism. The course is of six months to two years duration. While quite a few leading universities have full-time courses in tourism, some private institutions also conduct correspondence courses. Thereafter, either get in touch with the nearest employment exchange—where you may be informed of a vacancy in the India Tourism Development Corporation (ITDC), if any—or you could drop a letter to the ITDC Ltd, Jeevan Vihar, Sansad Marg, New Delhi-110 001. ITDC conducts various tourism programmes from time to time. Similarly, YMCA conducts courses in tourism. Alternatively, get in touch with your state tourism department, leading hotels or travel agencies for on-the-job training. Since selection is not scheduled, keep in regular touch with them.

I'm a 12th class student with Biology, Physics, Chemistry, Hindi and English as my subjects. How can I get admission in a medical college of a developed country—preferably on a scholarship?

Girdhar Singh Rautella, Allahabad

Most countries have their embassies in New Delhi and counsel offices in leading cities. Decide the country and the university you wish to attend and contact the embassy or consulate concerned. If the US is what you have in mind, write to the Student Advisor, USEFI, Regional Office "Sundeept", 4 New Marine Lines, Bombay-20, or USEFI, Fulbright House, 42 Hailey Road, New Delhi-110 001. If you desire a scholarship, first seek admission in the university of your choice. Refer our March 1982 issue for the list of organisations that give loans and scholarships to students going abroad.

I'm 17 and wish to join the army, air force or naval intelligence. Please give me the details.

Binod Kumar Shaw, Calcutta

There is no separate exam or selection procedure for the intelligence branch in the three wings of the armed forces. Since intelligence is a wing of the armed forces, you have to qualify for the army, navy or air force, depending on your choice. Once you're selected for the armed forces, for which exams are held by the UPSC—NDA, CDS or OTS exams—

you could opt for the intelligence wing for which internal exams are held and officers recommended for this corps.

How can I, a first-class Commerce postgraduate, join as a clerk in the UN Secretariat?

D. Nagendra Prasad, Anantapur

For complete information, write to:

B.K. Bhaumik,
Administration Officer
or
F. Chakravarty
Information Assistant,
55 Lodi Estate,
New Delhi-110 003

I have been working as PA to the Director, National Institute of Oceanography, (NIO) Goa—which is one of the many laboratories under CSIR, New Delhi—for the last three and a half years. Last year, I sat for a departmental competitive exam conducted by CSIR and stood second. On the basis of my performance, I have been offered the post of Assistant in NIO itself. At the same time, I have qualified for BSRB and have been asked to join Syndicate Bank as a Stenographer. What should I opt for?

M.G. Dalvi, Dona Paula (Goa)

Stay with NIO. Joining the bank will mean a loss of seniority. NIO has another attraction: you could rise there as your performance has been exceptional in the departmental exam.

I'm doing LL.B. from Lucknow University and want to join the Oxford University for Bar-at-Law. What are the essential qualifications? Any scholarship facility in the Education Ministry?

Shukrant Singh, Lucknow

To be 'called to the Bar', you must first obtain admission to one of the four Inns of Court. The minimum qualification is a degree and age 21 years. For further details, write to Secretary, Council of Legal Education, 4 Gray's Inn Place, London WC1R 5DX. Foreign exchange is only released for Bar-at-Law studies when the candidate is simultaneously studying for another course in Britain. No scholarships are available.

I'm doing M.A. in Archaeology. What are its future prospects? If I also have a diploma in tourism, can I easily get a job in ITDC?

Rakesh Sinha, Varanasi

The Archaeological Survey of India takes in archaeologists, as do uni-

versities and national museums. Archaeologists can also work as tourist officers, especially if they have taken additional training in the field of tourism. ITDC takes in people through an open competition.

I'm a Chemistry (Hons) graduate and am interested in taking up a Sugar Technology course. Which institutions in Maharashtra are conducting this course?

Udayising Ganpatsing Rajput, Satara

National Sugar Institute, Ministry of Agriculture, Department of Food, Kanpur, conducts a 2½-year post-B.Sc. diploma course in Sugar Technology, leading to the government-recognised Associateship of National Sugar Institute (ANSI). ANSI candidates are appointed to the posts of Laboratory In-charge, Manufacturing (Shift) Chemist, Chief Chemist, Technologist, etc., in the sugar industry and other departments dealing with sugar. They can also be recruited to superior posts and services requiring specialised training in Sugar Technology.

I'm doing my graduation in Economics (second year) and have obtained a diploma in Architecture from British Institutes. Can I now obtain a recognised degree in Architecture? B. Arch. as an external candidate from any institute?

Mohd Yousuf, Srinagar

The diploma of British Institutes is not considered as a qualification for further studies. If you work hard for a good division in graduation, you could specialise in Economics.

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many students ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling, Career & Competition Times, 10 Darya ganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

CAREER COUNSELLING
COUPON

ALPHA's specialised professional courses

★ MEDICAL ENTRANCE EXAM '84

Students of XII Std, PUC, start early to make sure of a medical seat.

ALPHA's specialised course, designed on the new syllabus and past question papers of all medical colleges in the country, will guide you towards the goal.

The examiner cannot go beyond the boundary of the QUESTION BANK (4,000 questions and answers) compiled by Alpha's experts. ★ **FOUNDATION COURSE FOR '85 EXAM** Students of XI Std, first PUC, etc strengthen your chances for the '85 medical entrance exam by undergoing the foundation course. Both the above courses will be useful for the regular courses also.

★ CIVIL SERVICES

(Prelim) (IAS)'84

Graduates desiring to join the highly coveted Indian Administrative Service can prepare early to pass this highly competitive exam with ease. Alpha's QUESTION BANK (3,000 questions and answers) will guide you to the goal.

★ MBA ENTRANCE EXAM

Excellent coaching for MBA entrance exams conducted by the Indian Institute of Management (Ahmedabad, Bangalore and Calcutta) XLRI Jamshedpur, Bajaj Institute of management, foreign and Indian Universities. Study materials prepared on the basis of the previous question papers will help you to pass the exam in flying colours.

★ C.A. ENTRANCE EXAM

Result oriented coaching by experts. PUC, HSC are now eligible to appear for the exam.

GROUP DISCUSSION

HAS PLANNING FAILED IN INDIA?

BY A.K. NANDA

A: I think economic planning has, by and large, failed in India. Nothing makes it so unmistakably clear than the wide inequality in the redistribution of national income. The top five per cent people get away with 60 per cent of the national income, and half the population is left to grind below the poverty line.

B: I agree with your facts but not with your point of view. Inequality is not of the plans' making. Inequality had existed in India before the advent of planning. People who had already been in an advantageous position did derive quick gains from investments made under planning and appropriated the gains to themselves. So, today's inequality is the accumulated result of past years and not directly caused by planning failure.

A: Inequality has been perpetuated with the increase in poverty and has rendered planning a futile exercise.

B: A great many measures, including taxation, have been taken to correct the imbalance and more are in the offing.

C: I think you are taking trees for the wood. It is not planning which has failed. The failure is of the strategy which laid heavy emphasis on capital-goods industries in the initial years of development to the detriment of agriculture.

B: India took to planning soon after it became independent, and its aspirations to build an industrial economy were given an important place in plan documents. Under the pressure of industrialisation it did bring about certain social and economic changes which helped to speed up the process of industrial development, and seek full utilisation of human and physical resources.

A: I don't think so. Three decades of planning have given this country numerous landless agricultural labourers and a lot of small and marginal farmers who eke out a living not enough for survival. Yet, it is on them that agricultural prosperity depends. Poverty in rural and urban areas is widespread. Because of increasing unemployment and under-employment, growth in national product is low.

C: What led to failure of planning in India is the recourse to deficit financing and foreign aid. Instead of helping the economy to move up to a higher level of activity they placed hurdles on growth.

D: Yes, you are partially correct. Indian planning aimed to achieve growth with social justice within the democratic process. That may be its particular weakness, as you say, because it has shown no quick results either in growth or social justice. However, that is where its peculiar strength lies. It is decentralised and is open to being remodelled according to the need.

E: I do not get you, really.

D: It is not merely a question of investing resources to achieve the desired end. Coordinated efforts are directed towards transforming a traditional, caste-ridden society and its institutions and practices into a modern, achievement-oriented society, with technology and capital being given the pride of place. The plans have succeeded in making structural changes in the economy. Our industrial base has been strengthened and diversified, accompanied by improvement in the basic infrastructure. Our country has a vast technically trained man power and a large corps of professionally trained managers. The spirit of entrepreneurship is far more widespread. It is now much easier for capital to be raised for new ventures, partly as a result of the increasing saving rate.

E: These gains are at best peripheral and incidental rather than structural. Otherwise, how could one explain the woeful performance of the public sector, supposed to be at the commanding heights of the economy, and the widespread industrial unrest in the organised sector where labour is well-protected and well-paid, such high rate of inflation, balance-of-payment crisis, farm output stagnating despite green revolution, deterioration in administration and failure to curb the growth of population.

A: It is, perhaps, time to think about alternatives to planning now that it has failed to deliver the goods.

C: The alternative to planning is free enterprise. Planning is a necessary evil. What is required is change in the strategy. It would have made a lot of difference if the strategy had been properly formulated, keeping in view the agrarian character of the economy. The agricultural population has remained unaffected by the modernising trends in

our society.

E: The most important thing was growth. If planning in India failed to achieve growth it failed in everything else.

D: Yes, true, but not wholly true. The total development of a country cannot be measured by growth in gross national product. Each plan has constraints in that it has to be administered within the social, economic and administrative framework available in the country. The development programme must be big enough to benefit a large number of people and a big development programme cannot be undertaken with the resources available in the country. The implementation remained exclusively the government's responsibility with the consent of the people, and the government's own bureaucracy was not fully equal to the task. Despite these constraints, planning in India has made a dent into the structure and the emerging industrial structure, with a full view to the industrial goods produced in the country, draws admiration from foreign visitors. If one takes a full view, planning has not failed in India, though its progress has been interrupted by constraints of many kinds.

Assessment: Participating in group discussions requires skill and confidence. In the mock discussion given above the defects of a candidate have been emphasised. Candidate 'A' begins with a lot of self-confidence but is unable to hold on to his view with more arguments. He commits himself to a specific position and is unable to appreciate other views opposed to his. 'B' is more eager to contradict others than to state his own view clearly. 'C' tries to read between the words, to confuse others rather than guide the discussion. Candidate 'D', on the other hand, although he begins much later, is soon able to show his grasp of the subject. He puts the subject in its proper perspective and pleads favour of taking a full view. He is polite and lets others speak first, but when he does speak, he does it thoroughly. He steers the discussion clear through conflicting views. Candidate 'E' fails to make his mark because he is unable to see beyond the immediate and assess the subject. He does not look at those facts which are unfavourable to his view point. Under the circumstances, the choice is clear. Private and public firms and other organisations need people who are well-balanced, clear in their heads about what they are thinking, polite, intelligent and can hold their own in any conference. Of all the candidates, 'D' emerges as the most capable. 

NEW INTERNATIONAL
INFORMATION ORDER
**SOONER THE
BETTER**
BY ASHUTOSH DIKSHIT

If the developing nations are to mobilise public opinion in the world for their needs and demands, they need an effective information system. The biased news coverage by the Western news agencies has forced the Third World to look for a new international information order.

The demand for a new international information order (NIIO) has been one of the most contentious issues of the North South dialogue in recent years. Encouraged by the seemingly lessening control of the superpowers over international events and a growing confidence in their own collective power, the developing countries of the world have, through international agencies like the UNESCO, mounted pressure on the Western countries to review the existing international information order. They have accused the West of cultural domination through its control of the major news collecting resources, through the continual flow of its cultural products across the world, and through the financial power of its advertising agencies, its international newspaper chains, its newsprint companies, and its hold over the electromagnetic spectrum on which all broadcasting depends. The swamping effect of this vast information machinery has transformed the social fabric of the Third World countries.

Nearly all the Third World countries have a colonial background and the existing information order may be looked upon as part of their colonial legacy. Although the former colonies became politically independent in the years following World War II, their dependence on the respective imperial countries continued in the economic and cultural spheres. This neo-colonialism has largely been a function of 'media imperialism' through which public opinion in the Third World countries has been continuously moulded with a view to expanding the demand for the consumer products of

the West. This also involves imperceptible attempts at inculcating in these underdeveloped countries Western cultural values in preference to indigenous traditional ones.

Another aspect of the present international information order has been the presentation of a distorted and biased picture of the Third World. The major news agencies, oblivious of the Third World interests, provide news which they believe their client magazines will welcome because it will increase their circulation. Famines, coups and corruption therefore feature as the major news items about the Third World countries. This vicious circle of supply and demand naturally damages the interests of the developing nations in their search for capital and markets, and for a just share of world resources.

The following facts speak volumes about the cultural domination of the South by the North's information media.

The five major news agencies of the world, Reuters, Agence France-Presse, UPI, AP and Tass, belong to four major powers but supply 90 per cent of the international news passing into the news rooms all over the world. All these agencies have emerged from the imperial and post-imperial competition of the last century by which the great powers tried to spread their news networks throughout their areas of economic and political suzerainty. Among themselves they have nearly 50,000 offices spread around the globe. Their domination of the Third World media is almost total. Take South America, for example. Fifty per cent of all news published in the South American papers comes from the US agencies. UPI and AP, 10 per cent from Reuters and Agence Presse; while the Third World news agencies contribute barely two per cent.

Turning to television, more than 50 per cent of all programmes shown in Chile, 34 per cent in Colombia, 62 per cent in Uruguay and 84 per cent in Guatemala are of US origin. American export of feature films is 50 per cent to Colombia, Chile and Uruguay, and nearly 70 per cent to Bolivia, Brazil, Ecuador, Paraguay, Peru and Venezuela. The same applies for countries in Asia and the Middle East. In Thailand, for example, 90 per cent of all films shown are American.

The Third World demand for a review of the existing information order led to the appointment of the MacBride Commission by UNESCO. Although essentially a compromise document, the Commission's report contains several suggestions for a more balanced flow of information. Third World countries have

also proposed several changes. They contend that developing countries must devise their own national communication policies which should involve exchange of expertise, journalists and technicians among themselves, while working with developed countries to establish their autonomous news media. Stress has also been laid on the need for a campaign to make the West realise the deficiencies in the existing order and to persuade it to 'decolonise' its information resources. Developing countries should try to make more equitable use of satellites and other networks at the same time strengthening their own news agencies and news pools and promoting better respect for their output.

A major role has been assigned for UNESCO. This includes the training of Third World journalists, research into how technology may be transferred from North to South and also a proposal for developed countries to tax their cultural exports and use them to create an international copyright fund to be administered by UNESCO. To facilitate the implementation of NIIO, UNESCO has also set up the International Programme for Development Communication (IPDC). The main aim of IPDC is to help improve information systems in developing countries by providing financial assistance and the necessary communications equipment.

The criteria for financial allocation are: the project for which finances are sought should be relevant for communication development; it should increase the capacity to disseminate information. Preference is given to those schemes which promote self-reliance and the use of indigenous techniques.

The demand for NIIO has many negative aspects as well. Certain governments support the demand for reasons far from honourable. It has given them the excuse to repress the media in their country. Thus, the Western view that the demand for NIIO is just an attempt by Third World dictators to gain an authoritarian hold over domestic media is not completely unfounded.

That a new international information order is needed is indisputable, and every effort has to be made to see that the voice of the Third World is not strangled. But at the same time measures have to be taken to ensure that it is not misused by Third World governments to obstruct free flow of information in their own country. The new order should make the Third World media stable enough to guard against not only foreign media domination but even domestic repression. □

A confident erect posture shows a successful person - be it male or female. Research has proved that a tall posture is more appealing to the opposite sex. Are you being denied the good things of life just because of a poor posture? Don't despair, whatever be your age and whatever be your present state, here is good news for you.

A Super New Discovery

An amazing posture correction programme discovered in Switzerland is NOW available in India for the first time. New Height is a comprehensive programme, which helps you attain your full height potential by straightening your spinal column, to help you stand taller and walk with greater stability and confidence.

The New Height programme is absolutely exhaustive, encompassing exercises, diets, visual techniques and even the psychological aspect of attaining a super new posture. This programme is so remarkably effective and new for both men and women, that it requires

no stretching machines, no pills or medications and no expensive equipment. All you need is this amazing programme and your own desire to look better and walk taller.

Guaranteed Satisfaction or your Money Back

Try our 'New Height' programme on our unconditional money-back guarantee. This fantastic programme is yours to examine and try for 14 full days. If within this period you don't already see a dramatic all-round improvement in your posture and height, simply return the programme for a full and immediate refund (less P & F) no questions asked.

THE FREEDOM MOVEMENT

BY RAJU MANSUKHANI

Quit India Movement

World War II broke out in 1939. Although the Congress was in full sympathy with the victims of fascist aggression, they resented the fact that the Government of India immediately joined the war without consulting the Congress or the elected members of the Central Legislature. Its leaders demanded that effective power be put into Indian hands before it could actively participate in the war. When the British Government refused, the Congress ordered its ministries to resign. However, when Japan joined the war in December 1941 and occupied Rangoon in March 1942, thus bringing the war to India's doorstep, the British became more receptive to the demands of the Congress. To secure India's cooperation, a Cabinet Minister, Sir Stafford Cripps, was sent to India in March 1942. But detailed negotiations between him and the Congress leaders broke down because the British Government refused to accept the Congress demand for an immediate transfer of power. The failure of the Cripps Mission embittered the Indians and on August 8, 1942, Gandhi gave the 'Quit India' call to the British.

The Congress had been divided over the passing of the resolution. The moderate Congressmen, the Congress Socialist Party, were in favour of the struggle. But Nehru and the communist forces were against the resolution as they felt that since the fascist forces were right at India's doorstep, this was not the time for an anti-British struggle.

The presence of the Allied forces, the shortage of foodgrains, the scorch earth tactics of the fleeing forces from Burma—all made for a high inflationary situation. The war years in Britain had witnessed strict rationing and egalitarian distribution of supplies. In India, gross mismanagement of resources and blackmarketing was prevalent.

On August 9, Gandhi and other Congress leaders were arrested and this led to a popular revolt. The leaderless and discontented people rose up everywhere. This popular upsurge was centred around Bihar, eastern UP, south-west Bengal, parts of Orissa, Maharashtra and Karnataka. Unprecedented violence, reminiscent of the mutiny, erupted.

This elemental upsurge was, how-

ever, short-lived as it was unrelated to any specific socio-economic programme at a national level. Its importance lay in the fact that it showed how far nationalist feelings had permeated.

Involvement in the war and post-war struggle

The important event in the national movement during the war was the organisation of the Azad Hind Fauj or Indian National Army (INA) by Netaji Subhas Chandra Bose in Singapore. Bose sought Japanese help against the British. He and his INA hoped to march into India with the armies of Japan from Burma. But with the collapse of Japan in 1945, the INA, too, was defeated and Bose killed in a plane accident on his way to Tokyo. After the war, the British Government decided to prosecute the soldiers and officers of the INA. Generals Shah Nawaz, Gurdial Singh Dhillon and Prem Sehgal of the INA, who had earlier been officers of the British Indian army, were put on trial at Red Fort for having turned traitors to the British Crown. The people of India, however, used the trial as a focal point to unite once again against the British. In the face of public protests and mass demonstrations, the government had to release the three generals, although the court martial held them guilty.

The attitude of the British Government changed immediately after the war because of several reasons. Britain was no longer among the major powers of the world and had to take second place to the US and the Soviet Union, both of whom favoured India's demand for independence. In Britain itself, the Labour Party, many of whose members supported the demands of the Congress, was now in power. In India, the British realised that they could no longer rely on the Indian Army, which had so far been its main source of strength. Furthermore, strikes and revolts in the forces were becoming common. The Indian people, too, were becoming more and more confident that they were going to succeed in their struggle for independence. The Post and Telegraph workers went on strike in July 1946 and in August the railway workers struck work in southern India.

The British Government finally decided to send a Cabinet mission to India to negotiate the terms of transfer of power with Indian leaders. It proposed a two-tier plan: there was to be a federation of the provinces and the states with

the federal centre controlling only defence, foreign affairs and communications; at the same time they could form regional unions to which they could surrender some of their powers by mutual agreement. While the Congress and Muslim League both accepted the plan, the two could not agree on the plan for an interim government, whose function it was to convene a Constituent Assembly to frame a constitution for free India. Ultimately, an Interim Cabinet, headed by Nehru, was formed by the Congress alone in September 1946. Although the Muslim League joined it later, in October, it decided to boycott the Constituent Assembly.

Independence and partition

Distrust between the Hindus and Muslims, which had been growing as a result of political quarrels often fanned by the British, burst into flames in August 1946. Communal riots broke out in Bengal and Bihar. In March 1947, the last Viceroy, Lord Mountbatten, declared that India was to be free—but not united. The nationalist leaders, however, did not agree to the two-nation theory and, therefore, did not agree to hand over one-third of the country to the Muslim League as the latter wanted in proportion to the number of Muslims in the Indian population. They agreed to the separation of only those areas where the influence of the League was predominant. Plebiscites were to be held in the North-West Frontier Province and the Sylhet district of Assam, as the League's influence was doubtful here.

On June 3, 1947 it was formally announced that India and Pakistan were to be free. The princely states were given the choice of joining either of the two new nations. While most states readily joined India, Junagadh, Hyderabad and Kashmir held back for a short while before joining India.

On August 15, 1947, India became independent and the new state of Pakistan was created. But the jubilation was mixed with pain as communal riots shook both the nations and lakhs of refugees had to be resettled in both countries. And in the midst of this turmoil the man who had spearheaded the nationalist movement, Mahatma Gandhi, fell victim to an assassin's bullet on January 30, 1948. Gandhi "died a martyr to the cause of unity to which he had always been devoted".

(Concluded)

MINI-MAG

SOYA—THE PERFECT BEAN

Legend has it that the first persons to eat soya beans were traders from a rich caravan waylaid by bandits in eastern China more than 4,000 years ago. Cut off and surrounded, the traders took refuge in a rocky gorge and waited for help. When their food supplies dwindled, they ate beans from a nearby plant. After being rescued, they took several of those plants home. The wild soya bean was soon domesticated and became a major staple food in Asia.

The soya bean was imported from Japan into Europe in 1792 by a German botanist, Engelbert Kaempfer. In 1804, an American clipper ship glided along the China coast, searching for cargo. Uncertain how long the return voyage would last, the skipper took on a few bags of soya beans to bolster his food reserves. And so the soya bean entered the US.

But for the next century, it had difficulty surviving there. As forage, it got limited use. Soya bean oil was considered inferior to linseed oil in the production of paint, and inferior to cottonseed oil as a food. Soya bean meal took second place to linseed meal as

*Above: Stuff from soya. Gourmet's delight
Inset: Soya pods. From China with love*

livestock feed.

But then soya bean got a patron saint. William Joseph Morse, a US Department of Agriculture agronomist, became a soya bean advocate when he was asked to find a new, dependable forage crop for a growing agricultural economy.

Morse's experiments convinced him that soya bean meal was the answer. But it wasn't enough, he realised, to discover the bean. He had to make converts in the ranks of American farmers. At night, after finishing work in the laboratory and in the field, he wrote articles on soya beans for agricultural journals. He gave lectures on the subject and met with farmers and plant scientists. Soon he had made a name for himself—and for soya beans.

The US Government commissioned Morse to write a series of pamphlets, 40 in all, on soya beans. He travelled across the country, urging farmers, research scientists and industrialists to produce and use the best

strains of soya beans. At his initiative, more than 1,000 types of soya beans were gathered in Virginia from all over the world for experimentation and study. The growing cultivation of soya beans in the Western world is due to Morse's effort—and, of course, also to simple logistics: a kilogram of processed soya bean yields 792 grams of high protein meal and 178 grams of oil. Against the backdrop of a worldwide shortage of affordable protein, the soya bean stands as a feasible substitute for expensive meat products. At the same time, cheap soya bean meal feeds growing numbers of livestock and poultry. But use of the soya bean for food oil, a protein substitute, and animal feed scarcely scratches the surface of its utility. Soya bean byproducts find hundreds of uses in the home and in industry, from margarine and frozen desserts to adhesives and printer's ink.

Latex paints, antibiotics, lubricants, rubber tyres—all are produced with ingredients from the soya bean. And that's just a start. Add pastry toppings, baby foods, candy bars, salad dressings, shortening, cake mixes, crackers, bread, marshmallows. Then there are industrial byproducts, including brush bristles, disinfectants, pesticides, caulking compounds, linoleum backings, wallboard and plywood adhesives, and fertilisers.

As food, soya beans may be flaked, ground or powdered, and made into a sauce, oil or meal. One of the most savoury soya bean dishes is a kind of curd called tofu. It is made from soaked beans that are cooked, ground, pressed and treated with salt. The beans, mixed with fat, curdle like cottage cheese. Then the curds are separated from the liquids and pressed into cakes. It is used as a meat replacement in stews, or simply fried with vegetables. In either case, the result is a bland, light but protein rich dish.

Soya flour is used to fortify and improve the nutritional quality of many bakery products. Soya fibre provides the body with healthy roughage and may improve the body's ability to process sugars and fats, possibly benefiting persons with diabetes and cholesterol problems. Soya milk has been used successfully in formulas for infants who are allergic to cow's milk, and also is a boon for persons who, because of an enzyme deficiency, are unable to digest cow's milk. Since it contains less sodium than cow's milk, soya milk is better for persons with high blood pressure.

US research scientists are trying to produce a perfect hybrid—a soya bean plant that

will survive in a great variety of climates, bear plentiful pods, and prosper even if rainfall is limited. It's not easy. Soya beans, unlike corn, resist hybridisation. The very latest research in the field of genetic engineering. Scientists hope that the newly developed technique of DNA transfer between cells will enable them to produce improved hybrid plants.

To flower and mature properly, soya beans require just the right amount of daylight. If they are grown too far south, they get too much light, flower prematurely and produce few beans. Planted too far north, they get too little light, mature slowly and perish in frost. Most varieties of soya beans produced in the US flourish only at certain latitudes and in climates conducive to their maturation. The principal goal of scientists is to develop a

hardy soya bean that will grow anywhere.

Developing the perfect soya bean plant, researchers say, will go a long way toward ameliorating the protein malnutrition that is widespread in developing countries. One hectare of land used for grazing purposes will produce enough meat to satisfy one man's protein needs for 190 days, planted in wheat it will provide enough protein for 2,167 days. But that hectare, planted in soya beans, will yield enough protein for 5,496 days.

Since the soya bean is the world's richest natural source of protein food, agronomists say, no efforts should be spared to improve the plant. The task is formidable, but they consider the work worthwhile and are confident of eventual success.

OF PINS & PIN-PRICKS

The common pin which we use and disuse with such utter disdain today, used to be not so common and certainly not within the reach of the common man a couple of centuries ago. Made of costly materials like ivory, gold, silver, bronze or brass, pins were rare and expensive. Indeed, it required a fortune to own a couple of them. Isn't it strange, then, that a man of this century uses, and loses, without any qualms, innumerable pins every day?

Pin losing would have been prickly, to say the least, for Queen Victoria's seamstress or any of the Czar's valets. As the last Czar lost to the proletariat, so did the elitist pin to John Tilsby of England. He was the first to make pins of drawn iron wire by establishing a pin-manufacturing business in 1926. Thanks are due also to Daniel Foot Taylor of Birmingham, who mechanised and perfected the pin-making machines.

No less prickly than the pin is its sister, the common household needle. One pricks in the office, the other at home. Both are equally indispensable. That is why, it seems, we have the phrase 'pins and needles' for the tingling sensation we feel when we get cramps.

Indeed, philology has a suitable phrase for many an occasion. Take, for example, the expression 'a merry pin'. How innocently joyful the phrase sounds. It signifies that you are in a merry temper. However, in a generous mood you may get rather lavish and give 'pin money' to your better half. While she may 'pin point' you for the former, she may 'pin prick' you for the latter as pin money is money allotted to a wife for private expenses—ostensibly to buy pins, after all?

The expression 'pin money' originated, it seems, from the importance attached to hair-pins. A G. Gardiner, while pitying the lot of an aged husband in a May-December wedding, explains how young and prim Mrs Jones trips gaily into a shop, only to buy pins and strolls out of it with heavier bags and a lighter purse, while poor Mr Jones stands dumbfounded with vicarious pleasure, sinking happily in a quagmire of debt.

Pins have caused yet more pricks. Remember O'Henry's world famous short story, *The Gift Of The Magi*? Just think of the

Dear, I need
more PIN MONEY

young hero's plight, all centred round those tiny trouble-shooters—the pins. When Della had her long cascading hair, Jim had no money to buy her the expensive tortoise-shell pins. And when he bought them, she had no hair to adorn them on.

The little mischief-makers do not stop here. Take the term 'pin-up'. I am afraid, it has an explosive quality about it. Let a wife know of it and she will be inflamed. In fact, a 'pin-up' is a girl who might have her photograph pinned up on the wall for admiration. So there is a prick in the very expression.

The ancient Greeks and Romans gave rather an elevated position to the pin as they used this little item to fasten their tunics and chemise before buttons were invented. They would have felt as lost as we do today without pins. Today, you too can be 'pinned down' to your office if your papers get lost for want of pins.

Yet, imagine how much more lack-lustre

life would be without pins and pinpricks. Public speeches lose much of their monotony and tedium when a heckler pokes in. Parliaments, with all their sombre dignity, have their lively spells with a little brick-batting and pin-pricking. Flashes of wit enliven the otherwise dull atmosphere with light-hearted banter.

Indeed, pins seem to be pinned on to Parliaments. Way back, in the century when women in Parliament were unheard of, Lady Astor became the first woman to cross the threshold of the British Parliament. Opposed to the idea of a woman entering their precincts, many a male chauvinist fought tooth and nail. When both the weapons failed, some gave in but a few took to pin-pricks. Once, during a session, as Lady Astor stood up to speak on some vital issue, a heckler tried to be smart. "Well, my dear Lady," interrupted he, "could you tell me how many toes a pig has?" The lady member stopped her speech, smiled and said, "Take off your shoes, dear sir, and count for yourself." Amid guffaws of laughter the outwitted member resumed his seat. But I am sure, he had had the feeling of sitting on a pin-cushion with all the pins stuck upside down.

Hospital patient "I've been on pins and needles all the week."

An actress congratulated Ilka Chase on her book *Past Imperfect*. "I enjoyed it," she said. "Who wrote it for you?"

"Darling," clawed Ilka, "I'm so glad you liked it, who read it for you?"

Rita, Rourkela

Booktalk

PAKISTAN'S SHAME

Having used up all the Indian years of his past life in *Midnight's Children*, Salman Rushdie now exhausts the reserves of his experiences about this sub-continent in a novel about Pakistan, written in faraway England. With *Shame*, Rushdie has slashed at and cut, to shreds the umbilical cord that connected him, however remotely, to that country.

Rushdie told us on his recent visit to India that his next book is a "very bitter book about Pakistan". It now transpires that was an understatement: it is more than bitter, it is blasphemous.

But it's a shame *Shame* will be banned in Pakistan.

It's understandable, however. For the book's protagonists, Iskander Harappa and Raza Hyder, symbolise Bhutto and Zia-ul-Haq and Rushdie tears into the lives of both, rips apart the myths, points to their wounds and bites at them. Of course, it hurts.

Rushdie revels in fantasy, in the supernatural, the extraordinary. His characters are all special and doomed—the women beautiful and elusive and jerking hysterically and unstoppably to become terminal cases of short nerves. The men, not half as strong-willed as their better halves, but possessing qualities that catapult them into positions of power.

Shame is all about what people do to cling to that power. It's a shame, Rushdie demonstrates again and again, the way power is misused, abused and wielded. It reduces giants to pygmies and transforms mortals into colossals—overnight! Power—the greatest aphrodisiac today and castration tomorrow!

The author's fine eye for detail misses nothing. In his novels, you don't encounter plots—you have to traverse utterly complex

**SHAME* by Salman Rushdie, published by Rupa & Co, pages: 286; price: Rs 30.

RHYME & WIN

There was an old man of Peru,
Who dreamt he was eating his shoe,
He woke up in the night,
In a terrible fright,
And found it was perfectly true.

—Rajendra Dhingra, Ahmedabad

That's a limerick—a light humorous verse in a five-line jingle, with a rhyme scheme of aabba.

Can you coin one too? Enter our LIMERICK CONTEST, latest by October 25, by completing any one or all of the three alternative first lines:

- (i) An old maid who lived in Cuba
- (ii) A boring old colonel called Smith
- (iii) A young man called Isaac Newton

The 10 best entries will be published in our forthcoming issues and will be entitled to a surprise gift.

labyrinths as a master story-teller constantly hurls new surprises at you. This novelist is concerned more with content and conviction than with pretty prose. And he doesn't give a damn whether you like it or not.

Which is precisely why this book is so powerful and original. It'll be a shame if you neglect to read it.

Amit Agarwal, New Delhi

Extract.

The last time I visited Pakistan, I was told this joke. God came down to Pakistan to see how things were going. He asked General Ayub Khan why the place was in such a mess. Ayub replied: "It's these no-good corrupt civilians, Sir. Just get rid of them and leave the rest to me." So God eliminated the politicians. After a while, He returned, things were even worse than before. This time He asked Yahya Khan for an explanation. Yahya blamed Ayub, his sons and their hangers-on for the troubles. "Do the needful," Yahya begged, "and I'll clean the place up good and proper." So God's thunderbolts wiped out Ayub. On His third visit, He found a catastrophe, so He agreed with Zulfikar Ali Bhutto that democracy must return. He turned Yahya into a cockroach and swept him under a carpet, but, a few years later, he noticed the situation was still pretty awful. He went to General Zia and offered him supreme power: on one condition. "Anything, God," the General replied, "You name it." So God said, "Answer me one question and I'll flatten Bhutto for you like a chapati." Zia said: "Fire away." So God whispered in his ear: "Look, I do all these things for this country, but what I don't understand is, why don't people seem to love me any more?"

It seems clear that the President of Pakistan managed to give God a satisfactory answer. I wonder what it was.

Centre-Stage

INDIAN DANCES—4

Kathakali:

It is a dance-drama, dramatic in form as opposed to the other styles of dance which are narrative. It is often confused with Kathak, from which it is totally different.

The main feature of Kathakali is that it takes up epic mythological themes and portrays them through an elaborate dramatic spectacle. It is characterised in supernatural grandeur and oversized costumes to give an enlarged impression of human proportions and to identify it with the gods. The actors wear complex symbolic colour make-ups and masks. The masks are painted and moulded on the faces of the actors, each mask symbolising a character type.

The female role in Kathakali is pre-eminently a portrayal of the ideal woman, refined and beautiful. Till recently even the female parts were played by men. Human characters are represented by Brahmins, sages, messengers and charioteers.

Among the famous female exponents of Kathakali dance are Revati and K. Venkitt. Among the males we have, Kalamandalam Murali, K. Sankaranarayanan. Govindan

Complex make-up and oversized masks and costumes—the trademark of Kathakali.

Kutty, K. Vasunni, Raman Kutty Nair, Kalamandalam Gopi and Padmanabhan

Ottan Tullal is a solo dance which employs Kathakali gestures and *abhinaya*. The origin of this dance is attributed to a scholarly poet and musician Kunju Nambiar. His hereditary profession was that of a milavu player in the theatre of Chakkaiyars. One day while accompanying Chakkaiyar's Kuthu performance, he struck a wrong note for which he was publicly rebuked. In retaliation, Kunju conceived and created a different kind of dramatic entertainment in Malayalam. He composed a story poem in the ballad style of *Tullal-pattu* (leaping songs) enacted by solo artists. Thus, *Ottan Tullal* became a rival entertainment for the Chakkaiyars.

Among other dances in Kathakali are *To-dayam*, a benedictory dance performed by young dancers behind the stage, and *Purapaddu*, a dance prelude of rare classical beauty, performed by a male and female character.

V Krishnaswamy, New Delhi
(To be continued)

HOW Y'S ARE YOU?

1. When is a man like frozen rain?
2. What did the big rose say to the little rose?
3. What did the big strawberry say to the little strawberry?
4. Why is a glass of water the mother of telephone?
5. In mid-July what's worse than raining cats and dogs?
6. What is the word that when you take away the first two letters makes you sick?

Answers

1. When he is hale
2. Hi there, Bud!
3. How did you get into this jam?
4. Because water is a necessity and telephone is an invention. We are all aware of the old saying that "Necessity is the mother of invention."
5. Hailing taxis, of course.
6. Music.

Sanjeev Agarwal, Jyotipuram

STAMPED IN MEMORY

Do you stick a stamp in your album and forget all about it? Well, don't. Every stamp has a telling tale to tell—we recount some of them in this column.

THE SWEDISH Post Office issued a miniature sheet in 1981 on their film history with five motifs taken from Swedish films. *The Coachman*, *Intermezzo*, *The Gosta Berling Saga*, *Persecution* and *Cries And Whispers*. The first Swedish motion picture was filmed in 1897. During 1920 to 1923, Victor Sjöström and Mauritz Stiller directed two great films: *The Coachman* and *The Gosta Berling Saga*. Around 1930, films with accompanying sound track made their appearance, and in 1936 Molander made *Intermezzo*.

In the 1940s, a more serious approach prevailed where escapism was triumphant. This was when Ingmar Bergman entered the Swedish film firm with *Persecution* in 1944. Though he did not direct it, he wrote the script. Bergman's films soon became famous and totally dominated Swedish films and drew rare reviews worldwide. With the subsequent release of the *Seventh Seal*, *Wild Strawberries*, *The Silence* and *The Virgin Spring*, Bergman established himself among the top echelons of great directors of all time.

Five stamps of the miniature sheet featured one scene each of the five great films of Sweden. In the 150-kroner stamp, one can see Bergman with Gosta Ekman in *Intermezzo*.

SMOKING IS gravely damaging for health. Statistics reveal that the death rate from lung cancer among smokers is over 10 times that of non-smokers and 80 per cent of recorded lung-cancer patients are smokers. Smoking also causes ulcers, heart dis-

eases, and affects the brain and kidneys. Peculiarly enough, the incidence of smoking is higher among those of Asian or African origin than it is among those from Europe or the U.S.

Recently, there has been a sharp rise in the number of women smokers. It is also generally accepted that the woman who smokes damages not only her health but the health of her unborn child, as the nicotine from tobacco enters the blood stream of the embryo and adversely affects its growth in the womb. Their breast-feeding is also injurious for the infant's health.

So, now, the Postal Department of Israel has joined the campaign against smoking by providing help to smokers wishing to break this deadly habit by issuing a postage stamp (above). Now, the choice is yours—smoking or health!

THE STAMP shown below portrays the joyous celebration of a traditional festival of Finland. Known as Midsummer Eve among Finns, it has long

been celebrated in memory of John the Baptist. The most important event is the burning of bonfires. Though this

custom originated from eastern Finland, it is now common throughout the country. Thousands of bonfires are lit on the shores of lakes—as the stamp depicts. Besides bonfires, many festivals like folk-dances, romantic plays, musical performances, etc., take place during Midsummer Eve. In the foreground, young people in national costume are performing folk dances.

Bent Street

A HUMAN ORCHESTRA

A HUSHED expectancy descends on the audience as a lithe, young Sardar comes swaying up to the mike. The announcement was for a musical item—but where is the man's instrument?

Then, emanating from deep inside his body, come the toe-tapping throbs of percussion, rising to a crescendo with the thudding of drums. And as a trumpet soars above the rhythm of guitars, the already energised audience breaks into a roar of approval.

Sidhu: Bridging the gap between man and machine.

That's R.S. Sidhu—the human orchestra, who can deliver a repertoire ranging from disco, rock

and jazz to Indian classical music. "Although machines like the synthesiser are replacing musical instruments, I demonstrate how the human being is superior to both," affirms Sidhu, who can imitate the sound of tabla, mridangam, trumpet, sax, synthesiser, electric guitar, etc.

Sidhu, who hails from Delhi, is currently in Bombay looking for an offer that will enable him to produce the first 'solo' disc in the world ever, which will "bridge the gap between man and machine". Any takers? Sidhu has performed extensively all over India, besides east Asia and West Germany. He has even shared the stage with Rod Stewart, Trio, a rock band from England, and the Singapore Symphony Orchestra.

"I used to imitate the sounds of birds and animals from the age of eight," reveals Sidhu. He has now expanded his range considerably in the course of a 15 year career, with the aid of yoga and breath-control techniques.

"This is a new kind of music, the likes of which the international market has not seen. It confirms that a human being is capable of anything—he can even copy a computer," opines Sidhu.

Melody, Bombay

TRUE DEMOCRACY

Spain's popular rock star Miguel Rios was about to go on stage recently at Madrid's packed Rayo Vallecano stadium. In the dense throng of friends and well-wishers gathered backstage, a uniformed policeman spotted a well-known singer and asked for her autograph. The singer accepted the policeman's pen and asked

him to hold her *porro*, a thick joint of marijuana. The policeman took a long draw and beckoned to a colleague. As the two puffed away, a friend of the rock star gleefully embraced them. "This," he declared, "is true democracy." That made Spain the first nation in Europe to legalise the use of marijuana.

BANK RECRUITMENT

PROBATIONARY OFFICERS/CLERKS

"Specialised Training in NSB Regular/Correspondence Courses has proved to be the guaranteed way to secure jobs in Banks as Probationary Officers & Clerks."

-says Editor, Citylight, Bombay.

If you have applied to State Bank of India or any Nationalised Bank Boards, for PO or Clerical Post, join our Course now.

Banking: A Rewarding Career:

Nearly 2500 Probationary Officers are recruited every year by Banks in India. This avenue of direct recruitment as Probationary Officers in Banks offers a promising career for bright young people today. Any graduate between 21 and 28 years can apply for the post. The job brings a handsome remuneration, security of service and job satisfaction. The work content is rich and varied. And, after nationalisation, Bank jobs have acquired a new status because now the Banks have taken upon themselves the responsibility of building a better India. Today, in our Banks, our social ideals find a dynamic expression. Bank jobs, therefore, offer the opportunity and challenge to participate in shaping our country's future.

Our Professional Commitment

We coach in regular Courses at Bombay, Pune and by POSTAL TUITION throughout India for objective and descriptive test of PO exams. All subjects—(1) Reasoning (verbal, logical, non verbal) (2) Quantitative Aptitude (3) General Awareness and Current Affairs (4) English Comprehension (5) Essays, letters, precis-writing—are covered exhaustively. Specialised practice books on all subjects covering thousands of typical and actual exam questions are supplied in the Course. These books are not sold to others.

Success Earned is Success Deserved:

We are just a few years old but our successes have been noted across the country. Help and recognition have come from everywhere and in abundance. Test after test, hundreds of our students join the 20 Nationalised Banks, State Bank, Associate Banks, LIC, GIC, ECGC as Officers. The subjects, syllabus, pattern of tests and examining body (NIBM) for all these exams are same. Naturally we have a single common BRPO course for all these exams. Success-oriented students join the Course well in advance of the test and benefit by our step-by-step and exhaustive coaching. Admissions are open round the year but the number of admissions is limited to the number of vacancies declared by Banks.

Selection on Merit through Competitive Exams:

When vacancies of Probationary Officers/Clerks are declared at intervals of almost every three months by one Bank or another, large numbers apply for them and appear for the intensely competitive exams based on general intelligence tests. Standards of evaluation are most rigorous and impartial. The percentage of success is lower than 0.5%. In 1979-80, from a total of 5½ lakh applicants, 2300 were taken as POs by Banks. Therefore, every single additional mark that you can get becomes important. A provenly competent, specialised and thorough coaching becomes a MUST.

NSB's Faith in Specialisation:

National School of Banking, head-quartered at Bombay, was founded a few years ago as a specialised institute providing coaching mainly for BANK RECRUITMENT exams—of POs and Clerks. It has grown rapidly and is now the largest pre recruitment training institute in the country. Our continuous research and on-going study of objective and descriptive exam question papers have contributed to our present pre-eminence as the central institute for BANK RECRUITMENT training.

The entire course materials and books are supplied on urgent basis in large instalments to those whose exams are scheduled soon.

JOIN NOW AND PREPARE FOR A RICH AND REWARDING CAREER. For details of vacancies, application forms and our special courses, write today with Rs. 2/- P.O. or M.O. to:

CCTIMES QUIZ CONTEST-16

**Rs 3,000
IN PRIZES
THIS
MONTH**

- 1 Who wrote the play *A Streetcar Named Desire*?
- 2 Which *raga* in Hindustani music is related to the season of rains?
- 3 A Philippines opposition leader was shot dead the day he returned back from voluntary self-exile. Who was he?
- 4 What is chromatology?
- 5 What is the name of the lightest human adult in the world on record?
- 6 Which two political parties recently came together to form the National Democratic Alliance?
- 7 Which Muslim country has decided to boycott the 1984 Los Angeles Olympics?
- 8 Which are the latest non-nuclear missiles that America has agreed to supply to Pakistan?
- 9 Yuri Gagarin was the first white man in space. Name the first black astronaut.
- 10 Who is the youngest person ever to win an Oscar?

HOW TO ENTER

- Print the answers neatly in capital letters alongwith your name, age and address.
- You may send in any number of entries, but each must be numbered accordingly and accompanied with its respective COUPON.
- Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest in case you're getting more than one.
- The decision of the judges is final and binding. No correspondence will be entered into.

Closing date for the three contests:
October 25

Address your entries to: The Editor, Career & Competition Times, 10 Daryaganj, New Delhi-110 002

Solutions to this issue's contests will be published in December.
Solutions to SPORTS QUIZ-22, KENWORDS-22 and CCTIMES QUIZ CONTEST-14 on page 78.

Sports Quiz-24 Kenwords-24

BY NAROTTAM PURI

BY HOSEY MISTRY

WIN Rs 100 IN BOOKS

- 1 A famous Indian boxer won two golds in the 1966 and 1970 Asian Games. Name him.
- 2 Who invented the all-metal racquet in tennis?
- 3 When did India first play in Davis Cup?
- 4 Did India win or lose?
- 5 Who was the first Indian to be seeded in the Wimbledon Championships?
- 6 What is the Lady Bhargava Cup in hockey?
- 7 And what is the Mir Iqbal Hussain Trophy in football?

COUPON**

**Make your gums strong.
And give your teeth a long life.**

**Only Forhan's
has an exclusive astringent to
strengthen gums.**

The tingling sensation tells you it's actually working:

Even healthy teeth need the support of strong gums — if gums become weak and spongy, your teeth no longer have a firm foundation. That's why Forhan's is formulated with an exclusive astringent that helps to tighten and

contract the gum tissue. The tingling sensation you feel when you brush your teeth with Forhan's is the astringent at work — making your gums stronger, firmer. So that your teeth stay healthy longer.

So give your teeth a firm foundation — Use Forhan's the toothpaste with an exclusive astringent.

If your gums are weak, even healthy teeth become loose.

Forhan's exclusive astringent tightens gum tissue.

making your gums stronger, giving your teeth a long life.

Trust Forhan's It's the toothpaste created by a dentist.

**Four years back,
I started by learning
on a FACIT.**

**Today,
I'm the P.A.
to the M.D.**

"It all started just a few years ago, when I began learning on a FACIT - my training institute had only FACIT typewriters. I remember asking my instructor why this was so. He had answered knowingly "You'll soon find out"

And find out, I did. FACIT with its efficient and professional touch, actually brought

confidence to my fingertips.

Thanks to my training on a FACIT, getting myself a good job was no problem. And that's not all, I was well ahead of most other secretaries.

When the time came for promotion, it was the FACIT experience that made that extra difference.

Today, I am the P.A. to the M.D., thanks to my old contacts with the FACIT. And this contact remains till today.

A few words of advice to all those of you who find yourself starting on a career in typing - start with FACIT. It gives you a head start."

Also available for Central Government Departments under D.G.S. & D. Rate Contract.

NSB
**Your Course
to a Career in
Banking**

Bank Recruitment tests are considered toughest among the objective competitive exams. Examination blues and jitters are not an uncommon spectacle at Bank Recruitment exam halls.

In these intensely competitive exams—and particularly those of Bank Probationary Officers—what ultimately leads you to success is not only how well you prepare before the exam, but also how well you gear up yourself to think spontaneously while you are in the examination hall. What a candidate, therefore, needs most is the TOP OF THE WORLD FEELING, before and during the exam in the examination hall.

NSB accomplishes exactly this critical task. A candidate, who studies thoroughly, our specialised Books and materials,—developed and perfected over the years—can alone marshal his mind and thoughts to accept the gauntlet and challenge of the P.O. examinations. Besides, our unique and well known achievement of having succeeded in building a parallel Question Bank, years of specialisation and research, analysis and on-going study of P.O. exams, their changing patterns—and timely revision of our Courses—is what has enabled NSB to fully unravel the mystery of Bank P.O. exams and place our students—and

resultantly NSB—on the Top—as a coaching Institute of All-India repute and unrivalled distinction.

No wonder our students join Banks as Probationary Officers and Clerks, in their thousands.

Students!

**Come together
and know
your country & people**

**Accommodation and all meals
for only Rs. 60 per day**

Here is some fun for you & your friends. You could even combine your trip with a school excursion. Make a group of a minimum of fifteen and take an educational cum sightseeing tour. Explore the crisp, cool heights of Kulu, Manali and Shillong. Meet the friendly mountain people. Or unveil the beautiful shade of sanctuaries - Bharatpur, Kanha, Kaziranga and Sasan Gir. There is also the silvery charm of beaches like Kovalam and Mahabalipuram. Or discover history and sanctity at Ajanta, Aurangabad, Bangalore, Bhubaneswar, Bikaner, Bodhgaya, Calcutta, Delhi, Hassan, Jaipur, Jammu, Kanhipuram, Khajuraho, Konarak, Kushinagar, Madurai,

Mandu, Mysore, Patna, Sanchi, Thanjavur, Tiruchirappalli, Udaipur and Varanasi. Come, know the people from all over your country.

If you wish, we could even arrange for local transport for sightseeing at concessional rates.

All you need is to forward your travel plan with an application through your Principal - whether you're in school or college. Also, your group should be accompanied by a teacher or an authorised tour escort. There will be free boarding and lodging for the escort and spouse.

Offer valid till September 30th 1984

LETTERS

Modern Democracy

There is a man who shakes your world, who shakes your opinions and shakes you in the most effective way. *Changing Relations* (Sept '83) Abraham Lincoln defined democracy as "Government of the people, for the people and by the people." But now it can be redefined as follows: Democracy is the "Government of the people, for the people and by the people."

N. Purnama, Coimbatore

Best Letter: Rs 40

Full-time Job

Thank you, God for creating the peace-makers, trouble shooters and mediators, for they shall never be out of work. Otherwise, the world would soon have been full of the unemployed.

B. Rajeev, Bhagalpur

Prize-winning Letter: Rs 25

Story Of Triumph

Hello Folks (Sept '83) made interesting reading. In fact, Kapil's story of triumph provides opportunity to be gracious in defeat, to be modest in victory, to combine as a team and above all to know that greatest thing in life is not winning but fighting well.

Shashank Shekhar, Ranchi

Give me a Kapil. I will give you a myriad World Cups.

Nimesha Sinha, Patna

I have heard them saying "The World Cup was Kapil's cup of tea."

Vinod Kumar Sinha, Saharsa

It is not exactly Kapil Dev who is responsible for winning the Prudential Cup, but his leadership over efficient cricketers. In any sphere India possesses the qualities of a winner but without strong leadership. If you lead ones in all the different spheres, how are Kapil's then without any exaggeration, India will be at the zenith of victory.

Shree C. Patank, Korigaon, Orissa

Only the world cricket has been a success story for India. In other spheres, it has been a failure.

Arundhati Sinha, Patna

Chance Factor

It is a pity that the world is not a level playing field. The chances of success are not equal for everyone. The success of a country depends on the leadership and the resources available to it. The success of a person depends on the opportunities and the resources available to him. The success of a nation depends on the leadership and the resources available to it. The success of a person depends on the opportunities and the resources available to him. The success of a nation depends on the leadership and the resources available to it.

mugging up the so-called general knowledge and a few subjects that have been specified in the syllabus. What can one expect from a person who fetches the highest marks in the subject Indian Economy, but can do the least to change the circumstances in real life!

Sanjay S. Shanbhag, Karwar

Thanks for publishing Medha Jakati's mark sheet (*IAS Toppers*, Sept '83). It should help students who appeared for this exam but failed to make the grade analyse their performance with respect to their own marks.

B. K. Pachrwalla, Bhagalpur

Politicians And The Law

They say the law is deaf and dumb as it should be (*The Judiciary In India*, Sept '83). But unfortunately the politicians of today want it to listen to them on their avowed claims of 'social commitment', 'social perspective' and 'social justice' to weaker segments of society. If this were permitted to perpetuate, the rule of law would dwindle and we shall find judges turned politicians on benches. So let us not erode judiciary and infect it with slogan shouting.

Rajkumar Jain, Bhawaninandi

A Great Fiasco

The SARC (South Asian Regional Cooperation) agreement (*Current Events*, Sept '83) covers a large number of subjects but excludes the two most important ones: trade and industrialisation. It cannot, therefore, be compared with the ASEAN or Latin Common Market and even less with the European Community. It was held under the threatening clouds of anti-Tamil carnage in Sri Lanka. The Kashmir problem, the Farakka barrage, the Tamils in Sri Lanka, the Bangladesh refugees in India, and the Soviet presence in Afghanistan are the common problems yet to be solved. Considering all these factors the SARC seems to be a fiasco.

Md. Atser Ali, Cuttack

Down With Mischief-makers

How fine a movement for autonomy and self-determination by Indians abroad except those who have their homeland in India. See the News (*Sri Lanka*, Sept '83). One might think the government of India and the Indian diaspora DMK members have compromised by allowing a discussion on the subject of self-determination and organising a conference. The DMK chauvinists are not satisfied with this. They are using the issue to create a division among the Indian diaspora in Sri Lanka. They should understand that the issue is settled. The Indian diaspora in Sri Lanka is not interested in self-determination and Tamil in Sri Lanka.

A. R. Parthasarathy, Berhampur

Not A Temporary Phase

strongly object to your views on India's agricultural exports (*Current Events*, Sept '83) as a 'Temporary Phase'. Despite the severe drought of 1982-83, the foodgrains buffer stands around 12 million tonnes. Though it is true that Indian agriculture is much dependent on the vagaries of the monsoon, this dependence is now much less than what it used to be until the mid-60s. More recently, while in 1979-80 the overall agricultural production had declined by 15.5 per cent, on account of a severe drought, it declined by just three per cent or so in 1982-83 under the near similar conditions of adverse monsoon.

Monoj Kr. Mallick, Patna

Arms And Peace

India has now emerged as one of the arms exporting countries (*Current Events*, Sept '83) and its export of small arms and ammunition is expected to be worth Rs 100 crores by the end of the decade. Now, we can well hope and say that India, in the remote future, will be able to export all kinds of sophisticated arms. What would, then, be India's views on the 'non proliferation of arms' when it would itself become an exporter of sophisticated arms for economic gain? Will India be able to utilise the word 'peace' as easily as it does now?

Bipul Bhuyan, Sibsagar

Change For The Better

At last a change in the Practice Tests layout. Now I would like you to continue with this attractive new format.

Abdul Rahman, Moradabad

Security First

Our defence budget is the lowest in the world and our so called 'peace-loving' politicians smugly continue to harp on this (*India's Defence Policy*, Aug '83). We need to raise our defence budget to compete with the world. The progress of any country lies in the security of its people, for which a strong defence is indispensable. Besides arms, we should improve the plight of the soldier for he is behind every machine gun.

K. Hansh, Kangra Valley, (H.P.)

WIN A PRIZE

Do our editors promise you to say something to your teachers who you feel strongly about? Now's your chance to say exactly what you want in the margin. The first letter will win Rs 40, the second Rs 20.

So, why don't you get started?

Your letters should be legible, written/typed, not above the lines and include your full name and address. The name will be used for purposes of clarity or space.

Hello folks...

Two years is not a long period in the life of a magazine. However, for a new publication, it is. With this issue, we enter the third year of publication. During the past two years, we made swift progress; now it is time to pause and look back in retrospect. It is also the appropriate time to look forward and plan for the future. Let us start by assessing what we have provided you with to make your personality a balanced one.

The modern approach is of a holistic nature. In almost all spheres, particularly in management and administration, the officers and executives are expected to analyse the situation from different angles so that the solution arrived at can take care of the various aspects of a problem. It is, therefore, necessary, to have the mental training of examining the problem from different angles economic, political, social, managerial, etc. Keeping this in mind, we view the events from different perspectives and then prepare write-ups.

Another important thing in this context is to learn techniques and not just models. And this is precisely what we endeavour to teach you. For example, we provide not only the test papers of previous exams but also give more importance to practice tests, whereby our efforts are to explain how different problems can be solved. You would find our answers longer than the questions as we explain at length why a particular answer is correct. Another example is the English section where we explain the techniques of writing good précis, essays and paragraphs.

Thus, we help you understand the rationale behind every question and to develop the positive attitude of knowing

the correct way of doing a thing rather than accepting things as they are.

Language is the vehicle of thought. Having good ideas is not enough to achieve the desired objective. In fact, ideas are useless unless conveyed properly. Good language and expression are needed for this. Our second emphasis, therefore, is on helping you acquire a good command over language and expression. Our endeavour is to provide simple, correct English. The days of ornamental and flowery language are over. The main emphasis now is on conveying ideas effectively, convincingly and briefly. All this is kept in mind when we write for you.

The basic objective of a competition magazine is to provide comprehensive information to its readers. We perform this function in several ways. On important current situations we provide analytical articles. To write on such topics you have to understand the background. We, therefore, give you backgrounders to help you know what happened in the past. Supplementary information on current events is provided through *What's Happening?*, *News Capsule* and analysis of news items. While writing on national and international affairs, we try to analyse the situation after giving proper background and also discuss the various implications. We do not simply reproduce verbatim from newspaper clippings.

In every issue, we provide you 16 solid pages of practice tests on reasoning, quantitative aptitude, general knowledge, current affairs and English. These are prepared by experts having long standing experience in preparing such tests. The material is supplied to us only after the questions have been tested on their students and have proved satisfactory. To give you an idea of the type of questions asked in exams and the trend of papers, we often give you test papers of the previous exams. As these are sent to us by our readers who depend upon their memory, these questions may not always be as accurately reframed. However, they indicate the trend.

Our articles and write-ups are prepared by university lecturers who regularly read a number of newspapers and periodicals. Their drafts are discussed and the final write-ups

prepared. We take special care to see that a balanced report is prepared as a biased viewpoint can be harmful for those appearing in competitions and interviews.

More reading is not sufficient. For total development of the personality there must be interaction of ideas. For this it is important to participate in discussions, seminars, debates and contests. With this in view, we have encouraged our readers to organise CCTimes Clubs. More than 300 clubs have sprung up in different parts of the country and are organising academic activities for their members. We have started organising lectures and study circles to enable our readers to develop discussion skills. A beginning is being made in Delhi.

What we want is a committed readership — alive, alert and active. We feel satisfied that we have been able to achieve this. Our mail box is an indication. Day after day, we receive letters expressing appreciation or criticism and giving suggestions on areas where readers feel we were wrong. In a magazine of this dimension, some slips do occur. We always appreciate our readers when they point out the errors. We also publish corrigenda so that our readers can correct themselves.

From our first issue to the 25th, we have come a long way. It was a journey full of trials and tribulations, experimentation and discovery, mixed with a great deal of success. But far from being complacent, we believe, like the poet Robert Frost, that we have 'miles to go' before we sleep in contentment. With each successive issue we work with renewed vigour to serve the best interests and requirements of our readers. As we move on, from achievement to achievement, we are joined by more and more readers on our way. Overwhelmed by their tremendous response all we can say, in the words of Robert Browning, is

"Grow old along with me
The best is yet to be."

Thinking of driving into the automobile market boom

The opportunities in U.P. are something to think about

The Automobile and Automobile Ancillary Industry has started taking advantage of the investment climate of Uttar Pradesh. DCM-Toyota, Bajaj, Escorts—Yamaha, Lohia-Piaggio are all here in various stages of implementation.

Uttar Pradesh offers a wide spectrum of facilities and incentives to entrepreneurs setting up new industrial projects in the State.

- Total Sales Tax Exemption without any ceiling on turnover.
- No power cuts for five years, if not more.
- Fabulous subsidies and Concessional Finance in districts with developed infrastructure
- Sales Tax Deferment and special subsidies for 'Pioneer' and 'Prestige' Projects
- 'Udyog Bandhu' to speedily solve problems and remove bottlenecks.

We are listing some promising projects. You are welcome to add to the list.

| Sl No | Items | Cost of Projects
(Rs in lacs) |
|-------|---------------------------------|----------------------------------|
| 1 | Shock Absorbers | 500.00 |
| 2 | Automotive gears | 185.00 |
| 3 | Automobile Wheels | 500.00 |
| 4 | Ball & Roller Bearings | 850.00 |
| 5. | Needle Roller Bearings | 215.00 |
| 6. | Passenger Car/Truck Tube Valves | 275.00 |
| 7 | Wiper Motors | 57.00 |
| 8 | Brake Lining & Clutch Facing | 86.00 |
| 9. | Tie-rod assembly | 72.00 |
| 10. | Pistons | 752.00 |
| 11. | Automotive Rear Axles | 68.00 |
| 12. | Automotive Clutches | 74.00 |
| 13. | Hydraulic Brakes | 215.00 |

TEST YOUR WORD POWER

BY AYCEE

Tick the word or phrase you believe is *nearest in meaning* to the key word.

1. **afflict**: A: to irritate B: influence C: cause to suffer D: encroach
2. **antibiotic**: A: medicine used to prevent a disease from having an effect B: substance preventing decomposition by destroying germs C: substance able to counteract a disease D: substance used to destroy micro-organisms that infect the body
3. **apartheid**: A: division into sections B: racial segregation C: unjustified intrusion D: uncalled for criticism
4. **deteriorate**: A: to become worse B: block up C: make lower in value D: reduce in stature
5. **disrupt**: A: to throw into disorder B: deprive C: detach D: fuse
6. **edible**: A: loud enough to be heard B: fit to be eaten C: that can be read easily D: that can be made good
7. **enhance**: A: to heighten B: dignify C: give more knowledge to D: inflame with passion
8. **facet**: A: something accepted as true B: false appearance C: silly preferences D: aspect
9. **hermit**: A: one claiming to see into the future B: one liking the company of others C: one living in solitude D: a well-wisher
10. **inevitable**: A: not necessary B: absolutely essential C: unavoidable D: unexpected
11. **nestle**: A: to lie sheltered B: hide C: pamper D: protect
12. **potent**: A: powerful B: great C: filled with rage D: over-confident
13. **prerogative**: A: matter to be dealt with B: higher rank C: superior power D: special privilege
14. **profane**: A: impure B: coarse C: violent D: hateful
15. **sedition**: A: open rebellion against lawful authority B: violation of agreement C: betrayal of trust D: propaganda urging to rebellion
16. **segment**: A: small number B: section C: incomplete part D: discontented group of people
17. **segregate**: A: to isolate B: divide C: crush D: put to shame
18. **unravel**: A: to solve B: disclose C: wind off D: display
19. **watershed**: A: barrier built to keep back water and raise its level B: place where water is stored C: hollow place where water collects D: dividing line between events which take different courses
20. **whim**: A: unfulfilled desire B: unnatural behaviour C: fancy D: stubborn behaviour

(Answers on page 66)

WATCH YOUR LANGUAGE

Can you spot the misused word in this sentence: "After a series of fits and starts the stock market eked out a gain."?

For years the late Theodore Bernstein, Assistant Managing Editor of the *New York Times*, campaigned for better writing in a popular house organ called *Winners & Sinners*. Here are extracts. And what did Bernstein find wrong with that sentence about the stock market? See his remarks about "eke" below.

Amid, Among. "*Fiermen groped among the wreckage.*" "Among" means in the midst of countable things. When the things are not separable, the word is "amid" or "amidst".

As well as. "*He, as well as the producer, are Broadway newcomers.*" "As well as" is a subordinating, not a coordinating, conjunction; it is not the equivalent of "and". Therefore, its presence does not make the subject plural. The sentence should read, "... is a Broadway newcomer."

Climax. "*The drop in popularity of the larger engine reached its climax last September.*" "Climax", which comes from a Greek word meaning ladder, refers to an ascending series. A low point cannot be a climax.

Conclave. "*Secret Conclave Winds Up Discussion.*" The word "conclave" (based on the Latin "clavis," meaning key) originally referred to a room that could be locked, and now means a secret or private meeting. "Secret" is redundant, omit it.

Convince. "*Three persons tried to convince her to take her seat on the plane.*" "Persuade" would be the proper word in this construction. "Convince" may be followed by an "of" phrase or a "that" clause, but not by a "to" infinitive. "Convince" has the meaning of satisfy beyond doubt by appealing to reason. "Persuade" has the meaning of inducing or winning over by appealing to reason and feeling.

Eke. "*After a series of lulls and starts the stock market eked out a gain.*" "Eke" has Anglo-Saxon roots meaning to increase or add. When you eke something out, you add to it or supplement it. What is eked out is not the thing that results but the original stock or supply. In short, "eke out" does not mean "squeeze out", as the quoted sentence suggests.

From *Winners & Sinners* by Theodore M. Bernstein

Home is the place where, when you have to go there, They have to take you in.

Robert Frost

No society can surely be flourishing and happy, of which the far greater part of the members are poor and miserable.

Adam Smith

There is nothing either good or bad, but thinking makes it so.

William Shakespeare (Hamlet)
All animals are equal, but some animals are more equal than others.

George Orwell

A classic is something that everybody wants to have read and nobody wants to read.

Mark Twain

Some folks are wise, and some are otherwise.

Tobias Smollett

As ten millions of circles can never make a square, so the united voice of myriads cannot lend the smallest foundation to falsehood.

Oliver Goldsmith

We have just enough religion to make us hate, but not enough to make us love one another.

Jonathan Swift

SPECIAL FEATURE

INDIA AND THE COMMONWEALTH

by Ravi K. Jain

Heads of State or Government of the 47 nations of the Commonwealth will be meeting in New Delhi from November 23 to 30 this year. This is the first time India is hosting the full Commonwealth Heads of Government Meeting (CHOGM) though it hosted a Commonwealth Regional (Asia-Pacific) Meeting (CHOGRM) in September 1980. Indeed, barring five full Commonwealth Summits in Singapore (1971), Ottawa (Canada, 1973), Kingston (Jamaica, 1975), Lusaka (Zambia, 1979) and Melbourne (Australia, 1981), these biennial annual till 1963 - conferences have always been held in Britain, which also houses the Commonwealth Secretariat (established in 1965) at Marlborough House, London.

Originally called the British Commonwealth, the Commonwealth-like British institutions in general has had an evolutionary character and growth. It was not established or inaugurated on a particular day or point of time - like the UN started functioning on October 24, 1945. By the end of the nineteenth century, the British empire was fully developed and consolidated, and it had pockets or possessions in nearly all parts of the world. To ensure its efficient governance, the British devised the institution of periodic colonial or imperial conferences - consisting of the governors or viceroys of the various colonies and presided over by the British prime minister or a senior Cabinet minister of Her Majesty's Government. Over a time, as major British colonies like Canada, Australia, South Africa and New Zealand attained self-government, later called 'Dominion Status', the colonial or imperial conferences were designated as Dominion Conferences or Conferences of the British Commonwealth of Nations, especially after 1930 (i.e., after the adoption of the

historic statute of Westminster, which defined the status of a self-governing dominion). All the same, until the end of World War II, the Commonwealth (or British Commonwealth) remained a rather small, Anglo-centred, all-White association—a symbol of Britain's imperial glory and an instrument of British colonial diplomacy.

The turning point in the transformation or expansion of the Commonwealth came with India's independence on August 15, 1947. Under the leadership of Prime Minister Jawaharlal Nehru and Vallabhbhai Patel, India opted for Commonwealth membership. And, following its example, Pakistan and Ceylon (now Sri Lanka) also joined the Commonwealth. Also—knowledgeably influenced by the Indian decision and the accompanying transformation of the post-war Commonwealth—a large number of African, Asian and Caribbean and Pacific-region states opted for Commonwealth membership as they gained independence in the 60s and 70s. It may be added—and it must be significantly noted—that India led the way not only to the numerical and geographical expansion of the Commonwealth, but by joining the former all-White British Commonwealth, India (a vast non-White nation) also helped the transformation of the Commonwealth into a multi-racial association. Signi-

Nehru and other world leaders at the 1957 London Commonwealth Meet: Picking up the threads?

ficantly, soon after India's entry into the Commonwealth, the prefix 'British' fell into disuse. For over 30 years now, the association is called the Commonwealth of Nations or just the Commonwealth.

India added or contributed another historic innovation to the theory and practice of the Commonwealth. The Commonwealth has always been an informal, flexible association of sovereign nations: free from the rigidities and complications of any written constitution, restrictive structures or weighted voting procedures. Indeed, it was this characteristic of the Commonwealth which, among other things, attracted Nehru to it: he regarded it as a world forum of useful interaction, "a good thing" that did not "bind us at all". However, one agreed norm or convention of Commonwealth membership (until 1949) was that the British King or Queen was regarded as the Head of each member-nation. Thus, there was no place in the Commonwealth for republican states, which could not owe allegiance to a monarch. This issue came to the fore when, in 1949, India chose to be a republic in terms of the new Constitution. Both India and the other member-nations were keen to

retain New Delhi in the Commonwealth, despite its republican status. To get over the problem it was decided (in April 1949) that for those member-nations (like republican India) who could not owe allegiance to the British sovereign, the King or Queen would only be the symbol of their free association and 'Head of the Commonwealth'. This was a trail-blazing development in the evolution of the Commonwealth, so that, now, 26 of the 47 member-nations of the Commonwealth are republics. But for the Indian precedent, the Commonwealth would have been smaller by half.

While India's contribution to the transformation of the modern, post-war Commonwealth is widely recognised, the question is often asked (in Parliament, press and elsewhere) in India as to what has India gained from her membership of the Commonwealth. Initially, India saw several concrete advantages in Commonwealth membership such as the ensuring of British cooperation in the maintenance and replenishment of its military stores and armaments, which at the time were entirely of British origin, benefiting from the 'Commonwealth preference' system in its foreign trade, retaining financial access to the vast sterling area, and keeping up and widening the possibilities of British economic assistance and investments for maintaining and developing the nascent Indian economy.

However, over the years, these early benefits have tended to erode or become largely inoperative as India's defence and diplomatic contacts have widened and as Britain has been reduced to a second-class power and has joined the rather inward-looking European Economic Community. Also, India itself is now reckoned as the eighth-largest industrial/technically-advanced state of the world and provides economic/technical assistance to a large number of Third World nations. Yet, India has not only retained Commonwealth membership, but has played an increasingly active role in Commonwealth affairs. In September 1980, India hosted the Asia-Pacific Commonwealth Summit (CHOGRM II), and is now preparing for CHOGM in November. An Indian diplomat, Ambassador

Rajeshwar Dayal, served as the Head of the Commonwealth observer team during the first free elections in Zimbabwe in 1979-80. Many Indian economists, scientists and other experts have been serving on various Commonwealth committees and commissions and in various departments of the Commonwealth Secretariat, which, since 1965, has served as the organisational headquarters of the Commonwealth. This is apparently so because India—together with the other members—regards the Commonwealth an association of continuing value or utility. These continuing uses of the Commonwealth as perceived by India and the other member-nations, generally, are:

- First, the Commonwealth provides a useful forum of international interaction and, as it were, a 'window on the world' to its members.

- Second, the various institutions and agencies of the Commonwealth in the scientific, cultural, educational and social

fields enable the member-nations to enrich one another's experience;

- Third, the Commonwealth meetings—marked by easy informality and lack of tension—can perform problem-solving or conflict-resolution tasks in many situations, as they did in settling the vexed Rhodesian problem in 1979.

- Fourth, starting in 1978 with the first Asia-Pacific Summit in Sydney, the Commonwealth has added a regional dimension to its activities, which is of special interest to India and the Commonwealth countries situated in this part of the world.

- And fifth, there are wide-ranging bilateral relations among Commonwealth countries which are further strengthened by their common heritage and linkage.

Surely in all these areas of activity and cooperation, the Commonwealth's resources are limited or small. However, it is therefore easier to operate or organise and its benefits are available to all members without invidious distinctions and discrimination.

CONFLICT WITHIN

BY AJAY VERMA

The Commonwealth is a peculiar association though it is an association of states, it is more of an informal group. It has no defined policy or written Constitution which has to be adhered to by the members. Any state can join or leave it according to its will and follow its own independent course. However, the members debate and discuss, informally, on matters of mutual concern.

Yet the Commonwealth relationship has had its share of strain. The Anglo-French action in the Suez in 1956 evoked condemnation worldwide, the Commonwealth nations being no exception. This led to the first major split in the Commonwealth practice of consensus. To the newly independent members it was but a grim reminder of Britain's imperialist past and they shuddered to be implicitly condoning such acts. India and Canada led the chorus of protests and the demand for withdrawal from the Commonwealth reverberated in many a member state. Perhaps somewhat chaste-

ned by this criticism, Britain chose to seek its fortunes outside the Commonwealth in the EEC.

Various kinds of ethnic, religious and racial problems within a member state and member states inter se, also cast their shadow on the continuance of the Commonwealth. The perennial conflict between India and Pakistan, leading to the latter's leaving in 1972, the racial riots in Kenya and Cyprus in the 1960s, Uganda's expulsion of the Asians in the early 1970s, and Britain's own discriminatory immigration laws have marked the Commonwealth sometimes or the other. Following the strong impassioned denunciation of South Africa's racist policies by the blacks and browns of Africa and Asia, Pretoria was forced to leave the group.

After inheriting a common heritage, the diversities have now started surfacing. Parliamentary government and Cabinet system, respect for rule of law, education system on British pattern, military firmly ensconced in the barracks and other common elements have been done away with. Presidential governments like in Sri Lanka, Cyprus, Zambia, Nigeria and Uganda, military dictatorships in Pakistan, Ghana and other coun-

Very truly yours,

...and the role of law being made a casualty and disregard for democratic norms—all have become the order of the day. Commonwealth meetings, once dominated by stalwarts, now have to bear with self-styled and new-fangled leaders.

However, institutions like the Commonwealth have not become obsolete. In today's world, when every leader is engrossed in the affairs of his country, any sort of contact amongst themselves accords them an opportunity to exchange notes and understand varying perspectives of the international scenario. With this in mind, those who are crying hoarse that CHOGM, in New Delhi, will be nothing but a jamboree or an extravaganza, are mistaken. In fact, as Mrs Gandhi revealed, President Hosni Mubarak confessed to her that the Non aligned Summit in Delhi, in March, enabled him to meet many Arab and other leaders and explain them Egypt's policies that would otherwise have been impossible. Therefore, such meetings and contacts do have their effect. What with the Middle East fuse already lit and the conflagration expected anytime, the superpowers spoiling for an eyeball-to-eyeball confrontation, depletion of resources of world financial institutions, need for a new world economic order and the unending quest for nuclear armheads threatening the very existence of humanity, when the leaders meet in November, they will have much to discuss, in the best traditions of the Commonwealth.

A look at the members of the Commonwealth will show that they do not have any decisive power within their ranks. Nevertheless, there are certain countries which have their respective spheres of influence. Great Britain, though no longer great, is heard with attention by the US and in Western Europe. Similarly, Australia and Canada are also important constituents of the Western alliance. Countries like India, Zambia and Tanzania too are not light-weights in the comity of nations. India, as chairman of the Non-aligned Movement (NAM) and the natural leader of the developing world, is looked upon with respect for guidance and assurance. Mrs Gandhi has excellent rapport with the Soviet leadership and coupled with the new found understanding

with the Reagan Administration, she has placed India in a unique position, enhancing her role as a possible East-West mediator.

It would be rather optimistic to expect the Commonwealth leaders on their own to hold back the world from the brink of self-destruction. All the same, they can definitely assert themselves. The Commonwealth comprises countries from both the developing and developed worlds. If these two can forge some sort of understanding, it will indeed augur well for their larger group as a whole. As the talks progress, it should weigh on them that they, in fact, shall be setting the tone for further talk—on a global platform.

The issue of Pakistan's re-entry is also likely to crop up. Here the leaders have to be cautious because whatever decision they may be taking will be laying a precedent. Therefore, the reasons prompting Pakistan to leave and now to rejoin the Commonwealth have to be carefully considered. International conferences are meant for resolving multilateral problems and not for raking up bilateral issues. That Pakistan left the association in a huff after the Commonwealth alongside the rest of the world had condemned its (Islamabad's) brutalities in East Pakistan, should also not be overlooked. Its attempt at re-entry is nothing but a ploy to gain legitimacy for its military regime and a ruse to cover up its undemocratic practices even now. Its entry into NAM, which had been a subject of its ridicule on numerous occasions, strengthens such doubts.

The leaders should also decide, conclusively and explicitly, their policy on apartheid and the incidence of growing links with the racist South African regime. Unless such moves are put down, the labour of numerous years to secure freedom and dignity for the blacks in South Africa will have been wasted.

Thus, the CHOGM in November may well prove to be the most important event so far. The crises today, though numerous, are not such as to defy solution. If the Commonwealth leaders pull their weight together in favour of "peace, liberty and progress", they might force the diehards to adopt a rational attitude. □

ATTENTION IAS ASPIRANTS LUCKY STAR ANNOUNCES FOR THE FIRST TIME IN INDIA Comprehensive-Scientific-Systematic General Studies in 6 volumes by eminent scholars OVERVIEW OF ADVANCED GENERAL STUDIES

For Paper 1 :

1. Modern Indian History & Culture
by S C Raychoudhry
2. Current Events: National & International
(Coverage upto 2nd Oct. 83)
by H K Chhabra
3. Statistical Analysis, graphs and diagrams.

[illegible]

At that point, have gone on record as saying this is more often the case when the INS is aboard.) Should the same be said about the Soviet SU-15 fighter pilot who turns he could not distinguish the

"Abcam" both literally and militarily means the same thing: 90 degrees at right angles to the ship's (in his case, aircraft's) length. Could not the Soviet pilot even then distinguish the distinct hump of the 231-foot 4-inch jumbo, about 50 per cent larger than the RC 135 he claimed he shot at?

A map of the North Pacific Ocean region, showing the Soviet Union, Kamchatka, Alaska, Canada, Japan, and South Korea. The map highlights the 'Likely route of Flight 007' as a dashed line starting from the Sea of Okhotsk, passing through the Sea of Japan, and ending near Tokyo. A solid line indicates the 'Route Flight 007 should have taken (Romco 20)', which follows a more direct path from the Sea of Okhotsk to the Pacific Ocean. A star marks the location where 'Flight 007 shot down' near the Japanese coast. Other labels include 'Approximate limit of Radar Coverage' and various geographical features like the Sea of Okhotsk, Sea of Japan, and the Pacific Ocean.

Soviet Chief of Staff Nikolai V. Ogarkov disclaimed days later that the SU-15 pilot had visually sighted 007 and disputed another part of the same tape transcript which said: "...The A.N.O. (Air Navigational Lights) are burning. The [strobe] lighting is flashing..." One of the basic Soviet contentions that 007 was on a spy mission was that its navigation lights were put off—as reconnaissance planes, of course, do. The other two Soviet contentions: that the KAL pilot didn't "respond to IFF" (tape transcript) as also tracer bullets, part of the standard operating procedure for intercepting a civilian intruder as per "rules of the air" of the International Civil Aeronautics Organisation. Previously indecipherable tape transcripts released belatedly by the US vindicate the Soviet point on these two counts. Why then did 007 not respond?

IFF, meaning Identification: Friend or Foe, is essentially used by the air forces. Allied planes can identify each other on the basis of closely guarded secret electronic passwords. But the 007 captain, Byong-in Chon, had little chance of knowing that password—and so automatically became a foe, irrespective of his being a civilian or military airliner. That very fact goes to show the limitations of IFF. Ogarkov claimed Soviet pilots tried off and on to contact 007 on international emergency frequencies. On this point, the tapes are blank. (Moreover, Soviet aircraft are not equipped with this frequency, except on rescue missions, for fear of defection.)

On the other—that the Soviets had fired warning shots—the tapes clearly show that the SU-15 fighter pilot had indeed fired "cannon bursts" six minutes before downing 007 with missiles. But to what effect? About seven minutes before the Soviet pilot fired the shots, captain Byong-in asked and got clearance from Japanese air traffic controllers at Narita, near Tokyo, for raising altitude from 33,000 feet to 35,000 feet. By the time the SU-15 pilot had burst off a round of cannon shots, 007 was already climbing. Conclusion: the cannon shots went nowhere near the airliner. Interestingly, transcripts of the Soviet pilot's communications with ground controllers indicate that the airliner "continued on the same

course at the same height" after his firing the warning shots; while a Soviet pilot told a defence paper that the Korean plane had "lowered its flap to lose speed". It would be worthwhile noting that when an airliner readies itself for a climb, it marshals engine power for greater thrust upward than forward. And the result: loss of speed. Indeed, Captain Byong-in, a reservist South Korean airforce colonel, in increasing height was contravening one of the basic evasive tactics employed by big bombers (the 747 was large enough for one) against fuel-thirsty interceptors, as the Soviet's claimed he did. Bombers dive to low altitudes where interceptors burn up their fuel faster.

Actually, throughout its 2½ hour flight through Soviet airspace, 007 reported nothing untoward to its Narita air controllers, flying as unconcerned as any civilian airliner would: checking in its flight position and other routine communications between pilot and ground. Curiously enough, 007 reported passing most of its Red 20 checkpoints—when, in fact, it was wide off course. Why this discrepancy? *Flight International*, in one of its issues much before the KAL shoot-down, lamented on computerised cockpits in which "human beings become less important": no dials or lamps to keep them alert, the bane of 'fly by wire'. If the INS on 007 had no built-in reference to check the data fed in, as it didn't have, then the system's warnings—alerting the captain—"would not show until very late in a sequence of possible errors".

To the Soviets, the overriding question was: why did Narita and the bevy of US and Japanese listening posts of around the crash site not alert 007 to the gross violation of Soviet airspace, when they were apparently monitoring its flight? Narita was, all along, only in voice contact with 007 as the airliner was well outside its radar range (see map). It could thus chart 007's flight on the basis of the airliner's own position reports, which were itself wrong. So was the case with the US radar station at Misawa, though it was not even in voice contact with 007. The Japanese radar at Wakkanai, at the tip of Hokkaido, did sight 007 and the Soviet interceptors. But in the absence of any query from Narita as to the plane's fate, Wakkanai

assumed the blip on its radar screen was a routine Soviet squadron heading from Kamchatka to Sakhalin. Furthermore, Wakkanai was not in voice contact with 007.

But voice-activated tapes at Wakkani were routinely recording the communication between the Soviet pilot and his ground controllers—which were then produced as evidence. While, admittedly, military air-traffic controllers rarely contact civilian aircraft, it is hard to fathom the US and Japanese claim that no human ear was glued to the listening devices for 2½ whole hours while the drama was being enacted over Sakhalin. This is against the backdrop that that area is listed very high on US and Japanese intelligence priorities. The Soviets routinely dismissed the tapes as fakes—Watergate?—but were hardpressed to produce any of their own communication records.

Would their tapes have blown sky high their claim that 007 was a spy plane? No one knows—and the least who care are the Soviet generals. Why? Because the KAL shootdown was the means to an end. And the end: to checkmate Soviet President Yuri Andropov.

An explanation is needed. The Soviet Union is a military superpower, not an economic one. The almost paranoid fear of encirclement has left Soviet generals itching for more and more armaments, the more sophisticated the better, and never mind the cost. The war-machine which steadily grew after World War II has distorted the entire face of the Soviet economy. Figures speak for themselves.

The Soviets spend over 16 per cent of their GNP on defence, which is still rising at 4-5 per cent annually. Pathetically, the GNP growth rate has dropped from 4 per cent in the 70s to just 2 per cent now. Still worse, investment growth has dropped from more than 7 per cent annually in the mid-70s to 2 per cent between 1981-83, with fearful consequences on the growth rate. While food and light-industry output quadrupled in the last 40 years, defence-oriented industries showed a 15-fold jump in production in the same time period. And the culprit: the Soviet military-industrial establishment, which gets the best of brains and materials at the cost of crucially-important civilian factories.

Just before his death, President

THE SOVIET EXPLANATION

late in the day, the Soviet generals claimed to have found further proof that 007 was a US spy plane. In an article, *Facts Exposed*, in the September issue of *Pravda*, linked up 007 with a US reconnaissance plane, "Ferret-D". He claimed it was 40 minutes behind schedule to strictly synchronise with the plane's approach to the shores of Kamchatka and Sakhalin with the flight of... "Ferret-D". It said the satellite, on its path once in every 96 minutes, made three passes over the Soviet far east: at 6.45 p.m. (Moscow time) over east of Kamchatka and the Kurile Islands for 12 minutes to carry out radiotechnical reconnaissance of radioelectronic devices working in peacetime conditions, at 8.30 p.m. over Kamchatka precisely when 007 strayed into Soviet territory heightening radar activity; and again at 10.50 p.m. over Sakhalin, when the Korean airliner was again there to "tickle" the radar for Ferret's benefit.

Ferret-D must have been a strange satellite, changing its listed orbital time of 96 minutes. Assuming that 6.45 p.m. was indeed when Ferret made its first Kamchatka run, it should have made the subsequent passes over Soviet territory at 7.81 p.m., 9.17 p.m. and 10.53 p.m. While 10.53 p.m. does figure in Kirsanov's calculations (he says it is 10.50 p.m.), 8.30 p.m. is absent—when 007 strayed into Soviet airspace. Further, Ferret, according to Soviet computations, must have been non operational in its se-

cond (7.81 p.m.) and third (9.17 p.m.) run. That's preposterous and contradictory. If Ferret had an elint-gathering potential from "a strip of three thousand kilometres of land", it would have easily caught up with increased radar activity in both the Sakhalin Islands and the Kamchatka Peninsula at 9.17 p.m. (Moscow time), when 007 was well within Soviet airspace.

Besides Ferret-D, the RC-135 reconnaissance plane admitted by the US and 007, there was a whole "intelligence complex" nearby, says Kirsanov. Among the other components of the complex: a second RC-135 "barraging along the Kurile Islands", P-3C Orion "over the Okhotsk sea north of Sakhalin" and another Orion over the Sea of Japan.

It is common knowledge now that Soviet air-defence controllers scrambled interceptors for only 007, the first RC-135 receiving only cursory inspection as it was in international airspace and a "regular". Going by the Soviet claim at face value, it would then have been unnecessary and illogical to coopt a passenger aircraft for a high-risk 2½ hour run through Soviet air-space when P-3C Orions and RC-135s could have done the same elint operation excellently.

But the third point Kirsanov raises has, quite simply, no answers: Why did KAL 007 have 29 crew members when normally a Boeing 747 has only 18? Eventually, the right explanation must lie at the bottom of the Sea of Japan—inside 007's "black box".

Leonid Brezhnev had, reportedly, called in Soviet generals and cautioned them that they had to put to the best use the resources available to the army, since the country's resources were not unlimited. But Brezhnev was up against a wall though chairing the Defence Council, he had little say in defence allocations, which were decided by Gosplan, an independent wing of state planning ministry. While Gosplan kept army interests first, it was helped by a

military industrial commission which made sure the army's demands were met with. Thus, economic stagnation was the highlight of Brezhnev's last years.

In November '82, Andropov inherited all that—plus some more troubles. Though a coalition-for-change—constituting the army and security forces, some senior party men and revisionist economists—put him into power, at least two factions in the coalition were averse to any immediate change

They were the senior party men and the army generals. Since Andropov wielded no real power in the party—the result of heading the KGB for 15 years—he had to depend on his immediate coterie, which itself was relatively powerless against the likes of Konstantin Chernenko, Andropov's chief rival. Moreover, when Andropov came to power on their initial backing, the power balance in the Soviet Union was distinctly tilted in the military's favour. Handicapped thus—as he's still today, 10 months later—Andropov had no base from which to enforce the much-needed radical reforms in the Soviet economy.

But he has tried, and seemingly failed. Andropov's strategy was to secure an arms-control agreement with the US, which would appreciably decrease Soviet military expenditure, and then put his radical plans in operation. To demonstrate his seriousness, Andropov, in a *Pravda* interview before the Korean airliner incident, offered to "liquidate" all medium-range nuclear missiles reduced in the European part of Soviet Russia on the basis of a new arms-control treaty. However, the generals wanted redeployment of these excess missiles in the Asian part of the USSR or making them mobile for instantaneous redeployment in Europe if the treaty broke down. They were also averse to Andropov's proposed reforms. Economically speaking, even if defense spending at present levels had been frozen till 1990, Soviet GNP would have shown a miniscule 0.2 per cent annual increase, while per capita consumption would have been 0.3 per cent higher than that. Belt-tightening—at the cost of security—when decent returns seemed dim? That's how the Soviet generals perceived the problem.

Since Andropov's radical reforms were linked with progress in arms-control talks, Soviet generals were set to scuttle the latter. And they almost succeeded—when they ordered the South Korean airliner to be shot down, after 2½ hours of deliberations. Fortunately, for all his overblown rhetoric, US President Ronald Reagan had good sense to categorically state that US-USSR arms-limitation talks would continue as before. What remains to be seen is who will emerge the victor in the Soviet Union. □

BACKGROUND PAKISTAN

BY SANJUKTA BANERJI, University of Delhi

When soldiers are in the streets and generals on the throne, how long can democratic Pakistanis take it lying down? Not for long—as events in Pakistan show. Sind lit the fuse—and the explosions are rocking Pakistan. A background on why Pakistanis hate the generals and crave for democracy.

Pakistan became independent on August 14, 1947, the result of many conferences which involved much horse-trading. The only stable bond of unity between the various parts of the new nation was Islam. Thus, it was not based on either territorial or secular nationalism.

Pakistan faced a steeper uphill task than India. The only organisation which had a sense of national unity in the chaos that was Pakistan in the years following 1947, was the army. Political parties, on the other hand, were hopelessly split into religious groups and linguistic factions, and it was not long before the army seized power. Since 1958, Pakistan has seen various permutations and combinations of constitutional autocracy. The Pakistani people, however, have not always willingly accepted military dictatorship as a fact of life. Once in a while, there have been popular uprisings against military regimes and the recent problem in Pakistan is just another example of this. However, it is also a fact in Pakistan's history that these popular revolts have not been able to sustain themselves. As a result, the army, which has a monolithic organisation and is supported by modern military machines, has always been tempted to seize power

Police quelling anti-Zia stir in Karachi: Will Punjab follow Sind?

at the first opportunity

The death of the Father of the Nation, Muhammad Ali Jinnah in 1948, and the assassination of Prime Minister Liaquat Ali Khan in 1951 were serious blows to the political development of the new nation. The country passed through a series of prime ministers in quick succession—Khwaja Nazimuddin, Muhammad Ali Bogra, Chaudhuri Muhammad Ali, Suhrawardy Feroz Khan Noon—until on October 7, 1958 President Iskander Mirza, supported by the Commander-in-Chief of the Army, Gen Ayub Khan and other senior officials, proclaimed a 'peaceful revolution' and imposed martial law. Mirza himself was set aside in another army coup and Ayub, who had already been appointed the Chief Martial Law Administrator and Supreme Commander of the Armed Forces, assumed the presidency on October 27, 1958. Although martial law was withdrawn in June 1962, and a new Constitution promulgated by Ayub in March 1962 under which he was elected President in January 1965, for a term of five years, Ayub consistently argued that parliamentary democracy was not likely to work in Pakistan. Although the Constitution of 1962 did safeguard some fundamental laws, it was made absolutely clear that the fundamental rights guaranteed by the Constitution Act did not imply that certain presidential orders, martial law regulations, etc. became null and void because they were in contravention of the fundamental rights.

Anti-Ayub feelings began to increase in the years following the 1965 war between Pakistan and India, and Ayub was forced to relinquish power on March 25,

1969, after months of continued political agitation in both East and West Pakistan. This, however, did not mark the beginning of parliamentary democracy. In fact, the Constitution of 1962 was suspended, martial law was reimposed and the Commander-in-Chief of the Army, Gen A.M. Yahya Khan, took over as the Chief Martial Law Administrator and on April 1, 1969, also assumed the presidency. Yet, Yahya's intentions were not all dictatorial. He allowed full political activity to be resumed in January 1970 and elections were held in December for a National Assembly and for the Legislatures of Pakistan's five provinces: East Pakistan, Punjab, Sind, North West Frontier and Baluchistan. The Assembly was to have the responsibility for adopting the Constitution for a new civilian government. The major unresolved issue, however, was the question of the role of East Pakistan in the reconstituted civilian government. East Pakistanis maintained that they had not been represented in the Central Government and had been denied their share of the Central Government revenues. The Awami League party of East Pakistan won a majority in the Assembly, and their demand for a high degree of political autonomy precipitated the East Pakistan crisis. Yahya stepped down from the presidency on December 20, 1971, after the defeat of Pakistan at India's hands. He was replaced as President and Chief Martial Law Administrator by Zulfikar Ali Bhutto, the leader of the largest party in West Pakistan Pakistan People's Party (PPP).

It was under Bhutto that Pakistan saw an attempt to make democracy work. He convened the first directly elected National Assembly in the history of Pakistan in April 1972 and lifted martial law. According to the new Constitution, which was adopted on August 14, 1973, a parliamentary form of government was established. The post of President was made ceremonial while the Prime Minister became the actual head of the state. The National Assembly was to be chosen by universal adult franchise and the Senate members were to be indirectly elected by the provincial assemblies and tribal councils. Fazal Elahi Choudhury was chosen President and Bhutto was elected Prime Minister according to the new Constitution. Political opposition was allowed in the form of the opposition Pakistan National Alliance (PNA) party.

But the army was waiting for law and order to break down. This happened in mid-1977, following accusations by the PNA of vote rigging in elections for national and provincial Assemblies in March 1977. In July, the

ECONOMY

RBI REPORT

BETTER PROSPECTS AHEAD

BY BECO

RBI's Annual Report surveys the period July to June, and critically analyses the economic scenario. It assesses future prospects too. The report for 1982-83 was released recently along with the World Bank Annual Report for 1983, which assesses India's performance in a broader context of world economic situation. The two reports raise certain important issues.

The RBI report says the Indian economy has suffered a serious setback in 1982-83 with a marked fall in agricultural output due to severe drought. Not only did food output decline from 133 million tonnes in 1981-82 to 128 million tonnes in 1982-83, but non-food crops such as jute, mesta and oilseeds suffered sharp declines, while fall in sugarcane and cotton crops was modest. Procurement operations were geared up and despite a higher offtake, stocks of foodgrains with the government agencies at June '83 end, at 16.5 million tonnes, were higher than 15.5 million tonnes a year earlier.

The World Bank report supports the RBI's. It, however, appreciates the successful economic-management policies of the government, which were able to mitigate the adverse effects of the drought. The point is underscored that our agriculture still, to a large extent, 'gambles on rains' and needs a fresh impetus. Besides strengthening the provision of adequate infrastructural facilities and credit inputs, concerted efforts have to be made to extend technology to new crops and new areas.

The RBI report admits that despite good performance of the infrastructural sector, index of industrial production decelerated, rising by 3.2 per cent between July 1982 and May 1983 as against an increase of 7.6 per cent in 1981-82. Overall dampening effect of the severe drought on the demand side

agricultural income were responsible for this. In specific industries, production was low because of prolonged strike in the Bombay cotton-textile mills, demand recession in commercial vehicles and agricultural tractors and decline in export demand of jute manufactures. Excessive and liberalised imports also affected some industries. The World Bank report has also adopted almost an identical approach in this context.

To say that production in some of the industries could not pick up because of certain specific reasons may be misleading. Take, for instance, the case of the textile industry which faced a prolonged strike in Bombay. Subsequent developments have shown that production of cloth was low because the demand for it remained low so far. Again, there is little improvement, if any, in the demand for products of those industries that were hit by recession last year. This again suggests that the entire question of pushing up industrial production should be re-examined, particularly when anticipated improvement in agricultural production in 1983-84 has created favourable conditions for speedy development in the industrial sector.

RBI has placed the growth of Net National Product (NNP), in real terms, at 1.2 per cent in contrast to a growth of 5 per cent in 1981-82 and 8.1 per cent in 1980-81. According to World Bank also, India's Gross Domestic Product (GDP) may come down to about 2 per cent in fiscal 1983 from 8 per cent and 5.2 per cent respectively in the previous two years. It has been further remarked that though it is not encouraging enough, the Indian economy, is however, stronger than what it was in 1979, the drought year when foodgrain production was 109 million tonnes while GDP fell by about 5.5 per cent.

RBI has estimated aggregate Net Domestic Savings for 1982-83 at 16.8 per cent of NNP, which denotes a marginal rise of 0.3 percentage points over the previous year. Despite this marginal rise, net investment in terms of NNP declined from 19.1 per cent in 1981-82 to 18.8 per cent in 1982-83. Looking to comparable rates of savings and investment achieved

India is quite encouraging. India has erected a vast infrastructure over the years of planned development and the time has come to take concrete steps towards channelising investment to areas which may result in improving capital output ratio. In plain terms, the time has come when more output per unit of investment should be ensured.

According to RBI, the growth in both deposits and credit of the banking system was higher in 1982-83 as compared with that in 1981-82 and the rise in credit was more marked. The rise in non-food credit, at 18.2 per cent in 1982-83, was higher than 12.4 per cent in 1981-82. A good portion of this increase was accounted for by additional credit to public sector units. Various measures were taken in the sphere of credit policies aimed at ensuring a pace of credit growth that would stimulate and sustain production and at the same time curb the rise of inflationary trends. In line with this, steps were also taken to offer a better return for savings in the form of long-term deposits and to assist banks in their deposit-mobilisation efforts. Any student of the Indian economic scene would not doubt the laudable aims of our credit and monetary policies. What is open to question, however, is the suddenness and ad-hocism with which the policies are framed and implemented without properly assessing their impact on various sectors of the economy. This also thwarts the discipline of financial planning to which banking as well as the industrial sector are being oriented, emphatically.

RBI has estimated money supply in terms of M3 to increase by 15.3 per cent in 1982-83 as against 12.9 per cent in 1981-82. A major contributing factor to the higher monetary expansion in 1982-83 has been a reduction in the negative impact of a decline in foreign exchange assets. In absolute terms, the fall in net foreign exchange assets of the banking sector was of the order of Rs 381 crores in 1982-83 as against a decline of Rs 1,955 crores in the previous year. In other words, higher monetary expansion occurred because foreign-exchange assets did not decline as much as had been anticipated. Obviously, one may brand

negative impact of the IMF loan that India contracted recently.

Balance-of-payments position may appear manageable, balance of trade itself having shrunk from Rs 5,752 crores in 1981-82 to Rs 5,409 crores in 1982-83. According to the World Bank report also, the current account deficit, which had been \$ 3.8 billion and 2.5 per cent of the GDP in fiscal 1982, declined to \$ 3.4 billion and to 2.2 per cent of the GDP in fiscal 1983.

RBI has rightly cautioned that careful planning should be initiated to ensure continued viability of the country's external payments. It is expected that India's balance-of-payments position would be under strain for several years, for India's development strategy would itself generate a significant demand for imports. Imports of raw materials, capital goods and modern technology and equipment are required for additional capacity. Increasing existing utilisation of capacity and enhancing efficient production for both domestic and export markets is also required.

Note may be taken in this context of the fact that the outlook for external aid to India is also not encouraging. Moreover, unreasonable protectionist policies initiated by industrialised nations are also harming the developing nations. India's debt-service payments, which are already large enough at Rs 915 crores in 1981-82, have gone upto Rs 953 crores in 1982-83. As a result, there is a decline in the net inflow of external assets. RBI, therefore, rightly, feels there is a need for reducing our dependence on imports.

The bright areas of our economy, according to the RBI assessment, relates to the behaviour of prices during the greater part of the year. The price situation has appeared to be relatively stable in the background of the decline in agricultural output, slack in industrial growth and a more rapid monetary expansion.

According to RBI, an important element of policy on the price front is the control of monetary expansion, regardless of the nature of inflation, whether it is primarily demand-induced or whether cost-push factors are more significant. Surprisingly, however, the report says that "Monetary control may not

be the appropriate policy instrument to use, if the price increases emanate from the rising unit cost of production." While this increase in unit cost of production may be attributed to various factors, higher manufacturing costs and relative scarcity of credit may also be important reasons. That is why the report makes the important point which implies that financial discipline cannot be imposed on a selective basis. In other words, both the commercial and government sector will have to observe strict financial discipline if monetary expansion has to be kept within manageable limits.

RBI considers that 1983-84 ought to be a better year with substantial improvement in agricultural and industrial output, but the price outlook remains uncertain. Any significant increase in industrial output is primarily conditioned, besides many other factors, on the development and extension of infrastructural facilities. If signals are any guide, the aforesaid infrastructural facilities have not kept pace with the requirement of the situation. Capacity utilisation in industries, as per reports, is not increasing, power shortages are continuing with little promise of an early improvement, and slippages in project completion have become the order of the day. Under such circumstances, industrial production can improve only if meaningful and integrated policies are evolved and speedy steps taken to implement them.

Keeping the balance-of-payments position under control in a high-cost economy like India is another major factor to reckon with. The RBI report rightly envisages the question mark on the balance-of-payments outlook when the repayment of the IMF loan begins, which is really responsible for the orderly management of the external payments situation during 1982-83. In this context, the World Bank's assessment of the sombre prospects for the economies of the Third World and its warning that the next few years would remain both "difficult and painful", hardly come as a surprise. It is, thus, in the fitness of things that World Bank has called for a softening of the protectionist trade policies of the West and an increased flow of official development assistance to developing and poor nations. □

BACKGROUND: PAKISTAN

(Continued from page 19)

army deposed Bhutto and Gen Zia-ul-Haq set himself up as the Chief Martial Law Administrator, although President Choudhury continued in office till his resignation in September 1978, after which Zia assumed the post of President. Bhutto was charged with the murder of a political opponent and hanged in April 1979.

The PNA had initially participated in Zia's government but the party's Cabinet ministers resigned following Bhutto's death. Zia's subsequent Cabinet was made up of mainly military personnel. Meanwhile, he kept postponing national elections, the recent postponement coming on August 12 of this year, which has triggered off a crisis. Dissatisfaction with the Zia regime, however, started much earlier. His martial law order of May 1980, which placed severe restrictions on the judiciary and on personal freedom, earned widespread discontent among politicians and lawyers. In March 1981, nine political parties, including the PPP, formed an alliance: the Movement for the Restoration of Democracy (MRD).

The MRD, which had lost popularity shortly after its formation as a result of the hijacking of a PIA airliner by PPP activists, has recently come to the fore as the leader of opposition elements in the country. Zia's recent announcement that elections would take place by March 1985 has forced the anti-military dictatorship forces in Pakistan to take action.

The point to be noted about the present struggle is that anti-Zia demonstrations are mainly confined to Sind. The logical explanation is that the province of Punjab dominates Pakistan, providing 75 per cent of the army and 85 per cent of the bureaucracy. Punjabis dominate the economy and make up the political elite. As a result, the Sindhis feel that they have not had a fair deal from the government. It is interesting to note that in a country dominated by the army, they are in a minority in the army. Furthermore, Bhutto was from Sind, and his death at the hands of the present government has naturally aroused fierce emotions in his home province. There is also a feeling of nationalism in Sind. The fear is that if the other states, particularly Punjab, do not follow the lead given by Sind, the struggle for democracy in Sind may turn into a separatist demand. The military junta will naturally try to confine the unrest to Sind, and will not stop at playing up the secessionist traits in the movement. The result may be the displacement of one military dictator by another, yet unknown. Democracy has weak roots in Pakistan. But is it too late to strengthen these roots? □

CIVIL SERVICES

MAINS

BY J.V. ARUN KUMAR

Congratulations for clearing the Civil Services Prelims. For your sure success in the Mains, we feature essays on social, political and economic topics; biographies of social and religious reformers; and a special section on data interpretation with examples.

The Civil Services Exam demands not just wide reading, but also clarity of thought and expression. A planned strategy should therefore involve the practice of writing brief but comprehensive answers with a good introduction, a well-connected conclusion and, of course, a balanced argument.

MID-TERM APPRAISAL

SINCE THE 1950s, India has taken to the path of planned development to solve its economic problems. We are now in the midst of the Sixth Five Year Plan and we realise that our achievements, though considerable, have been neutralised by dismal failures in some crucial areas. The Planning Commission's mid-term appraisal shows the seriousness of the economic situation.

The Sixth Plan, launched in 1980, has to be evaluated in the context of the objectives laid down. These are stepping up the rate of growth, promoting efficiency in the use of resources and strengthening the impulses of modernisation for the attainment of self reliance, and reducing the incidence of poverty.

The proposed investment in the Sixth Plan was very high in comparison to the earlier Plans. The public sector outlay was proposed at Rs 97,500 crores. The actual outlay in the first three years of the Plan comes to about 62 per cent in real terms, at 1979-80 prices. The estimated shortfall in the public sector's actual outlay is 15 to 20 per cent. The overall investment, however, is projected to be short of target by about five per cent, expecting the private corporate sector to exceed its target. In view of this the overall growth rate has to be revised to 4.98 per cent from 5.2 per cent annually during the Plan period. However even this rate of growth depends on the private sector investment making up for the shortfall in the public sector—merely an act of faith, even though the private

corporate sector has performed satisfactorily in the matter of savings.

The economy attained 7.9 per cent growth rate in 1980-81 and about five per cent in the next year, but slumped to just two per cent in 1982-83, giving a growth rate of about five per cent annually for the three years against the target of 5.2 per cent. Per capita growth was assumed to increase at 3.3 per cent per annum during the Plan period but with this lower growth rate and the increased population base—the estimated population at the time of planning was lower than the actual 684 million people—the standard of living can at best increase at 2.9 per cent.

Agriculture did not register adequate growth during the first three years of the Plan. The foodgrain target of 154 million tonnes at the end of the plan will not be achieved with the actual output at 145 million tonnes. This performance highlights the dependence of agriculture on monsoons. Floods and drought, which have become a regular feature in our country, also adversely affected agricultural growth rate. The average annual growth rate in the industrial sector is about six per cent against a target of 8.6 per cent. The performance in the first year was very good but subsequently, infrastructural constraints seem to have lowered the rate of growth.

Infrastructural inputs play a very crucial role in increasing output. The power generation in the first three years of the Plan is much short of target and in the entire Plan period, the shortfall is likely to be about 45,000 Mw. The coal production is short of target by 20 million tonnes. All these figures point to the increased efforts required to meet the shortages. The only saving grace is oil production, which will exceed Plan target.

A major effort in the Plan was directed towards reducing the percentage of population below the poverty line from 48.4 per cent to 30 per cent by the end of 1985. In the first two years

of the Plan about 34 per cent of the target has been achieved. The population below the poverty line stands at 41 per cent. However, poverty alleviation programmes are marginally successful because the National Rural Employment Programme and the Integrated Rural Development Programme are not fulfilling their potential. This is mainly due to lack of monitoring agencies and the ability to provide complimentary services to the beneficiaries.

Though the achievement on the price front is impressive, forces causing inflation are again becoming active. The slow growth in exports in the face of worldwide recession, the growing imports and decreased remittance from abroad have resulted in an annual deficit of Rs 5,500 crores in the Plan's three-year period.

The performance of any Plan depends on the resource-mobilisation efforts of the states. On this account the Sixth Plan shortfall is considerable, hampering developmental efforts. Deficits in the state electricity boards and the state transport corporations are the main reason for their poor performance. Thus a severe strain on the resource base is being felt. In the absence of efforts to tap the direct tax potential and the inability of the public sector enterprises to generate surplus, the incidence of indirect taxation will increase. The accompanying stress on deficit financing and reduced provision for subsidies, is a barrier to developmental efforts. The deficit in the three years of the Plan is very close to the Rs 5,000 crores kept in the Plan. Failure to mobilise resources from other quarters leads to generous offers to the multinationals, private sector and non-resident Indians to attract investment.

The conclusion we reach is that though the target will be achieved in many sectors of the economy by the end of 1985, the failures in crucial areas, particularly infrastructural facilities, is a cause for concern. Improved power generation, efficient functioning of the public sector

and better resource mobilisation drives become imperative if a sound basis is to be provided for launching the Seventh Five Year Plan.

COLLECTIVE SELF-RELIANCE

THE RAPID deterioration of the economic conditions in the world has made it essential for the developing countries to increase technological and economic cooperation among themselves if they want to build independent modern industrial economies. The concept of collective self-reliance gains strength in view of their diverse resource base, making for different degrees of economic development among the developing countries. With the developed countries showing gross insensitivity to the problems of the developing, the concept of collective self-reliance is gaining currency in the Third World.

In the '50s the economic cooperation programmes received little attention. The first Non-aligned Summit (1961) realised the importance of economic and technological cooperation among the developing countries. Since then the call for a New International Economic Order (NIEO) has gained in strength, and was given special significance in the Seventh NAM Summit, in New Delhi. The seventh meet committed itself to sharing experiences in various fields and raised the slogan of South-South cooperation.

Collective self-reliance based on concrete needs of the developing countries, with their diversity, strives to promote a more balanced world economy. The areas in which they can cooperate range from agriculture to trade, though cooperation for industrial development may be limited considering that some countries depend on multinational companies for their industrial development. In agriculture and rural development the North's role is limited as the structure and importance attached to agriculture in these countries is different and the farming activity is highly mechanised. The developing countries on the other hand have a large population and must opt for labour-intensive technology. Thus, mutual understanding amongst the Third World countries is the only option left. The agro-based industries form one sector of industrial development where these countries can share experiences. Health provides another vital aspect for cooperation. Energy crisis, in the shape of scarcity of non-commercial fuel for cooking, has received scant attention and here too they can come to an agreement.

The tariff barriers and other discrimi-

RAJA RAMMOHAN ROY

The first great leader of modern India

- Believed in the synthesis of Hindu philosophy and Western culture to cure the Indian society of evils like caste, meaningless rituals and low status of women.
- Founded the 'Atmiya Sabha' in Calcutta in 1814 to campaign against religious and social evils.
- Was deeply influenced by the Western philosophy of equality, liberty and justice.
- Wrote *Precepts Of Jesus* in 1820

incorporating the teachings of Christianity and Hinduism.

- Established the Brahmo Samaj in 1829 for reforming the Indian religion.
- Supported equal rights for women, and Western education.
- Began a crusade against the *sati* practice and child marriage, which led Lord Bentinck to ban the practice.

KESHUB CHANDRA SEN

- Carried the Brahmo Samaj after 1816, with its revival by the *Tatvabodhini Sabha*.
- His efforts at reforming were successful.
- Advocated the combination of Vedic and Western thought, as preached by the Brahmo Samaj, and widow remarriage.
- Opposed the undue importance of priests in Hindu religion.
- Campaigned against child marriage successfully.

RAJU MANSUKHANI

natory practices against the products of the developing countries by the developed, is making it difficult for them to raise surplus to finance their economic development. In this context South-South cooperation becomes more meaningful. This is not a retrograde step but only an effort to fight backwardness in this world. The bargaining power of developing countries against developed countries will also increase as a consequence.

However, the process is very slow, revealing the unplanned character of the strategy, with lack of clarity about the basic goals such cooperation is to attain. If the strategy is to be effective the attitudinal barriers and information gap on what is available in the developing countries has to be overcome. The dangers like multinationals cornering a large market, the dispute regarding the countries' share in the spoils, and psychological barriers have to be guarded against.

The increasing awareness of the benefits of collective self-reliance is revealed by the various regional, inter-regional, and sub-regional cooperation efforts among the developing countries. The conference of South Asian Regional Cooperation is a significant step in this direction.

SECULARISM

INDIA'S MULTI-RACIAL, multi-lingual, multi-religious character makes it unique in the world. All the different languages, races and cultures have their own identity, but at the same time are linked to each other—which is essential for the

progress of the society. It was this consideration that guided our nationalists at the time of independence to accept the path of secularism and socialism.

Secularism, a creed with deep humanistic values, is based on rationalism, empiricism and is against religious rituals and superstitions. It involves supporting the separation of religious power from the state. The pursuit of secularism requires establishing an autonomous sphere of knowledge purged of supernatural, apocalyptic presumptions and demands close interaction among the different communities. It also implies revolt against falsehood inhuman and irrational customs which increase the conflicts among different communities and individuals.

The commonality running through the diverse cultures of India is very high. Though sub-cultures of various religious or ethnic groups exist within the composite culture, these make for the unity in diversity that is India. The word 'secular' is accepted by the Constitution which is based on the traditional Indian concept of religious tolerance and separation of State from the Church. Article 25 to 28 of the Constitution are the bedrocks of individual practice of religious freedom in the country. The Constitution has built fences between the State and religion to enable the two to co-exist. A basic aspect of Indian secularism is the consideration of public order, moral health, as well as fundamental rights and religion which will not be allowed to come into conflict.

Appointments

The irrational implementation of the concept of Indian secularism of all religious practices being given equal respect, has led to frequent communal disturbances in the country. Without taking a scientific and cultural view, political parties and individuals support or oppose issues on language, religion, etc. which whips up communal tension in the country. Political bigwigs supporting religious institutions, media painting the virtues of religious orthodoxy, and the government increasing 'religious' holidays, has led to a lot of tension in society which can be removed only with the society's rapid modernisation.

Superstitious practices, external symbols and ritualistic performances, the common features of all our religions, contain seeds of discord and animosity. They create tension among people following different religions. The role of anti-social elements and economic interests of different communities are other factors which add fuel to the fire of communal riots.

To realise the true meaning of secularism the religious factors should be played down and the spread of science and technology in different fields should be encouraged for the modernisation of Indian society. The need to create awareness among the people is of great importance. Eradication of economic irritants that divide communities, prompt action in riot affected areas and stringent punishment should help in mitigating communal riots and building up national loyalty which is so essential for maintaining our secular status.

PLANNING AND POVERTY

IN THE three decades of planned economic development India's performance in the economic field is very impressive. Agriculture can no longer be termed backward and our industrial progress is quite noteworthy. But despite all these increases the majority of the population is still poor.

Poverty, a negation of the end purpose of all planning, is a threat to the well-being of the country. The norms used to measure poverty range from annual income, calorie-intake to quality of life. The Sixth Plan (1980-85) defines poverty line on the basis of the recommended nutritional requirement of 2,400 calories per person per day for the rural and 2,100 calories for the urban areas. The available estimates on poverty, using varied norms, provide different results. The number of poor over the years is also subject to diverse estimates. The Sixth Plan estimated 48.4 per cent of the population below the poverty line. About 50.7 per cent of rural population

SWAMI VIVEKANANDA

A great disciple of Ramakrishna Paramahansa

- Popularised Hinduism in the world.
- Interpreted the Hindu philosophy with the modern idiom, believed in all religions and the principle

that man had to work for his freedom, liberation and equality.

- Berated the Indians for their passive acceptance of fate.
- Preached against caste barriers, rituals and superstitions in Hindu society.
- Attended the World Council of Religion in Chicago spread the message of Hindu religion
- Founded the Ramakrishna Mission in 1896, which carried out humanitarian relief work

ISWAR CHANDRA VIDYASAGAR

A great Bengali, Sanskrit scholar

- Encouraged the study of ancient Hindu philosophy on scientific lines.
- Opened the gates of higher education to all, in his college.
- Championed the cause of equality of women.
- Founded the Bethune School in 1849, in Calcutta, for higher education of women.
- Widow remarriage was legalised in his time

R.M.

and 40 per cent of the urban population is classed as poor.

Some of the reasons for the continuation of large-scale poverty is the increasing population and the scarcity of land and its declining fertility. Illiteracy, lack of alternative employment opportunities and ill-health are all causes and consequences of poverty. In rural India, the majority of the population owns little or no land and meagre resources; their survival depends on how those who own the resources utilise them. This skewed distribution of asset ownership is a major factor causing mass poverty.

The orientation of the system, which serves only the interests of the well-to-do, is also to be blamed for poverty. The growing underemployment and unemployment is contributing to this misery. The scarcity of jobs with rapidly rising population adds to the ranks of the unemployed in the country each year.

The eradication of poverty has been the main objective of economic policy and planning in India. The approach in the Plans has taken different shapes. In the First Plan (1951-56) agriculture was given preference to solve this gigantic problem. The Second Plan, with emphasis on capital-intensive industries, also emphasised the development of ancillary and small-scale sector to maintain good wage supply in the country. However, the anticipated 'trickle-down' effects of industrialisation at the top did not materialise leaving the pro-

blem unsolved

The Sixth Plan has the National Rural Employment Programme (NREP) which incorporates the Food for Work Programme of 1977, in which the grain component of the wages directly helped the poor and also reduced grain prices in the market. But the states were unable to manage a programme of this magnitude. This led to the NREP, which is shared on a 50:50 basis with the states. It aims to provide supplementary employment opportunities and rural infrastructure. The total allocation of Rs 1,620 crores is to generate 300 to 400 mandays per year. However, the results are disappointing due to the increasing cost of materials, large-scale bungling, delays in drawing up projects, and lack of coordination among different agencies.

The Integrated Rural Development Programme (IRDP) is the cornerstone of all poverty alleviation efforts in the countryside. The IRDP, covering 5,011 blocks, seeks to augment the incomes of the target group, which includes the landless labourers, scheduled castes and scheduled tribes. The strategy is to take family as the basic unit and assist them in coming up in any occupation where they can use their resources optimally. Banks are to provide assistance partly to the 3,000 poor families during the Plan period. The implementation of the programme is tardy, with the absence of complementary services rendering it ineffective. In the first three years of the Plan

The Magazine that spells success...

...million farmers have benefited against a Plan target of 15 million. Banks have been able to disburse only half of their total target for the Plan period. The lack of proper monitoring agency, faulty drawing up of projects, etc. are the other problems of this programme

The Revised Minimum Need Programme aiming to provide rural infrastructure, roads, water supply, and education also attempts to ameliorate the lot of the poor.

The national scheme of Training of Rural Youth for Self-Employment (TRYSEM) was initiated to provide self-employment opportunity to the rural poor. The programme, though well-intentioned, needs a little more thrust to be effective.

Poverty can be banished, but it calls for a strong political will and a structural change in the economy to effect redistribution of land in favour of the poor. Agriculture has to be the basis of any poverty alleviation strategy, which would lead to all round development.

However, for the implementation of any development programme the basic requirement is an efficient and committed team of workers. Many of the good programmes so far have been unsuccessful because of rampant corruption and lack of sympathy for the cause, in the men who implement them

ROLE OF GOVERNOR

THE EXECUTIVE power of the state is vested in the governor. Any citizen of the country, not below 35 years, eligible for becoming a member of the state Vidhan Sabha and not holding any office of profit under the Union or state government, is eligible to be appointed governor by the President for a five-year term

All-state transactions are carried out in the governor's name and he performs legislative, executive and judicial functions. His job also involves the appointment of the council of ministers, with the chief minister as the head, the advocate general, the chairman and members of the Public Service Commission. The President consults him in the appointment of the chief justice of the High Court.

The governor summons, adjourns and prorogues the state Legislature. All Bills need his assent and the introduction of Money Bills in the Legislature requires his prior approval.

The governor has the power to grant pardons, reprieves, respite of punishment or to suspend, commute the sentence of any person against any offence, against any law related to the executive power of the state. He can also use the discretionary powers vested in him under certain conditions. The governor, a key constitutional link between the Centre

RABINDRANATH TAGORE

An educationist, a social reformer active in politics, a novelist and poet of international repute, and a painter and musician of no small measure

- Son of a wealthy landlord, Debendranath Tagore, he lived his early life in a village
- Appalled by the pathetic condition of the peasantry
- Adopted *Atmashakti* to make villa-

ges self-sufficient and to spread literacy for improving the rural conditions.

- Stressed the importance of education in the life of people
- His Gurukuls aimed at practical teaching in the mother tongue.
- Established Shanti Niketan and Viswa Bharti University, the high seats of learning.
- Won the Nobel Prize in 1913, for *Gitanjali* a collection of poems.
- Incorporated Indian classical music and Bengali folk to compose 'Rabindra Sangeet'
- Represented the fusion of both the oriental and the occidental

HENRY VIVIAN DE ROZIO

A radical teacher inspired by the slogan of 'Liberty, Equality and Fraternity'

- Taught his students to think rationally and freely
- Championed the development of Western education in the country.
- Questioned the harmful customs and traditions of Indian society
- He was too radical to inspire the later generations

R.M.

and the states, has to play a positive role in today's strife-riven Indian democracy.

However, there are numerous ills afflicting this office. The governors, today, are more concerned with pleasing the Centre, than playing their constitutionally assigned role. The problem starts right from the stage of elections to the state Legislature. In most cases, the governor responds to wire pulling by the Centre in deciding which member of the newly-elected Assembly be invited to form the government. Though he has to invite the leader of the largest single party or alliance formed before the elections, in practice the governor also cares for the alliance which is formed after the declaration of results. This practice needs to be checked to prevent floor-crossing and to limit the role of money-power in elections. The governor rarely plays a neutral role, particularly when a chief minister of the Centre's party loses confidence of the Legislature. There are no norms or guidelines for the governor to act consistently.

All these irritants have to be removed if this office is to retain its credibility. The governor should invite the leader of the largest single party or alliance formed before elections and strictly follow the election results. The strength of the government should be immediately tested in the House. The new procedure of parading

support also needs to be discouraged. Once a government loses its support in the Legislature, the next largest party/alliance should be called upon to take over the reins of the government. If this fails to provide a stable government, elections should be held. The governor, however, should only act as the watchman and not usurp all power vested in the people of this country.

The post of governor should only go to men with proven integrity. The governor can promote communal harmony, proper functioning of the universities and bring the state and the Centre closer. However, he should be allowed to play this role by the people and the executive. More careful selection of incumbents will go a long way in restoring credibility to this office.

SOCIAL FORESTRY

FORESTRY DEVELOPMENT can form the core of our strategy in the fight against poverty in rural India. Forests meet the increasing demand for fuel wood, help in maintaining a healthy environment, and provide substantial employment opportunities to the poor. The present haphazard denudation, caused by the growing pressures of population on land, upsets ecological balance and invites disasters like floods and soil erosion. Thus the need for a forest strategy, which integrates

...the greatest today

The programme of social forestry, combining forestry and social welfare, has received considerable attention in the Sixth Plan (1980-85). The outlay proposed was Rs 1,000 crores and the states and the panchayati raj organisation were expected to supplement the Centre's efforts. The state governments are being encouraged to implement the social forestry scheme, which aims at bringing forest-owning communities using foreign aid. The idea is that the society, which relies on products from forests, should co-operate in the government's afforestation efforts. Therefore, social forestry seeks rationalisation of land and deforestation compatible with economic and social requirements of the community.

The aims of social forestry are: improving the fuel wood supply in rural areas, expanding existing and opening the supply of products and providing necessary protection against wind and water erosion, and meeting the recreational needs by increasing greenery in the countryside.

The scheme includes a number of programmes to achieve these objectives: forest extension, extension forestry, afforestation of degraded forests and reforestation of lands. All these programmes are to be made available to the community and planting of species which can be used to raise their income. However, a close vigil is required to avoid felling of trees for plantation.

The implementation of the social forestry scheme really hinges on popular participation in the countryside. This can come only with increased awareness about the environment. Foreign assistance to supplement other measures have enabled the individual and communal interests to flourish. The scheme is also being implemented to avoid the constraint of overpopulation. What is required is a social alternative source of income for people who are dependent on forest products and are engaged in forest activities. This is a developing branch of the economy.

TRANSFER OF JUDGES

Not all the states are the transfer of a Chief Justice of the Jammu and Kashmir High Court to the Sikkim High Court. We once again need to review the role of the judiciary and the executive in our country, particularly the right of the Centre in transferring judges (speci-
fically in the case of J&K).

The J&K Government had brought in the transfer of the Centre's

right in transferring judges in J&K, as this falls in their legislative and executive power. However, earlier precedents, the approval of the chief ministers of the state, and the constitutional position favours the Centre's action. Fortunately, both sides have patched up their differences and it is no longer a thorn in the Centre-state (J&K) relations.

The transfers of judges is seen as the executive's attempt to show down the judiciary. This tussle between the two started in the 50s with the promulgation of the Constitution—which provides separation of powers. A strong judiciary in India is vital to prevent arbitrary executive action and to safeguard the rights and liberty of individuals. However, the executive maintains that the judiciary, with its decisions, is impeding progressive measures.

The argument against transfer of judges is that this will make the judiciary subordinate to the executive, creating fear in the minds of the judges which will undermine the independence of the judiciary. The term 'judges' in its reference to the chief justices of high courts is also disputed. The verdict in the 'judges case' has gone in favour of the government which is planning large-scale transfers. However, democracy demands that this tangle must be immediately solved and the constitutional position of the judiciary restored.

ENVIRONMENTAL POLLUTION

THE CONTROL of environment and the prevention of its degradation has become a vital issue in this decade. The scars of violence on Indian environment, emanating from the conditions of poverty and unintentional effects of the process of development, affects the well-being of our people. Degradation of environment results in increased economic inequalities, adversely affecting the poor, and severe health hazards, including mental degeneration. Pollution, rendering resources unfit for use due to physical, chemical and biological factors, is caused mainly by the release of effluents in large quantities that cannot be neutralised by nature. Untreated sewage and industrial effluence with toxic elements and careless spraying of pesticides and insecticides are polluting the water resources in the few areas where water supply is available.

Air pollution rendering the atmosphere unfit for breathing causes pathological problems, damage to vegetation and agricultural crops and influences atmospheric processes adversely. It also threatens the symbols of our past, the

historical monuments; e.g., the chemical industries in Agra are threatening Taj.

Deforestation is causing large-scale ecological imbalances resulting in floods, droughts, soil erosion and increased quantum of carbon dioxide in the atmosphere.

Noise pollution, an urban phenomenon, due to increased traffic, causes increasing psychological disorders and impairs hearing. The thermal power stations discharging toxic elements in the atmosphere leave it polluted—quite hazardous for human beings and organisms. The unplanned development, chaotic traffic, over-crowding slums, deteriorating sanitation and water supply are all adding to the problem of atmospheric pollution.

In view of the serious health problems like dizziness, eye irritations, impairment of hearing and lung affections, spending on pollution control will greatly reduce these damages. Wastes should be properly disposed and efficient management can not only reduce pollution but can also add to the stock of future resources. The legislative measures undertaken by the State in the form of Water Prevention and Control of Pollution Act, Insecticides Act 1968, Indian Forests Act, etc., have made little impact due to lack of clarity in stating the social objectives which they aim to achieve. Some of the measures have become outdated and hence serve little purpose today. We need to provide teeth to these Acts. Another effective measure to control pollution is the use of fiscal incentives and disincentives which have proved beneficial in other countries. This includes subsidies, tax deductions and priority in industrial licensing to those who install requisite pollution-control equipment or adopt pollution-free manufacturing processes. The sooner these steps are taken the better it is in reducing the respiratory ailments and cancer, so prevalent among the people living in industrial cities. The indiscriminate felling of trees needs to be met head on. However, none of these measures can become effective unless popular participation is forthcoming. The chipko movement and the ban on felling of trees are encouraging steps. Though the ecological system is fragile, halting all forms of development activities will prove disastrous. The need is to find a balance and to strike a happy equilibrium.

RURAL DEVELOPMENT

MAHATMA GANDHI had said that India lives in its villages. The statement is valid to this day. Over 70 per cent of our population lives in the rural areas,

with excessive dependence on agriculture. Majority of them survive in conditions of abject poverty with rampant unemployment and underemployment. The lower 10 per cent of the rural population own less than 0.5 per cent of the total land assets. High infant mortality, inadequate medical facilities, dismally low literacy rate and appalling housing facilities make for the impoverishment of the masses.

The government has made numerous attempts at ameliorating the lot of the poor but the fruits are not commensurate with the efforts put in so far. Rural development relates to all-round development in areas like rural electrification, water supply, health, education, etc. along with development of agriculture and industries. The First Plan's (1951-56) community development programmes launched in 1952, with National Extension Services, was to channelise community efforts towards a self-enduring base of development. But the lack of clarity in setting the goals in the programme vis-a-vis social justice resulted in the benefits accruing more to the well-to-do in the villages.

The Intensive Agricultural Development Programme of the 60s failed to transform the basic character of Indian agriculture as it was a purely technocratic measure. The high-yielding varieties—Green Revolution—benefitted the rich farmers who had the physical resources to take advantage of the new package of inputs. The programmes like Small and Marginal Farmers Development Programme (SMFA) and Drought Prone Area Programme (DPAP), started in the 70s, did not yield much results, though it marked the beginning of the acceptance of the concept of direct attack on poverty.

The cornerstone of rural development programme in the Sixth Plan is the Integrated Rural Development Programme (IRDP), which covers 5,011 blocks and seeks to augment the income of 3,000 rural families. The target group—landless agricultural labourers, Scheduled Castes, Scheduled Tribes—are to be given assistance so as to enable them to use their resources for income generation. Banks are to partly finance the projects. However, the implementation of the programme leaves much to be desired. Due to inept drawing of activity profile for the target groups and lack of proper monitoring, the banks have also not fulfilled their share of the assistance. The accompanying TRYSEM programme for the self-employment of rural youth also remained ineffective in reducing poverty in the countryside.

The National Rural Employment

SWAMI DAYANAND SARASWATI

- Founded the *Arya Samaj* in Punjab in 1875 for reforming Hindu religion;
- Believed in the Vedas but disliked rituals and superstitions and the Brahmanical hold on the religion.
- Arya Samaj later revealed streaks of orthodoxy, ignoring human reason.
- Raised his voice against the condition of women and rigid casteism in the country.
- Started the 'Gurukul' style of imparting education with Swami Shradhananda joining later.
- Arya Samaj opposed conversion of Hindus to other religions.

R.M.

Programme (NREP), which includes the Food for Work Programme (FFW) implemented on 50:50 basis with the states, has also not been very successful in providing supplementary employment and rural infrastructure. The inadequacies of the programme are misutilisation of foodgrains, delays, large-scale bungling and problems of coordination. The new programme for providing employment to rural landless is not likely to make much of an impact if these problems remain unattended. The rural industries development and provision of credit facilities is also not adequately oriented to benefit the poor.

To attain prosperity in Indian villages, the land distribution system has to favour the poor. The accompanying infrastructural development and other improvements call for popular participation—which holds the key to rural development.

NEW TECHNOLOGY

SINCE INDEPENDENCE there has been a consistent and sustained endeavour to build up a strong technology base to fight backwardness in the country. The new technology policy of 1983 shares the same aim. The basic purpose of the new policy is to promote self-reliance by developing indigenous technology. The policy allows for import of technology but on a selective basis. The legislative and legal framework provided would encourage research and development (R&D) in various fields in the country.

Despite the abundance of technical personnel, the technology base is weak. The uninspiring work conditions and ill-equipped research institutions, preventing application in industry, are the main culprits. Like the earlier policies, the '83 technology policy fails to cover this aspect. There is a basic conflict between the principle of self-reliance and the import of technology. While the imports could

block R & D efforts, there is a possibility that in striving for self-reliance we might be duplicating the discoveries already made in the world. The policy does not cover the inherent weakness in the system—the tight employment market—which attracts only the second best to research institutions. However, despite these drawbacks, the policy's basic framework offers tremendous potential for the development of technology.

ELECTORAL REFORMS

ELECTORAL REFORMS deserve serious thought in view of the destabilising forces in our democratic setup. The financing of elections and the expenditure incurred are old problems. The situation has deteriorated further with the combining of electioneering with the minister's official visit. Along with the need to stop this practice it is necessary to strengthen the party system and to give the Election Commission more power. However, due to the non-availability of a proper definition of political party in the Constitution, a change in the prevailing conditions cannot be brought about. Reduced dependence on the executive and more staff to the Commission, particularly the security force, will facilitate fair elections.

The proliferation of parties, causing instability on the political front, encourages defections. The rising money power further adds to moral degeneration. Stricter application of the norms by the Election Commission can be of some help. The setting up of special funds under the Commission for financing the elections and the question of donations from the private companies have to be seriously considered.

DOWRY DEATHS

A MAJOR social problem which has assumed alarming proportions, particularly in northern India, concerns the increasing dowry deaths. The

space household is a perverted form of the ancient Hindu tradition of *streedhan*, where dowry was given to the bride voluntarily at the time of marriage. The growth of laws and the social status of married women staying with the parents on the rise of marital discord, have led to an increase in bride burning.

The root cause of the problem is the economic dependence of women and the heavy work attached to domestic work. Women's entry to a house is taken as a burden for which dowry is considered as compensation. The failure to face marital disharmony has also led to a large number of dowry deaths. The economic dependence, negativity between men and women, and unequal rights given to women are outstanding factors. The dowry system, women's social status, economic dependence, and the heavy work attached to domestic work are the main causes of the problem.

The dowry system is a major cause of the problem. It is a tradition where the bride's family gives property to the groom's family. This system has led to a large number of dowry deaths. The economic dependence of women and the heavy work attached to domestic work are also major causes. The negativity between men and women, and the unequal rights given to women are also outstanding factors. The dowry system, women's social status, economic dependence, and the heavy work attached to domestic work are the main causes of the problem.

OF PEN AND PAPER

The pen is a writing instrument. It is used to write on paper or other surfaces. The pen is a simple tool that has been used for centuries. It is made of various materials, including wood, metal, and plastic. The pen is a common object in many homes and offices.

The pen is a simple tool that has been used for centuries. It is made of various materials, including wood, metal, and plastic. The pen is a common object in many homes and offices.

The pen is a simple tool that has been used for centuries. It is made of various materials, including wood, metal, and plastic. The pen is a common object in many homes and offices.

ment and bringing about the participation of women to protect themselves, are other steps. The visualisation and launching of social action to modify and alter socio-cultural norms and values can cure the society of this malaise.

STATUS OF WOMEN

THE RICH heritage of India has led to the emergence of a resilient indomitable woman with deep scars on her psyche. In ancient India the matriarchal system changed with the coming of the Aryans. Manu's dictums undermined the position of women in society. However, the coming of social reformers like Raja Rammohan Roy and Iswar Chandra vidyasagar, who fought for equal rights for women, prompted some action.

A number of progressive legislations since 1947 have been effected: the Widow Remarriage Act, The Hindu Marriage Act, the Hindu Succession Act. However, the constitutional right of equality, particularly in the parental property, is hardly reflected in reality.

Today, even though women have come to work in various fields, the average woman continues to be a household commodity. In the non-factory sector the decline in female employment is discernable, even though the organised sector continues to give increasing employment to women. They hardly participate in the decision-making process and are still confined to playing a secondary role in social life. Even now education is the prerogative of a few, though some strides have been made. The number of illiterate women seem to have increased since the beginning of the 70s. The declining sex ratio is another cause for concern, along with the expectancy for women, which has improved but still lags behind the average.

Increasing violence against women has become a part of our socio-cultural milieu, and reflects the inferior position of

women. Customary practices prevent her from developing an independent personality of her own. Rape and dowry deaths are still prevalent in rural and urban areas.

Of late the State has shown increasing concern for women, and the separate chapter on women and their development in the Sixth Plan is an evidence of the fact. The growing consciousness and concern for the plight of women in the media and the public in general augurs well for the future as also the growing awareness in women themselves (even in villages) of their plight.

NATIONAL SPORTS

ALL WORK and no play makes Jack a dull boy. This old saying points at the crucial role of sports in fostering development and building the nation's character. The close connection between sports and development becomes obvious when we look at the success stories of renowned sportsmen at international sports meets.

India, though an active sporting nation with international participation since 1920, can boast of only a handful of successes. The education system's relegating sports to extra-curricular activities, has resulted in the scarcity of record breakers in our country.

However, the successful organisation of the IX Asian Games, the presence of international sportsmen and women, the availability of modern equipment and stadium has provided a new thrust to the sports policy. The creation of a separate Sports Ministry and a concrete sports policy, with a definite shape and earnest implementation, will help to promote sports in a big way. Previously the only 'sporting' link with the government was the All-India Council of Sports (AICS) headed by V.C. Shukla. The proposed Sports Authority of India, an autonomous body, taking up various projects and collecting funds from different sources, can provide a strong sports base in the country.

The realisation that low per capita expenditure with inadequate sports facilities and social taboos hindering mass participation was holding us down and the need to give higher priority to sports augurs well for the various sports events. The sports minister's belief that transferring the subject to the Concurrent List of the Constitution from the State List will enable the Centre to supplement the efforts of the states, is also well found. Ensuring mass participation, particularly of rural population, hitherto ignored, provision of adequate facilities and financial assistance at the school level and welfare measures for the retired and disabled sportsmen and sportswomen will go to make a successful sports policy. ■

MORE THAN

25,000

Jobs are waiting to recruit you...

These jobs have become the current talk of the town—rather entire Country, not only because they make your life safe, sound, smooth and secure but also because they take you to higher vistas of authority and power. It is no wonder therefore that all of you are aspiring to grab and grasp this unique opportunity that has come your way to take you to reach such coveted Positions.

Hard work, zeal, sincerity and earnestness are the qualities which take you to the zenith of your glory in life in whatever endeavours you undertake. These qualities now-a-days are becoming rare, hard to come by and conspicuous by their absence.

How is then one to stay ahead in ones business?

We offer you the best, the easiest and the surest way to success through our...

for Probationary Officers' Competitive Examinations of State Bank of India and other Nationalised Banks, Assistant Administrative Officers' Comp Exams of I.L.C., G.I.C. and R.B.I., Indian Civil Services—Preliminary as well as Finals Comp. Exams., National Defence Services (NDS), Staff Selection, Public Service Commissions, Auditors/Junior Accounts/Upper Division Clerks, Stenographers' Exams, Internal Promotional Officers as well as Clerical Comp Exams of State Bank of India and other Nationalised Banks, I.L.C., G.I.C., R.B.I., Railways, Indian Airlines, Air-India, Post & Telegraphs, Inspector of Central Excise, Inspector of Income-Tax, M.P.S.C., etc. Comp. DATA INTERPRETATION

The General Studies paper tests your interpretation powers through a series of data-based questions to which you are supposed to draw logical conclusions. The following are based on this pattern:

P* 1. The rate of increase in the number of cows in India is greater than that of population. So people in India are getting more milk per head. Comment.

I* More milk per head will be obtained only if the rate of increase in yield of milk is greater than the population's growth. Increase in number of cows will correspond to increase in milk yield if the rate of yield per cow increases. So the statement would be correct only if yield of milk per cow increases.

P 2. The increase in the price of commodity 'X' was 30%. Then the price decreased by 35% and again increased by 25%. So the resultant increase in the price was 20%. Do you agree? If not, why?

I. No. Here, the resultant increase has been found as $30\% - 35\% + 25\% = 20\%$.

The increase of 25% and decrease of 35% do not refer to the original price. They have been calculated from the resulting price at each stage. Overall percentage increase cannot be obtained by simple addition or subtraction of such percentage figures which do not refer to the same base. So the resultant increase stated here is wrong. The correct figure will be $\left(\frac{130 \times 65 \times 125}{100 \times 100} - 100 \right) = 5.625\%$.

P 3 Rate of a commodity in the first week is 4 kg for a rupee and in the second week is 8 kg for a rupee. So the average price is $\frac{4+8}{2} = 6$ kg a rupee. Do you agree?

I. No. Average price when rate is given as quantity bought per rupee will be harmonic mean of given rates. So the correct average price will be $\left(\frac{1}{\frac{1}{4} + \frac{1}{8}} \right) \times 2 = 5\frac{1}{3}$ kilograms for a rupee.

P 4. The monthly earnings of a worker and the corresponding price index numbers are given below.

* P=Problem; I=Interpretation

| Year | 1971 | 1972 | 1973 | 1974 | 1975 |
|--------------------|------|------|------|------|------|
| Earnings in (Rs.): | 220 | 225 | 250 | 278 | 315 |
| Price Index Nos. | 100 | 100 | 125 | 135 | 150 |

Do you think that the real earnings of the workers have increased in 1975? Justify your answer.

I. A rise in the price level means a reduction in the purchasing power of money. It shall be clear from Table I that since the value of money goes down with the rising prices, the workers or salaried people are interested not so much in money wages as in real wages, i.e., not how much they earn, but how much their income or wages will buy. In the given table, although the money wages are increasing along with the price-index number, the real earnings have decreased.

P 5 The table in next column gives the per capita income and the cost of living index of a community. Do you think, with an increase in per capita income, the cost of living is increased? Justify your answer, by taking into account the real income.

I In the given table the per capita income and cost of living index are

result that general observation can

| Year | Cost of living index (Base 1967) | Per capita income (in Rs) |
|------|----------------------------------|---------------------------|
| 1967 | 100 | 360 |
| 1968 | 104 | 400 |
| 1969 | 115 | 480 |
| 1970 | 160 | 520 |
| 1971 | 210 | 550 |
| 1972 | 260 | 590 |
| 1973 | 300 | 610 |
| 1974 | 320 | 650 |

be that one is affecting the other. But the real income data (Table II) completely indicates that the real income has decreased in 1974 as compared to the increase in the cost of living index.

P 6. Table III shows the sales for each month of the successive years, called 'This Year' and 'Last Year'. After studying the above data write down the major conclusions you reach. Show the data graphically to arrive at conclusions.

Conclusions

In the graph on page 33 we find that the sales have undergone a drastic change during the months May to September of this year as compared to last year. The reasons in this connection can be listed as:

1. It may be due to a special type of advertising campaign which produced much better results during the current year than last year. This may

TABLE I

Calculation Of Real Earnings

| Year | Earnings (in Rs) | Price Index Numbers | Real earnings (in Rs) |
|------|------------------|---------------------|----------------------------|
| 1971 | 220 | 100 | $220/100 \times 100 = 220$ |
| 1972 | 225 | 100 | $225/100 \times 100 = 225$ |
| 1973 | 250 | 125 | $250/125 \times 100 = 200$ |
| 1974 | 278 | 135 | $278/135 \times 100 = 200$ |
| 1975 | 315 | 150 | $315/150 \times 100 = 210$ |

TABLE II

Calculation Of Real Income

| Year | Cost of living index (Base-1967) | Per capita income (in Rs) | Real income (Per capita income / Cost of living index $\times 100$) |
|------|----------------------------------|---------------------------|--|
| 1967 | 100 | 360 | $360/100 \times 100 = 360.0$ |
| 1968 | 104 | 400 | $400/104 \times 100 = 384.6$ |
| 1969 | 115 | 480 | $480/115 \times 100 = 417.3$ |
| 1970 | 160 | 520 | $520/160 \times 100 = 325.0$ |
| 1971 | 210 | 550 | $550/210 \times 100 = 261.9$ |
| 1972 | 260 | 590 | $590/260 \times 100 = 226.9$ |
| 1973 | 300 | 610 | $610/300 \times 100 = 203.3$ |
| 1974 | 320 | 650 | $650/320 \times 100 = 203.1$ |

TABLE III

Table showing the value of monthly sales for each of two years.

| Month | Last year sales in Rs | This year sales in Rs |
|-----------|-----------------------|-----------------------|
| January | 16,200 | 18,500 |
| February | 19,800 | 20,200 |
| March | 18,500 | 19,100 |
| April | 20,200 | 19,800 |
| May | 19,200 | 18,200 |
| June | 19,500 | 17,500 |
| July | 20,000 | 16,300 |
| August | 20,200 | 16,500 |
| September | 20,200 | 18,700 |
| October | 21,000 | 20,000 |
| November | 20,100 | 19,800 |
| December | 20,800 | 21,000 |

help in the progress of the business.

- It is also possible that due to certain important festivals/events the sales may have increased during the current year.
- It may be possible that the period may be a boom period when sales are increasing at a much faster rate

P 7. Do you agree with the statement "On the basis of prevailing prices in India, the national income in 1960-61 was Rs 13,263 crores. In 1975-76, the national income at prevailing prices was Rs 60,293 crores. With the result the national income during 15 years was increased by more than 4 times. We conclude that India has gained four-fold prosperity."

- No. This statement can be correct only if the prices were constant

during these periods. But during these periods there is a sharp increase in the prices of the commodities and real national income has not increased to that extent. On the basis of prices of 1960-61, the national income was estimated as Rs 21,952 crores. With the result, the national income in real terms is twice as much in 1975-76 as compared to 1960-61.

P 8 Usually, the attendance in a course is 40 students per day in a college. Therefore, the total attendance of 100 working days will be 4,000. Do you agree?

- Usual attendance means modal attendance. This means 40 is the mode of attendance and the total attendance for 100 working days is calculated by multiplying mode by 100. This may give the total attendance or may not. Average \times number of items definitely gives total of items. But this is not always true for mode. It is true only when mode = arithmetic mean.

P 9 Average rainfall of a certain city from Monday to Saturday is 3 inches. Due to heavy rainfall on Sunday, the average of the week increases to .5 inches. What was the rainfall on Sunday?

- Average rainfall from Monday to Saturday is .3 inches. Total rainfall for 6 days is $.3 \times 6 = 1.8$ inches. Average rainfall from Monday to Sunday is .5 inches. Total rainfall for 7 days $= .5 \times 7 = 3.5$ inches. Therefore the rainfall for Sunday is $= 3.5 - 1.8 = 1.7$ inches.

P 10 An automobile driver travels a 100-km distance from a plain to a hill station at an average speed of 30 kmph. He then makes the return trip at an average speed of 20 kmph. Do you think the average speed is 25 kmph over the entire distance of 200 km?

- No. The average speed, 25 kmph, over the entire distance of 200 km is obtained as $\frac{30 \text{ km} + 20 \text{ km}}{2} = 25 \text{ kmph}$.

But this is not the correct average. Harmonic mean would be more suitable. Therefore, harmonic mean of 30 and 20 is

$$\frac{2}{\frac{1}{30} + \frac{1}{20}} = 24 \text{ kmph}$$

(Note When distances are the same for two speeds, harmonic mean gives the correct answer.)

P 11. An automobile driver travels a distance of 100 km from a plain to a hill station. He travels 30 kmph. for half of the time and 20 kmph for the other half while going. He does the same while coming. Is the average speed 25 kmph? Yes, the average speed is $\frac{30 \text{ km} + 20 \text{ km}}{2} = 25 \text{ kmph}$.

(Note When times are same, the arithmetic mean of the rates of speed gives the correct answer.)

P 12. A person spent some money as follows

| Money spent (in Rs) | Articles purchased |
|---------------------|--------------------|
| 20 | 50 |
| 30 | 60 |
| 40 | 120 |
| 50 | 90 |
| 60 | 80 |

Find out the average price per article that he paid as well as the average number of articles per rupee he purchased

- For the calculation of average price per article, we have to calculate as Total money spent/Number of articles. Therefore, total money spent $= \text{Rs } 20 + 30 + 40 + 50 + 60 = \text{Rs } 200$.

Number of articles $= 50 + 60 + 120 + 90 + 80 = 400$

Therefore, average price per article $= \frac{200}{400} = \text{Rs } 0.50$.

Average number of articles per rupee $= \frac{\text{Total number of articles}}{\text{Total amount spent}}$

$$= \frac{400}{200} = 2 \text{ articles per rupee.}$$

P. P. GUPTA

BRIEFLY SPEAKING

Short questions requiring precise, to-the-point answers also form a section in the test paper. Some examples

- Q. Name the authors of the following books
 (i) *Geet Govind* (ii) *Rajtarangini* (iii) *Midnight's Children* (iv) *The Adventures Of Tom Sawyer* (v) *Das Kapital*
- A. (i) Jayadev (ii) Kalhan (iii) Salman Rushdie (iv) Mark Twain (v) Karl Marx (whose death centenary was celebrated this year)
- Q. Name the major classical dances of India.
- A. Bharat Natyam, Kuchipudi, Kathak, Manipuri Kathakali and Odissi are some of the major classical dances of India.
- Q. Who played the role of Gandhi in the film *Gandhi*? Name the director of the film and the Indian costume designer who is the first Indian to win an Oscar.
- A. Ben Kingsley played the character Gandhi in the film, directed by Richard Attenborough, and the only Indian to receive an Oscar for the film is Bhanu Athaiya.
- Q. Why was the Sarkaria Commission constituted?
- A. The one-man Commission, headed by Justice R.S. Sarkaria, will examine the workings of the Centre-state relations and suggest appropriate changes within the constitutional framework to strengthen these relations.
- Q. When and why was the Sangeet Natak Academy set up?
- A. The Sangeet Natak Academy was established in 1953, for the promotion of dance, drama and music in the country.
- Q. Which is the largest public sector undertaking in India?
- A. The Indian Railways is the largest public sector undertaking.
- Q. When and where will the next Commonwealth Heads of State and Government meeting be held?
- A. The meeting will be held in November '83 in New Delhi.
- Q. What is SARC? How many countries attended the conference?
- A. The conference on South Asian Regional Cooperation was held recently in New Delhi to promote cooperation among the countries in this region. Seven nations participated in the conference.
- Q. Who is the winner of the U Thant Award for 1982?

- ...the award was given this award, last year, for her outstanding contribution to East-West understanding.
- Q. Who are the winners of Esanda Cup Hockey tournament?
- A. Australia.
- Q. Who are the Ranji Trophy champions?
- A. Bombay
- Q. Why is Kalpakkam in the news?
- A. The first indigenously designed nuclear power plant of the country is located here.
- Q. In which fields have the following distinguished themselves:
- (i) Kapil Dev (ii) Buta Singh (iii) Stewart Slavin (iv) Shiv Kumar Sharma (v) Raja Ramanna
- A. (i) Cricket (ii) Minister for Sports, in India (iii) Journalist who was expelled from Sri Lanka recently (iv) Santoor player (v) New Chairman of the Atomic Energy Commission.
- Q. Who are the winners of the Third World Cup cricket tournament? Name the individual with the highest-ever score to his credit. Where will the next World Cup be held?
- A. India are the winners of the World Cup tournament and Kapil Dev has scored the highest-ever score of 175 not out against Zimbabwe. The venue of the next World Cup is still to be decided as the original sponsors, Prudential Assurance Company, England, have withdrawn their sponsorship.
- Q. Who is the winner of the 1982 Dadasaheb Phalke Award?
- A. L.V. Prasad.
- Q. Who is the winner of Jnanpith

TALK YOUR WAY TO SUCCESS

Want to be among the toppers at no cost? Join *CC Times* think-tank for gaining all the world's knowledge—and for success in prestigious competitive exams—through lectures, group discussions and the like. Send in your typed bio-data—clearly indicating your educational qualifications, percentage and rank if any, in the board or university exams, published articles if any, extra-curricular activities to the Editor, *Career & Competition Times*, 10 Daryaganj, New Delhi 110 002. Selection will be based only on merit; and selected candidates will be interviewed individually. We will not entertain, repeat, not entertain any correspondence about the results through telephone, post or a personal visit. Last date for sending applications: November 20.

Award for 1983?

- A. Mahadevi Varma.
- Q. What is the Public Accounts Committee?
- A. The Public Accounts Committee scrutinises the Appropriation Accounts of the Government of India and the report of the Comptroller and Auditor General. It is a regular ad hoc parliamentary committee consisting of 22 members.
- Q. What is the main function of the Territorial Army?
- A. The Territorial Army gives all Indians an opportunity to receive military training and serve the country during emergency by providing units to the regular army.
- Q. Name the Chairman of the Eighth Finance Commission.
- A. Y.B. Chavan.
- Q. What is NABARD?
- A. The National Bank for Agriculture and Rural Development; it meets the credit needs of all types of agriculture and for rural development.
- Q. When is Teachers' Day celebrated every year?
- A. September 5.
- Q. When and where will the next Commonwealth Games be held?
- A. In 1986, in Edinburgh, Scotland.
- Q. How many countries are members of the Antarctica Club? What does the Antarctica Treaty lay down?
- A. Originally, 12 countries had signed the Treaty in 1959. Today, there are 14 countries apart from India who are members of the Club. The Treaty lays down that the continent be reserved only for peaceful scientific research.
- Q. From where was INSAT-1B launched?
- A. INSAT-1B was launched from Cape Canaveral, Florida, in the US aboard the space shuttle Challenger.
- Q. Where was the Jawaharlal Nehru Gold Cup football tournament played? Who were the winners? Name the losing finalists.
- A. The tournament, held in Cochin, was won by Hungary. China were the losing finalists.
- Q. What is the aim of the public distribution system?
- A. The public distribution system supplies through fair price shops, foodgrains to the people at a reasonable price thereby acting as a cushion against inflation.
- Q. What do you understand by TNCs?
- A. The Trans-National Corporations (also known as multinationals) refers to business enterprises having business involvement in two or more countries.

J.V.A.K.

PUNJAB

CENTRE SWINGS INTO ACTION

In a series of swift but welcome moves Punjab was brought under President's rule and the entire state plus the Union territory (UT) of Chandigarh were declared disturbed areas. Such drastic steps had to be taken following an increase in extremist violence in Punjab. In two separate incidents eight persons of a community were gunned down by Sikh extremists while travelling in a bus and a train.

The administration of Punjab has been given sweeping powers to deal with extremists, through two ordinances issued a day after the imposition of the rule. The ordinances authorise police and magistrates to give shoot-at-sight orders against anyone contravening any law and order regulation in the state. Another notification under the Section 144 of CrPC prohibits carrying of firearms and lethal weapons in the state and UT. Also any magistrate and policeman (not below sub-inspector's rank) may destroy any arms dump or attack an extremist hideout without prior warning. Persons suspected of indulging in violence can also be arrested without a warrant. According to the ordinances—which have been promulgated under the powers conferred by Section 5 of the Presidential Ordinances—no legal proceedings can be moved against police activity during the period.

Substantial reinforcements of CRPF and BSF have been rushed to Punjab, the first state to be brought under President's rule since Congress (I) came to power in 1980. The state Assembly has been suspended and West Bengal Governor B.D. Pande (an ex-ICS officer) has been transferred to Punjab in place of A.P. Sharma.

While most of the people welcomed the imposition of President's rule, the general feeling is that the action should have come at least six months earlier. The Darbara Government's inept handling has only worsened the situation. Initially, the Akali President Harchand Singh Longowal had lauded the decision. However, the Dal has, since, expressed its resentment over the ordinances calling them "shades of emergency". Sant Bhindranwale has resorted to his usual rhetoric—precisely the type which incites communal tension.

Meanwhile, the first task of the new administration is to control extremist activity and generate a sense of confidence and security in the minds of the panic-stricken Punjabis. Secondly, a political solution with the Akalis has to be found without further delay. The President's rule can only be a temporary solution and every effort had to be made to reach a permanent solution. An effort in this direction has been made by the PM's invitation to the Akali leaders to start fresh negotiations.

Earlier, the BJP had called a Punjab bandh to protest the extremist killings. The bandh was peaceful and supported by Akali Dal and other parties. What is surprising is that despite its public condemnation of extremist violence, the Dal takes no steps to curb it. Nor does it take any steps to clear the Golden Temple of secessionists and extremists hiding there. If

not controlled these extremists could well lead to the destruction of this sensitive border state.

PM's TRIP ABROAD

DOING DIPLOMATIC DUTY

Before embarking on the herculean task of making the developed West see eye to eye with non-aligned countries (at the 38th UN General Assembly), Mrs Gandhi paid an official visit to three European countries. On her way to New York the PM visited Cyprus, Greece and France consistently speaking up in defence of the Non-aligned Movement (NAM).

In Cyprus (a NAM member) Mrs Gandhi held talks with President Spyros Kyprianou and the two denounced the fact that the developed countries expected a price for the aid they gave the developing countries. They expected political subservience and submissiveness in return, the two premiers opined. The two also spoke of the virtues of NAM. In Nicosia Mrs Gandhi unveiled a plaque formally christening the Homer Avenue after Jawaharlal Nehru.

Next, in her four-day visit to Greece the PM held discussions with her counterpart Andreas Papandreu on a variety of global issues. The two countries made a plea for a new economic order and the need for North-South dialogue. India and Greece also signed an accord on economic, scientific and technological cooperation. It is hoped the agreement will modestly increase India's iron ore exports to Greece. India will benefit from Greek shipping, ship building, construction, etc. In Athens Mrs Gandhi was presented the 'Gold Medal of the honour and freedom of the city of Athens' for her work in peace.

The PM's visit to France gave fresh impetus to Indo-French economic and commercial cooperation. France offered to assist India in finding alternative energy sources such as nuclear, biogas and solar. French President Francois Mitterrand was also the first European Economic Community (EEC) leader to respond to Mrs Gandhi's invitation to the summit of heads of state at the UN.

ENERGY CRISIS

NO ROOM FOR COMPLACENCY

The 12th Congress of the World Energy Conference (WEC) began its week-long deliberations on the world's energy problems in New Delhi on September 18. The Congress, being hosted for the first time in a developing country, had as its theme 'Energy Development—Quality of Life'. As the theme implies, the Congress recognised man's relationship with energy requirements and his qualitative growth and development.

More than 1,500 delegates from 71 countries—comprising scientists, economists, businessmen and politicians—read out papers on a variety of subjects concerning energy. In her inaugural address, PM Indira Gandhi urged development in at least five specific areas: 1. Application of biological advances in biomass production—like tissue culture and improved photosynthesis. 2. Photochemical technique to

sunlight costing 10 to 100 times less than current sources
 4. Energy storage systems and devices to make transportation less dependent on oil
 5. Integrated energy systems to meet a variety of needs

Energy has been instrumental in the development of man, but with advancement his energy needs have also increased. The rapid use of conventional energy sources such as oil, coal and firewood has led to an energy crisis in the world.

However, the energy scenario today is better than it was about half a decade ago. Manufacture and use of vehicles with low fuel consumption in the developed countries has led to a decrease in the rate of world's oil consumption. Oil prices have fallen by almost 20 per cent during the last few years. Oil reserves have gone up from 418 billion barrels in 1967 to 700 billion barrels today. These brightened prospects have on the other hand, led to a complacency about world energy problems.

The papers read out at the Congress were almost unanimous in the view that there is no room for complacency and that efforts for new and renewable sources of energy (NRSE) must continue. The delegates agreed that development of nuclear and solar energy is the only answer to world energy problems.

The US and Swedish delegates felt that government intervention hampers energy development. The USSR advocated long-range energy planning according to a country's needs. France urged greater international cooperation in solving energy problems, and championed the cause of the Third World. (The EEC has offered to help the countries of SARC to tackle their energy problems.)

India highlighted its own problems. In India, the energy crisis is not so oil-oriented. Here, the excess burden is on firewood and coal. Use of firewood for cooking in the rural areas has led to deforestation. This causes other environmental hazards. While listing its advances in nuclear energy, India stressed the need for liberal flow of nuclear technology, equipment and material.

India has ample resources, the problem is in exploiting them. Its coal reserves are about 112 billion tonnes but the full potential has not been exploited. Only 12 per cent of the hydel capacity has been utilised. Besides, India has to provide energy to its agricultural and rural sector and has exhorted the developed to help the developing.

Earlier, the US had suspended its ministerial delegation to the WEC because India had refused visas to Israeli delegates. India's move is in keeping with its policy towards Israel and South Africa. Also, the Congress is not a UN-sponsored body but an international body of non-government experts.

The WEC, initially known as the World Power Conference, was conceived in 1924 by Daniel Nicol Dunlop and held its first Congress that year in London. This unique organisation not only reviews current energy problems but also ecological, environmental, social, economic and political problems related to it. Its last Congress was held in Munich in 1980.

ROLE OF GOVERNORS

CONTROVERSIAL WHITE PAPER

As a sequel to the on-going debate on Centre-state relations, a discussion on the role of the Governor was, perhaps, inevitable. What is surprising is the ruling party's expression of outrage at it. The office of the Governor has been continuous source of controversy in recent years and a nation wide debate on it was long-overdue.

Karnataka Chief Minister Ramakrishna Hegde's white paper

September 22, Hegde presented the white paper to justify a statement he had made in a seminar on Centre-state relations in Bangalore in early August. The paper, which evoked a violent response from the Congress (I)-led Opposition, gives the constitutional position on the office of the Governor and then lists the various instances of departures from the constitutional framework. It gives damning evidence of the way the "clear constitutional position has been subverted by destroying the Governor's independence and suborning his impartiality". The paper holds the ruling Congress Party responsible for abusing Article 356 of the Constitution and using the Governors as "glorified servants of the Union".

The Indian Constitution clearly lays down the powers of the Governor in Articles 371(A), 200(3) and 356. According to it, the Governor is to act according to the advice of the council of ministers and his duties are similar to those of the President of India. A Governor must be appointed in consultation with and with the consent of the state government. According to the paper, the Constituent Assembly wanted the Governors to be men of high integrity and above petty party politics. They were meant to keep Centre-state relations smooth and not act as the Centre's nominees.

However, in the past two decades, the office of the Governor has been greatly devalued and Governors have become mere stooges of the Central Government. Most of the norms laid down by the Constitution have been flouted and Raj Bhavans have become the dumping ground of ruling party rejects, the paper says. As an eminent journalist put it, "office of the Governor enjoys scant respect even in the eyes of those who hold it, leave alone the public at large."

Besides, as the CM's white paper mentions, there have been many cases of the Governors misusing their discretionary powers and appointing and dismissing state governments at the ruling party's directives. In 1967, Dharma Vira, Governor of West Bengal, dismissed the Ajoy Mukherjee Ministry merely because it benefited the Centre. The public protest against the act led to fresh elections and reinstatement of the dismissed Left Government.

Then, there was the unprecedented dismissal of the Tamil Nadu and Rajasthan Governors—Prabhudas Patwari and Raghukul Tilak respectively—in 1980 by the Congress (I) Government. They were appointed during the Janata regime.

Some instances of abuse of office mentioned by the white paper are the cases of Rajasthan Governor Sampurnanad, UP Governor Gopala Reddy, in 1970, and L.P. Singh and Prakash Mehrotra (Assam). A more recent example is that of the Haryana Governor, G.D. Tapase, who without giving the Opposition a chance to prove its majority in the Assembly, called the Bhajan Lal-led Congress (I) to form a government.

Often enough, discredited CMs are made Governors of far-off states to avoid dissident trouble in the home state. Himachal Pradesh CM Ram Lal—known for his involvement in the state scandals, political intrigue and gross inefficiency—was sent to Andhra Pradesh as Governor after he was asked to step down from office. These cases flout the basic federal and democratic principles on which our Constitution is founded and should not be repeated.

Meanwhile, critics of the white paper feel it is merely a retaliatory measure of the CM, because the new Karnataka Governor, A.N. Banerji, had returned two ordinances without his signatures, initially. Besides, the CM has, perhaps, been too harsh on the Governors, tarring one and all with the same brush. Yet a general debate on the subject would be welcome.

SARVESHWAR DEAD

Sarveshwar Dayal Saxena, an eminent litterateur and the Editor of *Parag*, a sister publication of *CCTimes*, died on September 24, after a massive heart attack. Sarveshwar, former Chief Sub-editor of *Dinman*, was a popular figure in Hindi literary circles and had close connections with Harivansh Rai Bachchan and S H Vatsyayan Agye. Born in Mahson town (UP) on September 15, 1927, Sarveshwar had to his credit famous works like *Garam Havayen*, *Ure Huye Rang* and *Bakri*.

HYDERABAD

COMMUNAL FLARE-UP

Trouble started over a minor incident. A place of worship was desecrated and community leaders called for a hartal. Some shopkeepers did not respond and communal violence started in Hyderabad's old city in the first week of September, spreading then to Secunderabad. This is the third such incident in the year, the others occurring in January and May. Still, the state government proved inept in controlling the present violence—escalating it in the process.

When a *bandh* was called on September 9, the government should have taken all precautionary measures. It did not, and there was mob violence, stone throwing and stabbing. More than 40 people have been killed so far with over a 100 injured. Rather belatedly, curfew has been clamped on the entire old city and nine companies of CRPF deployed to contain the violence.

The various political parties and communities have exchanged charges of responsibility for the violence. In fact, all must accept the blame. The state government has accused the Congress (I) and BJP of fomenting trouble in the area. There could be some justification in the charge because the Opposition would naturally like to discredit the ruling Telugu Desam. The ruling government, on the other hand, has not dealt with the situation efficiently enough. Stricter action and harsh measures in the very beginning would have stemmed the violence. Furthermore, Hyderabad, with its gory history of communal flare-ups, ought to have a special intelligence cell to monitor any kind of communal disturbance and take preventive measures.

Inter-community competitions—be they economic or religious—have added to the tension. The two communities often indulge in shows of strength by taking out extravagant processions during their festivals. Gulf money pouring into the state has also led to economic differences between them. The January elections had led to total polarisation of the old city electorate—increasing hostilities.

The turn of events in the present flare-up is dangerous. Initial violence has now led to a series of apparently planned and pre-mediated stabbings. Intelligence circles feel some neighbouring countries could well be trying to foment trouble in India to divert attention from their internal problems.

However, one can hardly blame an outside party when

Indians themselves are so ready to blame their own religion. In fact, it is not even religion—it is just personal prejudices.

SC VERDICT

THE HANGMAN STAYS

The Supreme Court finally put an end to the three-year debate on the legality and efficacy of the death sentence and the method of execution, by upholding the validity of hanging by rope. The Divisional Bench headed by Chief Justice Y.V. Chandrachud rejected a plea by 40 condemned prisoners that death by hanging was cruel and barbaric and ought to be replaced by the electric chair, gas chamber, firing squad or the lethal injection. The plea had been made under Article 21 of the Constitution, which guarantees right of life and liberty to Indians.

The Bench, comprising Justices R.S. Pathak and Sabyasachi Mukherji, rejected the plea because it saw no "distinct or demonstrable advantage over the system of hanging", in the other modes of execution. The court said medical, forensic and other agencies agreed that hanging was adequate for executing "instant and certain death".

As for the other methods, they are no more humane than hanging. It is known that in the gas chamber, a prisoner is often asked to breathe deeply for quicker death. In electric chair also, often a second shock has to be administered for complete extinction of life. Besides, with India's frequent electricity failures, the chair could become one long torture.

The Divisional Bench was also unanimous in dismissing the need to reconsider the validity of the death sentence. It rejected the plea that death sentence in itself was cruel and inhuman. The court held that death sentence was only awarded in the "rarest of rare cases" where it was felt "the collective conscience of the community" had been shocked. Rape, child murder, bride burning and brutality and diabolical perversity in committing the crime were the 'aggravating circumstances' in the crime, according to the court.

Whatever the merit of the debate and the plea, there was hardly any doubt about the results. The fact remains that the plea was merely a ploy to steal some days of life for the prisoners condemned to death. Among those going to the gallows after the verdict is Munawar Harun Shah (of the Abhyankar murder case), Kartar Singh and Ujagar Singh (Vidya Jain murder) were hanged on October 9.

SPACE

SUCCESS STORY

India's unique three in one satellite, INSAT 1B, reached its space home on September 18, amidst countrywide jubilation. The 1,193 kg satellite, with the height of a six-storey building, was lodged in the nominal position of its geostationary orbit—about 35,680 km above earth—on 74° east longitude. Next day, the satellite was made stationary in its slot by firing small thrusters.

Earlier, INSAT's C/S band antenna for the TV segment was successfully deployed, though initially there occurred a slight ambiguity about the deployment of the solar sail. Before reaching its space home, the satellite was also successfully put into the three-axis stabilised mode at command from the Master Control Facility (MCF) at Hassan.

Subsequently, functioning of all the three services of the satellite have been verified with the snapping of the first meteorological image of earth by INSAT-1B's Very High Resolution Radiometer (VHRR) on September 25. The image which was scanned in visible and infra-red bands proved the successful functioning of the visible band imaging operation.

use of it. Thirty fixed stations—28 for Posts and Telegraphs department and two for ONGC—have been built for enhancing communication capabilities through INSAT. The satellite will be fully operational from October 15.

Originally, INSAT-1B was to be the on-orbit spare of INSAT-1A, but the latter's failure necessitated a change. Now, INSAT-1B is the main satellite and INSAT-1C, to be launched in 1986, will be the on-orbit spare.

Even as INSAT-1B reached its space home, India's first experimental communications satellite, APPLE, was abandoned, having achieved all its goals. APPLE, which was launched on-board the Ariane rocket of the European Space Agency on June 19, 1981, from Kourou (French Guyana), stayed in space three months more than its two-year life-span.

Another Indian space operation which concluded successfully was the switching off of the smart sensor camera on-board India's second developmental satellite, Rohini-D2. The camera, scheduled to function for three months, exceeded its life by two months, transmitting over 2,500 pictures of the Indian landmass.

NDA

OF ALLIANCES AND CONCLAVES

Any hope of a "meaningful understanding" between the National Democratic Alliance (NDA) and the new five-party United Front (UF)—with the Janwadi Party joining it—were quashed with both sides trading charges and denouncing the other's policies. UF Convenor Chandra Shekhar ruled out any electoral adjustments with NDA, saying he wasn't even sure if the alliance would last long. NDA retaliated by calling UF a hotch potch of many parties.

Meanwhile, the CPI and the Telugu Desam have not joined either alliance—though they welcomed the formation of UF. The CPI would like a more anti-imperialistic stand from UF and is apprehensive of the known anti-communist stand of some of its members. Differences also exist in the foreign-policy perceptions of the two. The Telugu Desam, obviously, wishes to keep its options open.

The debate on whether the NDA would be invited to the third All non-Congress (I) Opposition Parties' Conclave in Srinagar was laid to rest by Farooq Abdullah's invitation to NDA, which it has turned down. The invitation came at the instance of Telugu Desam chief N.T. Rama Rao. The reasons for NDA's declining to attend the conclave could be many. One reason could be that BJP was not invited to the all-party meet to discuss communal violence in Hyderabad. The main agenda of the conclave is Centre-state relations which NDA opposed because it supports a strong Centre unlike the other parties. Also, perhaps, it does not wish to confuse its voters by joining the conglomeration of other parties. The decision shows NDA's confidence in its own spheres of influence and its wish for isolation from others.

The third opposition parties' conclave in Srinagar started on October 5 and as expected dealt with some controversial issues. The most important issue discussed was the Centre-state relations. The leaders of 15 opposition parties were unanimous in their condemnation of the Congress (I) government and blamed it for eroding the office of the Governor. The conclave proposed amendment to Article 357 of the Constitution and deletion of Article 250 which, they said, give wide-ranging powers to the Union at the cost of the states. According to Article 250, the Centre can even legislate on subjects in the state list if two or more states request it. The leaders criticised the way the Centre used the official media—radio and TV. They proposed some measures to regulate financial mat-

differences arose when Akali Dal and Telugu Desam proposed that except External Affairs, Defence, Communications and Currency, all other subjects should come under state laws.

SWRAJ PAUL

WINNING THE FIRST ROUND

In the industrial battle between the non-resident Indian Swraj Paul and the two Indian companies Escorts Ltd and DCM, the first round has gone to the former. Paul used the 'good' offices of the Indian Government to tilt the contest in his favour, thus paving way for the registration of his shares.

In a cryptic press release the Reserve Bank of India (RBI) stated: "The subsidiary companies of a group with at least 60 per cent share holding by non-resident Indians are eligible to invest in Indian firms upto a maximum of one per cent of total shares." Secondly, the RBI clarified that "five per cent ceiling on purchase of shares applied only to shares bought after May 2." The RBI clarification clears Paul's way of all difficulties. RBI has also directed the Punjab National Bank (PNB) to release Rs 1.07 crores for purchase of shares. The first clarification allows all the 13 subsidiary companies of Caparo Group to purchase one per cent each of shares, of a company. This is also bound to lead to one company or person giving himself multiple identity by using small subsidiaries as mere dummies.

Problems are likely to arise about the date for five per cent ceiling. How is the government to confirm the number of shares purchased till May 2? The fate of the shares bought after that also remains uncertain.

However, the basic objection to the purchases remains—that Paul did not obtain a general permission or approval of the RBI. The companies allege that no permission was taken and the RBI is silent on the matter. The companies, in the meantime, have still not relented on the transfer of shares and have sought legal advice on the RBI statement.

Paul, who has 13 per cent share of DCM and seven per cent of Escorts, has threatened to call on the shareholders of DCM and Escorts to requisition a separate meeting of the boards. As a last resort Paul can always pressurise the government again and win the public financial institutions over to his side.

FOODGRAIN IMPORTS UNECONOMICAL

Why must India import large quantities of wheat and rice amidst a bumper harvest this year? Good rainfall this year led to a good rain crop with wheat procurements reaching an all-time high of 8.2 million tonnes. Kharif crop is also expected to increase substantially and rice expected to go up to 8 million tonnes. In fact, total foodgrain output in 1983-84 may reach a new high of over 140 million tonnes. Yet, India persists in purchasing from abroad.

A total of 2.13 million tonnes of wheat has been contracted and the shipments are expected to arrive by February next. India has bought 6.5 lakh tonnes from Argentina, 9.8 lakh tonnes from the US and 5 lakh tonnes from Canada, costing Rs 332.81 crores in all. India has also purchased rice from Burma and Thailand.

The government has justified its action by saying the imports were necessary because annual fluctuations in foodgrain output are unpredictable. It seeks to enhance the buffer stock so that more grain can be released through the public distribution system. The government also hopes to control grain prices by releasing enough subsidised food. Another reason offered is that with the easing of world foodgrain prices, India has been able to purchase more for lesser

(Continued on page 64)

PAKISTAN

A CHANGE IS IMMINENT

Seven weeks after the eight-party alliance of Movement for Restoration of Democracy (MRD) started its campaign against the martial law regime of General Zia-ul-Haq, widespread violence and anarchic conditions show no signs of abating in Pakistan, particularly in the province of Sind. Till the first week of October, more than 100 people were killed by the government troops in clashes and demonstrations. However, the Opposition sources in Pakistan claim that more than 150 people have been killed since the start of the civil disobedience movement by the graveside of Zulfikar Ali Bhutto, on August 14. While no official figures on the number of arrested persons are available, the governor of Sind gave the number as 1,999 in September, in Sind alone, according to unofficial estimates, it is around six to seven thousand.

However, all this has failed to put down the spirits of the protestors who have resorted to attacking and burning police stations, post offices, railway stations and other government offices. Extensive damage has been done to rail and road transport between Karachi, the country's main port, and its heartland in the Punjab, as the troubled Sind districts straddle the transport lines between these two. This is causing serious problems as the exports from Punjab's farms and factories and imports for its industries must pass through central Sind. All over the province, army and paramilitary troops have been deployed, with armoured cars and tanks, in an attempt to crush the agitation with an iron hand.

To add to Zia's woes, Lt-Gen Faiz Ali Chishti (ret'd), one of the six generals who masterminded the 1977 coup that brought Zia to power, has taken a strong stand against him, and has said in public that the army should not court unpopularity because of a "handful of expendable men". Two members of Zia's Majlis-i-Shoora or advisory council from Sind have also resigned while a third has voiced his criticism of his constitutional reform plan, announced on August 12.

According to this plan, the General wants to restore the 1973 Constitution—suspended at the moment—with certain amendments, under the pretext of Islamisation, which will give the election commission power to vet candidates. He also wishes to strike a better balance between the President and the Prime Minister. Under the present Constitution, designed to suit the needs of the late Prime Minister Bhutto, the President cannot impose his rule throughout the country, but only in individual provinces. Zia wants a more powerful President, i.e. himself, and a puppet Prime Minister, while the politicians want a parliamentary form of government and immediate elections. Meanwhile, another party outside the MRD, the Jamiat-e-Ulema-e-Pakistan has also joined the agitation and has threatened direct action under the slogan "no taxation without (elective) representation."

A significant feature of the current anti-government agitation in Pakistan is that it is largely confined to Sind—as yet. Punjab continues to be peaceful, by and large. The Punjabi elite, who are the rulers of Pakistan, seem to be content with the state of affairs, although among the intelligentsia, like the teachers, lawyers and students, there seems to be a strong sympathy for the MRD. Similarly, the movement is not very

strong in the North West Frontier Province and Baluchistan, though General Zia is said to be keeping a close watch over them as he is not very sure about what turn the situation might take in these provinces. The arrest of Wali Khan, the Pathan leader of the Pakistani Democratic National Party, and the continued detention of the 92-year-old Khan Abdul Ghaffar Khan only go to show the General's nervousness. It is noteworthy that Mrs Gandhi has asked Zia, in a letter, to release the veteran leader, as he could not possibly offer any threat to the regime, at such an advanced age.

An important reason for the strong reaction in Sind, is that Bhutto was from this province, and his execution by the present regime has roused the anger of Sindhis. The Pakistan People's Party (PPP), headed by Bhutto's daughter Benazir, has always enjoyed a strong support in this state. But more than this, it is a feeling of neglect amongst the people of Sind, a feeling that they have not received a fair deal from the government in the matter of recruitment in government service and the army that has made them come up in arms against the present regime. The Sindhi displeasure with the Punjabis—the ruling class—plays no less important a part in this drama, as the former resent the latter's dominance in Pakistan. Punjabis, along with refugees, own a very large part of farmland in this province. Most of the top jobs in Sind are held by non-Sindhis and Punjabis, and Sindhis have only 3 per cent of the jobs in the Central Government. To top it all, Pakistan has military government, which means armed Punjabi rule.

The Sindhis are demanding early elections not only for a change in the government but for something more—they want more say in the matters of administration and government. With the entire top-level leadership of the PPP and MRD, in the province, in jails or in exile, the situation is fast becoming like the Bangladesh movement in 1971. If the other provinces, especially Punjab, do not follow the lead provided by Sind, the unrest could well turn into a separatist demand.

Meanwhile, Zia has made an attempt to defuse tension by announcing that several elections may be held before March 1985. His military regime has just completed nationwide local body elections, which have received a very poor voter response in Sind and were faced by a boycott call by the MRD, leading to fresh scenes of violence and arson. To conciliate the opinion at home, he is expected to hold a high-level meeting at Islamabad to review the political situation and has also invited the Opposition to hold talks to end the current stalemate in Pakistan. He has also released over a 1,000 persons from jails in Sind, comprising a number of prominent women, arrested in agitations since August 14.

As matters stand, the current situation in Pakistan may also have grave effects on India. It has often been witnessed that military rulers, when faced by internal unrest, whip up the nationalistic feelings of the public by entering into war with some foreign country, thus diverting their attention from the matters in the home country. A recent example was Argentinian President General Leopoldo Galtieri's declaration of war against Britain, on the Falkland Islands issue, at a time when he was faced with adverse conditions at home. The recent statements of Mrs Gandhi and Foreign Minister Narasimha Rao in support of democracy in Pakistan, might have already provided an excuse to Zia to start war hysteria against India. In

fact Islamic fundamentalists have already started taking out prisoners in Lahore condemning "Indian interference in Pakistan's internal affairs". And the stockpiling of US arms by Pakistan in recent years has done little to indicate that their intentions are noble and they do really seek amiable relations with India.

Another outcome of the present explosive situation may be that Zia may let go of the reins of power and hold general elections. He is unable to cope with the unrest. Considering the state of affairs, Zia does not have much option to refuse what the political opponents want. He can remain in power only with their cooperation, but in the current situation it does not seem that he can get that cooperation. Thus, the most prudent course would be for him to manage his own exit peacefully while bringing in a democratic government in a disciplined manner. As suggested by Ghulam Mustafa Jatoi, a jailed leader of MRD, the regime could hand over power to the judiciary and let it hold elections under the 1973 Constitution immediately.

But if he does not do so, there is also a possibility that ultimately, he might be toppled from power by another military coup, particularly so in view of the MRD's appeal to civilian and military officers to disobey orders aimed at prolonging military rule. If that happens, it would once again establish the world's faith in the age-old dictum "He who lives by the sword shall perish by the sword."

LEBANON

STRIFF-TORN STATE

There are three armies, 22 militias and more than 40 political parties in the small war-ravaged state of Lebanon. And over the last month, they have been battling each other in a bloody civil war. To make matters worse, US marines have been shelled and there is a danger of deepening American involvement in the crisis. The main faction in Lebanon are the Maronite Christians, who enjoy formal control of Parliament and government and who also have the support of the regular 24,000-strong Lebanese army; the Phalangists, a right-wing political party with roots in the Maronite community, who dominate the well-disciplined militia called the Lebanese Forces, which has 10,000 standing troops and 15,000 reservists; the Druze, an Islamic sect with 2,50,000 adherents, who have a political party, the Progressive Socialist Party, and militia of 4,000 troops, armed mainly by the Syrians, the Sunni Muslims, who make up 30 per cent of the Lebanese population and have a heavily-armed 5,000-strong militia called the Mourabitoun; and the Shiite Muslims, who are the largest community in Lebanon and whose militia, the Amal, is also, reportedly, armed by Syria.

The recent crisis has come about as a result of the power vacuum left by the Israelis in the Chouf mountains. Israel began to withdraw from the region to its new line south of the Awali river on September 2, and the Druze and Christian Phalangist militiamen immediately began to fight for control of the abandoned territory. The Druze, who have dominated the Chouf region for decades, quickly got the upper hand and gained control over the hills overlooking Beirut and the international peacekeeping force positioned in and around Beirut. Lebanon's immediate future appeared to be in the hands of the Druze leader, Walid Jumblatt, and his patron, President Hafez Al Assad of Syria. Assad wants to establish Syria as a new Arab superpower in the region, but if they were to establish their surrogates in Lebanon, another war can safely be predicted in the near future. The PLO, too, has reportedly been helping the Druze—and Israel is not likely to take this kindly.

To complicate matters further, the Druze militia began to

shell US marine positions at Beirut airport and French, British and Italian members of the international peacekeeping contingent were also caught in the cross-fire. Some Americans have been killed and quite a few wounded and this has aroused belligerent feelings in the US, although nobody wants a direct involvement in the war. In defence, however, the US began a naval bombardment of artillery positions within Syrian-controlled areas of Lebanon. The Syrians have threatened to shell US naval vessels. The two countries have been moving closer to direct conflict over the last few days. The US faces a dilemma, it can either withdraw, and then Syria, perhaps with Moscow's blessings, would cash in on the power vacuum; or it could increase its military and naval strength in the area, which would create further tensions in the region.

PHILIPPINES

AFTERMATH OF AN ASSASSINATION

To show Filipinos that the government did not have any hand in the murder of opposition leader Benigno Aquino Jr. on his return from exile in the US last month, Philippines President Ferdinand Marcos set up a five-member commission to investigate the death. But the commission ran into trouble at the very beginning. Accused of being a puppet of Marcos, commission Chairman Chief Justice Enrique Fernando temporarily removed himself from the body. The panel stalled on producing the three soldiers who had accompanied Aquino from the China Airlines plane and other witnesses, afraid of future consequences, appeared unwilling to come forward.

Meanwhile, the alleged assassin has been identified as Rolando Galman, a well-known gangster who is also supposed to have served at times as a hired assassin and informer for influential Filipinos. He had friends in high places, for even though he had a record of multiple arrests, he had a knack of getting sprung from jail. A story, however, is going around that he may not have assassinated Aquino. A film shot by television crews, although sketchy because hands were clapped over the TV lenses by security officers, has a sound track in which a man can be distinctly heard shouting "Ako na, Ako na" ("I'll do it, I'll do it") seconds before a shot was fired. Some Filipinos feel the security guards sent to protect Aquino themselves killed him and planted Galman's body on the tarmac.

In the conspiracy theory doing the rounds of Philippines, three names figure prominently: Gen. Fabian Ver, the Chief of Staff of the Armed Forces, first lady Imelda Marcos and a powerful businessman, Eduardo Conuengco, who was a bitter rival of Aquino. According to American columnist Jack Anderson, Imelda Marcos and Ver may have collaborated and arranged the murder, without the knowledge of President Marcos. There are indications that Marcos, who has a serious kidney problem, is grooming his wife to succeed him. Mrs. Marcos may have caused Aquino's death to get rid of a most charismatic political rival. All this speculation, however, has added to the unrest of the nation and has put Marcos on the defensive. Following violent incidents of protests on September 21, Marcos threatened to reimpose martial law in the country.

MAURITIUS

NEAT BEGINNING

Prim Minister Anerood Jugnauth's three-party coalition known as the Alliance decisively defeated the leading opposition party, the Mauritian Militant Movement (MMM), in the general elections to the 62-member National Alliance held recently. The leader of the MMM, Paul Berenger, had broken away from Jugnauth's Government only a

few months ago. In 1982, Jugnauth and Berenger had been allies and had won all the seats in the National Assembly elections of June, sweeping away the administration of Sir Seewoosagur Ramgoolam. This year, however, Ramgoolam's Mauritius Labour Party (MLP) joined hands with Jugnauth to defeat Berenger.

The elections centered around personalities rather than issues. Neither group put forward plans for solving the problems of unemployment (75,000 unemployed) and housing (45,000 homeless). Economic problems, too, went untouched: there is a balance-of-payments deficit of Rs 800 million, the public debt is Rs 7 billion, and there is 15 per cent inflation in the country. The leaders also did not discuss the foreign policy issue. The attitude of both groups is to take things as they come.

The three partners of the Alliance have already divided the chief political offices among themselves. Ramgoolam is the Governor-General and will ultimately become the President, when Mauritius becomes a republic; Jugnauth continues as Prime Minister; and the leader of the third party in the Alliance (Mauritius Social Democratic Party), Sir Gaetan Duval, will hold the Foreign Affairs portfolio. It is a neat beginning considering the ideological gaps that extend between the parties. MLP is moderate, Jugnauth's Socialist Militant Movement (SMM) is radical socialist, while Duval's party is rightist.

AFRICA

POVERTY AMIDST PLENTY

Over half the unused farmland in the world is in Africa. If the soil was made to produce the best yield obtainable, Africa could grow 100 times more food than it grows now. Yet, thousands of Africans are facing starvation this year. In 18 black African countries, 20 million people are facing starvation and 6,00,000 tonnes of extra food is required to help them survive. Many other countries, too, have appalling food shortages.

The reason is not merely the failure of the rains across Africa, but also bureaucratic incompetence and war. As a result of rain failure, South Africa, which exported almost 5 million tonnes of maize last year, will import 2.5 million tonnes this year. Botswana, which has an average maize harvest of 60,000 tonnes per annum, grew only 16,000 tonnes this year. In addition, the rinderpest disease, a kind of diarrhoea which attacks cattle, has killed lot of cattle heads from the west to the east, and has recently been detected at Malawi, which is only a stone's throw from the southern African veld, where huge herds of cattle live.

Another reason for the food crisis is an adverse population-food ratio, while the amount of food produced in Africa has increased by less than 2 per cent per annum since 1960, and the rate is falling, the population has increased at a rate well over 2 per cent since 1960, and is still rising. Africa is the only part of the world which grows less food per person than it did 20 years ago. The rapid increase in the urban population has also led to acute food shortages in towns. As a result, Africa has to import cereals, and between 1960 and 1982, cereal imports have gone up nearly four times.

In the rural areas, the people live by subsistence farming, and government policies are largely to be blamed for this. While almost every African country has a state marketing board with powers to buy and sell food at fixed prices and thus encourage surplus production, most of them fixed the prices so low in the 1960s and 1970s that the farmers did not find any incentive to produce more than they required for personal consumption. Recently, some countries like Zambia and Malawi have taken steps to increase the prices of food products, but as a result the urban population is dissatisfied. The

only country which has consistently promoted commercial farming is Kenya. The result has been a good 4 per cent annual increase in agricultural production.

African governments, too, are often incompetent in dealing with the problems of farmers. Lots of people die merely because daily rations are not delivered regularly to refugee camps. Thomas Malthus, the English economist, predicted 150 years ago that populations will grow faster than food production as a result of which famines would occur. Is Africa proving Malthus' point?

CHILE

VIOLENT ANNIVERSARY

South of the US, the trouble spots are increasing every day. Chile has now joined the list of problematic areas in the region. Opponents of Gen Augusto Pinochet, the head of the military regime, have been holding one day demonstrations every month for the last five months to protest against Pinochet. In mid-September, the fifth monthly protest, held on the 10th anniversary of the coup that brought Pinochet to power, turned violent as police, who had orders to "obliterate everything", turned on a crowd of 3,000 demonstrators with truncheons, tear gas and water cannons. The violence marked the end of a promising attempt by Interior Minister, Sergio Onofre Jarpa to solve the problem by conciliation. Jarpa had met with leaders of the Democratic Alliance, a loose federation of the nation's five major opposition parties, to discuss economic and political reforms. Two leading political exiles had been allowed to return and Jarpa had also agreed to suspend the emergency imposed in 1973 when Pinochet had seized power from his leftist predecessor, Salvador Allende Gossens after a bloody coup in which 1,000 to 40,000 people were killed. For some years after the coup, Pinochet remained a fairly popular figure, especially because he managed to bring down inflation from 600 per cent in 1975 to around 10 per cent in 1981. From 1982, however, a recession began in Chile and at present there is 24 per cent unemployment in the country. Chile also has the highest foreign debt, the fifth highest in Latin America. In fact, the state of the economy which is mostly responsible for the growing opposition to Pinochet. According to a new Constitution introduced in 1980, Pinochet is to serve as President until 1989 without elections, but the people, plagued by a mismanaged economy, want elections well in advance of 1989.

In another Latin American country, Argentina, elections were to be held in October, the first since the military seized power in 1976 after overthrowing Isabel Martinez de Peron, the wife of the late charismatic dictator, Juan Domingo Peron. The military leaders stand discredited since their blunder in seizing and losing the British-held Falkland Islands in 1982. Argentina's economy, too, is in a shambles, with inflation running at 400 per cent, reportedly the world's highest rate. This February, the military junta of President Reynaldo Bignone announced plans to hold civilian elections and thus return Argentina to democracy. The two leading candidates for the presidency are Italo Argentino Luder of the Peronist party and Raul Alfonsin of the Radical party. The Peronist party, founded by Peron in 1946, has considerable support among the working class and the poor. Though it is torn by factional feuding at present, many members feel that if Isabel Peron were to return from her self-imposed exile in Spain, to which she fled in 1976, the party would be reunited and would win the election. The centrist Radical party, however, has been gaining strength of late and has built up a base not only among the urban middle-class but also among blue collar workers.

In Central America, the situation has become explosive. As

CAREER COURSES

Excellent Postal Programmes

As good as oral instruction, assuring you of definite success, leisurely learnt in the comfort of your home * Enhance your employability & career advancement by letting us train you for a career that suits your aptitude & temperament * Personalised attention * Exhaustive, easy - to - follow Study materials * Moderate Fees * Widely-recognised Diplomas/Certificates * Free Employment Guidance * Join any of our following job-oriented courses:

1. I. A. S. PRELIMINARY/MAIN EXAM
2. BUSINESS MANAGEMENT
3. INDIAN ECONOMIC SERVICE
4. M. B. A. ENTRANCE
5. C. A. ENTRANCE EXAM
6. C.A.I.I.B. — Parts I & II
7. BANK OFFICERS' EXAM
8. BANK CLERKS' EXAM
9. CLERKS' GRADE EXAM (S. S. C.)
10. AUDITORS/U. D. C. EXAM
11. INSPECTORS' GRADE EXAM
12. GOVT RECOGNISED P. & DIPLOMA IN PERSONNEL MANAGEMENT

We also coach students for all Competitive Examinations conducted by recruiting bodies of Govt. including Railway Service Commissions and Public Service Commissions of various State Governments and Banks.

Practice Tests

In preparing these tests we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating : Evaluate your performance on the basis of the following score-card.

| | | |
|-----------------------------|---|-----------|
| 100 questions in 60 minutes | — | Excellent |
| 60 questions in 60 minutes | — | Good |
| 50 questions in 60 minutes | — | Fair |
| 35 questions in 60 minutes | — | Poor |

Tips : 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not guess the answer.

HOW TO TACKLE CAT

BY LT COL. I R. MANCHANDA, former Dy President S S B.

Why do some get into the IIMs, others not? Here we spell out the secret of their success by analysing four sections of the Common Admission Test (CAT) paper of IIMs followed by practice tests on them. The remaining three sections plus practice tests will be published in our December issue.

The aim of all management entrance tests, irrespective of who conducts them, is to evaluate the candidate's general verbal, mathematical and analytical abilities under stress, since it has been found that these abilities are intimately associated with success in the management courses run by various institutes and universities. Though these tests do not measure achievement in specific fields of economics and commerce, some of the test items are based on business situations. This, however, should not worry you since any candidate, even if he has never studied economics or commerce, will be able to answer these items correctly if he uses his common sense and is logical in his reasoning.

Preparation for the entrance test

Since there are very limited seats in the management institutes and the aspirants too many, the entrance tests, though not very difficult in content, subject a candidate to a severe 'time stress'. Success in these tests, therefore, calls for thorough preparation which must be done intelligently, systematically, and under battle-like conditions.

Familiarisation with the pattern of the test paper is very essential since it gives a candidate an insight into his

strengths and weaknesses. Analysis of the Common Admission Test (CAT) conducted by the Indian Institutes of Management last year revealed roughly the following pattern. (This pattern must not be treated as wholly authentic since it is based on the debriefing of a few candidates only.) The whole paper consisted of seven sections having about 220 multiple-choice questions to be answered in approximately 2 hours 30 minutes.

Section I: Verbal ability. Time allowed—20 minutes. Number of items: 35 to 40. It had: (a) synonyms (6 to 7); (b) antonyms (6 to 7); (c) spellings (6); (d) one-word substitution (5); and (e) analogies (12 to 15).

Section II: Mathematical ability. Time allowed—20 minutes. Number of items: 35 to 40. All items in this test were aimed at evaluating whether the candidate has full grasp of the fundamentals of Arithmetic and Algebra. If you go through Section II of our Practice Test for MBA candidates in this issue of CCTimes, you will be fully acquainted with the kind of questions contained in this section of the actual CAT.

Section III: Verbal ability. Time allowed—30 minutes. Number of items: about 35. It had: (a) three passages on comprehension with six questions on each (18 items); (b) questions requiring the formation of a meaningful word from words

having scrambled letters (8 to 9 items), and (c) questions requiring arrangement of words in a proper order, so that the sentence so formed makes sense (8 to 9 items). For sample questions on words with scrambled letters and disarranged sentences, refer to our Practice Test for Bank POs and Practice Test for MBA candidates, respectively, in this issue of CCTimes. It also contains two passages on comprehension for MBA candidates.

Section IV: Analytical ability. Time allowed—15 minutes. Number of items: 20. It had: (a) questions on data sufficiency (15); and (b) arrangement of sentences in a logical order (5). For sample questions on data sufficiency, refer to Section IV of the Practice Test for MBA candidates mentioned earlier on. Sample questions on arrangement of sentences in a logical order will be published in the December issue.

Section V: Mathematical ability. Time allowed—20 to 25 minutes. Number of items: 35 to 40. This contained numerical problems on: (a) percentage; (b) profit and loss; (c) interest—both simple and compound; (d) time and work; (e) distance and time; (f) ratio proportion; (g) mixtures; (h) averages; (i) age problems; and (j) some miscellaneous problems. Most of these problems required thorough knowledge of the

on their application to solve them speedily

Section VI: Analytical ability Time allowed—20 minutes. Number of items 20 to 25. This contained questions on (a) data evaluation based on a business situation; and (b) analysis of explanation with respect to a fact situation and result. Sample questions will be published in our December issue

Section VII Interpretation of graphs, diagrams and tables. Time allowed—20 minutes. Number of items . 25 to 30

A comparison between the CAT paper of 1981 and that of 1982 indicates a few variations. In 1981, the sections on verbal ability contained questions like filling in the blanks with prepositions and distinction between words, which were not there in the paper set in 1982. In 1981, the sections on mathematical ability contained questions based on set operations like union of sets, intersection of sets, etc., illustrated by Venn diagrams, whereas these were not there in the paper set in 1982. In 1982, the sections on analytical ability contained questions on data evaluation based on a business situation whereas these were not there in the paper set in 1981

In the light of the above, a candidate should, therefore, be prepared to expect some questions of a new kind being introduced this year. This year's paper, I have a hunch, shall contain questions on analytical reasoning involving puzzles and logical reasoning. For sample questions on analytical reasoning (puzzles) refer to our September issue as also some of our previous issues. For logical reasoning, it is suggested that candidates go through the Tests of Reasoning in our previous issues. We shall also include questions of these types in the Practice Test for MBA candidates in our next issue.

Content-wise, the tests conducted by the Xavier Labour Relations Institute (XLRI), Jamshedpur, and other universities followed almost the same pattern, with a few variations here and there. In the paper set by XLRI every year, there are a large number of questions on logical reasoning. In 1981-82, the Delhi University paper had a separate section to assess the personality traits of a candidate and this section had roughly 200 questions to be answered in 40 to 50 minutes. But in the 1982-83 paper of the University, there was no section of

this type as such. However, there were about 10 to 15 questions which were interspersed in different sections with the same aim in view: to assess the personality traits. Further, the last Delhi University paper contained a new section involving 50 questions on non-verbal reasoning to be completed in about 12 minutes.

From the above, it would be clear that both accuracy and speed are vital for success in an examination of this type. One cannot, therefore, afford to wait till a week or even a month before he starts preparing for this test. It has also been seen that most candidates are able to complete sections on verbal ability well before time, but when it comes to mathematical and analytical abilities, a majority of them complain about insufficient time. So you must concentrate more on these aspects.

Preparation for improving verbal ability

(a) Enrich your vocabulary. In our magazine, there is a regular feature covering this aspect every month. Besides this, you should try to learn as many new words as possible every day. Develop the habit of consulting the dictionary everytime you come across a new word. Further, certain words have different connotations depending upon the context in which these are used. The best way to remember meanings of various words is to learn their antonyms also at the same time. You must pay particular attention to those words that you are familiar with but have unusual secondary meanings not generally known. Most of the tests on synonyms and antonyms make use of these secondary definitions.

(b) There are a large number of words which are usually misspelt. For spelling rules, it is suggested that the candidates go through *English Grammar, Composition, And Correspondence* by Pink and Thomas, Appendix II, Page 388. This book will also be useful for learning the use of prepositions. Since some management tests include questions on the spotting of errors in sentences, it is recommended that candidates also master Chapter 8 of this book. Though CAT has not included questions of this type in the papers set during the last two years, a candidate should not be surprised if these are included in this year's paper. The papers set by Delhi University have often contained questions of this kind. The book mentioned above is available in India.

(c) You will not face much difficulty in tackling questions on comprehension/reading recall if you possess a rich vocabulary. Papers set by Delhi University generally include passages on reading recall. In reading recall, all the questions based on different passages are given at the end, whereas the questions on comprehension (involving implied interpretation of the content of various passages) follow immediately after each passage. In reading recall test, you cannot refer to the passages once time for reading is over, while in passages checking your comprehension, you can refer to the passage any number of times as long as you complete the section in the allotted time.

(d) Questions on sentence completion generally include at least two choices, both of which appear to be correct. In order to hit the correct choice, a candidate must analyse the implications of the sentence very carefully.

(e) To tackle questions on analogies successfully, candidates are advised to learn various types of word relationships. These could be of synonyms, antonyms, worker and article created by him, worker and his tools, animals and their sounds, cause and effect, class and species, type and characteristics, degree of intensity, time sequence, etc.

(f) For learning one-word substitutions, there is no way other than an intensive study of these

Mathematical ability

(a) Must know the BODMAS rule thoroughly.

(b) Practise questions involving fractions, both simple and complex. Remember, every decimal represents a fraction. Decimals are much easier to add, subtract, multiply and divide than fractions. Practise these intensively.

(c) Understand the difference between $8\frac{1}{3}\%$ and $08\frac{1}{3}\%$

(d) You must learn to express percentage into fractions and decimals. Also the other way round. **THIS IS VERY IMPORTANT.** This must be a part of your system if you wish to complete sections on mathematical ability in the allotted time.

(e) Use of various formulae for working simple and compound interest. Since the use of log tables is not allowed, it is speedier to work out problems on compound interest from one conversion period to the next than by the use of the formula if the

number of conversion periods happens to be more than three.

(f) Must learn that profit/loss can be expressed based on the selling price also. Normally, these are based on the cost price, unless otherwise stated.

(g) The absolute value of all numbers, positive or negative, is always positive. Example: $|2| = 2$, $|-2| = 2$.

(h) Must be able to divide numbers with different signs. $\frac{+5}{-5} = -1$, while

$$\frac{-5}{-5} = 1.$$

(i) Master averages, arithmetic mean, geometric mean as also median.

(j) Must master powers, exponents and roots. (1) Any non-zero number raised to the power zero is equal to 1.

$$(2) \left(\frac{a}{b}\right)^p = \frac{a^p}{b^p} \quad (3) \frac{a^p}{a^q} = a^{p-q}$$

$$(4) a^m \cdot a^n = a^{m+n} \quad (5) (a \cdot b)^p = a^p \cdot b^p$$

(k) Must learn the square and the cube of numbers upto at least 10.

(l) Difference between $3 \times \sqrt{64}$ and $3\sqrt{64}$. The first is equal to $3 \times 8 = 24$, while the second is equal to $4\sqrt{64}$ is the same as $(64)^{\frac{1}{2}}$ and $3\sqrt{64}$ is the same as $(64)^{\frac{3}{2}}$. Must learn to work out the square and cube roots of various numbers.

(m) Learn the rules of divisibility, since these come in very handy.

(n) Algebraic expressions should not scare you. If you practise simplifying them, you will start enjoying questions involving these expressions.

(o) If an expression has more than one set of parentheses, you must eliminate the inner one first and then tackle the outer one.

(p) Learn to combine algebraic expressions. Formulae like $(a+b)^2$, $(a-b)^2$, $(a+b)^3$, $(a-b)^3$, a^3+b^3 , a^3-b^3 will come in very handy.

(q) Factorisation of algebraic expressions must be mastered.

(r) Use of simultaneous equations. Remember, if you have two variables whose values you want to find out, you must have two different equations. If the number of variables is three, you must have three different equations. Remember $x+y=10$ and $3x+3y=30$ are NOT two different equations.

(s) Must master solving equations of the type: $\sqrt{2x+5} + \sqrt{3x+2} = 20$.

(t) Basic knowledge of quadratic equations is must.

(u) Average speed is equal to $\frac{\text{total distance}}{\text{total time}}$

total time

(v) Must be able to solve problems with the use of Venn diagrams.

(w) Basic log formulae must be learnt. If you go through our Practice Tests in this issue of the magazine quite a lot of your fundamentals in logs will get clarified.

(x) Geometry, which you studied in the IX and the X classes, must be brushed up.

(y) Mensuration and all its facets involving volume and surface area of cubes, cones, spheres, cylinders and suchlike must be understood thoroughly.

(z) You must know a bit about Coordinate Geometry. For example, you must know the equation of a line when it is parallel to the x-axis and when it is parallel to the y-axis.

Improving analytical ability

There is no short cut to it. Remember, there is no substitute for clear and analytical thinking. You have to cultivate the habit of thinking analytically. The more you practise, the sharper you become. The same applies to logical reasoning. I have seen a large number of candidates having a very high I.Q. and yet are not able to think logically and analytically. This is so because they never cultivated the habit of thinking.

Preparation for tackling problems on tables, graphs and diagrams

Only practise will make you perfect in solving such problems.

How to take the test

(a) Ensure that you adhere to the guidelines given by the authorities conducting the test.

(b) It is very important that you read carefully the directions for each section and for each question/set of questions. If you fail to do so, you are likely to miss the main idea and thus lose credit for the whole section/question. Candidates have been seen to record the synonym of a word as their answer, while they were required to select the choice which gave the antonym. Candidates have also been seen recording the choice for a statement which was true while they were required to check the false statement.

(c) The test lays stress on both accuracy and speed. Speed does not mean that you record your answers hastily. You should work as rapidly as possible without being careless.

(d) Make sure you record your

answers alongside the correct question number. A large number of candidates mess up everything owing to their failure to follow this requirement carefully.

(e) Do not be tense. Should you find any question difficult or which you cannot answer, do not spend much time over it. It is better to move on to the next question. A rigid approach failure.

(f) Should one guess? A certain percentage of incorrect answers are deducted from the correct ones for haphazard and thoughtless guessing. Thoughtless guessing invariably leads to incorrect answers; intelligent guessing generally leads to correct ones. If you can arrive at a maximum of two/three possible answers by a process of elimination, then it is worth making a guess, otherwise not.

(g) Of the four or five possible choices, you are required to select the best. A good question-setter normally impels you to think, especially in questions of verbal ability, by including two plausible answers. In such cases, you must read the question carefully and try to gauge the intentions of the question-setter. Reject mentally those answers which are obviously wrong. Suspect as being wrong any of the choices which gives a general answer. You will be able to give the more plausible answer only if you learn to get at the intentions of the examiner.

Tips for success

Section 1 (a) A large number of students do not read the directions carefully and instead of giving the antonyms, give the synonyms of the words. (b) If you get confused as to the correct spelling of a word when different choices are presented to you, write the word as it comes to you naturally. More often than not, you will hit at the correct spelling. (c) Grasp the intentions of the question-setter by understanding the implications of a sentence when you tackle question on sentence completion. Many sentences-completion test items are based on a contrast between the ideas expressed. Contrasts are generally connected with such phrases as—but, theoretically, in spite of, however, even though, although, nevertheless, etc. In questions of this type, one part of the sentence will be opposite in meaning to the other. (d) In tackling questions on analogies, you must first establish the exact nature of relationship between the words in the original pair. If

out the relationship between the first word of the original pair with the corresponding word in the lettered choices to hit the right answer

Section II You will do well by going through the explanatory notes on Section II of the Practice Test in this issue of our magazine

Section III Try to understand the author's purpose in writing the passage. Once you have done that, you shall find that you can answer various questions on comprehension speedily. If you do not know the meaning of a word in the passage, read the preceding and the succeeding sentence to guess what the meaning could be. More often than not, you shall be right in your guess

Section IV (a) Remember, you are not required to work out the exact numerical answer. A large number of candidates waste time by doing so. *Guard yourself against this tendency* (b) First, look at the question asked without seeing the two statements

(1) only. See if the data is sufficient to answer the question. Keep in mind whether you get the answer in the affirmative or in the negative. Then see the second statement alone and see if it provides sufficient data to answer the question. Once you have done that, you are in a position to say whether your answer will be A, B or D. If it is none of these, see if both the statements together give you the answer. If they do, then your answer will be C. If the steps mentioned above do not indicate the answer to the question, write your answer as E.

Some more tips

In the next issue, we intend giving you a practical test on other sections of CAT, besides a few questions on non-verbal reasoning, logical reasoning, and analytical reasoning (involving puzzles). We will also give some more practical tips on tackling all types of questions in general and the questions asked in sections V to VII in our next issue

(d) None of the above

12. (a) Benefitted
(b) Benifitted
(c) Benifited
(d) Benelited
13. (a) Occurred
(b) Occured
(c) Ocurred
(d) Ocured
14. (a) Vascilate
(b) Vascillate
(c) Vacilate
(d) Vacillate
15. (a) Liquification
(b) Liquefecation
(c) Liquefactiopl
(d) Liquificasion

Directions: In questions 16 to 20, a proverb/idiom/phrase is followed by four lettered choices. Select from amongst the given alternatives, the one that best explains the meaning of the proverb/idiom/phrase.

16. Sent to Coventry.
(a) Sent to a public school
(b) Welcomed
(c) Ostracised
(d) None of the above
17. To make fish of one and flesh of another
(a) To become a non-vegetarian
(b) To be impartial
(c) To be partial
(d) To be extra smart
18. To have a second string to one's bow.
(a) To have a second alternative in case the first fails
(b) To keep one's powder dry
(c) To deceive someone
(d) None of the above
19. To look a gift-horse in the mouth.
(a) To appreciate a gift or favour
(b) To pick flaws in a gift or favour
(c) To be indifferent
(d) None of the above
20. One swallow does not make a summer
(a) Spring does not always follow a winter
(b) One secret cannot save a person's life
(c) One difficulty overcome does not mean that trouble is over
(d) One hot day does not mean that summer has set in

Directions: In questions 21 to 30, select the lettered pair that expresses a relationship similar to that between the capitalised word-pair.

21. VICARIOUS: ACTUAL ::
(a) bigotry: intolerance
(b) capacious: spacious

PRACTICE TESTS FOR CAT

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the questions. Answers are given at the end of this supplement

Section 1

(Time—15 minutes)

Directions: In questions 1 to 5, select the word or phrase which is nearest in meaning to the capitalised word

1. NEXUS
(a) noxious
(b) a discrete group
(c) a linked group
(d) shibboleth
2. COEVAL
(a) contemporary
(b) subordinate
(c) quail
(d) intrepid
3. CARICATURE
(a) aberration
(b) cartoon likeness
(c) miniature
(d) consequential
4. UPBRAID
(a) extol
(b) sanction
(c) restrain
(d) revile
5. DIABOLIC
(a) having double meaning
(b) authoritarian
(c) angelic
(d) fiendish

Directions: In questions 6 to 10, select the word or phrase which is

most nearly *opposite* in the meaning to the capitalised word

6. UMBRAGE
(a) repugnance
(b) suspicion
(c) admiration
(d) antipathy
7. VOCIFEROUS
(a) reticent
(b) vehement
(c) laconic
(d) boisterous
8. ZEPHYR
(a) whisper
(b) tempest
(c) partisan
(d) whiff
9. FRAZZLE
(a) enervated
(b) inanimate
(c) spirited
(d) dazzle
10. PUSILLANIMOUS
(a) mean-spirited
(b) intrepid
(c) parsimonious
(d) cabbala

Directions: In questions 11 to 15, select the correct spellings from amongst the given alternatives.

11. (a) Ressurrection
(b) Resurrection

- (c) canard : exaggerated
(d) chagrin : complacency

22. DOLTISH : STUPID ::
(a) sartorial : clothes
(b) halcyon : peaceful
(c) animus : cooperation
(d) irascible : calm
23. INTELLIGENCE : IDIOT ::
(a) scholarship : erudite
(b) food : wealthy
(c) water : desert
(d) listless : lackadaisical
24. DIDACTIC : MORALISE ::
(a) teacher : dramatise
(b) callow : rationalise
(c) congenial : terrorise
(d) playwright : plagiarise
25. STRATEGIST : CAMPAIGN ::
(a) ravenous : motivate
(b) sculptor : paint
(c) psychiatrist : disorder
(d) tactician : battle
26. LOVE : ADMIRATION ::
(a) guilt : complex
(b) ecstasy : happiness
(c) kick : thrash
(d) crack : break
27. BOARD : TRUSTEES ::
(a) army : tanks
(b) crowd : convicts
(c) faggot : sticks
(d) caravan : vehicles
28. CONVICT : PRISON ::
(a) cow : byre
(b) fowl : stable
(c) dog : clinic
(d) nun : coventry
29. NIGHTINGALES : WARBLE ::
(a) monkeys : bleat
(b) vultures : howl
(c) thrushes : whistle
(d) sparrows : squeak
30. SILLY : BITTER ::
(a) brave : coward
(b) hare : tiger
(c) butterfly : cricket
(d) goose : gall

Directions : In questions 31 to 35, you are required to choose from the given alternatives the word(s)/preposition(s) that best fill(s) the blank space(s).

31. The essay contained so much of——material that it was difficult to comprehend the author's message.
(a) platitude
(b) superficial
(c) extraneous
(d) illustrative
32. ——— there were 50 delegates present at the meeting.
(a) All together
(b) Altogether
(c) Strictly
(d) Simultaneously

33. There was utter——consequent——the formation of a coalition government at the Centre.

- (a) listlessness, to
(b) euphoria, to
(c) confusion, on
(d) confusion to
34. Though he had considerable influence——the Prime Minister, nobody was satisfied——the truth of what he said.
(a) Over, with
(b) with, with
(c) with, of
(d) None of the above
35. Since industry occupies a very important place in modern life, it is—for people engaged in scientific research not to be aware of ——problems
(a) impossible, future
(b) unimaginable, theoretical
(c) difficult, esoteric
(d) inconceivable, practical

Section 2

(Time—20 minutes)

36. There are—prime numbers in the first 30 natural numbers.
(a) 10
(b) 11
(c) 12
(d) 13
37. If Ram saves $\frac{2}{7}$ of Rs 2,142, he spends
(a) Rs 612
(b) Rs 918
(c) Rs 1,530
(d) Rs 1,836
38. $0.78934 + 0.503 - 0.2$ of $430 \div 2$ equals 1
(a) 0.76343
(b) 0.86234
(c) 2.348531
(d) None of the above
39. $(0.3)^3 + (0.5)^3 + 3(0.3)(0.5)(0.8) + (0.3)^3 + (0.4)^3$ equals
(a) 0.313
(b) 0.603
(c) 0.813
(d) 1.813
40. 1.4371 of $0.2 + 6.134 \div 3.067$ equals
(a) 2.287420
(b) 2.87420
(c) 4.87420
(d) 4.87430
41. $3 + 3 \div 3 - 2 \times 1$ equals
(a) Zero
(b) 2
(c) 6
(d) None of the above
42. $[(1.7)^3 + (0.32)^3] \div [2.89 - (1.7)(0.32) + 0.1024]$ equals

- (a) 1.02
(b) 1.39
(c) 2.02
(d) None of the above

43. $(2.922 + 1.500)^2 - (2.9220 - 1.5)^2$ equals
(a) 17.5320
(b) 17.530
(c) $(2.922)^2 - (1.5)^2$
(d) None of the above
44. If $x + y = 70$ and $x - y = 10$, $\frac{1}{x} + \frac{1}{y}$ equals
(a) $1/70$
(b) $7/10$
(c) $7/12$
(d) $7/120$
45. If $a + b = 13$ and $4ab = 144$, $a - b$ equals
(a) 3
(b) 4
(c) ± 5
(d) None of the above
46. If $27^x = 9/3^x$, $1/x^2$ equals
(a) $\frac{1}{2}$
(b) $\frac{1}{4}$
(c) 2
(d) 4
47. If $4x + 6y + 8z = 76$; $6x - 4y + 10z = 52$; and $8x + 12y - 6z = 42$, x^2y^3 equals
(a) 144
(b) 432
(c) 576
(d) None of the above
48. $\left(\frac{x^a}{x^b}\right)^{a+b} \left(\frac{x^b}{x^c}\right)^{b+c} \left(\frac{x^c}{x^a}\right)^{c+a}$ equals
(a) Zero
(b) 1
(c) 3
(d) None of the above
49. If $a - 3 = 10/a$ ($a > 0$), $5a - 3$ equals
(a) Minus 3
(b) 11
(c) 22
(d) None of the above
50. If $(4x + 10)^{1/2} = 5$ and $5y + 3 = (64)^{1/3}$, xy equals
(a) 0.75
(b) 1
(c) 1.25
(d) None of the above
51. If $pq - 4xy = m$; $pq - 4xy = n$; and $16xy - 4pq = z$, $m = (?)z$.
(a) minus 4
(b) minus $\frac{1}{4}$
(c) $\frac{1}{4}$ (d) 1

- (a) Minus 43
(b) 37
(c) 40
(d) None of the above
53. $\left[(2x+3)^{\frac{1}{2}}\right]^4 \left[(2x+3)^{\frac{1}{3}}\right]^{\frac{1}{9}}$
 $\left[(3+2x)^2\right]^{\frac{1}{2}}$ equals
 (a) $2x+3$
 (b) $\sqrt{2x+3}$
 (c) $(2x+3)^2$
 (d) None of the above
54. If $f(x) = 4x^2 - 3x + 1$, $f(3)$ equals
 (a) 25
 (b) 26
 (c) 27
 (d) 28
55. If $4^x = 5^y = 20^z$, z equals
 (a) xy
 (b) $\frac{y}{x+y}$
 (c) $\frac{xy}{x+y}$
 (d) $\frac{x+y}{xy}$
56. If $2 = 10^m$ and $3 = 10^n$, 0.15 equals
 (a) 10^{m+n-1}
 (b) 10^{m-n-1}
 (c) $10^m + 10^n - 5^m$
 (d) None of the above
57. If $x = \frac{y}{z^2}$, a equals
 (a) $\log \frac{y}{x} / \log z$
 (b) $\log \frac{y}{x^2}$
 (c) $\frac{y}{\log z^2}$
 (d) None of the above
58. If $\log_x a = a$, $\log_x x$ equals
 (a) $a \times \log_y z$
 (b) a / \log_y
 (c) $a \times \log_y$
 (d) None of the above
59. If $(\log_4 x)(\log_8 k) = 3$, x equals
 (a) 15
 (b) 125
 (c) 243
 (d) None of the above.
60. If $a \log_2 x = b \log_4 x$, which of the following must be true?
 (a) $a = 2b$
 (b) $a = b^2$
 (c) $2a = b$
 (d) Can't be worked out
61. $7\frac{1}{2} + 3\frac{3}{4} - 2\frac{1}{7}$ of $\frac{7}{9}$
 $- 4\frac{3}{4}$ equals
 (a) $9\frac{8}{9}$

- (c) Minus $\frac{2}{3}$
(d) 5
62. $0.08\frac{1}{3}\%$ of 168 equals
 (a) 14
 (b) 14
 (c) 0.14
 (d) None of the above
63. Which of the following statements is correct?
 (a) $3.984 \times 0.872 = 3.7386560$
 (b) $\sqrt{0.324} = 0.18$
 (c) $4.912 \times 2.76 = 13.557120$
 (d) $\sqrt{0.09} = .03$
64. If A_1, A_2, A_3, A_4 and A_5 be the 'arithmetic means' between 14 and 44, A_4 equals
 (a) 32
 (b) 34
 (c) 36
 (d) Can't be worked out
65. Sanjeev obtained the following percentage of marks in an exam: English—60; Mathematics—64; Physics—62; and Chemistry—65. If the weightage allotted to these subjects were 1, 2, 3 and 2 respectively, what was his weighted mean?
 (a) 62.75
 (b) 63
 (c) 63.5
 (d) 64
66. The geometric mean between 9 and 16 is
 (a) $1\frac{7}{9}$
 (b) $\sqrt{7}$
 (c) 5
 (d) 12
67. The median of 11, 9, 6, 4, 7, 13, 8, 15, 12 is
 (a) 9
 (b) 9.4 approximately
 (c) 9.5
 (d) None of the above
68. In the inequality $4x+3 < 2x+5$, all of the following may be a value of x except
 (a) Zero
 (b) 1
 (c) Minus 1
 (d) Minus 2
69. If $m < n$ and $q < r$, then
 (a) $m - q < n - r$
 (b) $m + q < n + r$
 (c) $mq < nr$
 (d) $mq > nr$
70. $\sqrt{30+2} \times \sqrt{20-18} + \sqrt{68-4}$ of $3\sqrt{125}$ equals
 (a) 28
 (b) 46.7 approximately
 (c) 48
 (d) None of the above

(Time—20 minutes)

Directions: Questions 71 to 75 and 76 to 80 are based on passages 1 and 2 respectively. After reading each passage, choose the best answer to each question from amongst the given alternatives.

Passage 1

"There are different views of history, that it is cyclical, that it is linear, that it is spiral. The Greeks thought that history was a cyclical movement governed by impersonal laws. According to the preachings of Ecclesiastes, 'the thing that hath been is that which shall be; and that which is done is that which shall be done' and there is no new thing under the sun.' The Jews, the Christians and the Muslims held that it was the unfolding of a cosmic pattern, an act of God beginning at the creation and destined to end in the last judgment, that the last day of reckoning would read what the first day of creation wrote. The Chinese held that history was a continuous series of variations of a common theme. History, according to the spiral view, moves on with dips and loops, blind alleys and setbacks, to a higher purpose. Many of us under sway of the scientific spirit are inclined to a historical determinism. Still others feel that history is a chaotic, disorderly flux, that caprice is king. There is another view which regards history as the outcome of our ideals and ideas, hopes, and fears, ambitions and policies. It is produced by a combination of many causes, some necessary, some accidental. The force of the human spirit is an essential factor. There is a fundamental distinction between men and things. We cannot force men to do what we want. In the last resort they may prefer death to conformity. There is an element of indeterminacy in human nature. It has boundless possibilities. The great leaders, Socrates, the Buddha, Christ, bring something new and inaugurate fresh stages in the development of man; 'raja kalasya a karanam' Man has a real role in the making of history. He can make a choice from a number of possible alternative developments. What we will do here and now will make a difference to the future. In human life freedom and necessity are bound together. They condition one another. So also in history. There is nothing inevitable. When things happen they may be related to the past; till they happen, we could not

have procession. One age does not follow another in normal succession but sometimes saps the bond of continuity and founds a new order of things. We have both continuity and innovation in history. We cannot neglect individuals and deal only with the laws of history. The spirit bloweth where it listeth. The study of man in society cannot become an exact science. Man is the future of man. It is through the efforts of individual men that we can re-make our future."

(Extract from the Centenary Convocation address by the late Indian President, Dr S Radhakrishnan at Madras University on January 29 1957)

- 71 According to the author
 - (a) Based on the laws of history alone good historians are always able to predict the shape of things to come very accurately
 - (b) One age follows another according to some exact pattern
 - (c) The Jewish view of history is the best
 - (d) No one can predict the future with exactness
- 72 According to the author, which of the following must be true?
 - (a) Man is a slave of his circumstances and has no real role in the making of history
 - (b) Individuals play a very important part in shaping the future course of events
 - (c) History follows some definite laws
 - (d) Human beings always prefer conformity since doing otherwise results in their extinction
- 73 The Chinese view of history appears to be
 - (a) Very scientific
 - (b) Optimistic
 - (c) Pessimistic
 - (d) Capricious
- 74 The author appears to favour which one of the following views of history?
 - (a) The spiral view as propounded by the Chinese
 - (b) The cyclical view as propounded by the Greeks
 - (c) The linear view as propounded by the Christians the Muslims and the Jews
 - (d) None of the above
- 75 Which of the following is implied by the expression 'historical determinism' in the passage

- (a) All things in history are pre-determined by God
- (b) All things in history including the will of human beings are determined by some causes
- (c) The course of events in history is determined by the free will of individuals
- (d) None of the above

Passage 2

South Africa is playing to a new game plan. According to Simon Jenkins writing in *The Economist* Pretoria's policy is to gain security for itself by increasing the insecurity felt by regimes in the frontline states. In furtherance of this objective ways and means are sought to destabilise the various Black African countries which have banded together without much effect. It is true to fight the White South Africans not directly but via help to guerilla movements like the African National Congress.

One of South Africa's major success stories has been its ability to postpone majority rule in Namibia. Now that free and fair elections under the aegis of the UN are round the corner and Pretoria can no longer tarry it has decided to do the next best thing—set itself up in the southern part of Angola. The South African military presence in this former Portuguese colony serves two purposes. It will firstly help keep the SWAPO government if and when it is installed in Windhoek honest because it can be hit either from the north or from the south. And secondly the prospect of Pretoria's troops being able to intrude its territory at will and wreak havoc as in Mozambique will dampen SWAPO enthusiasm for support to the ANC freedom fighters gearing up for an escalated guerilla war.

South Africa's plans are centrally helped by the charismatic Jonas Savimbi of the UNITA which lost out to the MPLA in the grab for power after Lisbon withdrew from Angola. Savimbi has so far managed with South African help to establish a foothold in the south eastern areas of Angola and he is reported to consider a strike northwards in an attempt to capture the central highlands—the home of Savimbi's tribe—the Ovimbundu.

The MPLA Government of President Eduardo dos Santos is meanwhile content to consolidate its hold over the rest of the sparsely populated country with assistance from 20,000 Cuban soldiers and East

German advisers.
(Editorial column of the *Hindustan Times* dated September 7 1983)

- 76 According to the passage, Simon Jenkins is of the view that the White South African regime
 - (a) Will never allow free and fair elections in Namibia
 - (b) Will collapse very soon
 - (c) Hopes to ensure its own security by creating unstable conditions in other African countries which are still under colonial rule
 - (d) Is keen on ensuring its own security by creating unstable conditions in Black African states which are helping the guerilla movements in South Africa
- 77 According to the passage, soon after the Portuguese withdrew
 - (a) There was intense fighting between the MPLA troops and the Cubans in Angola.
 - (b) UNITA led by Eduardo dos Santos failed to grab power in Angola.
 - (c) UNITA led by Jonas Savimbi tried its best to grab power in Angola.
 - (d) There was complete unity amongst all sections of Angolans.
- 78 According to the passage, which of the following statements must be true?
 - (a) The South African regime has been of no assistance to UNITA.
 - (b) Certain areas of Angola are under control of UNITA.
 - (c) The Americans are openly helping the White South African regime in perpetuating racial discrimination.
 - (d) East German advisers are anxious to help Jonas Savimbi.
- 79 According to the passage, which of the following is incorrect?
 - (a) The South African regime is planning to make things difficult for SWAPO as and when it comes into power in Namibia.
 - (b) The South African regime has so far been quite successful in fighting the guerillas in their own country.
 - (c) Jonas Savimbi is quite satisfied with the present government in Angola.

80. According to the passage, which of the following is correct?

- Pretoria hopes to defeat the objectives of the African National Congress (ANC) if she succeeds in implementing her present policy.
- ANC fighters are not getting any help from SWAPO.
- ANC freedom fighters are not contemplating escalation of guerilla war.
- SWAPO is not enthusiastic about supporting a black rule in Namibia.

Directions: In questions 81 to 85, you will find disarranged sentences. After arranging the words in proper order, indicate the sentence which makes sense by using the numbers given under the words.

Example.

is Asian an country India
(1) (2) (3) (4) (5)

Answer: 5 1 3 2 4

81. Sloth a is such in young a
(1) (2) (3) (4) (5) (6) (7)

person deplorable.

(8) (9)

- 9 3 2 1 5 7 6 8 4
- 4 2 1 5 7 6 8 3 9
- 4 2 6 8 3 9 5 7 1
- 5 7 6 8 4 2 9 3 1

82. candid offended your has
(1) (2) (3) (4)

criticism the author

(5) (6) (7)

- 1 5 6 7 4 2 3
- 6 7 4 2 3 1 5
- 3 1 5 4 2 6 7
- 5 1 3 4 2 6 7

83. look probity his granted
(1) (2) (3) (4)

for everyone

(5) (6)

- 6 1 3 2 5 4
- 6 1 5 4 2 3
- 5 6 3 2 1 4
- 1 5 4 6 3 2

84. derelict was the craft menace
(1) (2) (3) (4) (5)

a navigation to

- 5 6 2 1 3 4 7 8

Section 4

(Time—10 minutes)

Directions: This section contains 15 data-sufficiency problems. Each problem consists of a question and two statements labelled (1) and (2) in which certain data are given. Decide whether the data in the statements are sufficient for answering the question. Using the data besides your knowledge of mathematics and everyday facts, mark your answer—

A: if statement (1) ALONE is sufficient, but statement (2) alone is not sufficient to answer the question; B: if statement (2) ALONE is sufficient, but statement (1) alone is not sufficient to answer the question; C: if BOTH statements (1) and (2) TOGETHER are needed to answer the question asked, but NEITHER statement ALONE is sufficient; D: if each statement ALONE is sufficient to answer the question; E: if data contained in both statements TOGETHER are insufficient to answer the question.

86. Water from a completely filled conical vessel is transferred to a cylindrical jar. Assuming that no water is lost in this operation, upto what height will the water rise in the jar?

- The radius of the base of the conical vessel is 2 cm
- The heights of the conical vessel and the jar are 3 and 7 cms respectively

87. What is the value of $a - b$?

- $\frac{b}{a} = 2$
- $b - a = 2$

88. What is the distance from your house to the office?

- You reach your office 10 mins late when you drive from your house to the office at the average speed of 30 kmph
- You reach your office 10 mins early when you drive from your house to the office at the average speed of 40 kmph

89. Is xy greater than $x + y$?

- $x + y = 15$
- x and y are positive quantities

90. Is ABC a right-angled triangle?

- Two of its angles are equal

is equal to the third angle.

91. Is Ram older than Sham?

- Sham is three years younger than Rajesh
- Rajesh is five years older than Ram

92. In the figure above, $AC = 13$ cm and $AB = 5$ cm. What is the area of the quadrilateral ABPN?

- PN is less than AB
- AN is equal to NC

93. In a rhombus ABCD, what is the length of the diagonal AC?

- BD, the longer of the two diagonals, is $\sqrt{80}$ cms
- CD is equal to 5 cm

94. What is the area of a square?

- One of the diagonals was found to be equal to 10 cm
- Each side of the square is $5\sqrt{2}$ cm

95. In the above figure, what is the sum of angles B and D?

- Angle A is greater than angle C and angle B is greater than angle D
- Points A, B, C, D lie on the circumference of the same circle

96. What is the volume of the cube?

- The diagonal of a face of the cube measures $4\sqrt{2}$ cm
- The surface area of a face of the cube is 16 sq cm

97. In how much time will x and y together be able to complete a piece of work?

- X alone takes 3 hrs to finish it
- Y alone takes 15 mins more than Z, who alone takes 1 hr less than the time X alone takes to finish the work

Test of Reasoning

BY: I.R.M.

This section is designed to help those appearing in the SBI (PO) Exam of the Central Recruitment Board to be held in December.

Time: 15 minutes.

Scores: 1. Give yourself one mark for each correct answer.

2. Deduct one mark for each wrong answer. 3. Then rate yourself as under:

Excellent... 26-30 Very good... 23-25 Good... 18-22
Fair... 13-17 Poor... Below 13

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of this supplement.

1. What will replace the question mark (?) in the series : $2 + 4 = 5$, $3 + 6 = 9$, $4 + 8 = 24$, $5 + 10 = 135$, $6 + 12 = ?$

(a) 225
(b) 1,308
(c) 2,407
(d) None of the above

2. Three-sevenths of a pole is above the water surface, while one-seventh is below it and above the ground. If the remaining part of the pole, which is 12 m, is below the ground, what is the total length of the pole?

(a) 21m
(b) 24m
(c) 27m
(d) None of the above

3. Insert the missing number.

| | | |
|---|----|---|
| 5 | 18 | 4 |
| 3 | 24 | 5 |
| 9 | 68 | 8 |
| 7 | 55 | 4 |
| 6 | ? | 7 |

(a) 68
(b) 70
(c) 76
(d) 78

Directions: Questions 4 to 9 are based on the information contained in the following table:

Number of Unnatural Deaths in Neel Dosh (1971 and 1972)

| Category | 1971 | | 1972 | |
|-------------------------|-------------------------|---------------|-------------------------|---------------|
| | No. of cases registered | No. of deaths | No. of cases registered | No. of deaths |
| 1. Automobile accidents | 120 | 2,350 | 180 | 3,140 |
| 2. Train accidents | 15 | 435 | 9 | 230 |
| 3. Fire accidents | 39 | 945 | 30 | 540 |
| 4. Murders | 110 | 234 | 150 | 460 |
| 5. House Collapse | 150 | 611 | 75 | 565 |
| 6. Riots | 58 | 325 | 34 | 150 |
| 7. Other causes | 113 | 1,875 | 200 | 1,875 |

4. Fire accidents accounted for approximately—% of the total number of cases registered in 1971.

(a) 5.4
(b) 6.4
(c) 7.5
(d) 8.5

5. Deaths due to house collapse in 1971 were approximately—% of the deaths caused due to train accidents in 1972.

(a) 38
(b) 48
(c) 261
(d) 265

6. The number of murder cases registered in 1971 were approximately—% of those registered in 1972.

(a) 63
(b) 65
(c) 73
(d) 75

7. The largest percentage decrease in deaths from 1971 to 1972 was in the category of

(a) Train accidents
(b) Fire accidents
(c) House collapses
(d) Rioting

8. When the categories are ranked, for each year, according to the number of cases registered in each category (largest to

rank), how many categories had the same rank in 1972 as in 1971?

(a) 1
(b) 2
(c) 3
(d) 4

9. For the two years combined, the average number of deaths per case of train accident registered was approximately

(a) 25
(b) 28
(c) 31
(d) 34

10. What will replace the question mark in the following series:

| | | |
|-----|------|---|
| 25 | (69) | 8 |
| 16 | (53) | 7 |
| 81 | (45) | 6 |
| 144 | (?) | 8 |

(a) 72
(b) 76
(c) 80
(d) 84

11. Reaching a conference on Wednesday at 10 mins to 8.45 a.m., I found myself half-an-hour earlier than the gentleman who was 45 mins late. The scheduled time of the conference was— a.m.,

(a) 8.15
(b) 8.20
(c) 8.25
(d) 8.40

Directions: Questions 12 to 16 consist of very common words, but the letters have been scrambled. Also, the letters have been allotted numbers according to the sequence in which these appear in the alphabet. You are required to find the correct word and state which of the alternatives gives the meaningful word so formed. Note that of the two similar letters, only one has been numbered.

12. L M I R A T U S

3 4 2 5 1 7 8 6
(a) 4 2 3 7 5 1 8 6
(b) 1 3 7 5 8 2 6 4
(c) 4 2 7 1 3 5 6 8
(d) 7 5 8 2 6 4 1 3

13. P M U R E I

4 3 6 5 1 2
(a) 1 2 3 4 5 6
(b) 2 3 4 6 1 5
(c) 6 3 4 2 5 1
(d) 5 6 3 4 1 2

14. O L D T S I

4 3 1 6 5 2
(a) 1 2 3 4 5 6
(b) 3 4 5 6 2 1

- (c) 1 3 5 2 4
(d) 5 6 4 3 2 1
- 15 R N N A E M
5 4 1 2 3
(a) 4 4 1 2 3 5
(b) 3 1 4 4 2 5
(c) 1 2 3 4 5 4
(d) 3 1 4 4 5 2
- 16 N O S S F E O R P I
4 5 8 2 1 7 6 3
(a) 6 5 8 8 1 2 3 4 7 5
(b) 1 2 3 4 5 5 6 7 8 8
(c) 6 7 5 2 1 8 8 3 5 4
(d) 6 7 5 2 1 4 5 3 8 8
- 17 If GOLF E R is coded as H N M
E F Q, H U N G E R will be coded as
(a) I T O F F Q
(b) I V O H F S
(c) I T O D F Q
(d) T I D O Q F
- 18 If GOLF E R is coded as T L O U
V I, P O W E R will be coded as
(a) M N E V I
(b) F G H V I
(c) C L O V I
(d) K L D V I
- 19 If GOLF E R is coded as E O J F
C R, S T U C K will be coded as
(a) U T C W M
(b) U T W C M
(c) Q T S C I
(d) Q T C I S
- 20 If GOLF E R is coded as I R P K
K Y, decode H R V H K
(a) F O R T S
(b) F O R C E
(c) F I R S T
(d) F E W C R
- 21 Find the letter which is as far
behind N in the alphabet as the
first E is behind the second E in

- (a) A
(b) B
(c) C
(d) Z
22. Find the letter which is as far
ahead of M in the alphabet as
the first O is behind S in the word
LABORIOUS
(a) R
(b) H
(c) Q
(d) O
23. Which term is wrong in the
following series :
0, 12, 120, 56, 724, 132
(a) 0
(b) 56
(c) 132
(d) 724
24. Which term is wrong in the
following series :
-1, 4, 21, 56, 115, 208, 329
(a) -1
(b) 115
(c) 208
(d) 329
25. Which one of the following
numbers belongs to the series :
4, 11, 18, 25, 32, infinite
terms ?
(a) 2,100
(b) 2,093
(c) 2,097
(d) 2,106
26. At a party each man was requir-
ed to shake the hand of the
other. As a result, there were a
total of 7,875 hand-shakes. The
number of men present at the
party were
(a) 120

- (c) 145
(d) None of the above
27. If the statement— "some men
are honest"—is true which one of
the following is probably true ?
(a) All men are honest
(b) No men are honest
(c) Some men are not honest
(d) None of the above.
28. If the statement—"all men are
honest"—is false, which one of
the following is definitely true ?
(a) Some men are honest
(b) No man is honest
(c) Some men are not honest
(d) None of the above
29. If the statement—"If and only if
Ram gets first class, he shall go
for higher studies abroad"—is
true, which of the following
must be true ?
(a) Ram will never get a first
class; he will, therefore,
never go for higher studies
abroad
(b) Ram has gone for higher
studies abroad; he must
have, therefore, got a first
class
(c) Neither
(a) nor (b)
(d) Both
(a) and (b)
30. Without challenging state-
ments (a) and (b) below, state
whether statement (c) is valid or
not.
(a) If P is Q, R will be S
(b) R is S
(c) Therefore, P is Q

HOW LOGICAL ARE YOU ?

Watch out for unexpected or
"catch" answers as you take this
infuriating quiz

1. In a certain African village
there live 800 women. Three
per cent of them are wearing
one earring. Of the other 97
per cent, half are wearing two
earrings, half are wearing
none. How many earrings all
together are being worn by
the women ?
2. A logician with some time to
kill in a small town decided to
get a haircut. The town had
only two barbers, each with
his own shop. The logician
glanced into one shop and
saw that it was extremely
untidy. The barber needed a
shave, his clothes were un-

kempt, his hair was badly cut.
The other shop was extremely
neat. The barber was freshly
shaved and spotlessly
dressed, his hair neatly
trimmed. The logician re-
turned to the first shop for his
haircut. Why ?

3. Smith gave a hotel clerk \$15
for his cleaning bill. The clerk
discovered he had over-
charged and sent a bellboy
to Smith's room with five \$1
bills. The dishonest bellboy
gave three to Smith, keeping
two for himself. Smith has
now paid \$12. The bellboy
has acquired \$2. This
accounts for \$14.
Where is the missing
dollar ?

Answers

1. Among the 97 per cent of the
women, if half wear 2 earring-
s and half none, this is the
same as if each wore one.
Assuming then that each of
the 800 women is wearing
one earring, there are 800
earrings.
2. Each barber must have cut
the other's hair. The logician
picked the barber who had
given his rival better haircut.
3. Adding the bellboy's \$2 to
the \$12 the Smith paid
produces a meaningless
sum. Smith is out \$12, of
which the clerk has \$10 and
the bellboy \$2. Smith got
back \$3, which accounts for
the full amount of \$15.

ANSWER KEY

PRACTICE TESTS FOR CAT

Section 1

1. (c), i.e., a linked group.
2. (a), i.e., contemporary.
3. (b), i.e., cartoon likeness.
4. (d), i.e., revile.
5. (d), i.e., fiendish. Fiendish means monstrously cruel or wicked.
6. (c), i.e., admiration. Umbrage means sense of slight or injury or offence.
7. (a), i.e., reticent. Vociferous means clamorous, noise; one who speaks loudly. A reticent person is reserved in his speech.
8. (b), i.e., tempest. Zephyr is soft mild gentle wind or breeze.
9. (c), i.e., spirited. Frazzle means enervated, exhausted.
10. (b), i.e., intrepid. Pusillanimous means chicken-hearted, while intrepid means brave.
11. (b), i.e., resurrection.
12. (d), i.e., benefited.
13. (a), i.e., occurred.
14. (d), i.e., vacillate.
15. (c), i.e., liquefaction.
16. (c), i.e., ostracised.
17. (c), i.e., to be partial.
18. (a), i.e., to have a second alternative in case the first fails.
19. (b), i.e., to pick flaws in a gift or favour.
20. (d), i.e., one difficulty overcome does not mean that trouble is over.
21. (d), i.e., chagrin : complacency. The relationship between the capitalised words is that of antonyms. Vicarious means second-hand, substitutional. Other choices give synonyms.
22. (b), i.e., halcyon : peaceful. The relationship is that of synonyms. Though sartorial means of clothes or tailors, choice (b) is more appropriate. Choice (c) and (d) give antonyms.
23. (c), i.e., water : desert. An idiot is deficient in intelligence. In the same way, there is a shortage of water in the desert.
24. (b), i.e., callow : rationalise. A didactic, i.e., a person who talks in a teacher-like manner—tries to moralise. A callow, i.e., an immature person tries to rationalise his failures, shortcomings, and so on.
25. (d), i.e., tactician : battle. A tactician conducts a battle whereas a strategist directs/projects a campaign.
26. (b), i.e., ecstasy : happiness. A really intense form of happiness is ecstasy in the same way as intense admiration results in love.
27. (c), i.e., faggot : sticks. A collection of sticks is called a faggot of sticks, in the same way as a number of trustees compose a board. A collection of tanks alone does not make an army. Choice (b) is obviously wrong. Caravan is a house on wheels. A company travelling together for safety in northern Africa was also called a caravan. Choice (d) is, therefore, not correct.
28. (a) cow : byre. A convict is kept in a prison, while a cow is kept in a byre. Byre means cow-house. Choices (b) and (c) are obviously wrong. Choice

(d) is also wrong. Do not confuse coventry with convent. Had the word 'convent' been used in place of coventry, choice (d) would also have been correct.

29. (c), i.e., thrushes : whistle. Warble means to sing in sweet gentle continuous trilling manner. The word thrush has three different connotations. One—kind of song-bird, the meaning associated in this question. Second—a throat disease in children. Third—a foot disease in horses. The song-bird whistles in the same way as nightingales warble. Monkeys do not bleat but chatter or gibber. Vultures do not howl but scream. Sparrows chirp or twitter.
30. (d), i.e., goose : gall. As silly as a goose and as bitter as gall. Gall means bile. It is in this sense that it has been used in this question. It also means asperity, assurance, impudence. Painful swelling or blister is also called gall. Another connotation of gall is excrescence on trees caused by insects.
31. (c), i.e., extraneous.
32. (b), i.e., altogether.
33. (d), i.e., confusion, to.
34. (c), i.e., with, of.
35. (d), i.e., inconceivable, practical.

Section 2

36. (a), i.e., 10, and these are 2, 3, 5, 7, 11, 13, 17, 19, 23, 29.
37. (c), i.e., Rs 1,530. Ram spends $\frac{5}{7}$ of the amount, since he saves $\frac{2}{7}$ of it. This works out to be $2,142 \times \frac{5}{7} = \text{Rs } 1,530$.
38. (b), i.e., 0.86234. Remembering BODMAS rule, we have $1.29234 - \frac{0.86}{2}$, which equals 0.86234.
39. (b), i.e., 0.603. The first three terms in the question follow the pattern $a^3 + b^3 + 3ab(a + b)$, if $0.3 = a$ and $0.5 = b$. In other words, these terms will equal $(a + b)^3$, i.e., $(0.3 + 0.5)^3$, which equals, 0.512. Adding the next two terms, we get $0.512 + 0.027 + 0.064$ which equals 0.603.
40. (a), i.e., 2.287420. Remembering BODMAS rule, we have the first two terms equalling 0.28742. Since $6.134 + 3.067$ equals 2, the final result will be 2.28742, which is not different from 2.287420.
41. (b), i.e., 2. Again BODMAS to be followed. We get $3 + 1 - 2$, which equals 2.
42. (c), i.e., 2.02. The expression follows the pattern— $(a^3 + b^3) \div (a^2 - ab + b^2)$. If you remember your formulae, this shall be equal to $a + b$, i.e., $(1.7 + 0.32)$, which equals 2.02.
43. (a), i.e., 17.5320. The expression really follows the pattern $(a + b)^2 - (a - b)^2$ —don't be worried about additional zeros. In other words, this should be equal to $4ab$, i.e., $4 \times 2.992 \times 1.5 = 6 \times 2.922 = 17.532$, which is the same as 17.5320.

44. (d), i.e., 7/120. Solving the two equations, we get $x=40$ and $y=30$. $\frac{1}{x} + \frac{1}{y}$ is nothing other than $\frac{x+y}{xy} = \frac{70}{40 \times 30} = \frac{7}{120}$. Alternatively, you could also say $\frac{1}{40} + \frac{1}{30} = \frac{70}{40 \times 30} = \frac{7}{120}$.
45. (c), i.e., ± 5 . $(a-b)^2 = (a+b)^2 - 4ab = 169 - 144 = 25$. Therefore, $a-b$ equals ± 5 .
46. (d), i.e., 4. The expression equals $(3^x)^x = 3^{2/3^x}$ or $3^{3^x} = 3^{2-x}$. Therefore, $3x = 2 - x$ or $x = \frac{1}{2}$.

$\frac{1}{x^2}$ will, therefore, be 4

47. (c), i.e., 576. Multiplying the first equation by 2, we get $8x + 12y + 16z = 152$. Subtracting the third equation from this, we get $22z = 110$ or $z = 5$. Substitute 5 for z in the first and the second equation, we get $4x + 6y = 36$ and $6x - 4y = 2$. Multiply the first result by 3 and the second by 2 and we get $12x + 18y = 108$ and $12x - 8y = 4$. In other words $26y = 104$ or $y = 4$. Substituting the values of y and z in any one of the equations, we get x equal to 3. Therefore, $x^2y^3 = 9 \times 64 = 576$. After substituting 5 for z in equations 1 and 2, you shall NOT be able to work out the value of x and y .

48. (b), i.e., 1. A quick look will give you the answer. The expression really equals $\frac{x^3 + ab}{ab + b^2} \times \frac{xb^2 + bc}{x^2 + ac}$ which is equal to $\frac{x^3 + a^2}{x^3 + a^2} \times \frac{xb^2 + bc}{xb^2 + bc} = x^0 = 1$.

49. (c), i.e., 22. $a - 3 = \frac{10}{a}$ means $a^2 - 3a - 10 = 0$ or $(a - 5)(a + 2) = 0$. $a = 5$ or $a = -2$. Since a is > 0 , the second result is to be discarded to work out $5a - 3$, which equals 22.

50. (a), i.e., 0.75. $(4x + 10)^{1/2} = 5$ means $4x + 10 = 25$ and $x = \frac{15}{4}$. $5y + 3 = (64)^{1/3}$ means $5y + 3 = 4$

and $y = \frac{1}{5}$. Therefore, $xy = \frac{15}{4} \times \frac{1}{5} = \frac{3}{4} = 0.75$

51. (b), i.e., minus $1/4$. The second equation has no relevance since the value of m has to be expressed in terms of z . The first equation is the same $a - 4pq - 16xy = 4m$ or $m = \frac{4pq - 16xy}{4}$. Since $16xy - 4pq = z$, $4pq - 16xy$ should equal

minus z . Therefore, m should equal $\frac{\text{minus } z}{4}$ or $\frac{\text{minus } 1}{4}$.

52. (b), i.e., 37. $x \sqrt{0.16} = 4$ means $0.4x = 4$ or $x = 10$. Therefore, $4x - 3$ will equal 37.
53. (c), i.e., $(2x + 3)^2$. A quick look shall give you the answer. The expression is equal to $(2x + 3)^2$.

54. (d), i.e., 28. $f(3) = 4(3)^2 - 3(3) + 1$, which is equal to 28.

55. (c), i.e., $\frac{xy}{x+y}$. $4^x \times 5^y = 20^z$ means $4 = 20 \frac{z}{x}$, and $5^y = 20^z$ means that $5 = 20 \frac{z}{y}$. Multiplying the two equations we get $20^1 = 20 \frac{z}{x} + \frac{z}{y}$ or

$\frac{z}{x} + \frac{z}{y}$ must equal 1 or $zx + zy = xy$ or z will equal

$$\frac{xy}{x+y}$$

56. (b), i.e., 10^{n+m} . $0.15 = \frac{3}{20}$ or $\frac{3}{10 \times 2}$. Since

$3 = 10^m$ and $2 = 10^n$, $\frac{3}{10 \times 2}$ will equal $\frac{10^m}{10 \times 10^n}$

or $\frac{10^m}{10^{m+1}}$ which is equal to 10^{n-m-1}

57. (a), i.e., $\log \frac{y}{x} / \log z$. $x = \frac{y}{z^a}$ means $z^a = \frac{y}{x}$. Taking log of both sides, we get $\log z^a = \log \frac{y}{x}$ or $a \log z = \log \frac{y}{x}$; a will, therefore, equal $\log \frac{y}{x} / \log z$.

58. (c), i.e., $a \log_z y$. $\log_y x = a$ means $x = y^a$. Taking log of both sides with base z , we get $\log_z x = \log_z y^a$ which is equal to $a \log_z y$.

59. (b), i.e., 125. $(\log_k x)(\log_k x) = 3$ means $\frac{\log x}{\log k} \times \frac{\log x}{\log k} = 3$ or $\log x / \log 5 = 3$, i.e., $\log_5 x = 3$. x must, therefore, equal $5^3 = 125$.

60. (c), i.e., $2a = b$. $a \log_2 x = b \log_4 x$ means $\frac{a}{b} = \frac{\log_4 x}{\log_2 x} = \frac{\log x}{\log 4} \times \frac{\log 2}{\log x}$ or $\frac{a}{b} = \frac{\log 2}{\log 2^2} = \frac{\log 2}{2 \log 2} = \frac{1}{2}$. Therefore, $2a = b$.

61. (d), i.e., 5. $\frac{15}{2} + \frac{15}{4} + \frac{15}{7}$ of $\frac{7}{9} - \frac{19}{4}$. Keeping the rule of BODMAS in mind, we get $\frac{15}{2} + \frac{15}{4} + \frac{5}{3} - \frac{19}{4}$, which is equal to $\frac{15}{2} + \frac{15}{4} \times \frac{3}{5} - \frac{19}{4} = \frac{15}{2} + \frac{9}{4} - \frac{19}{4} = \frac{20}{4} = 5$

62. (c), i.e., 0.14. $0.08 \frac{1}{3} \%$ is equal to $\frac{0.25}{3} \% = \frac{25}{300} \%$. Therefore, $\frac{1}{12} \%$ of 168 will equal $\frac{1}{12} \times 100 \times 168$ or 0.14.

63. (c), i.e., $4.912 \times 2.76 = 13.557120$. A quick look will tell you that choices (b) and (d) are incorrect. To verify choice (a), you do not have to

go through the operation of multiplication. Zero at the end after a decimal point does not carry any weight. Since 2 when multiplied by 4 gives 8, choice (a) is also wrong. Choice (c) must, therefore, be correct.

64. (b), i.e., 34. 'Arithmetic mean' implies that 14, A1, A2, A3, A4, A5, and 44 must be in arithmetical progression and that the common difference between any two consecutive terms must be identical. The difference between the first and last terms is 30. And since this difference has to be equally distributed amongst six intervals, the difference between any two consecutive terms will be $30/6 = 5$. A4 will, therefore, equal 14 plus 4 times the common difference, i.e., $14 + 4 \times 5 = 34$.

65. (b), i.e., 63. Weighted mean =

$$\frac{60 \times 1 + 64 \times 2 + 62 \times 3 + 65 \times 2}{1 + 2 + 3 + 2} \quad \text{which equals } \frac{504}{8} \text{ or } 63. \text{ The numerator consists of}$$

marks in each subject multiplied by the weightage given to it. Further, the total marks so obtained have been divided NOT by the number of subjects but by the sum total of weights allotted to get the weighted mean.

66. (d), i.e., 12. $\sqrt{9 \times 16} = 12$. The geometric mean between any two numbers is found by taking the square root of their product.
67. (a), i.e., 9. Arranging the numbers in the ascending or descending order, we get 4, 6, 7, 8, 9, 11, 12, 13, 15. Since the number of items is odd, we take the middle item from amongst these. Had the number of items been even, we would have taken the average of the two middle items after arranging them in ascending/descending order.
68. (b), i.e., 1. Subtracting $4x + 5$ from each side, we get $\text{minus } 2 < \text{minus } 2x$. Dividing each side by 2, we get $\text{minus } 1 < \text{minus } x$ or we can say $1 > x$, which is the same as saying $x < 1$. Therefore, any value of x less than 1 will satisfy the inequality. Since choices (a), (c), and (d) are less than 1, choice (b) must be the answer. A very speedy way of doing this question will be to substitute the values given in each of the choices. Only choice (b) does not satisfy the inequality and hence this should be the answer.
69. (b), i.e., $m + q < n + r$. Since we do not know the exact value of m , n , q , and r , we cannot be certain about choices (a), (c), and (d). Choice (b) will always be correct irrespective of the values that you give them.
70. (c), i.e., 48. $\sqrt{30 + 2 \times \sqrt{20 - 18}}$ is the same as $\sqrt{32 \times 2} = 8$; $\sqrt{68 - 4} = 8$, and $3 \sqrt{125} = 5 \times 8 = 40$ of 5 will, therefore, equal 48.

Section 3

Passage 1

71. (d), i.e., no one can predict the future with exactness.
72. (b), i.e., individuals play a very important part course of events.
73. (b), i.e., optimistic. The Chinese view is that it is spiral. History, according to the spiral view, moves on to a higher purpose even when it does so with dips and loops, blind alleys and set-backs. Refer

lines 12, 13 and 14 of the passage.

74. (d), i.e., none of the above. According to the author, there is nothing inevitable and that there are both continuity and innovations in history. The author is of the opinion that individuals play a very important part in the making of history. Choices (a), (b) and (c), therefore, do not reflect the author's views.
75. (b), i.e., all things in history including the will of human beings are determined by some causes.

Passage 2

76. (d), i.e., the White South African regime is keen on ensuring movements in South Africa.
77. (c), i.e., after the Portuguese withdrew, UNITA led by Jonas Savimbi... power in Angola.
78. (b), i.e., certain areas of Angola are under the control of UNITA. UNITA with the help of the South African regime has managed to establish a toe-hold in the south-eastern areas of Angola. Refer paragraph 3 of the passage.
79. (c), i.e., "Jonas Savimbi is quite satisfied with the present government in Angola" is an incorrect statement. (Note: the examiner wants you to state which of the given alternatives is incorrect.)
80. (a), i.e., Pretoria hopes to defeat... if it succeeds in implementing her present policy.
81. (b), i.e., 4 2 1 5 7 6 8 3 9—Such a sloth in a young person is deplorable.
82. (c), i.e., 3 1 5 4 2 6 7—Your candid criticism has offended the author.
83. (a), i.e., 6 1, 3, 2, 5, 4—Everyone took his probity for granted.
84. (c), i.e., 3 1 4 2 6 5 8 7—The derelict craft was a menace to navigation.
85. (a), i.e., 4 1 5 2 6 3 8 7—Coal is much more calorific than green wood.

Section 4

(Data Sufficiency Problems)

86. 'E', i.e., the data contained in both statements together are insufficient to answer the question. From statements (1) and (2), we can find out the volume of water contained in the conical vessel, but it is NOT possible to find out the height upto which the water will rise in the jar since we do not know the radius of the jar's base.
87. 'B', i.e., statement (2) alone is sufficient to answer the question. The first statement alone is not sufficient to answer the question, since it only tells us that b is equal to $2a$. If $b - a = z$, then $a - b$ will equal minus 2.
88. 'C', i.e., both statements are needed to answer the question asked, but neither statement alone is sufficient. Assume the distance to be 120 km between the house and the office. Time taken at the average speed of 30 kmph = 4 hrs. Time taken at the average speed of 40 kmph = 3 hrs. In other words, the difference in the time taken = 1 hr = 60 mins. Therefore, distance from house to the office, when the difference is 20 mins, as implied by statements (1) and (2), together, will equal $\frac{120}{60} \times 20 = 40$ km.
89. 'E', i.e., data are insufficient. $x + y$ can equal 15.

greater than $10 + 5$, i.e., $x + y$. If the values of x and y are 14 and 1 respectively, we find xy , i.e., (14×1) is less than $x + y$. Therefore, it is not possible to answer the question based on the data contained in statements (1) and (2).

90. 'B', i.e., statement (2) alone is sufficient to answer the question, but statement (1) alone is not sufficient. The first statement does not give any definite information whether the triangle in question is right angled or not. It may and may not be. Statement (2) gives a clear and definite answer that it is a right triangle since the sum of two angles can never be equal to the third angle unless it is a right triangle.

91. 'C', i.e., both statements (1) and (2) are required to answer the question and neither statement alone is sufficient. Self-explanatory.

92. 'B', i.e., statement (2) is sufficient to answer the question, but statement (1) alone is not. The first statement can be visualised from the diagram. Statement (2) tells us that NC is equal to 6.5 cm. If $AB = 5$, then BC will equal $\sqrt{13^2 - 5^2}$, which is equal to 12, since ABC is a right triangle. Triangles ABC and PNC are similar, since angle $N =$ angle $B =$ right angle. Angle C is common. Angle CPN must equal angle CAB , being the third angle in respect of the triangles. PN must, there-

fore, equal $\frac{6.5 \times 5}{12}$. Now, if we subtract the area

of triangle CPN from the area of triangle ABC , we will get the area of the quadrilateral $ABPN$.

93. 'C', i.e., both statements together are needed to answer the question, but neither statement alone is sufficient. A rhombus is a parallelogram. Also, its diagonals bisect each other at right angles. Look at the diagram below. If AC and BD intersect at O , OD , will equal $\frac{\sqrt{80}}{2}$. Using the Pythagoras theorem, we can find out OC , which

will equal $\sqrt{(5)^2 - \frac{\sqrt{80}^2}{2}} = \sqrt{25 - 20} =$

$\sqrt{5}$. Since AC is twice OC , AC will equal $2\sqrt{5}$.

94. 'D', i.e., each statement alone is sufficient to answer the question. If the diagonal of the square is equal to 10 cm, each of its sides will equal $5\sqrt{2}$. The second statement gives us the side of the square. The rest is self-explanatory.
95. 'B', i.e., statement (2) alone is sufficient to answer to question, but statement (1) alone is not. Statement (1) does not help at all to find the sum of angles B and D . It is a well-known theorem that the opposite angles of a cyclic quadrilateral are supplementary, i.e., the angles of quadrilateral, each vertex of which lies on the circumference of the same circle.
96. 'D', i.e., either statement alone is sufficient to answer the question. Since the length, the breadth, and the height of a cube have identical

dimensions, knowing the diagonal of the face of the cube will give us the measure of each of its edges. In the same way, if we know the surface area of the face of the cube, we can find out the measure of each of its edges. Either of these statements tells us that the edge of the cube in question is 4 cm. Its volume will, therefore, equal 64 cm³.

97. 'C', i.e., both statements together are needed to answer to question, but neither statement alone is sufficient. Statement (2) tells us the amount of time Y will take to complete the piece of work in question, i.e., 2 hrs 15 mins. Since X takes 3 hrs to finish the work and Y takes 2 hrs 15 mins, they

together will finish the work in $\frac{9}{7}$, i.e., $1\frac{2}{7}$ hrs.

TEST OF REASONING

- (b), i.e., 1,308. The series pattern, is $2^0 + 4 = 5$, $3^1 + 6 = 9$, $4^2 + 8 = 24$, $5^3 + 10 = 135$. The next term should, therefore, be $6^4 + 12$, which is equal to 1,308.
- (d), i.e., None of the above. 12 m represents three-sevenths of the pole, since four-sevenths is above the ground. The total length of the pole will, therefore, equal $\frac{12 \times 7}{3}$, i.e., 28 m.
- (d), i.e., 78. In each row, the number in the second (middle) column has been obtained as follows: (row number plus 1) (sum of the numbers in the first and the second column). In the fifth row, the number in the middle column should, therefore, be $(5 + 1)(7 + 6) = 78$.
- (b), i.e., approximately 64%. Total number of cases registered in 1971 were 605, while the number of fire accident cases were 39. When expressed in percentage, we get $\frac{39}{605} \times 100 = 6.4\%$ approximately.
- (d), i.e., approximately 265%. Deaths due to house collapse in 1971 were 611, while those due to train accidents in 1972 were 230. Therefore, the former were $\frac{611}{230} \times 100 = 265\%$ approximately.
- (c), i.e., 73% approximately. Number of murder cases registered in 1971 were 110 while those registered in 1972 were 150. Therefore, murder cases registered in 1971 were $\frac{110}{150} \times 100 =$ approximately 73% of those registered in 1972.
- (d), i.e., the largest percentage decrease in deaths from 1971 to 1972 was in the category of rioting. (Note that percentage decrease is different from number decrease.)
- (d), i.e., 4. These are in the categories of automobile accidents, train accidents, fire accidents and rioting. If you rank them in their respective year, the answer is self-explanatory.
- (b), i.e., 28. Total number of cases of train accidents registered during 1971 and 1972 work out to be 24, while deaths in this category during the two years were 665. Therefore, the average number of deaths per case of train accident registered for the two years combined would be $\frac{665}{24} = 27.7$, which is approximately 28.
- (b), i.e., 76. The square root of the number left of the

bracket added to the square of the number right of the bracket gives us the number inside the bracket.
 11. (b), i.e., 8.20 a.m. 10 mins to 8.45 a.m. is the same as 8.35 a.m. The other gentleman must have arrived at 9.05 a.m. Since he was 45 mins late, the scheduled time for the conference must have been 8.20 a.m.

12. (b), i.e., 1 3 7 5 8 2 6 4; it stands for A L T R U I S M
 13. (c), i.e., 6 3 4 2 5 1; it stands for U M P I R E. The letters could also make I M P U R E. Since it has not been given as one of the choices, U M P I R E must have been the word in the question-setter's mind.
 14. (d), i.e., 5 6 4 3 2 1; it stands for S T O L I D.
 15. (b), i.e., 3 1 4 4 2 5; it stands for M A N N E R.
 16. (c), i.e., 6 7 5 2 1 8 8 3 5 4; it stands for P R O F E S S O R.

Hint: For answering questions 17-22 speedily, you must write down the letters of the alphabet and number them as shown below.

| | | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|----|----|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 |
| A | B | C | D | E | F | G | H | I | J | K | L | M |
| 26 | 25 | 24 | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 | 15 | 14 |
| 14 | | 15 | | 16 | | 17 | | 18 | | 19 | | |
| N | | O | | P | | Q | | R | | S | | |
| 13 | | 12 | | 11 | | 10 | | 9 | | 8 | | |
| 20 | | 21 | | 22 | | 23 | | 24 | | 25 | | 26 |
| T | | U | | V | | W | | X | | Y | | Z |
| 7 | | 6 | | 5 | | 4 | | 3 | | 2 | | 1 |

17. (a), i.e., I T O F F Q. To code the word (in clear), its letters in the odd places are moved one step forward, while those in the even places are moved one step back.
 18. (d), i.e., K L D V I G, the seventh letter of the alphabet in the forward direction, has been coded at T, which is the seventh letter of the alphabet when numbered in the reverse order. Likewise O, the fifteenth letter in the forward direction, has been coded as L, which is the fifteenth letter of the alphabet when numbered in the reverse order. The same pattern is followed to conceal the letters of the word (in clear) to obtain its code.
 19. (c), i.e., Q T S C I. The letters of the word (in clear) occupying odd positions jump two places back, while those occupying even positions do not change at all.
 20. (b), i.e., F O R C E. The letters of the word (in clear) are moved two places, three places, four places, and so forth, the moves increasing by one place as we proceed from left to right to obtain its code. Since we are required to decode, we must go backward two places, three places, four places, and so forth to obtain the word in clear.
 21. (b), i.e., B. The first E is 12 places behind the second E in the word E X C O M M U N I C A T E. B is 12 places behind N in the alphabet.
 22. (a), i.e., R. The first O is five places behind S in the word L A B O R I O U S. R is five places ahead of M in the alphabet.
 23. (d), i.e., 724. The pattern of the series is:
 $1^3 - 1, 3^3 + 3, 5^3 - 5, 7^2 + 7, 9^3 - 9, 11^2 + 11$
 $9^3 - 9$ should be equal to 720. 724 is, therefore, the wrong term in the series.
 24. (c), i.e., 208. The series follows the pattern:
 $1^3 - 2, 2^3 - 4, 3^3 - 6, 4^3 - 8, 5^3 - 10, 6^3 - 12, 7^3 - 14$. Since $6^3 - 12$ equals 204, 208 is the

wrong term.

25. (c), i.e., 2,097. Each number in the series (in arithmetical progression), when divided by the common difference (between the consecutive terms) always results in the same remainder. Since the numbers in the series in this question are in arithmetical progression, any number in the series when divided by 7, the common difference, must give us an identical remainder, i.e., 4. Only choice (c) fulfils this requirement.
 26. (d), i.e., None of the above. Assume the number of men to be n . The first man will shake hands with $(n-1)$ men. The second man, when his turn comes, would be required to shake hands with $(n-2)$ men, since he has already shook hands with the first man. The third man, likewise, will now need to shake the hands of $(n-3)$ men, since he has already shook hands with the first and the second man. When the turn of the n th man comes, he would find that he has already shook hands with everyone else. The total number of handshakes shall, therefore, equal $(n-1) + (n-2) + (n-3) + (n-4) + \dots + 1$, where '1' represents the shaking of hand by the $(n-1)$ th man with the n th man. The sum of this series, which is in A.P., will equal $\frac{n-1}{2}(1+n-1) = 7,875$, i.e. $n(n-1) = 15,750$. Substituting 120, 125 and 145, we find that none of these satisfies the equation. The number of men, in fact, were 126. Substituting 126 for n , you will find that the equation is satisfied.
 27. (a), i.e., "all men are honest". In logical reasoning some means 'perhaps all'. The diagram below illustrates the point.

- The dotted part of the circle means that we are unaware of the honesty of these men. It also means that the assessor has been able to assess only a few men in regard to their honesty and the few that he assessed were found to be honest. Had he found some men 'not honest' even among these few, he would have said, "some men are honest and some are not". That's why, in logical reasoning, some means 'perhaps all'.
 28. (c), i.e., some men are not honest. The statement "all men are honest" can be false either because some men are not honest or because no man is honest. Whether "no man is honest" is true or not, "some men are not honest" has got to be true if the statement in question is false.
 29. (d), i.e., Both choices (a) and (b) are correct. Mark that the phrase "if and only if" is different from 'if' as is illustrated in the next question.
 30. Not valid. If A, then B means only two things, i.e., all cases of A are cases of B and that all cases of 'NOT B' are cases of 'NOT A'. This must be clearly understood since it is very important. It does NOT mean that all cases of B are cases of A, unless 'if' is replaced by "if and only if". It also does NOT mean that all cases of 'NOT A' are cases of 'NOT B' unless 'if' is replaced by "if and only if".

Write a résumé that gets the job

Your résumé has been called the paper you. Its primary purpose is to get you job interviews—a foot in the door. To do that, it must attract the attention of prospective employers and interest them in what you have to offer as a potential employee.

A résumé is a shorthand sketch, not a full-fledged autobiography. If it works, you'll have an opportunity later, in a personal interview, to go into detail about your background.

Here are some basic elements every résumé should contain. Present them in a clean, simple, uncluttered outline form, usually in the following order:

Identification. Right up at the top, put your name, address and phone numbers (where you can be reached at school, at home, at work).

Your objective or job goal. Handle this carefully. If you are too specific, you could rule yourself out for related jobs you'd actually want to consider. If you are too lofty—announcing your goal is to be in charge of a research lab, for instance—an employer will dismiss you as unrealistic. On the other hand, if you are vague about what you want to do, an employer might not bother to figure out where he could use you. One job counselor suggests that instead of a specific job title you include a one- or two-line summary of your abilities.

Work history. This merits the most space and emphasis even though you are a new graduate and your experience may be limited to part time and summer jobs. Include this information about each job you've held: name and location of the firm (for a small or unknown company, identify its line of business, for a major corporation indicate the department you worked in), dates of your employment, your title and responsibilities, and, above all, your specific accomplishments, presented so they are immediately apparent to a reader who will probably be skimming dozens of similar documents.

You can list your jobs in chronological order, starting with your current or most recent and working backward. This format works best for most people. Or you can outline your experience by the kinds of work you've done, giving top billing to your most important functions, regardless of when you held each job. This format works well for occupations in which you performed several functions or in which there were frequent changes of assignment.

Education and training. List your high school and college, degree and major. Note areas of emphasis in your major, and include your grade-point average if

tions, military service; hobbies or outside interests. You can also note your birthdate, birthplace and marital status, although these days many people choose not to.

References. At the end of your résumé, state that references will be provided upon request, and be prepared to offer names, addresses and phone numbers of several if requested. Do not actually list the references on the résumé.

The tone of your résumé is often as important as the information it contains. Here are five things to keep in mind about tone:

1. *Be positive.* This means showing confidence in your abilities and your experience.

2. *Be brief.* One-page résumés are best; two-pagers are okay. Don't write a longer one unless there are extraordinary reasons for such length.

3. *Stick to the facts.* Forget flattering adjectives and personal opinions. What counts is what you have done ("As a sales clerk at Kilgore's Department Store, I devised an inventory system that increased productivity in my section by 10%"), not some vague, all-purpose notion of what you think about it ("I feel I contributed greatly to the overall success of the company"). Don't lie. If you

can't back it up, don't say it.

4. *Keep your language clear.* Stick to plain, straightforward English, with active verbs and short and simple words. You needn't use complete sentences, but your phrases should read smoothly.

Avoid using stilted language, abbreviations and obscure terms.

5. *Keep your eye on your goal.* You do this by emphasizing the education and experience that best establish your qualifications for the work you seek. Tailor your résumé as closely as you can to specific job fields or employers, even if it means writing several versions. Write separate ones to emphasize your suitability for the job in question.

From 1983 Job Survey

it is especially high. Also note postgraduate study and degrees and any special training courses or seminars you have completed or are currently enrolled in. Cite any special job-related skills, such as fluency in a foreign language or certification in some specialized area.

As a new graduate with little work experience, consider putting educational background before work experience in your résumé and fleshing out the educational section with more details to show how your studies and extracurricular activities relate to the kind of job you want.

Personal data. In this section, include such things as honors and awards; academic, professional and social affilia-

WHAT'S HAPPENING?

September 12 15 killed, 35 injured as Pakistan soldiers fire on anti-government agitators in Sind

INSAT-1B put in stabilised mode

A.P.

NEWS CAPSULE

ACCOLADES

1980—A United Nations Human Rights Commission award.

EMERSON—and Martin Luther King Jr. Reconciliation Award.

ICAO—International Civil Aviation Organization.

IPDC—International Programme for the Development of Communications.

PFXSEM—Preparing Ex-Servicemen For Employment.

SCOPE—South Standing Conference of Public Enterprises.

AWARDED

The Nobel Peace Prize for 1983, to Lech Walesa, founder of the outlawed Solidarity Labour Federation of Poland. Nobel Prize for Literature to British novelist William Golding, best known for his novel *Lord Of The Flies*, and for Medicine to American genetic researcher Barbara McClintock.

The Feroze Gandhi Award, 1983, to noted Hindi writer Mani Madhukar, a Sahitya Academy Award winner, by the Indian Conference for Human Rights. The award carries a cash prize of Rs 21,000 and a 'Prashasti Patta'.

Venice Film Festival Awards: The Golden Lion Award for the Best Film to French born film maker Jean Luc Godard's *Private Passion*, the jury special prize for camera work to Raoul Coutard and for sound track to Francois Musy for the same film, the jury special prize for a film to French production *Biquet* by Georges Rouquier, the Best Actor prize to the entire cast of Robert Altman's film *Streamers*, and the Best Actress award to Darling Legitim for her role in Martinique's *Rue Des Cases Negres*, which also won the Silver Lion Award for the second best film.

The International Lotus Prize for Literature to Bombay based Urdu poet Kaifi Azmi by the Tashkent Conference of Asian and African Writers, other winners were Uzbek writer and playwright Sar Ar Azimov, poet Jose Craveirina of Mozambique, playwright Mustafa al-Farsi of Tunisia, and poet Nguyen Dinh Thi of Vietnam.

ELECTED

T.R. Satish Chandran, Secretary in the Ministry of Energy, as the President of the World Energy Conference for the next three years, succeeding Dr P. Von Siemens of the FRG.

M.M. Kohli, Secretary in the Ministry of Civil Aviation, is the first Vice-President of the 24th session of the assembly of ICAO, marking the first time in the ICAO's 39-year history that India has been elected to the second highest post.

Neil Kinnock, education spokesman of the British Labour Party and a left-winger, as the Labour Party leader, defeating the nearest

rival Roy Hattersley by capturing more than 70 per cent of the votes. Hattersley got 20 per cent.

RESIGNED

Mir Qasim former Jammu and Kashmir Chief Minister from the Congress (I) following differences with the party's central leadership on many issues including the Centre's attitude to non-Congress (I) governments, and its handling of the Punjab and Assam problems.

Nicos Rolandis, Cypriot Foreign Minister, from President Spyros Kyprianou's Cabinet following differences of opinion on the personal initiative of the UN Secretary General for a settlement of the Cyprus problem.

SCIENCE

New finds on cancer: Three medical research teams in Britain and the US have found that human cancers may be the results of at least a two-stage process and weeks and even years may elapse between the first and second stages. The three research teams reported in *Nature* that they had similar results despite using different strains of cells and different oncogenes. In the first stage called 'immortalisation', the cells overcome the body's control and develop an ability to grow. In the second, 'conversion', stage, these cells multiply rapidly, changes occur on their surface and they become cancerous.

Man-made chromosomes: Andrew Murray, a member of the committee on cell and developmental biology at the Dana Farber Cancer Institute, Howard University, has claimed the creation of the first man-made chromosomes. Chromosomes are the genetic material that pass parents' traits to offspring and can be used to detect birth defects. Murray says the work he had done with Dr Jack W. Szostak had succeeded in creating a chromosome in yeast. While doubting whether it could be done with human chromosomes, the two researchers said the basic research could lead to other findings about cell division and how birth defects arise.

Trees to transmit TV signals: Scientists at the Indian Space Research Organisation (ISRO) have successfully conducted feasibility studies to receive television signals through live, green trees. The trees used were banana, papaya, coconut, eucalyptus, mango, neem and date palm. Both coloured and black-and-white signals were received by portable as well as commercial television sets with the coloured signals coming in clearer. This was possible through the development of a 'simple' novel technique to couple RF energy from the trees.

Cure for genital herpes: A small flower growing in the Philippines may be the answer to the so-far incurable sexually-transmitted disease genital herpes, according to Filipino researcher Dr Hernan Gutierrez. The plant

Plumeria acuminata, had long been used in rural areas to treat venereal disease and to induce abortions. The plant also grows in India, Sri Lanka and Indonesia where it is often planted around temples and shrines.

Skull pattern can reveal identity: The Director of the Tamil Nadu Forensic Scientific Laboratory, P. Chandra Sekharan, has developed a technique to identify a dead person by examining the skull. The technique is based on the discovery that a person has a unique suture pattern formed by joining of different bones in the skull vault. Sutures (lines of junctures and spikes projections on the cranium) develop from the second to the seventh year of a person's life. The diverse suture patterns help differentiate one skull from the other. This method if used to track down criminals would be 100 per cent fool-proof, because a criminal cannot tamper with his skull as he does with fingerprints. An X-ray comparison between the sutures of a dead body to the already existing X-rays of living persons could reveal the identity of the dead person.

DEFENCE

India's multipurpose naval ship: 'Astra Vahini', India's first multi-purpose naval ship for research, torpedo launching and recovery was commissioned in Visakhapatnam on September 8. The ship has been designed by a research and development organisation and built by a private shipping company for the naval science and technological laboratory.

Soviet, US war plans: Soviet military activities in West Asia may provoke a US nuclear attack in the area, according to a study on nuclear targeting plans published by the London International Institute of Strategic Studies. The study estimates that all of the 200 largest Soviet cities and 80 per cent of the 866 Soviet cities with population above 25,000 are included in 'US War Plans'. Soviet strategic doctrine also requires the employment of its nuclear forces against a wide range of targets like US and West European industrial bases and centres of political and administrative control, according to the study by Australian professor Desmond Ball.

British AWACS for India: Britain has offered to sell India an Airborne early warning system (AWACS) using a less expensive air frame such as the HS-748, which will considerably reduce costs. About 350 British-made HS-748s are serving various air forces including about 40 with the IAF. India is looking for a suitable AWACS for countering advanced surveillance capabilities of its neighbours. British Minister for Defence Procurement Geoffrey Pattie said a British team was likely to visit India shortly to work out details of the deal.

Harpoons for Pakistan: The Reagan Administration has notified the US Congress of its decision to sell Harpoon missiles to Pakistan. The notification, issued on September 12, justified the sale on the

ground that "Pakistan occupies a strategic location in the Indian Ocean astride vital sea-lines of communications and approaches to the Gulf".

Soviet arms for India: India will receive sophisticated arms including Mig 29 'Fulcrum' fighters and T 80 tanks in one of the biggest arms-package deals with the Soviet Union. Though the agreement has yet to be signed, Moscow is believed to have "firmly" assured India it would supply the latest aircraft to be followed by licensed production rights for the latest Migs.

NEIGHBOURS

Nepal's border regulations: A task force set up by Nepal's additional commission on population, in a 70-point report released on September 6, has recommended regulation of free movement of people along the Indo-Nepalese border in three phases. They are: 1) registration of names of people crossing the border at check posts, 2) starting an entry permit system with a multiple entry permit given to those living within 10 km of the border and a single entry permit to others, 3) starting a regular passport system "at an appropriate time".

Pak Defence Day: Pakistan, on September 6, observed its Defence Day highlighting the army's role as defender of the nation's ideological and geographical identities.

Pak Government bans Asghar Khan's book: The Pakistan Government has banned Air Marshal Asghar Khan's book *Generals In Politics*—published some time ago by an Indian publishing company. The move followed news of a book by Benazir Bhutto being published by the same company.

Mauritius to become a republic: The Mauritian Cabinet has approved a draft law declaring the Indian Ocean Island a republic with a President, a Vice-President and a Supreme Court for appeals now heard by the British Privy Council. The move requires the votes of 75 per cent of Parliament when it comes up for approval in November. The British Sovereign is still formally Head of State in Mauritius which became independent in 1968, and is represented in Port Louis by a Governor-General. Former PM Sewoosagar Ramgoolam is tipped to be its first President.

EDUCATION

UGC's new reforms: The University Grants Commission (UGC) has asked all universities to implement a minimum programme of examination reforms by April 1984. Under the programme, students will be required to study the entire syllabus, there will be no overall choice among questions in examinations, the annual examination will be held only after a minimum number of lectures in each subject. Also, teachers will be free to reset questions set in earlier examinations with the syllabus being divided into well-defined units. The new programme shows the UGC's failure to implement the total examination reforms proposed in the early 1970s, whose major points were continuous internal evaluation, question banks and grading.

ECONOMY—National

Oil products demand decreases. The demand for petroleum oil products in 1984-85 is now expected to be 39.7 million tonnes against earlier estimates of 45.55 million tonnes, according to the latest official review. The decrease in demand is attributed to the lower than-anticipated growth rate in petroleum products in the first three years of the Sixth Plan. The country's crude refining capacity is likely to increase to 45.5 million tonnes by 1984-85 from the present 37.80 million tonnes.

Record rabi production: Foodgrain production in the last rabi season was a record 58.9 million tonnes, about 5 million tonnes above the previous best of 54 million tonnes in 1981-82. Wheat production was 42.5 million tonnes (previous best 37.8 million tonnes). The achievement is attributed chiefly to the measures taken to ensure timely supply of key farm inputs to farmers under the compensatory rabi production campaign in various states.

World Bank document on oil exploration: The World Bank, in its latest document on the energy transition in developing countries, praised India, Pakistan and Turkey for their open door policy in oil exploration with "encouraging preliminary results". According to the document, over the past decade there has been little increase in exploration activity in most developing countries despite the rise in the price of oil. India, Argentina and Brazil alone accounted for almost 60 per cent of the increase in exploratory drilling in all oil importing developing countries over the period. But despite efforts to reduce dependence on imported oil, the net oil imports of these countries are likely to grow from 29.5 million tonnes to about 386 million tonnes in 1995, the document said.

South Asian Food Security Reserve, a regional food security reserve of about 200,000 tonnes, with contributions coming from the countries in the region, has been proposed by the UN Food and Agricultural Organisation (FAO). The countries which would benefit are India, Nepal, Pakistan, Bangladesh and Sri Lanka. India being the largest country would contribute 1,54,000 tonnes, Bangladesh 22,000 tonnes, Pakistan 18,000 tonnes, and Nepal and Sri Lanka 3,000 tonnes each.

Less excise on tyres, refrigerators, etc: The government, on October 1, announced excise duty reductions on tyres, refrigerators, electric appliances and certain types of commercial vehicles which would mean a revenue loss of Rs 46.2 crores. The industries selected for the cuts are apparently those where "lower prices would push up offtake" with direct beneficial effect on production and indirect effect on a wide range of supplier industries. The excise duty reductions are not applicable to free-trade zones.

India's national income: Preliminary estimates show that the total national income of India, based on 1970-71 prices, was Rs 49,887 crores for 1981-82. It registered a five per cent increase over the national income for 1980-81.

Per capita income in real terms rose from

Rs 700 in 1980-81 to Rs 720 in 1981-82, registering a growth of 2.8 per cent.

Net domestic savings in 1981-82 was Rs 24,074 crores as against Rs 20,024 crores in 1980-81.

ECONOMY—International

The GATT report: World trade would have to increase by two per cent in the second half of 1983 to register a modest growth with global trade, showing only limited gains up to mid-year, according to a GATT report on international trade in 1982-83. Even this would be subject to continuing economic recovery in industrial nations and absence of major disruption in the international trade on financial systems. The GATT report says the immediate problems in economic policy are insufficient savings to finance investment, to sustain the recovery and renewed upward pressure on interest rates.

On the debt problem faced by developing countries, it said only more foreign exchange earnings and liberal access to markets of creditor countries would enable them to service the debt.

Drought in the US that led to a 16 per cent decline in American corn crop prospects contributed to a two per cent drop in the latest estimate of world grain production, put at 1.6 billion metric tonnes for the 1983-84 crop year. The new estimate is five per cent less than the record harvest of 1982-83. Dry weather also damaged crops in Canada and Western Europe, though the forecast for Soviet grain crop remains at 200 million tonnes. Crops in Australia and India benefitted from good weather. The estimates for coarse grain production is 685 million tonnes (12 per cent below the 1982-83 record), for wheat, 479.5 million tonnes, matching last year's crop. A one per cent increase was forecast for the world's rice production, according to the US agricultural department.

EVENTS—National

Indo-Egyptian agreement. India and Egypt, on September 3, signed an agreement on the establishment of a joint committee for closer cooperation in agriculture, economy and trade, industry, education and health. The agreement came during a three-day visit to Cairo by Foreign Secretary, M K Dasgupta for talks with Egyptian leaders on the NAM-sponsored summit gathering in New York late in September.

Indo-Maldives cultural agreement: India and Maldives, on September 7, signed a cultural agreement covering art, culture, archaeology, education, social welfare, public health, mass media and sports. The agreement was signed during Maldives President Maumoon Abdul Gayoom's official visit to India.

Indo-Greece joint commission. India and Greece, on September 23, set up a joint commission to pursue proposals contained in a five-year agreement on scientific, technical and economic cooperation. The cooperation will be in the fields of trade, industry, tourism, construction, public works, fishing, telecommunication, transport, ship building and repairing. The agreement was signed during Prime Minister Indira Gandhi's visit to Athens during her foreign tour.

EVENTS—International

Emergency in Chile: The Chilean Government on September 9, declared a state of emergency following a spate of unrest and protests against the military government of Augusto Pinochet. The emergency, in force in Chile for over 10 years, was lifted only two weeks ago, before its reimposition.

New Constitution approved: The South African Parliament, on September 9, approved a controversial proposed new Constitution which would give limited political power to Indians and coloureds, after a marathon 127 day session. The new Constitution would set up a three chamber Parliament of whites, coloureds and Indians headed by an all powerful executive president, with the whites retaining tight control of the political system. The Opposition has rejected the new Constitution as a further entrenchment of apartheid. The Constitution would continue to exclude the country's 20-million blacks who form 70 per cent of the population. The government says they can exercise political rights only in tribal home lands and town councils, outraging black political leaders.

St Kitts and Nevis gain independence: The Federation of St Kitts and Nevis, on September 19, became an independent nation, swearing in its first Prime Minister, Kennedy Symmonds, and its first Governor-General, Sir Clement Armingdell. The two Caribbean islands, with a combined population of over 45,000, bade farewell to more than three centuries of British control by raising a green, yellow, red, black and white flag to the boom of a 21 gun salute. Britain's Princess Margaret handed over the constitutional instruments of independence.

Less US aid for UN: The US Senate voted, on September 22, for a drastic reduction in US financial contributions to the UN by \$500 million over the next four years. The amendment proposed by Republican Senator Nancy Kassebaum, cannot become a law unless adopted by the House of Representatives, and signed by the President. The Senate, in reaction to the Soviet downing of a Korean plane, also adopted a non-mandatory resolution recommending expulsion of several hundred Soviet diplomats by limiting their number to that of US diplomats in the Soviet Union.

Kenya's new Cabinet: Kenyan President Daniel Arap Moi, on October 1, announced a new Cabinet five days after general elections naming Tourism Minister Elijah W. Mwangale to be the new minister for Foreign Affairs. Mwangale replaced Robert J. Ouko, who has been given the Labour portfolio. Five ministers were rejected by voters in the general elections on September 26, three who were re-elected were dropped from the Cabinet.

MISCELLANY

Solar power railways: One of the world's biggest solar-power systems was commissioned at Bisanattam railway station on September 23. The 3.2 kw system supplied by Bharat Heavy Electricals Ltd consists of 128 photo-voltaic panels of 25 watts each. The commissioning could be extended to

other rural railway stations without electricity supply across the country.

HTL to produce electronic teleprinters: The Hindustan Teleprinters Limited (HTL) proposes to set up an annexe unit for the manufacture of electronic teleprinters. The World Bank has sanctioned a loan of US \$ 6.5 million towards the capital cost of the project. HTL proposes to spend a sum of Rs 500 lakhs on this project over a period of three years commencing from 1983-84. HTL has also been licensed to manufacture 15,000 electric typewriters annually and has so far assembled 225 of them. HTL has already released a Hindi electric typewriter.

Rural electrification: Electrification of all the villages in the country is expected to be completed by 1990 and exploitation of ground-water potential by 1995. Referring to the progress in rural electrification since the establishment of the Rural Electrification Corporation in 1969, the village electrification level has gone up from 13 per cent to 55.6 per cent. Similarly, the number of pump sets energised has gone up from 11 lakh to 50 lakhs. This has brought an additional four million hectares of land under irrigation and helped increase the agricultural production by 21 million tonnes. Rural Electric Cooperatives were organised on pilot basis in 1969 in the states of Andhra Pradesh, Gujarat, Karnataka, Maharashtra and UP as part of the wider programme of rural electrification.

Land for landless: Nearly 6,000 acres of cultivable land was distributed among the landless during the first three months of the current year in the country according to the Planning Commission. The number of beneficiaries was 5,727, out of which 3,020 belonged to Scheduled Castes and Tribes.

Ban the drain: Industrial nations should help bolster the technological capacity of Third World countries that lose skilled manpower to the rich states, according to a new UN report. Brain drain should encompass the international movement of people with "all kinds of skill" and not just professionals, the report said. Countries admitting foreign workers should respect their basic economic and social rights set out in the International Labour Organisation (ILO) convention. Even illegal immigrants have the right to protection against "abuse and exploitation" and the state has to provide them with needed assistance. The report will go before the preparatory conference on population in January.

US to build more nuclear weapons: The US Government plans to build 17,000 new nuclear weapons and retire only 6,000 old ones over the next 10 years, according to the US Centre for Defence Information. A study on the US nuclear stockpile by the Centre called the projected increase "excessive"—US nuclear expenditure accounts for 22 per cent of the defence budget and not 10 per cent, the Defence department asserts, it said. All told the US will spend about \$457.6 billion on nuclear forces between 1983 and 1988.

ITDC made a record profit of Rs 2.01 crores during 1982-83 despite recession, fall in room occupancy, large investment in new hotels and heavy depreciation. The profit ex-

ceeded the Rs 2-crore mark for the first time in ITDC's history; the previous highest was Rs 1.61 crores in 1979-80. During this year, ITDC earned Rs 9.94 crore in foreign exchange—a 10-per cent increase over last year. The figure excludes Rs 1.5 crore earned for catering during Asiad 1982 since the money was paid in rupees.

PTI links New Delhi and New York: The Press Trust of India (PTI) news agency has set up a two-way satellite link between its New Delhi and New York offices, marking India's first entry into a major Western country. The link, the PTI's eighth satellite link, is part of the agency's process of expansion and modernisation of its news operations to "enable faster, better and more diversified news coverage, national and international".

More US aid for Third World Communications: The US Government will contribute \$8,50,000 to support the Third World communications projects of the International Programme for the Development of Communications. The sum is 3,00,000 more than previous US commitments. It will be used for exchange of programmes and training of journalists, media and communications technicians and other professionals in the field with the US Agency for International Development and the US Information Agency sharing the costs.

DIED

Gen Ibrahim Abboud, 83, former Sudanese President who was Head of State between 1958 and 1964 after seizing power from a civilian regime, on September 8, in Khartoum.

John Vorster, 67, former Prime Minister and State President of South Africa, a tough advocate of apartheid who left office in disgrace over a government propaganda scandal, on September 10, in Cape Town, of a lung infection. Vorster succeeded his assassinated predecessor Hendrik Verwoerd as Prime Minister in 1968 and retired in 1978. Three weeks later, he became the nation's fourth President before resigning in 1979.

Leopold III, 81, ex-King of Belgium who was forced to abdicate his throne amid charges that he sold out his country to the Nazis in World War II, on September 25, in Brussels.

C.H. Mohammad Koya, 56, Deputy Chief Minister of Kerala and leader of the Indian Union of Muslim League, on September 28, in Hyderabad, of cerebral haemorrhage.

Allen Moorehead, 73, an Australian-born writer and a leading war correspondent in World War II, whose historical works, *Galipoli* and *Cooper's Creek* won literary awards, on September 29, in London.

The Rev Michael Scott, 76, in London, on September 14. He was imprisoned in South Africa for protesting against racial discrimination and in England for anti-nuclear weapons activity and was in the peace mission expelled from India in 1966 for trying to end the strife in Nagaland.

Beverley Nichols, 85, British author and journalist best known for tales of cats, gardens and country cottages, on September 15, in London.

ANIL PENNA

(Continued from page 41)

the Americans began to make themselves at home in the Honduras, as per the military manoeuvres codenamed Big Pine II, El Salvadorean leftist guerrillas launched their largest artillery attack in the guerrilla war, killing about 19 government soldiers and wounding 100 others in the city of San Miguel. In Nicaragua, anti-Sandinist guerrillas of the Revolutionary Democratic Alliance (ARDE), which has bases in neighbouring Costa Rica, launched an air attack on Augusto Cesar Sandino airport at Managua. An aircraft was shot down and the pilots killed. The guerrillas also launched another unsuccessful attack on the home of the Foreign Minister, Miguel D'Escoto. The Nicaraguan Government was also upset by the three-day visit of US Defence Secretary Casper Weinberger to Panama, El Salvador and Honduras. Weinberger promised strong US support for the Salvadorean Government and gave patient hearing to Honduran requests for increased American military aid.

US ECONOMY

BETTER OR BUST?

Inflation, recession and inflation again? Are the wheels of economy turning too fast? US President Ronald Reagan's advisers were in a self-congratulatory mood recently as the American whole-sale prices, as measured by the producer price index of finished goods, went up by 0.4 per cent in August. But other economists pointed out such confidence may be misplaced. Food prices are climbing sharply as a result of the government's payment-in-kind programme, which pays farmers for planting less in 1983. Summer droughts have also reduced crop prospects and raised prices. Corn prices are 71 per cent higher than in 1982 and soya bean prices, too, have shot up 50 per cent since mid-July. Prices throughout industry are also increasing as a result of increased demand. Aluminium prices have increased by 90 per cent since 1982 and the prices of copper and petro-chemicals have also risen.

The damper is that the inflation rate may be higher during the next inflationary period. According to a senior economist, in every economic recovery since the 1960s, the inflation rate has always peaked at a higher level than in the previous recovery period. Although most private economists do not see a return to the double-digit inflation rates of 1980-81, experience has shown that inflation exceeds the consensus forecast.

Meanwhile, countries in South America continued to face a still worse problem: a foreign-debt burden totalling \$ 300 billion. Delegates from 30 Latin American nations and their chief creditor, the US, met at Caracas recently under the auspices of the Organisation of American States (OAS) to find a way to solve the problem. OAS pointed out that in three straight years of recession, there had been a five per cent drop in per capita income, a sharp decline in export earnings and an increased strain on the social and political fabric. Latin American delegates tried to put the blame for the deplorable economic condition in their nations on external factors like interest rates, worldwide recession and protectionism. But the US advised them to shoulder their economic burdens and impose further austerity measures in their countries.

GREECE

AN EEC REBEL

The one EEC member which refuses to conform to the patterns set by the Community is Greece. On September 12, Greek Foreign Minister Yiannis Haralambopoulos vetoed an EEC attempt to condemn the Russians for shooting down the Korean airliner. At the end of a

present, issued a large statement expressing "deep emotion" at the loss of life, without blaming anybody in particular.

Earlier, too, Greece had gone its own way on certain issues, contrary to the informal rules of political co-operation in the EEC. In 1981, Prime Minister Andreas Papandreou had refused to condemn the imposition of martial law in Poland. Greece is also the only EEC country which refuses to recognise Israel, and its pro-Arab stance has led it to break ranks with the other nine EEC countries in the UN many times. Papandreou also suggested in August that NATO should delay its plan to deploy cruise and Pershing II missiles in Europe for six months. This would have taken the pressure off the Soviet Union to reach a compromise in the Geneva arms-control talks.

One reason for Papandreou's pro-Soviet stance is that the pro-Moscow Communist Party in Greece is quite strong and the Prime Minister does not want it to create trouble at a time when Greece's economy is in dire straits. Further, extreme elements in his own party, PASOK, sympathise with the communists.

But communists cannot fill Greece's coffers, capitalists can. Recently, Papandreou signed an agreement with the Americans allowing them to keep their military bases in Greece at least till 1988. And with the military bases come \$500 million a year in American military aid.

INDONESIA

'GUNMEN WELCOME'

The danger with waging an extra legal war against crime is that, if occasion arises, hired gunmen can turn against the body which hired them. Since February, a large number of corpses have been found in Indonesia, riddled with bullet holes, some bearing the tattoo of a scorpion, the mark of one of Jakarta's well-known underground gangs. Last May, the bodies of a number of well-known criminals shot at point-blank range were found. Strangely police appeared unconcerned by the upsurge in crime. The government controlled Indonesian press dubbed the killers the "mysterious gunmen", but rumours spread that government security forces were behind the killings.

The rumours proved to be true. On July 27, Information Minister, Ali Murtojo, stated the killings were part of a government campaign against organised crime. The police force in Indonesia is very small, the legal system corrupt and the jails overcrowded, and it is because of this perhaps that the government has taken recourse to death squads. Although some Indonesians, like former Vice-President Adam Malik, are alarmed at this infringement of the legal system, many others, plagued by crime, appear to approve of the means. There is a proliferation of car bumper stickers which read "Mysterious Gunmen, Welcome."

WEST GERMANY

CONSCIENCE OR COWARDICE?

According to the West German Constitution, "no one may be compelled against his conscience to render war service involving the use of arms". This clause becomes particularly important in view of the fact that all draft age West Germans have to put in 15 months of compulsory military service. Conscientious objectors (COs)—those who refuse military service on the grounds of "personal conscience" and "value attached to life"—however, have been given the alternative option of 16 months service in hospitals, old age homes and institutions for the handicapped.

In recent times, the West German Army is facing a crisis because of a tremendous increase in the number of COs. In

COs, which comes to about 17 per cent of the 3,54,000 eligible for the draft. In the first seven months of this year, 51,300 have applied for consideration as COs. If the present rate continues, about 1,00,000 would have applied by the end of the year— which is about 30 per cent of those eligible for the draft. West Germany has the highest rate of application for CO status. Denmark and The Netherlands, which are as peace loving as West Germany, have only 3 per cent and 2.5 per cent COs respectively. During the Vietnam war, a large number of American boys of draftable age were granted CO status, but even during the peak year (1971), less than 1/4 of one per cent were COs. Some feel that the recent upsurge in COs in West Germany has a direct relation to the proposed deployment of the new US nuclear missiles on German soil, which will happen in case the current Geneva talks between the US and the USSR on the deployment of nuclear weapons fail. Others, however, feel that the new generation in West Germany is neither nationalistic nor patriotic: they just do not wish to fight for the Fatherland.

To check the problem, West Germany recently passed an amendment to the draft law extending alternative service from 16 to 20 months to act as a disincentive to the youth. This, however, failed to solve the problem and more and more people, especially from the environmentalist Green Party, are asking for CO status in the country.

CHINA

CAMPAIGN AGAINST CRIME

"Kill the chicken and warn the monkey." So says the Chinese Government, which began an anti-crime blitz on August 1, with specified quotas. It is reported that about 1,00,000 to 1,50,000 criminals are to be rounded up by February 1984. Not satisfied with just imprisonment, the National Peoples Congress, China's Parliament, recently announced new additions to the already long list of capital crimes in China. Criminals can now be executed not only for murder, rape, robbery and counter-revolutionary activity, but also for assaulting police informants, pimping, embezzling or any other sufficiently serious crime.

Under the new anti-crime campaign, 30 criminals were paraded before 80,000 spectators at a sports stadium in Beijing, swiftly tried, condemned to death and executed. *The People's Daily* recently reported the execution of an accountant in the southern town of Jin Zhou for embezzling \$70,000 and running a gambling ring. On September 5, 10 criminals were executed in Guangdong province for crimes ranging from espionage to rape and murder. Since August 1, in fact, over 120 criminals have been executed all over China. Criminals not accused of capital crimes fill jails and overflow into warehouses and schools. Many have been deported to labour camps in Qinghai, a poor and underpopulated province in the west.

The government has taken this unprecedented step because there has been an increase in crime rate in recent months. Some Chinese officials blame Mao Zedong's discredited cultural revolution for having bred anarchist ideas in the youth. Others feel that China's strongman, Deng Xiaoping's modernisation programmes have bred bourgeois values and this has resulted in a crime wave. Yet others see a connection between youth unemployment and juvenile delinquency. The new Chinese Minister of Public Security, Liu Fuzhi, however, feels that law enforcement has been too loose so far resulting in an increase in crime. Therefore, he has taken steps to punish serious crimes "promptly and severely".

HEMENDRA S. BARTWAL & S. B.

(Continued from page 38)

money. India might even buy more wheat from the US because international prices are expected to rise next year due to the US acreage reduction programme.

However, the agricultural experts consider the imports to be unwise and uneconomic. According to them, India already has a year's stock in advance. Another year's bumper crop could lead to a shortage of storage space. This means this year India's carrying cost of buffer—including storage and losses—would be Rs 276 per ton, i.e., Rs 431 crores. It is estimated that in the 1980s, India will be incurring a cost of Rs 9,600 crores to Rs 10,500 crores as the buffer's carrying cost. This naturally leads to the food subsidy being used up for storing food rather than releasing cheaper food. Experts also feel world wheat and rice production has been so good and the stocks so high that in case of a fall in production in the subsequent years, India can make short-notice purchases.

It would, perhaps, be a better policy if India spent this money on distributing and subsidising fertilisers to the farmers. The past few years have shown that the use of fertilisers is proportional to the annual output of wheat and rice. Wheat output increased from 37.8 million tonnes in 1981-82 to 42.5 million tonnes in 1982-83 and fertiliser use in rabi season from 3.75 million tonnes to 5.15 million tonnes in the same years.

WHEAT PRICES

HIKE IN PROCUREMENT PRICES

The Agricultural Prices Commission (APC) has sprung a surprise on the country by recommending a hike of Rs 4 in the procurement prices of wheat for 1984-85. The prices have been fixed at Rs 155 per quintal in the annual report of APC. The recommendation is surprising because farmers have earned huge profits this year due to a bumper harvest and the inflation rate is already very high.

In the last agricultural season, the procurement rates of paddy and wheat were raised by Rs 7 and Rs 12 per quintal respectively. In the early 1980s, there was some justification in hiking procurement prices because then the fertiliser and diesel prices were quite high and inputs were costly. But for the current season, the fertiliser prices were slashed by about 7.5 per cent, so there is no reason to increase procurement prices.

As is obvious from previous experiences, a hike in prices also increases industrial prices. Foodgrain is bound to become more costly for the poor. Ostensibly, the procurement price increase seems to help the farmers, but in reality it is only a small fraction of rich farmers who benefit from it. For the poor (who generally only grow for subsistence), it only makes food and other non-agricultural goods more costly.

The APC report has also suggested setting up of a study group with Food Corporation of India (FCI) to evolve a strategy to minimise costs (of transport etc) and maximise produce and projects.

ANITA SHARMA

DID YOU KNOW THAT . . .

- ▲ Fear, anger and love are the three primary human emotions?
- ▲ In the Andaman Islands, the worst crime which one can commit is fire stealing, for the aborigines do not know how to build a new fire?
- ▲ The plumage of aquatic birds is kept dry because the small feathers of the bird overlap each other like the tiles of a roof?

N. GIRJJA SANKAR PRASAD

Sailing to victory. 'Australia II', the 12-metre yacht challenger in the America's Cup final, under a full spinnaker run during race with defender 'Liberty'

ATHLETICS

World champion Ed Moses (USA) set a new world record in the 400 m hurdles (47.02 sec) at an international meet in Koblenz (West Germany) on August 31. (Earlier record: Moses, 47.13 sec in Milan.)

Thierry Vigneron (France) broke the world pole vault record (Pierre Quinon's 5.82 m) by clearing 5.83 m at the Golden Gala Athletics Meet in Rome (Italy) on September 1.

Steve Ovett (UK) regained his world record for the 1,500 m (3:30.78 sec) against Sydney Maree's 3:31.24 sec) at an international meet in Rieti (Italy) on September 5.

Zhu Jianhua (China) broke his own high-jump world record (2.37 m) with a leap of 2.38 m at the National Games in Shanghai on September 22.

Tommy Persson (Sweden) won the International Marathon in Pune, on September 25, by covering the 42-km 195-m course in 2:24.15.0 sec. Swaroop Singh (India) came second, clocking 2:27:08.0 sec.

TABLE TENNIS

Swedes took the first three places in the World Cup tournament, ending September 4.

Anders Appelgren beat Jan-Ove Waldner 21-14, 13-21, 21-12, 21-17 in the final. Eric Lindh came third by beating Zoran Kalinic (Yugoslavia) 21-16, 17-21, 21-16.

FOOTBALL

Sir Stanley Matthews (68), one of the greatest footballers of all time, died in Aschaffenburg (FRG) on September 22. In his 33-year career, he played in 886 first-class matches, which included *inter alia* 54 appearances for England in full international matches, 701 league and 86 F.A. Cup matches.

The IFA Shield was shared by East Bengal and Aryans Club. The finals, played in Calcutta on September 26, ended in a draw.

CRICKET

The First (Bangalore, ending September 19) and Second (Jullundur, ending September 29) Test matches between India and Pakistan ended in a draw. India won both the one-day internationals played at Hyderabad (September 10) and Jaipur (October 2), and the one-day night cricket match at New Delhi (September 21).

MODERN PENTATHLON

The women's world championships, which ended at Gothenburg (Sweden) on September 1, was won by Lynn Chornobrywy (Canada) with 5,328 pts. Anne Ahlgren (Sweden) was second with 5,198 pts and Sarah Parker (UK) third on 5,082 pts. The team title went to UK (15,050 pts), ahead of West Germany (14,870) and Sweden (14,709).

HOCKEY

Rene George Frank (85), President of the International Hockey Federation (FIH) for the

4. Frank, a Belgian, had been largely responsible for the FIH's development and growth, introducing world and continental championships, and absorbing the International Federation of Women's Hockey Associations.

India beat Australia 3-0 and 2-1, on September 17 and 18, in Melbourne but lost both the next matches in Perth (on September 24 and 25) 2-1. Thus, the series was drawn.

TENNIS

Following were the major international tournaments held in September.

The US Open Championships ended in Flushing Meadows, New York, on September 11 with the following results:

Men's Singles: Jimmy Connors (USA) b Ivan Lendl (Czechoslovakia) 6-3, 6-7, 7-5, 6-0. **Doubles:** John McEnroe and Peter Fleming (USA) b Fritz Buehning and Van Winitsky (USA) 6-3, 6-4, 6-2. **Women's Singles:** Martina Navratilova (USA) b Chris Evert Lloyd (USA) 6-1, 6-3. **Doubles:** Martina and Pam Shriver (USA) b Candy Reynolds (USA) and Rosalyn Fairbanks (South Africa) 6-7, 6-1, 6-3. **Mixed Doubles:** John Fitzgerald and Elizabeth Sayers (Australia) b Ferdi Taygan and Barbara Potter (USA) 3-6, 6-3, 6-4.

Mats Wilander beat fellow-Swede Henrik Sundstrom 3-6, 6-1, 6-3 to win the Geneva Grand Prix final on September 25.

Lendl beat McEnroe 3-6, 7-6, 6-4 in the final of the \$2,650,000 Transamerica Open Championship ending September 25 in San Francisco. Ramesh Krishnan (India) reached the semi-final where he was easily overcome by Lendl 6-0, 6-1.

S.K.G.

Preparing for the Olympics: Saudi Arabia defeated India 2-1 in the pre-Olympic football tournament, at the Jawaharlal Nehru Stadium, New Delhi, on October 1.

NIGHT CRICKET INDIAN DEBUT INDIAN WIN

Cricket is a dicey game. Luckily, the dice was loaded in Kapil Dev's favour when floodlit night cricket made its Indian debut at the pandemonium of Jawaharlal Nehru Stadium in New Delhi on September 21, 1983.

Put in to bat, Pakistan openers Mohsin Khan and Mudassar Nazar played clean but tedious cricket. After the second drinks break, two of the four giant light towers in the stadium blacked out. Play was delayed for 25 minutes—and overs reduced from the stipulated 60 to 50. This required a spurt in the run rate—which suddenly psyched Khan—caught at mid-wicket off Kirti Azad for 40. Enter and exit Zaheer Abbas—stumped by makeshift keeper Yashpal Sharma off Azad for 11 in Zaheer-like runs. Mudassar went next, again Azad, caught and bowled, for 65. Wasim Raja and Qasim Omer stepped in to step up Pakistan's score to close at 197 for 3 in 50 overs.

Not a big total, but night through to Kapil, the Indians messed it up all night. 6 for 80 in 30 overs. Then came Azad—and came his breezy, gutsy 71 off 70 balls in 100 minutes with six fours and four stand-dwarfing sixes. He and Madan Lal then (out eventually at 35) put up an 86 run partnership in 57 minutes. With 11 runs

Victory with a nerve-shattering twist: Pak captain Zaheer Abbas gives a stumping chance to Indian wicket-keeper Yashpal Sharma.

needed for a win in three overs, and running out of partners, Azad proved an assassinator of the Pak morale par excellence. With last man Balwinder Singh Sandhu at the non-playing end, Azad square-drove Abbas for a boundary—and India coasted to a 'fairy tale' win.

But in this fairy tale, nobody was

wicked—neither the wicket, which was snail-slow, nor the bowlers. Only the batsmen didn't know how to bat—except, perhaps, Azad. While the Pakistanis seemed to be playing five-day cricket, the Indians probably intended to get all the 198 runs in one over.

N.V.S.

Answers to TEST YOUR WORD POWER

1. **afflict:** C: to cause to suffer; cause bodily or mental trouble to; give pain or grief, harass. Pulmonary or lung TB afflicts more than 6,000,000 new victims every year in India.
2. **antibiotic:** D: a substance used to destroy micro-organisms that infect the body. Penicillin is an antibiotic.
3. **apartheid:** B: racial segregation. John Vorster, the former Prime Minister of South Africa, was an ardent advocate of apartheid, who denied the black majority property and political rights.
4. **deteriorate:** A: to become or make worse. Politically, President Ferdinand Marcos is losing ground, partly because the Philippine economy is deteriorating.
5. **disrupt:** A: to throw into disorder, upset, break up. Studies show that in many people caffeine disrupts their normal ability to fall asleep.
6. **edible:** B: fit to be eaten. Some edible oils play a major role in causing heart ailment.
7. **enhance:** A: to heighten; intensify, increase. Anabolic steroids are drugs that supposedly build up muscles, restore energy after a workout and enhance aggressiveness.
8. **facet:** D: aspect. Forest preservation and development cannot proceed in isolation from other facets of developmental planning.
9. **hermit:** C: one living in solitude, especially from religious motives. Hermits are generally considered anti-social.
10. **inevitable:** C: unavoidable; not to be escaped; that is sure to happen. In the US, wife-beating is no longer widely accepted as an inevitable and private matter.
11. **nestle:** A: to lie or be embedded, sheltered or half-hidden. More widely known as Canton, Kwangchow

nestles in the green Pearl River Delta.

12. **potent:** A: powerful. Loyal supporters of Deng Xiaoping (China's strongman) recognise that any public glorification of their chief can serve as a potent political weapon to enhance Deng's authority.
13. **prerogative:** D: special privilege or right. It is a prelate's prerogative to officiate at some functions.
14. **profane:** B: coarse; irreverent. Cursing is sometimes called a profane language.
15. **sedition:** D: words or actions or propaganda urging to rebellion; encouragement to revolt against the state. In Stalin's Russia, sedition meant certain death.
16. **segment:** B: section; division. IBM, the company with the longest experience and the greatest mastery of distributing and marketing computers, is gradually developing a hammer lock on the personal computer segment of the market.
17. **segregate:** A: to isolate; set apart from the rest. A child with measles should be segregated from the rest of the pupils.
18. **unravel:** A: to solve; make clear. Legal medicine has unravelled many a murder mystery.
19. **watershed:** D: dividing line between events which take different courses. The middle of the 20th century was a watershed in the evolution of world agriculture.
20. **whim:** C: fancy; sudden desire or idea, often something unreasoning. Throughout history, unlucky women have been subjected to the whims and brutality of their husbands.

CAREER COUNSELLING

BY G.J. UNNITHAN

Director, Students Advisory Bureau, University of Rajasthan

What are the career prospects of a Handloom Technologist? Please provide information about the certificate and post-graduation courses in the subject.

Zakir Ahmed, Dispur

The Ministry of Industry, Government of India, operates the Indian Institute of Handloom Technology with campuses at Varanasi (Chowkagat) and at Salem (Foulk's Compound) in Tamil Nadu. The Institute conducts a three-year diploma course in Handloom Technology (D.H.T.) and a short-term training course for artisans. The Varanasi Institute also has a research section. Minimum qualification for the D.H.T. is S.S.L.C. or equivalent with Science-Mathematics group, and English. Age 16-23 years. The total number of seats available for students from north India at the Varanasi Institute is 40 and for students from south India at the Salem Institute 48. Selection of candidates from each state is made with the help of the respective state governments, which publicise the admission. Preference is given to candidates belonging to hereditary weavers' families or those already employed in Weavers Co-operative Societies. A stipend of Rs 150 per month is given.

I would like to know more about the MBA courses conducted by the Asian Institute of Management, Manila, and the Management Development Institute IMEDE, Switzerland, and engineering and other courses offered by the Asian Institute of Technology, Bangkok. Please give me the addresses of the above three institutes. Can I take the entrance exams of these institutes in India?

Krishna Kumar D., Trivandrum

For details about next year's admission to the Management courses of both the Asian Institute of Management (M.C.C. P.O. Box 898, Makati, Metro, Manila, Philippines) and the Management Development Institute IMEDE,

Switzerland, you may contact the Managing Trustee, Education Foundation of India, 12-K Dubash Marg, Fort, Bombay-400 023. Both Institutes will require you to submit GMAT scores and for certain courses to have working experience. Fees are comparatively high. You may write to the Academic Secretary of the Asian Institute of Technology, P.O. Box 2754, Bangkok, Thailand, for further details regarding the masters degree in engineering conducted by the Institute.

I did my graduation in Science (B.Sc.) from Andhra University with a second class. Now I would like to sit for the S.A.S. Exam, conducted by the Comptroller and Auditor-General of India. What is the qualification for this course?

C.S. Srinivas, Gudivada (AP)

A combined competitive exam for recruitment to various categories of posts in the Subordinate Accounts Services of the offices of the Auditor-General of India and other government accounts departments is conducted annually by the Staff Selection Commission, New Delhi. This exam is widely advertised. Applications are to be sent to addresses in different regions. Candidates must be in possession of a degree. Age 18-25 years with certain relaxations. The exam consists of three papers, viz., General Studies, General English and Arithmetic.

I am a graduate in Psychology from the Panjab University, Chandigarh, planning to undergo the First Year Special Bridge Course of the Delhi University which is equivalent to B.A. III (Hons.) in Psychology, after which I shall be eligible to do my M.A. in Psychology from the Delhi University. I am interested in being a Clinical Psychologist. Which are the best institutions in India that offer this course? How long is it and what are the necessary qualifications? What is the scope of Clinical Psy-

chology? Are there any scholarships available for a master's degree in Psychology from foreign universities?

Ajay Singh, Delhi

Two well-known institutions in India for a post-M.A. course in Clinical Psychology are: (1) Central Institute of Psychiatry at Ranchi-834 006 for the two-year diploma course in Medical & Social Psychology and the diploma course in Psychiatric Social Work. Admissions are usually advertised in April/May. Seats are very limited. All selected candidates get a stipend of Rs 400 per month. (2) National Institute of Mental Health and Neuro Sciences, Post Box 2979, Bangalore 560 029, which conducts an M.Phil. course in Medical and Social Psychology for M.A. Psychology students. Admission advertisement appears in June/July. Stipend: Rs 600 per month. Besides, M. Phil. and Ph.D. courses in Clinical Psychology are available in several universities and medical colleges/institutes in India. As far as the scope is concerned, few vacancies are advertised for regular appointments as Clinical Psychologists. There is scope for private practice (especially in metropolitan cities, but it requires patience and perseverance to build up one's own reputation. Scholarships for study abroad in Psychology are virtually non-existent. For qualified Clinical Psychologists with experience, there are limited opportunities for fellowships to go abroad.

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many students ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling, Career & Competition Times, 10 Daryaganj, New Delhi 110 002. Your letters should be accompanied by the coupon.

CAREER COUNSELLING COUPON

ABOVE 'EM ALL

BY PRADIN KUMAR

Moving from engineering, creative writing, social service and sports, Pravin Kumar topped the list of IAS candidates '82, through sheer hard work and well planned, consistent preparation

I did my schooling from Kendriya Vidyalaya, Faridabad, and graduated in Mechanical Engineering from IIT, Delhi. At school I concentrated entirely on my textbooks. However, at college I diverged my interests to journalism, creative writing, sports and social service. I worked with student publications, NSS and other student activities centres in IIT. Though not given to very regular book-reading, I have been an avid reader of all types of magazines.

I chose IAS as a career because I was attracted by the status that goes with it and the opportunity it provides to work in a variety of capacities. I decided to go in for IAS during the final year in B.Tech. My parents, well aware of my interests and capabilities, readily approved of my decision.

Having decided to appear for the

Civil Services Exam, I got hold of the relevant NCERT books and read them before the Preliminary Exam (Prelims). Apart from helping me in Prelims, these books gave a good basic knowledge of the subjects I had not studied since school. I tried to plan my studies in such a way that the course would be over by mid-October, giving me about 20 days for revision. There was no particular strategy of preparation except that I devoted time to different optionals separately. I also decided to go slow in the beginning and increase the intensity of preparation as the exams drew near. This was necessitated by the prolonged period of preparation. I also made it a point to study all the subjects regularly rather than phasing my preparation.

Taking a rest of about 20 days after the Prelims, I began working for the Mains. I opted for Mechanical Engineering and Management & Public Administration in the Main exams. Mechanical Engineering was my discipline in B.Tech. and having done courses on Management during B.Tech., I was familiar with the Management part of the second optional. Also, I was doing M.Tech. in Systems and Management. So the reason for my choice of subjects is obvious. I studied jointly with two of my friends (both of them have been selected for IAS). We held discussions on various national and international topics. But I avoided discussions during the last month of preparations since they lead to unnecessary nervousness and anxiety, at times.

I didn't fix hours of study for each subject in a day but fixed the topics to be covered. I have never been a stickler for a rigid routine of study but planned the day in terms of daily output. I devoted around an hour in the morning and half an hour after lunch to newspapers. Not used to late nights, I slept at around 10.30 p.m.—for about seven hours. The average number of hours for the whole period of preparation would be around 7-8 hours a day. I could never study long hours at a stretch

and took a rest after every 1-1½ hours. I am sure that the length of time one can study at a stretch is a matter of habit. What matters is the concentration with which one studies. Advantages of short hours of study are well known.

For the Management paper, I prepared elaborate topic-wise notes from different books. For one topic, I usually referred to just one source. I also referred to national and international journals on Management for recent managerial concepts.

For the Mechanical Engineering paper, I kept a note of hints or the approach for derivations of various important formulae and also a list of numericals which were fairly typical and representative of their type. While covering the syllabus for the first time I fully solved all the numerical problems but during revision attempted only the numericals listed.

Lastly, I prepared a final list of material which I thought required a last-minute look for revision on the day before the exam. I relied upon discussions with my friends for revision in General Studies. In General Studies I prepared notes only for the topics for which the sources were diverse and scattered.

The preparations for Civil Services Exams are quite gruelling and may get on one's nerves if the mind is not properly relaxed. I gossiped (thoroughly non-academic) with my friends, watched TV or went for a movie for relaxation. I worked for the exams in my hostel but kept going home regularly, where the loving care and affection of my parents provided strong emotional support. The main distractions during this period were the blessed souls who never thought of taking the Civil Services Exam. But one must be mature enough to rationalise and diffuse such a simple stress situation. However all the sweat and toil is forgotten and there is a feeling of immense satisfaction over the good results, which can't be otherwise if one has worked for them. □

C. A. Entrance Exam

The Institute of Chartered Accountants of India (ICAI) will hold an entrance exam on December 27, 28, 29 and 30. To be eligible, candidates should have passed the Intermediate Exam of a university and should not be less than 16 years of age at the time of submission of application. For details and application forms, write to the ICAI, Indraprastha Marg, Post Box No. 7100 New Delhi-110 002 sending an Indian Postal Order for Rs 3, drawn in favour of the Secretary, ICAI, payable at New Delhi, and a self-addressed envelope (27.5 cm x 12.5 cm). Last date for receipt of applications is 7.11.83.

Assistant Sub-Inspectors, CRPF

The Directorate General, Central Reserve Police Force (CRPF) invites applications for 150 posts of Assistant Sub-Inspectors (clerks) in the CRPF. To be eligible, candidates must have passed Intermediate (10+2) and must have a typing speed of 30 w.p.m. in English or 25 w.p.m. in Hindi. They must be between 18 and 25 years of age as on 1.11.83. For details and format of application form, see *Indian Express* dated 26.9.83 or *Employment News* dated 24.9.83. Last date for receipt of applications is 1.11.83.

P.G. Programme, Institute of Rural Management, Anand

The Institute of Rural Management, Anand (IRMA), offers a two-year Postgraduate Programme in Rural Management, beginning in July 1984. To be eligible, candidates should be graduates in any discipline with at least 50 per cent marks and 55 per cent marks in the school terminal exam. An admission test will be held on 8.1.84. For application forms and prospectus, write to the Admissions Coordinator, IRMA, Anand 388 001, enclosing a

stamped (65 paise) self-addressed envelope (11 x 23 cm) along with a crossed postal order/demand draft, payable to the IRMA, for Rs 10; it must reach the above address by 31.10.83. Last date for receipt of applications is 22.11.83.

M.B.A., University of Lucknow

The Department of Business Administration, University of Lucknow, will be conducting an admission test for the 1984 M.B.A. Programme on 27.11.83. To be eligible, candidates must have a bachelor's degree or equivalent in any subject. Admission forms will be available from the cashier, University of Lucknow, up to October 31 on payment of Rs 30. Those desirous of getting the forms by post must send a crossed bank draft for Rs 30, drawn in favour of Assistant Superintendent (Cash), University of Lucknow, along with a self-addressed envelope (23 x 10 cm) affixed with stamps worth Rs 4,

to the Head, Department of Business Administration, University of Lucknow, Lucknow-226 007. Last date for receipt of applications by mail is 7.11.83 and 15.11.83 by hand.

Robert S. McNamara Fellowships

The World Bank will award fellowships for full-time post-graduate work or research in fields related to economic development. Small groups of up to five people working at the same institution may apply for a joint award. The candidates must not be more than 35 years of age, hold a master's degree or equivalent and must carry out their work in a country other than their own. For further information, write to J. Price Gittinger, Coordinator, McNamara Fellowships Programme, Economic Development Institute, The World Bank, 1818 H Street, NW, Washington DC, 20433 USA. □

ENGLISH

HOW TO IMPROVE YOUR SPELLINGS

BY RAGHU BHATNAGAR & RAJUL BHARGAVA

The ability to spell correctly is part of the necessary equipment of an educated person. Not infrequently, misspelling is regarded as a sign of illiteracy. It is, therefore, vital to learn how to spell correctly.

The task is not simple, as English spelling is not always logical and consistent. The important reason, however, is the dissimilarity between the sounds and spellings of many words. Not only are a large number of words not spelt as they sound but many which sound alike are spelt differently. There should be enough ground for despair for students when they realise that *line* and *sign* share common sounds, that *sile*, *sight* and *cite* sound alike, as also *no* and *know*, or for that matter *kernel* and *colonel*. However, the problem is not as difficult to solve as it may seem. It should be some comfort to prospective learners to know that most persons of normal intelligence do succeed in learning to spell correctly. It may not be simple, but it surely is not impossible. This would be all the more understandable if one were to know that in most cases some two thousand words make up 95 per cent of man's writing and that 95 per cent of all spelling errors occur in only one thousand words.

Now let us familiarise ourselves with some of the important rules as an aid to correct spelling.

Rule 1

Carefully distinguish between *ie* and *ei*. The following jingle will prove helpful. Write *i* before *e*.

Except after *c*

Or when sounded like *a*

As in *eighty* and *sleigh*

Examples.

i before *e* believe, shield, quiet

ei after *c* receive, deceive, ceiling.

ei when sounded like *a* weight, freight.

Some exceptions. Leisure, protein, financier.

Rule 2

Drop the final *e* before a suffix beginning with a vowel but not before a suffix beginning with a consonant.

Examples:

1. Suffix beginning with a vowel.
pleasure + ure = pleasure, hide + ing = hiding, educate + ion = education.

Exceptions.

a. Final *e* is retained to prevent confusion. dyeing (to distinguish it from dying).

b. Final *e* is retained when *c* and *g* sound as *s* and *j* respectively before *a* or *o*:
notice + able = noticeable, change + able = changeable, singe + ing = singeing.

But practice + able = practicable.

2. Suffix beginning with a consonant:
sure + ly = surely, like + ness = likeness, entire + ty = entirety

Exceptions. awe + ful = awful, due + ly = duly, true + ly = truly.

Rule 3

In most cases change final *y* to *i* except before a suffix beginning with *i*.

Examples: fifty + eth = fiftieth, rely + ance = reliance, deny + al = denial

Exceptions. try + ing = trying, grey + ish = greyish.

Rule 4

Double the final consonant before a suffix beginning with a vowel in cases like the following. Stop + ing = stopping (when a single vowel precedes the final consonant and when the word has one syllable only, i.e., has only one vowel sound).

Begin + ing = beginning (when there is a single vowel before the final consonant as above but where even though there is more than one syllable, i.e., more than one vowel sound, yet the stress is on the last syllable, i.e., the last vowel sound is pronounced with greater force. In *begin* there are two syllables, i.e., two vowel sounds, and the stress is on the last syllable.

Examples: admit + ed = admitted, allot + ed = allotted, control + er = controller, occur + ing = occurring.

Exceptions. The rule does not apply to words ending in the consonant *x*.

Examples: mix + ing = mixing, index + es = indexes.

Rule 5

Make plurals in most cases by adding *s* to the singular forms of nouns but note the following cases:

i) If a word ends in *y* preceded by a consonant, change *y* to *i* and add *s*, but if the final *y* is preceded by a vowel then add only *s*.

Examples: dairy — dairies, cry — cries, boy — boys, key — keys.

(ii) If a word ends in *s*, *x*, *ch*, *sh* and *z*, then add *es*.

Examples. loss — losses, box — boxes, church — churches, wish — wishes, buzz — buzzes.

(iii) In the case of most common words ending in *o* add *es*.

Examples. buffalo — buffaloes, hero — heroes, potato — potatoes.

Exceptions: radio — radios, photo — photos, studio — studios.

Note: Mere *s* is added in the case of lesser-known words, longer words, and foreign words ending in *o*.

(iv) [a] In the case of most nouns ending in *ff* add *s*.

Examples: tariff — tariffs, sheriff — sheriffs, staff — staffs.

(iv) [b] In the case of many words ending in *f* or *fe*, the *f* or *fe* is changed to *v* and *es* is added. But in many other cases simply *s* is added.

Examples: leaf — leaves, wife — wives, knife — knives.

But roof — roofs, chief — chiefs.

Note: Some nouns take both the plural forms. hoofs/hooves, scarfs/scarves, handkerchiefs/handkerchieves.

(v) In the case of a few nouns the singular and the plural forms are the same.

Examples. sheep — sheep, deer — deer, aircraft — aircraft.

(vi) There are a few nouns which have no singular form, although they often take a singular verb.

Examples: news, athletics, politics, measles, physics, mathematics.

Note: *scissors* and *trousers* are plural nouns but they describe singular things.

(vii) It is noteworthy that some words change their spelling in the plural.

Examples: goose — geese, child — children, foot — feet, man — men, mouse — mice, ox — oxen, tooth — teeth, woman — women.

(viii) In the case of many words taken in English from foreign languages, the foreign plural forms are retained.

Examples. agenda — agendas, alumnus — alumni, analysis — analyses, appendix — appendices (also appendixes), axis — axes, bacterium — bacteria, basis — bases, crisis — crises, criterion — criteria, datum — data, erratum — errata, focus — foci (also focuses), formula — formulae (also formulas), genus — genera (also genuses), hypothesis — hypotheses, index — indices (also indexes), memorandum — memoranda (also memorandums), oasis —

parentheses—parentheses, paenon—phenomena, plateau—plateaus, radius—radii (also radiuses), stimulus—stimuli, synopsis—synopses, thesis—theses, vertebra—vertebrae (also vertebrae).

(ix) In the case of compound verbs, form the plural ordinarily by adding *s* or *es* to the important word in the compound. The final element is usually the one pluralised if the compound as a whole is considered a single word.

Examples: commander in chief—commanders in chief, brother/sister/father/son/daughter-in-law — brothers/sisters/fathers/sons/daughters-in-law, attorney at law—attorneys at law, court-martial—courts-martial, looker on—lookers on, man-of-war—men-of-war, hanger on—hangers-on, passer-by—passers-by, bystander—bystanders, handful—handfuls, basketful—basketfuls, spoonful—spoonfuls, major general—major-generals.

Exception man-servant—men-servants

Rule 6

Note the following rules

(i) If a prefix ends in the same letter with which the main part of the word begins, then include both letters

Examples: dis + satisfied = dissatisfied, dil + iterate = diliterate, mis + spelling = misspelling

(ii) If the main part of a word ends in the same letter with which a suffix begins then also include both letters

Examples: sudden + less = suddenness, occasional + less = occasionally, soul + less = soulless

(iii) If two words are combined, the first ending with the same letter with which the second begins, then include both letters.

Examples: bath + house = bathroom, room + mate = roommate, glow + worm = glowworm

Note. The same three consonants are never written together. Thus, still + life is still-life, not stilllife, and cross + stitch is cross-stitch, not crossstitch

Rule 7

Words of one syllable (having one vowel sound only) ending in *ll* drop one *l* when used in compound words.

(1) This is always the case with *ful* used as an adjective-forming suffix

Examples: beauty + full = beautiful, harm + full = harmful, use + full = useful.

But note the spelling of the following words: fulfil, skilful, awful

(ii) *All* as a prefix in most cases becomes *al*.

Examples: all + most = almost, all + ready = already, all + together = altogether.

Exception. is all + right which, is not alright but all right.

(iii) *Well* as a prefix also drops one *l*.
Examples: well + come = welcome, well + fare = welfare.

(But note that well + being = well-being.) However, many compound words retain the *ll*

Examples. foretell, resell, forestall.

Rule 8

There are a number of noun-verb pairs in English spelt with *c* or *s*. In all such cases the noun has *c* and the verb *s*

Examples:

| Noun | Verb |
|---------|---------|
| advice | advise |
| device | devise |
| licence | license |

With increasing international importance of American English it is necessary to know some of the major differences between American and British spellings. Here is a brief list of them:

| | |
|-------------------|--------------|
| 1 British -ae, oe | American -e |
| anaemia | anemia |
| anaesthetic | anesthetic |
| encyclopaedia | encyclopedia |
| mediaeval | medieval |
| 2 British -en | American in- |
| encase | incase |

But

| | |
|----------------|-----------------|
| inquiry | inquire |
| insure | insure |
| 3 British -ise | American -ize |
| apologise | apologize |
| 4 British -or | American -er |
| colour | color |
| favour | favor |
| humour | humor |
| labour | labor |
| odour | odor |
| vigour | vigor |
| 5 British -er | American -en |
| centre | center |
| fibre | fiber |
| theatre | theater |
| 6 British -ou | American -o |
| naïve | naïve |
| plough | plow |
| shoulder | shoulder |
| 7 British -ion | American -ation |
| connexion | connection |
| inflexion | inflection |
| 8 British -l | American -l |
| levelled | leveled |
| quarrelled | quarreled |
| travelled | traveled |
| 9 British -e | American -e |
| acknowledge- | acknowledg- |
| ment | ment |
| judgement | judgment |

One likely cause of confusion in spelling is the presence in the language of words that are similar in sound but different in meaning. Some of the most troublesome among them are listed above.

accent: offshoring, a way sloping up
assent: agreement, to agree.

all ready: everyone is ready; already:
by this time.

all together: as a group, altogether:
entirely, completely.

altar: a structure used in worship;
alter: to change

breath: air taken into the lungs;
breathe: to exhale and inhale

capital: chief leading or governing city,
wealth capitol: a building that houses
the state or national lawmakers.

cite: to use as an example to quote;
site: location

clothes: wearing apparel, cloths: two
or more pieces of cloth

complement: that which completes,
to supply a lack, compliment: praise, flat-
tering remark, to praise

corps: a military group or unit, corpse:
a dead body

council: an assembly of lawmakers;
counsel: advice, one who advises, to give
advice

dairy: a factory or farm engaged in milk
production, diary: a daily record of ex-
periences and observations

descent: a way sloping down, dis-
sent, disagreement, to disagree

dining: eating, dining: making a
continuing noise.

dying: ceasing to live, dyeing: process
of colouring fabrics

formally: in a formal manner, formerly:
before

forth: forward in place or space, onward
in time, fourth: the ordinal equivalent of
the number 4

loose: free from bands, lose: to suffer
a loss

personal: pertaining to a particular
person, individual, personnel: body of
persons employed in same work or
service

principal: chief, most important, a
school official, a capital sum (as dis-
tinguished from interest or profit); prin-
ciple: a belief, rule of conduct or thought.

respectfully: with respect, respectively:
in order, in turn

stationery: writing paper, stationary:
not moving

their: possessive form of *they*, they're:
contraction of *they are*, there: adverb of
place.

whose: possessive form of *who*, who's:
contraction of *who is*.

Your: possessive form of *you*, you're:
contraction of *you are*.

Observance of the above rules and
directions will result in the avoidance
of a large number of spelling errors.
The only thing that will remain to be
done will be learning how to spell the
one thousand most frequently misspelt
words. [Q]

PARAGRAPH WRITING

BY ANITA SHARMA

In the last issue we discussed in detail the prerequisites of paragraph-writing. We also gave some tips on how to write paragraphs in limited time. Here are some more examples of model paragraphs.

Hope springs eternal in the human breast

—Alexander Pope

No matter what the agonies and miseries suffered by man, it is his nature to hope for a better future. Hope is a sort of optimism inherent in human psychology. It is what sustains human life and makes it worth living. A man plans, saves and works because he hopes to make his tomorrow better than today. Hope gives him the inspiration and the will to go on despite all odds; hope is his only link with the future. People waste thousands of rupees on buying lottery tickets in the hope of becoming rich suddenly. Gamblers stake all they are worth in the vain hope of winning it all back in the next game. In the Mahabharata Yudhishtir, the eldest Pandava brother, even staked his wife in the desperate hope of winning everything back. The poor hope to become rich and the rich great. Even a cancer patient fighting a grim battle for his life hopes that some miracle will cure him. And as long as he hopes, he will continue to wage a courageous battle to survive. To lose hope is to die, as it is a sacrilege against the Maker. Despair or the loss of hope is considered a sin in Christianity because it shows a lack of faith in Jesus. And surely, there is no man who commits this sin. For, however miserable and blighted a man, deep down he is an incurable optimist. It was perhaps in this mood that Shelley said: "If winter comes, can spring be far behind?"

Peace hath her victories no less renowned than war

—John Milton

History books are full of courageous kings and warriors who fought fierce battles and vanquished mighty armies. There are vivid accounts of numerous wars fought in the honour of one's motherland. Undoubtedly, these books make interesting reading and fill one with a sense of pride. War brings out the latent hidden virtues such as honour, courage and loyalty in man. Ruskin said that nations were "nourished in war and wasted in peace." Nietzsche pre-

scribed war as a remedy for "nations growing weak and contemptible." Yet, when set against the horrors of war—the countless dead and maimed—how hollow these virtues and how useless these remedies seem. For in war there are no victories. Invaluable human lives are lost both by the winner and the loser. It is the victories of love and peace that take greater courage and last forever. Christ fought no battles, yet he won the love and devotion of millions. Buddha and Gandhi gave the message of peace and non-violence and will live forever in the hearts of men. The relevance of their messages is felt all the more now when war has the capacity to destroy not only the living but even the unborn. Nietzsche's remedy for weak nations seems ironical in the context of the atomic bomb and chemical warfare. In fact, weak nations ought to abstain from war. After all, what are the victories of peace? A growing prosperous nation, devoid of poverty and misery, where man is forever engaged in exploring new realms. And this can only be achieved if he does not waste his energies and resources in mutual destruction.

Child is the father of man

—William Wordsworth

Wordsworth has his own special theory for substantiating this rather paradoxical statement. Yet, every religion and every community is aware of it. When a child is born he is nearest to God. As an infant he is unaware of those around him and his relationship to this world. He still retains the celestial glory and light of his Maker. It is only when he grows up that this light fades away and he becomes corrupted by the ways of the world. A child has the wisdom of innocence and truth, he knows no guile or rancour. He is above all religions, caste, community, nation or race. A child in his mother's arms will charm anyone with his toothy smile. He brings out the best in even the worst of us. A child gives love when he receives. It is in all this that he is wiser than his older counterpart. Once men establish a relationship with their surroundings, once they start differentiating between 'mine' and 'yours', they lose this wisdom. The elders are too busy in trying to outwit their fellow human beings to benefit from the child's innocent, spontaneous wisdom. The child gives without any reservations and

expectations and in this he is the father of man.

Beauty is but skin deep

Since time immemorial saints and wise men have castigated mankind for its weakness to physical, mortal beauty. True, that kind of beauty is transient and soon passes away, but many times this mortal beauty has inspired great works of art and literature. Many a beautiful verse and painting has been dedicated to beautiful women. The human form has inspired works of incomparable and immortal beauty. Sculptures of Michaelangelo are a tribute to the body beautiful. Helen of Troy possessed a destructive kind of beauty that led two empires to war; yet the men who fought for her honour are admired and emulated even today as epitomes of heroism. Besides, to call beauty skin deep is to erroneously limit the whole conception of beauty. Beauty is not something limited to the fair skin and rosy cheeks of a woman. It is everywhere around us. There is the beauty of the immortal Taj, a symbol of undying love and exquisite craftsmanship. There is beauty in the words of Wordsworth, Shelley, Firaq and Omar Khayyam. Nature's beauty is the most magical and transcendental of all others, it brings human beings closer to God. Like the beauty of the human form, the magic of the rose is also short-lived. Its colour and fragrance soon fades, yet, who can find fault with a lovely rose? Of course, the beauty embodied in high ideals and a good nature is loftier and longer lasting. But in no way does it underscore the beauty of lesser things. As Keats said, "A thing of beauty is a joy forever, its loveliness increaseth, it will never pass into nothingness." No beauty, however transient and ephemeral, vanishes without a trace. It always leaves behind a feeling of joy and wonder.

DOUBLE TROUBLE

The French use a riddle to teach schoolchildren the nature of exponential growth. A lily pond, so the riddle goes, contains a single leaf. Each day the number of leaves doubles—two leaves the second day, four the third, eight the fourth, and so on. "If the pond is full on the thirtieth day," the question goes, "at what point is it half full?" Answer: "On the twenty-ninth day."

The global lily pond in which four billion of us live may already be at least half full. Within the next generation, it could fill up entirely.

OVER TO CRICKET

Make-shift bats—from wooden planks off a school desk to an artist's 'T'—and wall wickets are a common enough sight anywhere in India. Come cricket time—and out comes the transistor, down goes the office attendance rate and passions run high. A special feature on cricket to appease the voracious appetite of the fans of the game.

A Cricket match between Sussex and Kent

THE GAME THEN AND NOW

BY NAROTTAM PURI

Cricket, like so many other present day sports, has somewhat obscure origins. In all probability, cricket began as a pastime in England's pastures and was, to begin with, confined to the shepherds. Historically, cricket has been known to have been played in 1300 in Kent. Gradually it gained in popularity and in the 17th century crossed the shores of England. In 1744, the first laws of the game were formulated. Then came the formation of cricket's Vatican—the Hambledon Club at Broadhalfpenny Down, in the 1760s. The Marylebone Cricket Club (MCC) came in 1787 and became the home and headquarters of the game.

In Victorian England, round about 1830s and 1840s, cricket took a recognisable shape and entered the society and culture of England. It was only a matter of time before the game started establishing itself in other countries, particularly in Australia.

Cricket, in the 19th century, changed from a game for shepherds to a game for all. As Eric Midwinter put it "Cricket, the one-time sport of children and menials, had been lionised by the aristocracy and was soon to become part of the preparation for life of better off Victorian youths. Cricket provided an uncommon illustration of an integrated culture with master and man well-met on equal terms. Although comparable to racing and boxing, which also had true-blue patrons and popular heroes, cricket was the team game par excellence, and the one in which the master and servant joined forces. Cricket's great virtue of encouraging contest without physical contact was the social characteristic which enabled the master to play with and against servants."

But in England till 1960 the master and servant attitude did remain, as exemplified by 'Gentlemen' and 'Players'.

'Gentlemen' were amateurs who supposedly played for fun. They only received expenses. They used a different dressing room and were generally from a different social strata than the 'Players' who were professionals and were paid for their services. Despite the fact that a professional was the better player and leading counties in England would not appoint them captains. England's first professional captain to lead the country was Len Hutton and the first professional to lead MCC was Denis Compton. And all this only in the 1950s. But let us proceed to the story.

The most profound change in terms of the game occurred in 1876-77 when **Test matches** started. The first Test was played at Melbourne between England and Australia and resulted in a win for Australia. In 1878, Australia sent its first official team to England and Test cricket got established. The mythical Ashes in 1882 caused a great amount

of public interest and cricket in general, and international cricket in particular, got a great fillip. Soon the ICC was established. MCC, Australia and South Africa were the original members of this Imperial Cricket Conference formed at London in 1909. India, West Indies and New Zealand became its members in 1926 and Pakistan in 1952. Sri Lanka are the latest entrants, having replaced South Africa, who were ousted in 1961. The ICC now stands for International Cricket Conference.

Cricket has survived two world wars and is a game confined to a handful of countries most of whom belong to the Commonwealth. Although cricket's home is England, it is not the national sport of that country. Perhaps, West Indies, India and Pakistan are the countries where it's most popular and has a huge following.

From the point of view of changes in the game, the greatest change had been an increase in the duration of Test matches. To begin with, the matches used to be of three day duration. In the 1940s, four day Tests got established and finally the five-day Tests which are now the norm.

Despite the example of England where cricket became a way of life—a profession for those who played it—in the rest of the cricket-playing world it remained, essentially, an amateur sport. The game, as revived after World War II, saw great overall development in its techniques. Better pitches meant better batting and more runs, and players like Bradman, Hassett, Morris, Harvey, Hutton, Hammond, May, Cowdrey, Worell and Walcott made batting memorable. It was what the crowds wanted—even now want—classic batting. The crowds filled the grounds and money was no problem. In fact, with so many amateurs around, the various cricket and county boards made a tidy amount.

The '60s brought about a major upheaval. South Africa was expelled from the ICC for their racial stand when they refused entry to Basil D'Oliveira—a coloured cricketer, representing England. It created a great political controversy and caused the first major rift in cricket circles. Then came the abolishing of the separate status for amateur and professionals in England. The gentlemen and players became one—professionals—and were paid for representing their counties and country.

With changing times, the economics of cricket changed. By the late '60s, at least in England, crowds were dwindling at county matches but the expenses were mounting. Cricket had become

too dull, too passive for the liking of the modern generation. A change was needed. It came in the form of **limited-overs cricket**. Forty overs a side, 50 overs, 55-overs matches for different trophies sponsored by business organisations came into being and started drawing big crowds. These matches were action-packed and produced definite results, often exciting. The idea caught on in other countries too, though slowly. This was mainly because in countries like India and Pakistan the crowds came even in tame, dull draws.

In 1975 came the first **World Cup Cricket** competition—a **limited-overs championship**. Sponsored by a business organisation, it was a tremendous success. It stifled whatever remaining criticism there was (mostly by the connoisseurs of the game) against this type of cricket. Limited-overs cricket was there to stay. It pleased the crowds, made money for the organisers and thereby the players, who started getting a better deal financially. Everything, once again, looked rosy.

The peace and calm of the traditional cricket world was torn asunder in 1977 by an Australian TV tycoon, **Kerry Packer**. He created his own commercial brand of cricket—the **World Series Cricket (WSC)**—and got together the cream of talent from West Indies, Australia, England, South Africa and Pakistan. The WSC was in direct confrontation with the ICC. The latter hummed and hawed and went to court against the WSC—and lost. Player power and money power won. ICC had to bow down. It was a tremendous win of the players against the organisation

Night cricket at VFL, Sydney: A new experience.

and resulted in far better payment for the players w.e.f. 1978-79 than had been the case earlier. The motivation of WSC's originator was mainly personal, but the players' rights, privileges and priorities got highlighted. Cricket got turned upside down and inside out. It would never be the same again—whether for good or worse only time would tell.

Packer's WSC was wrong in many ways but it resulted in some good too. Besides giving the players a better deal—financially—it resulted in the greatest strides being taken in TV cricket coverage. Packer's Channel Nine TV revolutionised TV coverage by innovations like both-end cameras, mikes dug into the pitch and use of computer technology. Today's TV viewer is better off due to it. Then there was the development of **artificial 'Hotbed' pitches**—pitches made elsewhere and transported to the ground. They aren't popular but it was a tremendous effort by John Maley.

Yet another innovation was **night cricket**. On December 14, 1977, the first night cricket match was played, under floodlights, at the VFL Park, Melbourne. By next year when Packer's WSC got the go-ahead to stage their matches at a traditional cricket ground, the Sydney cricket ground with its light towers became the bastion of night cricket. This type of cricket is very popular in Australia and South Africa but has been a failure in England and West Indies, while India has just begun experimenting with it.

Cricket laws have undergone several changes through the years. 1744 was the first time when laws were formulated. Revisions and modifications have been done in 1771, 1774, 1788, 1810, 1811, 1819, 1823-24, 1828, 1835, 1838, 1839, 1840, 1845, 1849, 1854, 1864, 1884, 1889, 1894, 1899, 1900, 1902, 1927, 1931, 1937, 1947, 1957, 1962, 1963, 1970, 1972 and finally in 1980. Almost all the laws formulated (exception being the length of the pitch—22 yards) in 1974 have been changed. From underarm to roundarm and then overarm bowling, choice of pitch and option of batting, height of the wickets and types of bats have undergone a sea change. In earlier days an over used to be of four balls but since the '40s (except in Australia where it's eight), it got standardised to a six-ball over. Pads came into being in 1800 and the gloves in 1835 and the wicket-keeping gloves in 1848. No balls were called first in 1809 and this law has gone through several changes. In 1963 the modern law—front foot rule—came about and is still in use. The first reference to wides was in 1810 and the lbw in 1774.

In modern times, the 1947 code withstood the test for 33 long years before the 1980 code, currently in use, came in. Now the number of laws has been reduced from 47 to 42. Some of the salient changes are the addition of the new mode of dismissal of a batsman, 'Timed Out', (see page 79) and the law on substitutes which empowers a substitute fielder to be placed in any position (except wicket-keeping). The new laws also permit the captain of the fielding side to withdraw an appeal and the umpires are now the sole judges of the fitness of the ground, weather and light for play.

Hence, from a pastime, cricket has become an established sport in several countries. England, Australia, India, Pakistan, Sri Lanka, West Indies and New Zealand are full Test-playing countries while Zimbabwe, Papua and New Guinea, East Africa, Holland, USA, Canada, Hong Kong, Singapore, Malaysia and Bangladesh also play cricket. Thanks primarily to one-day cricket, the game's base is growing. Changes in the game's format are reflective of the changes in society—its norms, standards *et al*. There is only one fear that threatens international cricket—the threat of South Africa who have started luring out cricketers to play unofficial series of matches in their country. They know that their rands can lure a lot of people and if, like Packer, they succeed, the cricket world may be torn asunder.

CRICKET SUPERLATIVES

BY B.B. MAMA

It is the fashionable thing nowadays to make fun of cricket figures. Journalists use them in their write-ups, yet denounce statistics with disdain. It's a love-hate relationship which defies analysis. Figures are a vital part of cricket. They can either place this fascinating game in true perspective or distort it out of recognition. Figure it out for yourself! So, here goes, with due acknowledgement to my good personal friend, Bill Frindall, and his compendium of *Facts And Feats*, soaring into Guinness-style superlatives.

World record for the highest-ever total in a first class innings—1,107 by Victoria vs New South Wales at Melbourne in Australia in December 1926. Tallest totals in three other cricket nations—in Pakistan—951 for 7 declared by Sind vs Baluchistan at Karachi in February 1974, in India—912 for 8 declared by Holkar vs Mysore at Indore in March 1946, in England—903 for 7 declared by England vs Australia at The Oval in August 1938, which is the world record for the highest innings total in all Test cricket. India's biggest total in Tests—644 for 7 declared vs West Indies at Kanpur in January 1979. This was the Test in which Kapil Dev became the youngest Indian

at the age of 20 years 21 days to hit a Test century (126 not out) in his eighth Test.

World record for the youngest-ever Test centurion. Pakistan's Mushtaq Mohammad—17 years 82 days (101 against India at Delhi in February 1961) in his sixth Test. The next youngest century-maker in Test history: Pakistan's Salim Malik—18 years 328 days (100 not out vs Sri Lanka at Karachi in March 1982)—a world record for a debutant from any country hitting a 'ton' in his first-ever Test.

Pakistan also holds the world record for the highest individual innings in all first-class cricket—Hanif Mohammad's 499 for Karachi against Bahawalpur at Karachi in January 1959. India's biggest individual score in any first-class match—Bhauasaheb Nimbalkar's 443 not out for Maharashtra vs Kathiawar at Poona in December 1948. Curiously, he remains the only batsman in cricket history to hit 400 plus in a first-class innings and yet not be selected to play in any Test match! Five other quadruple-centurions (Hanif 499, Bradman 452 not out, Ponsford 437 and 429, Aftab Baloch 428 and Archie MacLaren 424) all made the Test grade.

This brings us to the logical query. Who has played the most Tests? The world record is still held by Colin Cowdrey of England with 114 Test appearances. The only other player with 100 plus Tests is England's Geoff Boycott (108 appearances), who holds the current world record for the highest aggregate of runs (8,114) in Test cricket.

Gavaskar is also chasing two Test records—Boycott's run-aggregate and Don Bradman's tally of Test centuries (29). On September 13, 1983, on the eve of the first Test at Bangalore, against Pakistan, Sunil had 27 Test centuries under his belt, having scored 7,625 runs, averaging 52.22, in 158 Test innings (12 not outs).

But the Don reigns supreme—and, I dare say, will ever remain so. Bradman's Test batting average of 99.94 boggles the mind. The Don swiftly aggregated 6,996 runs from only 80 innings (10 not-outs) of his 52 Tests. This means that he averaged a century every 2.75 innings. Gavaskar's current strike-rate is a century every 5.85 innings.

Look at it another way. The Don averaged 134.53 runs per Test match, far outstripping all others before or since. Next best are Hobbs and Hutton each with 88 runs per Test. Gavaskar trails in

Playing with grace. A legend in cricket history, W.G. Grace was the first to score a 100 centuries with an impressive tally of 54,901 runs and 12,786 Test Test wickets.

Australia's knight in shining armour
Undisputedly the world's greatest batsman of all time, Sir Donald Bradman has to his credit the phenomenal Test average of 99.94 runs per innings. He hit 117 centuries in first class cricket with 37 multiple hundreds including one quadruplet on

sixth position with 84.72 runs per Test in a list of 19 batsmen with 5,000 runs and more in a Test career

Another Bradman record may also never be surpassed—the highest run aggregate in a Test series—974 runs (av 139.14) in five Tests of the 1930 rubber, in England. Gavaskar's best in a series—774 runs (av 154.80) in four Tests of the 1970-71 rubber in the West Indies on debut

Nor will any one (however long they play first-class cricket) ever come within sniffing distance of another fantastic record by Don in a first-class career—37 multiple centuries, consisting of one quadruple 'ton' (a career-best 452 not out), five triples and 31 doubles.

In Test cricket too, Bradman's dazzling cluster of 12 multiple-centuries (two triples—334 and 304, and as many as 10 doubles) can never be outshone by any other batting star. Gavaskar, by contrast, has only eight multiple-hundreds (one triple, a career-best 340, and seven doubles) in first class cricket, and a mere three double-hundreds (221, 220 and 205) in Tests

Talking of 'tons', the world record for the most centuries in first class cricket is firmly held by the immortal Jack Hobbs of England with 197 hundreds. Hobbs also holds the world record for the most runs in a first-class career—61,237 (av 50.65) from 1,315 innings

The highest individual innings in Test cricket is 365 not out by Gary Sobers of West Indies vs Pakistan at Kingston in February-March 1958 at the age of 21 years 216 days—thus establishing

another world record as the youngest-ever batsman in Test history to score a triple century.

In the course of this record knock, Sobers shared with Conrad Hunta a second-wicket partnership of 446—just five runs short of the world record for the highest-ever stand in Test cricket, jointly held by two countries: 451 runs for the second wicket between Bill Ponsford and Bradman for Australia vs England at The Oval in August 1931, and 451 runs for the third wicket between Mudassar Nazar and Javed Miandad for Pakistan vs India at Hyderabad (Sind) in January 1983.

Incidentally, India still holds the world record for the highest opening stand in Test history: 413 runs between Vinoo Mankad and Pankaj Roy vs New Zealand at Madras in January 1956. Mankad also holds the record for the highest-ever individual innings in Test cricket by an Indian batsman—231 in the same innings, in which he set up the record partnership with Roy as above. The world record partnership for any wicket in all first-class cricket is also proudly held by India—577 runs for the fourth wicket between Vijay Hazare and Gul Mahomed for Baroda vs Holkar at Baroda in March 1947

Turning now to bowling, it is gratifying to note that Kapil holds many superlative firsts in Test cricket as world records. He became the youngest-ever bowler in

Winning hearts with wit and wickets In his first class career spanning two decades the outspoken Yorkshireman Freddie Trueman took a record 307 Test wickets. His was the highest tally till Gibbs and then Lillee broke his record

Beating them all sober Bowling both pace and spin Gary Sobers captured 235 wickets in 93 Tests, held over a hundred catches and has to his credit an innings of 365 not out—a record in Test cricket

Test annals at 21 years 25 days to reach 100 wickets in a Test career when he achieved this target on January 31, 1980, against Pakistan in Calcutta. This also incorporates another world record. Since making his Test debut on October 18, 1978, against Pakistan in Faisalabad, Kapil has taken only one year and 105 days to reach 100 wickets—the shortest period in terms of time in which a bowler from any country has completed 100 wickets in Test history. Kapil also holds a world record in Test cricket for completing the double of 1,000 runs and 100 wickets in the fastest time of just one year 107 days from October 18, 1978, to February 2, 1980. A fourth world record to Kapil's credit is that he is the youngest-ever all-rounder in Test history to complete the 'double' at the age of 21 years 27 days.

Of course, Australia's Dennis Lillee is the highest wicket-taker in Test annals at present with 335 wickets (av 23.46) in 65 Tests. England's Bob Willis is hot on his trail with 305 wickets (av 24.49) in 83 Tests. The record-holder for India is Bishen Singh Bedi with 266 wickets (av 28.71) in 67 Tests.

As regards wicket-keeping, all the principal Test records are in the keeping (literally so!) of Rodney Marsh who also holds the record for most Test appearances (91) for Australia. Marsh is the only keeper in Test history to cross 300 dismissals—322 catches plus 12 stumpings for a total of 334 dismissals in 91 Tests. The Test record for India in

DOWN THE AGES

'Give nothing away': Proving his principle right, Wilfred Rhodes took 708 first-class catches in a career covering almost three decades. An all-rounder par excellence, Rhodes also took the highest number of wickets—4, 187, and hit 39,802 runs

wicket-keeping is held by Syed Kirmani with 160 dismissals (128 catches plus 32 stumpings) in 69 Tests

Finally, the captaincy. India holds a world record here too. The youngest-ever captain in Test history to lead his country was Mansur Ali Khan Pataudi when he took over from the injured Nari Contractor in the West Indies on March 23, 1962, at Bridgetown at the age of 21 years 77 days.

The captain who has led his country most often in Test annals is Clive Lloyd of West Indies with 54 Tests at the start of the 1983-84 tour of India out of his total of 90 Test appearances. He has won 22 of his Tests as captain, drawn 21 and lost only 11 for a high success percentage of 60.18. What does the coming winter season in India hold in store for him?

RUN FOR MONEY

Mike: "We didn't have much cricket last Saturday. Rain stopped play when the score was one"

Jack: "Well, the crowd certainly had a run for their money"

NO EXPERT

The famous Jack Hobbs was passing a bunch of school kids playing cricket on the street.

After watching for a while, the expert tendered some advice and suggestions but achieved no success.

"That's enough!" shouted one of the youngsters. "What does an oldie like you know about cricket?"

1300—First probable reference to cricket: in the wardrobe accounts of King Edward I, locality Newden, Kent

1622—Six parishioners prosecuted for playing cricket in a churchyard on Sunday in Boxgrove, Sussex.

1646—First recorded cricket match at Coxheath, Kent.

1654—Seven parishioners of Eltham fined for playing cricket on Lord's day

1709—First 'county match': Kent vs London.

1710—First reference to cricket in the university: Cambridge.

1729—Date of earliest surviving bat: inscribed 'J.C.' (John Chitty). This bat is now in the Pavilion at Oval.

1744—June 18. The first great match of which full score is preserved: Kent vs All-England at the Artillery ground; won by Kent.

1767—Foundation of Hambledon Club.

1769—First recorded century: Minshall 107 for Duke of Dorset XI vs Wrotham

1776—Earliest known score-cards

1777—First record of bowler being credited for catches off his bowling.

1788—June 27 MCC play their first match at Lord's

1800—Publication of first book on technique by Thomas Boxall.

1806—First Gentlemen vs Players match at Lord's

1807—First mention of 'straight-armed' (i.e., round arm) bowling by John Wiles of Kent

1817—First two separate centuries: 107 and 157 by William Lambert for Sussex vs Epsom at Lord's.

1820—First recorded score of 200. 278 by William Ward for MCC vs Norfolk at Lord's, a record for that ground for 105 years

1822—Wiles 'no-balled' for throwing i.e., round arm bowling

1827—First university match, drawn, Oxford vs Cambridge

1828—MCC authorise the bowler to raise his hand level with the elbow, this was after three experimental matches between Sussex and England.

1835—MCC adopt a revised Code of Laws on May 30

1845—First match at The Oval.

1848—July 18. W.G. Grace born

1849—First Yorkshire vs Lancashire match

1850—J. Wisden bowls all ten batsmen in one innings. North vs South at Lord's.

1858—First recorded instance of a bowler being given a hat for taking three wickets on consecutive deliveries.

1862—In a match at the Oval, England vs Surrey, Edgar Wilsheer was no-balled by John Lillywhite for raising his hand higher than his shoulder. Wilsheer left the field and game was suspended for the day; Lillywhite was replaced next day.

1864—June 10. 'Overhand bowling' authorised. First known county champions, Surrey.

1871—First batsman to reach 2,000 runs in a season was Grace (2,739)

1873—First recorded instance of 1,000 runs and 100 wickets in a season by Grace.

1877—First-ever Test match: Australia beat England by 45 runs at Melbourne; Charles Bannerman scored the first century (165).

1880—First Test match in England: England beat Australia by five wickets—Grace 152, W.L. Murdoch 153.

1882—First Australian Test victory in England by seven runs at The Oval and a spectator dies of excitement. Tradition of the 'Ashes' established by 'obituary notice' to English cricket in the *Sporting Times*.

1884—Revised set of Code of Laws adopted; first use of the words 'Test Match' in Melbourne Argus.

1889—First Test between South Africa and England.

1895—First 1,000 runs in May. by Grace in 22 days. He also scored his 100th century.

1909—Imperial Cricket Conference (ICC) constituted. MCC, Australia, and South Africa were the original members.

1926—India, New Zealand and West Indies admitted to ICC.

1928—First Test between West Indies and England

1929—First Test between New Zealand and England.

1932—First India vs England Test.

1933—The 'body-line' controversy during the MCC tour in Australia

1933-34—First Test century by an Indian: 118 on debut by Lala Amarnath.

1937—Sir Pelham Warner became first cricketer to receive knighthood.

1948—First five-day Test matches in England; Donald Bradman retires

1954—First Pakistan vs England Test.

1956—J.C. Laker takes 19 wickets in one match England vs Australia at Manchester.

1960—First-ever tied Test. England vs Australia at Brisbane.

1965—Imperial Cricket Conference changes its title to International Cricket Conference (ICC) and introduces associate membership.

1968—Cricket Council formed: Test and County Cricket Board replaces Board of Control for Test matches at home and Advisory County Cricket Committee.

1969—John Player League for Sunday cricket inaugurated.

1972—Benson and Hedges League Cup inaugurated.

1975—First international Prudential World Cup. West Indies champions and Australia runners-up

1976—Women play at Lord's for the first time.

1977—Kerry Packer of Australia signs up 51 of the world's leading players in opposition to ICC

1978-79—Indo-Pak Test cricket resumes after 18 years

1979—Second Prudential World Cup. West Indies champions and England runners-up

1983—Third Prudential World Cup: India champions and West Indies runners-up.

V.S.

WHAT'SWHAT IN CRICKET

Appeals. When the fielding side is of the opinion that the batsman is out, they appeal to the umpire by calling 'How's that?' — which sounds more like 'howzzat' when shouted. The call may be made any time before the next ball is bowled, even though the ball is dead, or over has been called, except that no appeals can be made after the bails have been removed by both umpires for close of play, or for lunch/tea intervals.

Backing up. The non-striking batsman is said to be backing up, when he moves a few paces up the pitch, as the bowler is delivering the ball, in the expectation of a quick run.

Beamer: A ball delivered full toss, i.e., without a bounce, at the batsman's head, either intentionally or unintentionally.

Bosie: Name given to a googly by the Australians, after its inventor Bernard James Tindal Bosanquet.

Bouncer (or bumper). A ball pitched rather short, i.e., nearer the bowler than the batsman, such that the bounce makes it rise up to or over the batsman's head.

Bowling crease: A straight line 8 feet 8 inches in length, marked on the pitch, in line with the three stumps, which are in its centre.

Bye: A run scored from a ball which passes the stumps, without touching the bat or batsman, and which the wicket-keeper fails to stop.

Carry one's bat: If an opening batsman is still not out when the last wicket of his team has fallen, he is said to have carried his bat through the innings.

Chinaman: The left arm bowler's off-break to a right handed batsman.

Duck: When the batsman is out for no score, i.e., for zero, he is said to have scored a duck.

Extras (sundries, as the Australians call them). Runs added to the score, but not scored off the batsman's bat. They consist of byes, leg byes, wides and no balls.

Follow-on: When the side batting second is asked to go in to bat once again, i.e., batting twice in succession.

Googly: A ball bowled, such that it comes out of the back of the hand, with what appears like a leg break action, but which spins as an off break on hitting the ground, and so turns the wrong way.

Guard: Given by the umpire from behind the bowler's wicket, to the batsman, such that the latter knows the position of his bat and feet in relation to the three stumps, which he is guarding.

Half-volley: A ball which pitches just short of the batsman, and is hit by him just as it leaves the ground. Sometimes, the batsman moves up, out of his crease, and converts the ball into a half-volley.

Hat trick: The feat of a bowler taking three wickets with three consecutive de-

liveries, either in one over or spread over two overs. By tradition, even three wickets in three balls spread over two innings, may be considered a hat trick.

King's pair: When a batsman is dismissed for zero, off the very first ball he receives in both the innings.

Leg byes: These runs are scored when the ball is unintentionally deflected off any part of the batsman's body, except his hands holding the bat, when he is actually attempting to play the ball. Any runs scored off deliberately deflecting the ball by the body are

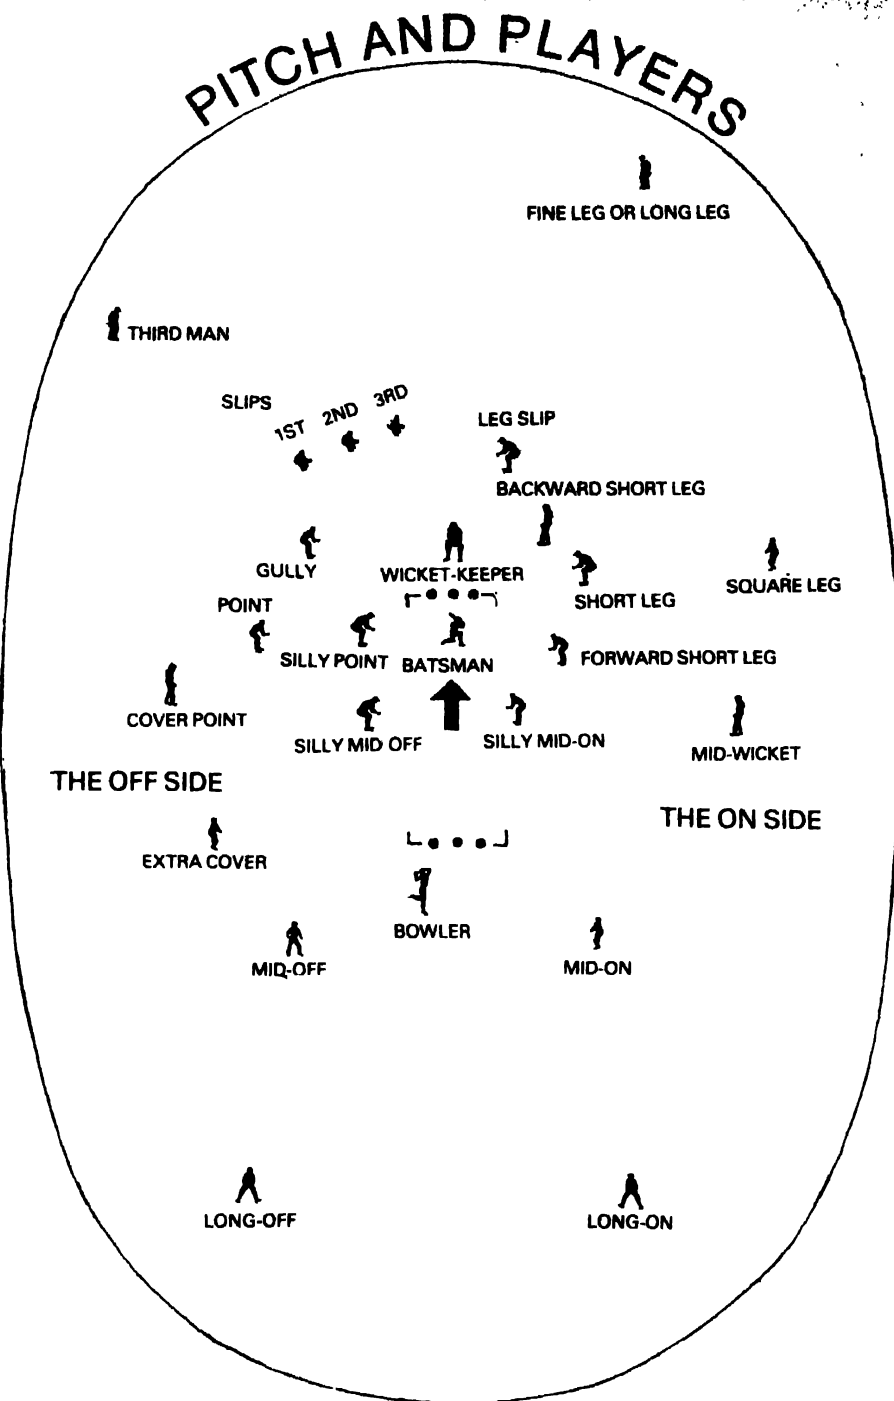

cancelled.

Long hop: A very short-pitched ball.

Maiden over: An over completed by the bowler of which no runs were scored by the batsman. (Though, the bowler may have conceded some extras.)

'Mankaded': A colloquial term, used when the non-striking batsman backs up too far and is out of his crease, just before the bowler is about to deliver the ball, and the bowler knocks down the wicket at his end to run out the batsman. Named after Vinoo Mankad, who was the first to run out a

Rajinder Puri

Over: An over consists of six consecutive deliveries by the bowler. Overs must be bowled from each end of the pitch alternately. The same bowler cannot bowl two consecutive overs.

Off-side: That half of the field (the pitch being the bisector) towards which the batsman is facing.

On-side (also leg side). Half of the field behind the batsman as he takes his stance at the wicket.

Outfield: That portion of the field all around, which is at quite a distance from the pitch.

Over: An over consists of six consecutive deliveries by the bowler. Overs must be bowled from each end of the pitch alternately. The same bowler cannot bowl two consecutive overs.

Over the wicket and round the wicket: These phrases are used to describe the side of the stumps from which the bowler delivers the ball.

Overthrows: A throw-in by a fielder, which is missed by the wicket-keeper or bowler, and goes away from the stumps, thus giving the batsman an opportunity to take more runs.

Pair of spectacles (or a pair). A term used when a batsman is dismissed for zero in both the innings.

Popping crease: A line four feet in front

of the stumps (also to the three stumps). It is the forward limit of the batsman's safety area, against stumping and run-out decisions.

Short run: When a batsman fails to make good his ground at one end, when running two or more runs. The umpire signals this, and the scorers delete one or more runs from those actually run by the batsmen.

Substitute: A substitute is allowed to field in place of a fielder or act as a runner for a batsman, who may be incapacitated by illness or injury sustained during the match (and not before it started).

Wicket maiden: An over in which no runs are scored by the batsmen, but in which the bowler claims one or more wickets.

Wide ball: The ball bowled is declared a wide by the umpire if it is so high or so wide off the stumps that in his opinion it is out of the reach of a batsman when taking guard in the normal position.

Terms used for strokes played by batsmen

Cross bat: A stroke played by the batsman such that it is out of the true perpendicular plane of the ball as it approaches the batsman.

The hook: A shot executed against a rising ball.

The cut: A stroke made to a short pitched ball outside the off-stump.

in which the bat is swung from the back at the point of contact with the ball, it is at right angles to the ground.

The pull: A stroke made by hitting across the flight of the ball.

The sweep: Played at a ball on or outside the leg stump by bringing the bat around in an arc parallel to the ground, rolling the wrists over at the point of contact to keep the ball from skying.

Terms used for bowling

Flight: The ball so delivered that in its passage through the air, it deceives the batsman as to the spot where it will touch the ground.

Full toss: A delivery which does not bounce, or which does not touch the ground, before it reaches the batsman.

In-swing: A delivery from a fast or medium-paced bowler, which curves from the off to the leg in flight, thus moving into the batsman while still in the air.

Out-swing: One which moves from the leg to the off in the air (opposite of the in-swing).

Leg-break: A slow delivery bowled such that it spins from the leg side to off, when it hits the pitch.

Off-break: A ball which after pitching turns from off to leg.

S.K.G.

10 WAYS OF GETTING OUT

Bowled: If the bowler breaks the wicket, i.e., dislodges a bail with the ball, he has bowled. The batsman is not out if the ball is merely disturbed and not dislodged. And he is out even if the ball first touches his bat or person. In fact, when it touches the bat first, or is deflected by the batsman onto the wicket, it is known as 'played on'.

Caught: If the ball hit by the batsman is held, or caught, before it touches the ground, from a stroke off the bat, or off the hand holding the bat, but not the wrist. The fielder must have both his feet entirely within the playing area at the instant the catch is completed.

Stumped: If, in playing a stroke, the batsman is outside the popping crease (out of his ground), and the wicket is broken by the wicket-keeper, with the ball in hand, the batsman is stumped.

Leg before wicket (lbw): Essentially, lbw is illegal interference, whether accidental or intentional, with a ball that otherwise, in the opinion of the umpire, would have hit the wickets. The batsman is out lbw, if he intercepts with any part of his person, except his hand, that is in line between wicket and wicket, a ball that has not first touched his bat or hand, and that has or would have pitched in a straight line between the wickets or on the off side, provided the ball would have hit the wickets.

Run out: Either batsman is run out if, while the ball is in play, his wicket is broken while he is out of his ground, generally while taking a run. If the batsmen have passed each other the one running for the wicket

Ball 1
NOT OUT as

play the ball
with his bat.

that is broken is out, and if they have not crossed, the one running from that wicket is out.

If the batsman plays the ball straight back, and it breaks the wicket at the bowler's end, the non-striker, if he is out of his crease, is run out, provided the ball has been touched by a member of the fielding side before its impact with the wicket.

Hit wicket: When the batsman breaks his own wicket, with his bat or any part of his person while playing the ball, or when setting off for his run immediately after having played the ball (not in the second or successive runs).

Handle the ball: Either batsman is out if he touches the ball with his hands, while it is in play, unless this is done at the request of the fielding side.

Hitting the ball twice: If the batsman hits the ball again, except in defence of his wicket, after it has been played by him, or struck, or stopped by any part of his person, he shall be out 'hitting the ball twice'.

Obstructing the field: Either batsman shall be declared out if he wilfully obstructs the fielding side. Here the umpire must make the crucial decision of whether it was done on purpose.

Timed out: If the batsman takes more than two minutes to step onto the field to bat at the fall of a wicket, he is given 'timed out'.

In the following four cases—run out, handle the ball, hitting the ball twice and obstructing the field—the bowler does not get credit for the wicket.

S.K.G.

SUNNY SURVIVES, U.K.?

BY AMIT AGARWAL

That Sunil Gavaskar finally ended his string of low scores by scoring a century in the Bangalore Test—a milestone over which Zaheer Abbas sacrificed his stature as a sportsman—reflects more of Sunny's gritty character than his return to form as a batsman.

For even that hundred, like most other knocks of Gavaskar for the last couple of years, did not have the kind of assurance and mastery for which Sunny was once known.

Can it be that the little genius who used to eclipse record after record in the era gone by, has now himself been eclipsed?

Sunny used to be invincible, rock-firm against all odds and every type of bowling. And even though he would generally be over cautious and score slowly, his mere presence at the wicket was reassuring to the team, inspiring to the batsman at the other end and pure pleasure to the purist.

Playing with supreme confidence, unwavering concentration and admirable attrition, Sunny would be quick to bury, with his bat, the fliers of a John Snow or an Imran Khan and equally quick to parry, with his mouth, the gamesmanship of a Tony Greig. Yes, they could never pull a fast one on Sunny.

Almost always, the burden of holding the Indian innings together would rest

with him, a fact which could explain his eliminating all the risky shots from his repertoire. Concentrating only on the arc between mid-on and mid-off in the initial phases of his innings (Gavaskar still plays the straight drive better than anybody else in the game), the cover drive, the square-cut and the pull to mid-wicket would follow only after the measure of the bowling attack had been obtained. The ball would then start hitting the fence with, for the bowling team, sickening regularity.

Yet the same batsman who was never troubled by the outswinger outside the off-stump—the bane of all other Indian batsmen—is now suspect to that delivery. It pains one to see a master craftsman pushing tentatively at a kind of delivery he could once have played blind-folded, if you pardon the exaggeration. What could be the reason? Age, the terrible and awesome pressures of being a superstar, a fanatic public today acclaiming him and tomorrow yelling for his blood because he loses a Test series as captain?

You can't keep a good (bats)man down, however, as Sunny himself demonstrated in the Bangalore Test. Whether that will silence the considerable anti-Gavaskar hysteria generated in the recent past and bring back sunny days again remains to be seen.

the field as on it. He wrote a best-selling book, *Sunny Days*, reportedly in one go. The first draft was so well-written and complete that it was thought unnecessary to rewrite or add to it. His love for writing is evident from the fact that he now edits a magazine, *Indian Cricketer*. Over the years he has written regularly for various sports publications. Arvind Lavakare, in a recent issue of *The Sunday Observer*, reported that "Gavaskar was paid a rupee a word five years ago. That was a rate never ever paid by any Indian newspaper to any Indian writer—be it Frank Moraes or Arun Shourie."

Gavaskar is also an intelligent and eloquent public speaker, which explains why he works as the Public Relations Officer of the Nirlons in Bombay. His was one of the first forays by a cricketer into films, though the Marathi film in which he starred proved a flop. The ad-industry also capitalised on his appeal in a big way, a mantle that has now befallen Kapil.

Gavaskar also has the unique honour of having a calypso song composed in his honour. Indeed, Sunny's success in the Caribbean has been so phenomenal that he won't be forgotten there as long as cricket is played in those scenic islands. After all, he scored 774 runs in his debut series there, repeating that prolific run-getting performance in subsequent tours. He himself, however, considers the half-century that he made at Old Trafford, Manchester, against England in 1971 as his best knock ever. It was made on a pitch as green as the outfield and against John Price, who was really swingin' 'em on that track. We also cannot forget his 221 at The Oval which put India on the brink of scoring an impossible 400 plus needed in the second innings to win. A classy 86 against the Windies at the Wankhede Stadium in the 1974-75 series also readily comes to mind. His feats, however, are too numerous to be singled out.

Sunny survives, O.K.?

USEFUL WEIGHT

The captain of the village cricket team was pointing out the local celebrities to the visitor.

"That's Smith, the butcher," he said singling out an exceptionally heavy-set individual. "Most useful man, that," he added.

"Is it so?" inquired the visitor. "Hard to believe that so fat a man could be useful."

"Yes, he is," replied the skipper. "When we use the heavy roller, we ask Smithie to sit on it."

THE ASHES

The Ashes (left) and the Urn. From a lady—with love.

The Ashes is the legendary honour at stake in the Anglo-Australian Test series. The Ashes are to cricket what the World Cup is to football or the Derby to horse racing. They are the supreme challenge and the most coveted of all cricket trophies and yet they can be won by only two of the cricketing countries.

The origin goes back to August 1882, when Australia (63 and 122) beat England (101 and 77) by seven runs, at The Oval, in London, in the only match of the series, and so recorded their first victory in England. In this low-scoring match, after the English bowlers Peate and Barlow had run through the Aussie batting, Fred 'The Demon' Spofforth, one of the fastest bowlers ever, took 7 for 46 to limit England's first innings lead to 38. On the second day, on a wet wicket, considered unfit for play, Hugh Massie, (Australia) in a bold hitting innings, scored 55 out of 66, and England needed only 85 to win. But despite W.G. Grace's 32, Spofforth cut through the batting, while Harry Boyle kept one end secure. So tight was their bowling that the last four English wickets managed only seven runs between them.

On the following day, the *Sporting Times* published a mock obituary for English cricket as follows:

In Affectionate Remembrance
of

ENGLISH CRICKET
which died at The Oval
on

29th August, 1882

Order of Bowling, Friends
and Acquaintances
R.I.P.

N.B: The body will be cremated and the Ashes taken to Australia.

In the following winter (1882-83), the Hon. Ivo Bligh (later, the eighth Earl of Darnley) captained the English team to Australia. The home team won the first Test, but England took the next two of the scheduled three-match rubber. At the end of the last match, two ladies—one of whom later married the Hon. Ivo—burnt a bail, sealed the ashes in an urn and presented it to Bligh.

The urn remained his private property until his death in 1927, when it was bequeathed to MCC and is now kept in the Imperial Cricket Memorial Gallery at the back of the pavilion at Lord's (London). The Ashes, therefore, exist, but although played for, never leave Lord's. So, in fact, the two countries play for an imaginary trophy, since it is never seen exchanging hands.

S K G

The Ashes Song

We've brought the Ashes back home
We've got them here in the urn
The Aussies had had them twelve years
So it was about our turn
But oh! what a tough fight
It's been in the dazzling sunlight
In spite of the boos of the mob on the hill
We've won by two matches to nil

When we arrived people said
The Aussies would leave us for dead
But we knew we would prove them wrong
And that's why we're singing this song
But oh! the feeling is great
For losing is something we hate
So Sydney we thank you for both of our wins
But not for those bottles and tins

Our openers gave us a good start
And the others then all played their part
We usually made a good score
Seven times three hundred or more
The Aussies however were apt
To collapse at the drop of a hat
If they were bowled any ball that was short
It was ten to one on they'd be caught

In the field it was often too hot
So sometimes we felt very low
Whether rain was forecast or not
We always knew we'd have snow
So now to go home we are free
And we're sure the Aussies agree
Though the series has been a long uphill climb
We've all had a real bumper time.

INSTANT CRICKET

BY KRISHNASWAMY

Flashing bats, crashing balls—it's one-day cricket. Clive Lloyd holds the Prudential Cup at Edgbaston. West Indies won the 1975 series 3-0

One-day cricket made its debut in 1962 and ever since, there has been an increasing interest in it. This came about at a time when first-class cricket in England and in many other parts of the world was going through a severe crisis. And it was felt that commercialisation of the game through one-day cricket would fetch a greater amount at the gate and consequently more revenue, which it did. The fast game and quick results have made this form of cricket extremely popular. As a result, since its inception the prize money has increased more than a hundred-fold. And now almost every Test-playing country has one-day competitions.

The first ever one-day competition was the Gillette Cup, held in 1962. Sussex won the Gillette Cup the first two years and thereafter there have been some keen contests for the Cup each year. This tournament has become very popular with the cricket lovers who cannot afford to sit three or five days regularly to watch a county or Test match in full. In one-day cricket the excitement gets over in six or eight hours.

The John Player League in 1969 heralded the era of Sunday cricket because this tournament is played only on Sundays. The two teams play 40 overs each as opposed to 55 or 60 in some other tournaments. This year the title went to Yorkshire who won it for the first time ever.

Yet another one-day tournament started with the Benson and Hedges Cup in 1971. This is played in the first 12 weeks of the season in order to avoid a

The World Cup began in 1975 with the Prudential Assurance Company putting up the money. It was a roaring success. The first playing countries—England, Australia, West Indies, New Zealand, India and Pakistan—plus two others—Sri Lanka and East Africa—joined in as invitèes to make the total number eight. West India won the Cup with Australia as runners-up in the first contest.

The second World Cup played four years later, the West Indians won the cup for the second time. This time, England were the runners up.

The third and the last Prudential World Cup played this year. Aus-

ting the favoured West Indies in the final by 43 runs. Since then, the Prudential Assurance Company has withdrawn the sponsorship and unless someone else comes forward with an offer, this could well be the end of the World Cup.

India made its debut in night cricket with the inaugural match in New Delhi's Nehru Stadium on September 6 this year. The only other country which has had night cricket is Australia, where it originated. The first ever match of this kind was played in Melbourne with the efforts of Australia's TV tycoon, Kerry Packer. India's major one-day competitions are the Deodhar Trophy and the Wills Trophy.

ton. The Vehicle and General Cup, started in Australia. The six Aussie states and New Zealand competed in a knock-out draw. As this competition gained popularity, in 1973-74 it was renamed the Gillette Cup.

These games were limited to 50 six-ball overs per side with no single bowler allowed more than 10 overs. This trophy was played for only six seasons, with Western Australia winning three times.

The McDonald's Cup

This trophy replaced the Gillette Cup, as Australia's one-day cricket championship, in 1979-80. (New Zealand was excluded.) Each side is allowed 50 six-ball overs, as earlier, but it is not a knock-out tournament.

ENGLAND

The County Championship

County cricket is probably the most enthralling of the various domestic tournaments. Seventeen counties compete for the championship, each playing 22 matches. This means that each county meets at least once, but plays a return match against only six of the others.

The county game was established in the last quarter of the 19th century, after some initial non-formal attempts at creating a championship. However, all official publications giving the list of championship winners, begin with 1864, with Surrey as the first county champions. In fact, John Wisden's cricket almanac did not publish its first county championship table till 1888.

The trophy contested for is the County Cricket Championship Trophy presented by the Lord's Taverners, which the Duke of Edinburgh, in his capacity as 'twelfth man' annually presents to the champion county at Buckingham Palace.

Yorkshire has won the championship an astonishing 33 times (last time in 1968), followed by Surrey's 16 wins. The latter also have the record of seven consecutive wins, 1952 to 1958. Strangely, Northants, Sussex and Somerset have yet to win the championship. In 1977, the championship, which had ceased to be financially viable, was sponsored by Schweppes, which still continues.

Being the pioneers of the limited-overs cricket, which has come to stay, England currently has three such tournaments.

The Gillette Cup (later the Natwest Trophy)

This tournament was started in 1963, under the name, 'The Knock-out Competition', sponsored by the Gillette Safety Razor Co Ltd. Its title was changed to the Gillette Cup in 1964. It was confined to the 17 counties, and the five leading minor counties of the previous season.

The matches, of one innings per side, are limited to 60 six-ball overs per innings, with each bowler allowed a maximum of 12 overs.

After the 1980 tournament, Gillette withdrew their sponsorship of this knock-out tournament and from 1981, National Westminster Bank stepped in, hence the new name, Natwest Trophy. The rules all remain the same, apart from the fact that from 1983 onwards, eight more minor counties, plus Ireland and Scotland, have been included into the draw, where a seeding system has also

NATIONAL TOURNAMENTS

Mushtaq, David Steel and Roy Virgin with the 1976 Gillette Cup at Lord's, England. Northamptonshire beat Lancashire.

All the 17 counties have one major domestic tournament, in which teams representing the various states, districts or territories of that country participate. Consistently good performances by the players in these tournaments become the criterion for their selection to the national team.

The duration of the matches is either three or four days, and all are considered as 'first class' fixtures, with all the outstanding achievements going into the record books.

With the advent of one-day cricket in the '60s, and its unbounded popularity, which has helped to fill the coffers of the various National Boards of Control for Cricket and local authorities, all countries have now started limited overs tournaments, at the national level. Here is a country wise list of some of the major domestic tournaments.

AUSTRALIA

The Sheffield Shield

In 1892, Lord Sheffield, whose side had just completed a tour of Australia, gave a sum of 150 guineas and a trophy to the Australian Cricket Council to help promote the game. The Council immediately started a domestic championship, in which Australian states compete against each other in a home-and-away series every year, for the now famous Sheffield Shield.

The most successful side has been New South Wales, winning 37 times, the last being in 1982-83. Victoria, the inaugural winners, have won 24 times, and South Australia, 12. Queensland have yet to win the cup.

The Gillette Cup

A one-day competition for Australia's state

The Benson and Hedges final at Lord's, 1977. Kent vs Gloucestershire.

been introduced. The tournament has been won maximum times (four) by Lancashire

The John Player League

Begun in 1969, only the 17 counties participate in this one-day match tournament, limited to 40 overs per side and played only on Sundays. The winner is decided on a points table system.

Of the 14 league titles decided till 1982, Kent had won thrice, and Lancashire, Leicestershire and Hampshire twice each.

The Benson & Hedges Cup

Begun in 1972, this is a competition limited to 55 overs per side and sponsored by Benson & Hedges. The 17 counties, Scotland, Combined Universities (Oxford and Cambridge) and a minor counties representative side compete. In its 11-year history, till 1982, the Cup has been won three times by Kent and twice each by Leicestershire and Somerset

Lawrence Trophy

Awarded to an individual player for the fastest century each season in county cricket. Presented by Sir Walter Lawrence, the first winner of the trophy was Frank Woolley in 1934. With the onset of war and the death of Sir Walter in 1939, the trophy went into oblivion.

It was not until 1966, that the directors of Walter Lawrence & Sons Ltd reintroduced the Trophy. Now, £ 250 and the Trophy were to be presented to the English player who scored the fastest century in Tests in each calendar year, based on the number of balls received. Ken Barrington was the first winner. But, from 1971, the donors have reverted to the original plan

SOUTH AFRICA

The Currie Cup

This is South Africa's main domestic competition since 1889 and produces some of the best first-class cricket in the world, outside of Tests. Purely because only five teams participate, on a home-and-away basis, resulting in only eight first class matches in a season. Each match is of three days (21 hours) duration.

Till 1982-83 Transvaal had maximum titles—20 times, outright and four times shared. Natal has 17 plus three shared titles. East Province, Rhodesia and North Transvaal have never won the trophy.

The trophy itself had been presented in 1889 by Sir Donald Currie to the team that put up the best performance against the first En-

glish touring team. Kimberley won, and next year, Transvaal challenged and defeated them. Thus began the Currie Cup.

The Datsun Shield

This is the major limited-overs tournament. Apart from the five teams participating in the Currie Cup, three more state teams also participate. It is a knock-out tournament, with each match of 60 overs per team. Not more than 12 overs can be bowled by one bowler

NEW ZEALAND

The Shell Trophy

In 1975-76, the Plunket Shield was replaced by a first-class programme called the Shell Trophy.

The Shell Cup

This tournament began in 1980-81. Earlier, the one-day tournament was sponsored, and called the Gillette Cup. A disagreement between the New Zealand Cricket Council and Gillette, over timing of the competition and television coverage, led to withdrawal by the latter. Then Shell (New Zealand) Ltd took over in 1980-81. This is a 50 overs a side tournament and each bowler is allowed not more than 10 overs. It is played on a knock-out basis between the six provincial sides that contest the Shell Trophy.

PAKISTAN

The Quaid-e-Azam Trophy

The premier tournament in Pakistan began in the year 1953-54. It is contested by Pakistan's top 10 teams, on a league basis, and decided on points. The participating teams are regional representatives as well as representatives of organisations and companies. Of the 25 tournaments held so far, Karachi have won five times and Karachi Blue four times. Since 1975-76 the various bank teams have been dominating. National Bank and United Bank have won thrice each till 1982-83.

Quaid-e-Azam means 'the great leader' and the Trophy is in memory of Mohammed Ali Jinnah, founder of Pakistan.

The Peco Cup

This competition is sponsored by Pakistan Automobile Corporation, and is contested by the top five teams in the Quaid-e-Azam points table, each year. The winner is decided on a round-robin tournament, points system.

The Patron's Trophy

This is the qualifying tournament for Pakistan's premier tournament. The two finalists qualify for promotion to the premier league. The matches played in this tournament are no longer considered first class

The Wills Cup

This is the major one-day limited-overs cricket tournament, which was won for the third year running by Pakistan International Airlines in 1982-83.

WEST INDIES

The Shell Shield

Even though representative cricket in the West Indies is more than a century old, it was not until as recently as the 1960s that a proper domestic tournament could take off.

It was way back in 1865 that Barbados won the first representative match, playing against Demerara (British Guiana) and in 1869 the latter visited Trinidad. Soon, these matches came to be known as intercolonials.

In 1965-66, the intercolonials were scrapped and under the aegis of the West Indies Cricket Control Board, the Shell Shield tournament was launched, deriving its name from the sponsors Shell Oil Co. It was contested between Barbados, Trinidad and Tobago, Guyana and Jamaica and the Combined Islands team, which was separated in 1981-82 into Leeward Islands and Windward Islands

Of the 17 tournaments till 1982-83 (none in 1967-68) Barbados has won nine outright and shared once with Trinidad, who have two outright wins. Guyana has three wins, Jamaica three and Combined Islands one each.

The Geddes Grant-Harrison Line Trophy

Co-sponsored by T. Geddes Grant Ltd and Arnold Malabre Ltd on behalf of Harrison Shipping Line, this is the major limited-overs tournament which began five years ago, and is contested between the six sides which play 'the Shield'

INDIA

The Ranji Trophy

It is named after a man who played very little of his cricket in India: Maharaja Ranjitsingh of Nawanagar. It was donated by the Maharaja of Patiala, in memory of Ranji, who died in 1933. Thus, two years after India made its Test debut, her national championship or the Ranji Trophy was started, in 1934-35. In the early years, the championship was dominated by the princely states. After India's independence, the princely states dropped out; then came the domination of Bombay over Indian cricket. From 1948 to 1978, they won 23 of the 31 titles, winning 15 years in a row from 1958-59 to 1972-73. At present the championship is played on a league-cum-knock-out basis. There are five zones (with about five teams each).

(i) Central—Uttar Pradesh, Vidharba, Rajasthan, Madhya Pradesh and Railways.

(ii) North—Delhi, Jammu & Kashmir, Haryana, Punjab and Services

(iii) East—Orissa, Bihar, West Bengal and Assam.

(iv) West—Bombay, Maharashtra, Saurashtra, Gujarat and Baroda.

(v) South—Hyderabad, Tamil Nadu, Karnataka, Andhra Pradesh and Kerala.

The matches are for four days each. The final is played over five days and unfinished matches are decided on first innings lead. From next year, bonus points system will be introduced, based on the English county championships.

1982-83 winners: Karnataka.

Deodhar Trophy

This is the major limited-overs domestic tournament. It was started in 1973-74, and each match is a 50 overs a side match. Generally played at the same venue over a few days, the five zonal teams take part in it. After a play-off match come the semi-finals and finals.

1982-83 winners: West Zone.

The other major trophies on the domestic scene are as follows:

Duleep Trophy

The other great Indian, who played very little cricket in India, was Duleepsinghi, and after his death in 1962, the Board of Control

for Cricket in India instituted the Duleep Trophy from 1962-63.

The five zonal teams participate in this knock-out tournament, each match being over four days, and unfinished matches decided on first innings lead.

West have won it 10 times in its 22-year history, with South claiming six victories.

1982-83 winners: North Zone—their fourth win.

Irani Trophy

Introduced by the Board in the 1960-61 season, the Trophy is named in memory of late Z.R. Irani, former Treasurer and President of the Indian Control Board.

It is contested between the national champions from the previous season (i.e., Ranji Trophy winners) and Rest of India. Thus, it is only a solitary match for the Trophy.

1982-83 winners: Rest of India.

The Rahinton-Baria Trophy

Started in 1935-36, it is the all-India inter-university tournament, played on the lines of Ranji Trophy.

1982-83 winners: Delhi University—their sixth win in a row.

The Vizzy Trophy

Started in 1966-67, it is the inter-zone university championship. Played on Duleep

Trophy lines, each match is of two innings. Named after Dr Vijaya Anand (the Maharajakumar of Vizianagram), popularly known as 'Vizzy,' and former President of the Board of Control and captain of India in 1936, who died in 1965.

1982-83 winners: North Zone

The C.K. Nayudu Trophy

Started in 1974-75, it is the all-India inter-zone tournament, restricted to players under 22 years of age. Named after Cottan Kanakaiya Nayudu, the first captain of India, and a legendary batsman.

The Cooch-Bihar Trophy

Started in 1950, when the Maharaja of Cooch-Bihar donated the Trophy, it is the junior-most tournament, being the all-India schools inter-zone tournament.

1982-83 winners: Central Zone

SRI LANKA

P. Saravanamuthu Trophy

Premier tournament in Sri Lanka which brings new comers into the Test fold. In 1981-82 the final round matches in this tournament were extended to three days, for the first time in its 33-year-old history.

The other two major trophies are **Rahman Hathy Trophy** and **Donovan Andree Trophy**. □

CRICKET IS HERE TO STAY

BY BHAMA DEVI & SAVITA CHANDIRAMANI

Sharma: Cricket blitz

Sham: Castigating sponsors

While the taste of the World Cup victory was still fresh in everyone's minds, we spoke to a cross-section of people in Bombay, to gauge whether cricket is still relevant today. The final verdict was unanimous—cricket is here to stay. Over the years, from being a bastion of the elite, the game has gained more of a mass base; from the aristocracy, it has been entrusted to the new patrons—the industrialists. Top players these days come less from public schools and more from public maidans.

It takes little by way of equipment to

get a game of cricket going, says S K Sham, sports editor of the *Free Press Journal*. Being a game that everyone has played at one stage or the other in their lives, people can easily identify themselves with a Gavaskar or a Kapil Dev.

According to the veteran journalist R.G.K., cricket has killed all other sports. For this, national badminton player Sanjay Sharma blames the sports associations of these other games. Cricket is a commodity in demand and it has been marketed extremely well.

Raj Singh Durgapur, cricketer, com-

mentator and manager of the Indian team on several tours, disagrees. Cricket is marketed in Australia and England, but here it has needed no such device. It is a game that suits the Indian pace of life and Hindu philosophy. That is what makes it so appealing to an Indian. "It is a game of glorious uncertainties; it has this concept of fatalism—one day you're on top, next day you're down; and like all other rituals—be it a marriage or funeral—the game carries on for five-six days." That is why while one-day cricket is seen as a welcome trend, it can never displace a five-day Test in India.

As a nation, says R.G.K., we are a lazy people, we have a lot of time on our hands to sit through a five-day match; and the government seems to indulge this obsession by broadcasting/televising these events live. A child should be outdoors playing and jumping around, not sitting in front of a TV screen, dazed like a moron.

The cricket following has gone up by almost 40 per cent, estimates Raj Singh, since 1977-78, when AIR went multilingual on the same channel. As the transistor made inroads into every village home, everyone tuned in to the progress of the ball. Then came live telecasts—yet another big boost for the game.

Cricket has its own culture, its own archives and literature. The tradition of extensive cricket reporting begun by the British editors continues till today, laments Leyland de Souza, retired sports journalist of *The Times Of India*.

Much to Sharma's chagrin, the media have converted the cricketers into demi gods. Readers are blitzed with the past records of cricket greats while hardly any background is "fed" to them of the past achievements of the current players in other games.

"Sports editors generally know what the public wants," says R.K. Pitamber, a golf champion and more recently, Chairman of the golf selection committee for the Asiad.

R. Rajagopal is a young executive and ex-table tennis player. "Cricket has always been in demand, and will always be," he says, but "the media does not give sufficient coverage during crucial times when Tests are played the world over. The papers merely report 'Scores incomplete.' At such times, the reader definitely craves for more. The reader knows what he wants and the media has to try to give it to him." According to Hanuman Singh, manager of the Indian team which toured the West Indies earlier this year, "We cannot

force a choice down people's throats. We have to give them what they want. And what they want is cricket."

Sham and other genuine cricket lovers castigate sponsors who put in money not for any love of the game, but for the mileage they can derive from it. "A greater degree of professional management is needed as far as the game is concerned," states Raj Singh. "Things are happening, but not at Lillee's pace as they should be, but at Doshi's. And if this is the case with our national game, how much worse must conditions be in other games?"

Cricket is a case of lopsided priorities. People either love it, or they hate it, it is difficult to remain indifferent. RGK feels that picketing at cricket venues (on the lines of Gandhi's satyagraha) is the only way we can water down this national obsession. Any volunteers?

WILL PRETORIA EVER LEARN?

"Because cricket authorities won't let us in at the front door, we have to go through the backdoor." So said South African Cricket Union (SACU) official Geoffin Dakin on the MCC's decision recently to disallow an England tour of South Africa.

Money is the bait Pretoria offers to woo international cricketing stars to play in the country, banned as it is from Test cricket because of its segregationist policy of apartheid. And till date, there have been three takers: the British "Dirty Dozen" in 1981; 14 leading Sri Lankan cricketers in 1982, and early this year, the West Indians.

This was a clear violation of the Gleneagles Agreement, which bans sporting links with South Africa. Way back in 1976, 28 African countries had boycotted the Montreal Olympics because New Zealand had taken part in it. And New Zealand's fault: its rugby union team had toured South Africa in 1975. After the Olympics, Commonwealth leaders pledged to "withhold support for apartheid and to discourage, actively, sports contacts with South Africa by individuals and teams".

Barely five years later, the "Dirty Dozen" toured South Africa. Notwithstanding the hullabaloo worldwide, the rebels were awarded punitive punishments: a three-year suspension from Test cricket. Yet they were allowed to play county matches and Tests when the opponents had no objection to their participation.

In contrast, the Sri Lankans and West Indians took quite a rap: a 25-year suspension for the first group and a ban-for-life for the other.

What made them risk such severe sanctions? Money again, pure and simple. For instance, the West Indies Cricket Board is virtually bankrupt, and in the absence of support from big business, cannot compensate its players suitably. In England, first-class game professionals have had to go on dole at the end of cricketing season. The situation is no better in other countries.

From the South African viewpoint, it is the urgent desire to witness top-grade cricket; and for its cricketers, to play the game at Test level. Isolation has hurt them and also made them more intransigent. True, there is less racism in South African cricket than before, but not "massive changes in defiance of their government", as some South Africans would have us believe. A recent BBC documentary shows facilities for black cricketers are in no way compar-

able to the whites.

Against this backdrop, the International Cricketing Conference (ICC), in its early July meeting, withheld entry of the SACU and the South African Board of Control (which conducts the games for blacks) into world cricket. An intransigent SACU chief, Joe Pamensky, who is on a worldwide recruiting drive for 'rebels', said after the meeting: "We will carry on without tears and we have hurt no conscience about it. South Africa has got political problems but they still have a vote at the UN where those problems can be discussed." He also confirmed that the West Indies rebels would re-tour South Africa in December. South African conscience was apparently absent when, in 1968, they called off an MCC tour of their country, because the team was to include an erstwhile Cape Town coloured: Basil D'Oliveira.

The MCC came in for criticism for the handling of the matter and anti-apartheid opposition gained momentum in Britain, though there were "extremists" who wanted links with South Africa. Finally, in 1970, the International Olympic Committee expelled Pretoria formally. World cricket bodies tacitly took that as a lead and disavowed links with South Africa till multi-racial cricket was permitted there.

Multi-racial cricket is still a far cry in South Africa. Passion for high-class cricket has increased, if anything, meanwhile. Even as the stakes grow higher for rebel cricketers, Test-playing nations have come forward to stem the slowly-spreading rot, though how workable they are remains to be seen. Australia has signed most of its 20 top players for a two-year \$ 20,000 per-year contract, which may be raised to \$ 60,000, and will cancel retirement benefits to any cricketer who opts for playing in South Africa. England's Test and County Cricket Board says it is redrafting contracts which will discourage players "from joining disapproved tours".

But the situation is still under control in India. Said Indian skipper Kapil Dev on being asked if the SACU had approached him: "When and if the offer comes, my answer will be a firm no. The state of my career and my current status does not permit me."

Former captain Sunil Gavaskar was yet more vocal: "Not me, I won't go to South Africa. If they come to me, I will just simply ask them to go and see the film *Gandhi*."

NAGARAJAN V.

Graeme Pollock (left) and Peter: Losing out to apartheid

PRICE OF APARTHEID

Apartheid in Pretoria—and the international isolation that followed—has taken its toll of world-standard South African cricketers. When the curtain went down for South Africa, the Bill Lawry-led Australia had suffered a 4-0 defeat at their hands in 1969-70. Among South Africa's stars: Eddie Barlow (30 Tests, 2,516 runs, six centuries), Barry Richards (500 runs in just four Tests), Mike Procter (dubbed 'bowler off the wrong foot'), Graeme Pollock (23 Tests, 2,256 runs, seven centuries, average 60.97) and brother Peter (fiery bowler, 28 Tests, 116 wickets), Ali Bacher (inspiring captain), Jim Irvine and Dennis Lindsay.

South Africa was the third country to enter Test cricket—in 1888-89, against England—but won its first in 1905-06 under P.W. Sherwell: 4-1 against England, the first-ever five-

Test series between the two. Sherwell's eleven lost to Australia (1910-11) 4-1, the one signifying their first-ever Test match win against the Aussies. Their only other opponent: New Zealand; their Test record: 172 played, 38 won, 72 lost and 57 drawn.

South Africa's winning squads in the '50s, till their eclipse from world cricket, had some all-time greats: A.J. Maclean (40 Tests, 2,120 runs, five centuries), Jackie McGlew and Colin Bland (the finest fielder ever), not to mention the stars who chewed up the Aussies in the 1969-70 Test. Its highlights: Graeme scored the highest-ever for his country—274, at Durban—while Richards and Barlow scored two centuries each. And all that was lost because one prime minister hated the idea of a coloured touring his country.

OF STARS AND SUPERSTITIONS

It may be the 20th century and cricket may have undergone a lot of change. But when it comes to cricketers, they are as superstitious as any villager and when it comes to the game, it is as uncertain as the Indian politician. The history of cricket is full of coincidences, superstitions and trailing decisions.

Did you know that the run machine Don Bradman always brushed his teeth with a new toothbrush on the morning of a Test? According to him the brush not only shone his teeth but also his innings.

Have you noticed that Sunil Gavaskar always wicket on the left side of his partner? This helps him to play useful knocks, admits Sunil himself.

In 1903, when Australia toured England, the MCC scored 302 in an innings. Colin Cowdrey, one of the English players had just bought a new car. It bore the number plate MCC 302. And would you believe

that Cowdrey always roamed about in his room in his birthday suit prior to a Test match?

The two Amaramath brothers share a common superstition. Both of them keep a handkerchief in their right hip pocket while batting; it moves to the left hip pocket while fielding. The only difference, Surinder uses a red handkerchief and Mohinder a blue one.

Frank Worrell never played a match without donning the pair of socks which he wore while scoring his first century. The pair wasn't discarded even when they were full of holes. He just wore another pair over them.

Alan Knott, the former English wicket-keeper, always saluted the wickets when he came in to bat. He believed that Mr Wickets should be kept happy or else.

Len Hutton, the great English captain,

always carried a penny coin given him by his grandpa's friend. Once when he was injured on the field, he tried to locate the coin in his pocket. It was not there. He had forgotten it in the dressing room.

Pataudi Sr once wrote in a friend's autograph book: "Fast horses and women are no good to a cricketer." Years later when 'Tiger' Pataudi read this, he countered on the next page: "I know nothing about horses and women, dad." While he was cutting his tenth birthday cake in India, his father died on a polo field in England.

Doug Walters of Australia always used the same locker in the dressing room whenever he went to play on any ground.

Kirti Azad, the talented Indian cricketer, always makes it a point to enter the field with his right foot.

Who the hell says modern people are not superstitious?

ANJAN MITRA

A PARTING SHOT

A SPECTACULAR CASE

You will remember Sir Aubrey Smith, the tall, handsome Englishman who went into films and, late in life, became the uncrowned king of Hollywood. Even Hollywood is not wrong about everything, and when it came to regard Sir Aubrey as its ideal of a fine old English gentleman it showed more than usual intelligence. Long before that time, though few can recall it now, he had been C A Smith, of Cambridge University, Sussex and England, and captain of the first touring side in South Africa. He was a slow bowler—slow to the point of slow motion who used to start his run about mid-off and then as though by after-thought, bowled round the wicket. That is why they called him 'Round-the-Corner' Smith and his house in Hollywood was christened *Round the Corner*. In the film colony he ran his own cricket team, and he ran it as strictly as Lord Hawke or Lord Harris would have done. He was a stickler as you may imagine for etiquette and insisted on the correct interpretation of cricket's laws, both social and sporting on all occasions. As he grew older he grew stricter, as he grew older too his eyesight grew sketchier and one day in the field he committed the enormity so hard to forgive in others of dropping a slip catch. Instantly he stopped the game and signalled for his butler who walked ceremoniously across the ground and bowed low.

"Bring me my spectacles," ordered Sir Aubrey. Slowly the butler returned to the outer world and once more appeared, bearing a pair of spectacles (in case) on a silver salver. Sir Aubrey put on his spectacles and signalled for the umpire's permission to resume action. The bowler bowled, the batsman snicked, the ball shot into Sir Aubrey's hands and shot out again. There was an almost interminable pause. Finally, a loud complaint arose to heaven. "Egad," exclaimed Sir Aubrey, "the dam' fool brought my reading glasses."

A.A. Thomas: From *Some Eccentric Matches*

VILLAGE CRICKET

The scores were level and there was one wicket to fall. The last man in was the blacksmith, leaning heavily upon the shoulder of the baker who was going to run for him, and limping as if in great pain. He took guard and looked round savagely. He was clearly still in a great rage

The first ball he received he lashed at wildly and hit straight up in the air to an enormous height. It went up and up until it became difficult to focus it properly against the deep, cloudless blue of the sky, and it carried with it the hopes and fears of an English village. Up and up it went and then at the top it seemed to hang motionless in the air, poised like a hawk, fighting, as it were, an heroic but forlorn battle against the chief invention of Sir Issac Newton, and then it began its slow descent.

In the meanwhile things were happening below, on the terrestrial sphere. Indeed, the situation was rapidly becoming what the French call *mouvement*. In the first place the blacksmith forgot his sprained ankle and set out at a capital rate for the other end, roaring in a great voice as he went "Come on Joel!" The baker who was running on behalf of the invalid also set out and he also roared "Come on Joel!" and side by side like a pair of high stepping hackneys, the pair cantered along. From the other end Joe set out on his mission and he roared "Come on Bill!" So all three came on. And everything would have been all right so far as the running was concerned had it not been for the fact that Joe, very naturally ran with his head thrown back and his eyes goggling at the hawk like cricket ball. And this in itself would not have mattered if it had not been for the fact that the blacksmith and the baker also very naturally, ran with their heads turned not only up-

wards but also backwards as well, so that they too gazed at the ball, with an alarming sort of squint and truly terrific kink in their necks. Half-way down the pitch the three met with a magnificent clang, reminiscent of early happy days in the tournament-ring at Ashby-de-la-Zouch and the hopes of the village fell with the resounding fall of their three champions.

A.G. Macdonnell From *England Their England*, 1933

W.G.

Dr W.G. Grace
Had hair all over his face
Lord! how all the people cheered
When a ball got lost in his beard

—E.C. Bentley

Sometimes he (W.G.) would play, at the height of his fame in a country cricket match in some village in the west of England. And from far and wide the folk would come, on foot, in carriages, and homely gigs. On one of these occasions Grace had made a score of twenty or so when he played out at a ball and missed it. The local wicket-keeper snapped up the ball in his gloves triumphantly and swept off the bails and—seeing visions of immortality—he screamed at the umpire "H'zat!"

The umpire said "Not out, and look'ee 'ere, young fellow the crowd has come to see Doctor Grace and not any of your monkey tricks."

Neville Cardus From *William Gilbert Grace* in *The Great Victorians*, 1932

SNICK 'n' A SLIP

Begging for a ball. Ashes produces some best cricket—also the best pictures. The above one was snapped during the Second Test match at Lord's between England and Australia in 1975. Aussie keeper Rodney Marsh is seen backed up by the slip fielders.

LONG LIVE THE QUEEN!

Buckingham Palace

Buckingham Palace has been the residence of British kings and queens since Queen Victoria acceded the throne in 1837. The palace occupies the site of Buckingham House, built in 1703 by the Duke of Buckingham. King George III bought the house in 1762 and in 1821 King George IV employed architect John Nash to build the present palace. Nash retained the shell and much of the plan of the earlier house.

With the exception of the Queen's Gallery and the Royal Mews, Buckingham Palace is not open to the public.

The state apartments in the west wing of the palace are approached by the Grand Hall and Grand Staircase with its marble stairway and gilt bronze balustrading. The Ballroom, which is the largest of the apartments, was built for Queen Victoria in the 1850s. Lit by six immense chandeliers formed of crystal bowls, the room contains at one end the Throne Dais, and at the other an organ and musician's gallery. It is here that state balls, state banquets and investitures are held. The Blue Drawing Room, the most beautiful room in the palace, was the palace ballroom before 1854. In this room is the 'Table of the Commanders', made for the Emperor Napoleon I in 1812 and after his defeat presented to King George IV by King Louis XVIII of France. The table is of green and gold Sevres porcelain.

The White Drawing Room is a white and gold room, with delicate yellow upholstery and curtains and a magnificent flowered carpet. Its furniture includes many fine examples of English Regency and French craftsmanship. The Throne Room with a marble frieze depicting the Wars of the Roses of 15th century England is lit by seven cut glass chandeliers. The thrones on the dais were used by the Queen and the Duke of Edinburgh at the Coronation in 1953.

The ivory and gold Music Room has a domed ceiling and the two huge cut-glass chandeliers are the finest in the palace. Queen Victoria and her Consort, Prince Albert, held musical evenings in this room.

The Queen's private apartments are in the north wing. The east wing is mainly used as guest rooms on occasions such as state visits.

The palace gardens, covering some 45 acres (18 hectares) and extending to Hyde Park Corner, were laid out for King George IV by W.T. Aiton. They comprise a lake, lawns

and paths and a large variety of flowers and trees. In the summer the gardens are the scene of three royal garden parties during which the Queen and the Duke of Edinburgh meet about 22,000 guests of many nationalities and from different walks of life.

The south wing of the palace contains the Queen's Gallery, open since 1962 for the public display of art treasures from the royal collection. In the Royal Mews (or stables) on the south side of the palace grounds, the coach houses, carriage horses and royal cars and carriages can be viewed by the public twice a week. The carriages include the Gold State Coach, built for King George III in 1762 and used at coronations ever since.

Monarchy

The Queen in all her majesty (left); Commons' viewing 'royal' splendour at Buckingham Palace, London (above).

THE BRITISH people look to Her Majesty Queen Elizabeth II not only as their Head of State, but also as the living symbol of their nation's unity. When the Queen was born on April 21, 1926, her grandfather, King George V, was on the throne and her uncle was his heir. However, the death of her grandfather and the abdication of her uncle (King Edward VIII) brought her father, King George VI, to the throne, and on his death on February 6, 1952, Princess Elizabeth became Queen and Head of the Commonwealth. Four years before, on November 20, 1947, she had married Lieutenant Philip Mountbatten, now Prince Philip, Duke of Edinburgh. She was crowned in Westminster Abbey on June 2, 1953, and in 1977 celebrated her Silver Jubilee, the 25th anniversary of her accession to the throne.

In the United Kingdom (UK), the Queen's title developed through the union of the kingdoms of England and Wales, and Scotland (1707), the union with Ireland (1801) and the creation of the Commonwealth. The Queen is also the Head of State of Barbuda, Australia, the Bahamas, Barbados, Canada, Fiji, Grenada, Jamaica, Mauritius, New Zealand, Papua New Guinea, Saint Lucia, Saint

The head of the monarchy is in the UK and in other countries she is represented by a Governor-General. He is appointed by her on the advice of the ministers of the country concerned and is completely independent of the British Government. In the UK dependencies, the Queen is usually represented by Governors, who are responsible to the British Government for the good government of the countries concerned.

Succession

The title to the Crown derives partly from statute, partly from common law rules of descent. Lineal Protestant descendants of Princess Sophia (the Electress of Hanover, granddaughter of James I of England-James VI of Scotland) are alone eligible to succeed, and although the succession is not bound to continue in its present line, it can only be altered by common consent of all the member nations of the Commonwealth of which the Queen is Sovereign.

Acts of Government

The Queen personifies the State. In law she is head of the executive, an integral part

of the Crown, and Supreme Governor of the established Church of England. As a result of a long process of evolution, during which the monarchy's absolute power has been progressively reduced, the Queen acts on the advice of her ministers, which she cannot ignore. The UK is governed by Her Majesty's Government in the name of the Queen, like India is governed in the name of the President.

An important function is appointing the Prime Minister. As in India this is normally automatic, and like the Indian President the Queen invites the leader of the political party which commands a majority in the House of Commons to form a government.

Despite the nominal powers invested in a British monarch, considerable significance is attached to royal functions and ceremonies. Monarchy with all its grandeur and splendour, is an indispensable part of British culture and heritage. Besides, the royal household has a special place in the hearts of its countrymen. "Long Live The Queen."

INDIAN DANCES—5

Kathak

The origin of Kathak is traced to ancient story tellers who recited *kathas* (stories) from sacred *Puranas* or epics. Kathak is a classical dance form which was a religious art performed in temples and royal courts of Rajasthan in medieval India.

The oldest Kathak dancer was Bhanuji, a devotee of Siva. His son, Maluji, was his disciple. His two grandsons, Laluji and Kanhuji, acquired the mastery of *Natvani Nritya*, the lyrical and impassioned dance of *Krishna Natvar*, the divine dancer. They made Jaipur their home, and their style is therefore the Jaipur Gharana of Kathak dance.

Kathak owes much to Nawab Wajid Ali Shah who gave a lot of encouragement to his dancers. Even in his exile in Calcutta he continued to extend his patronage to Kathak dancers.

Other dances. The group dances of the *Rasandharis* of Brindavan and Mathura, the *Ras Mandala* and *Ras Leelas* are the refined folk form of Radha Krishna dances accompanied by *Kirtanas* or devotional songs. The classical *Hori* and *Dhamar* songs of the Holi festival of spring are dance songs.

The styles vary according to the gharanas. The Jaipur Gharana is one of the most famous. Its contemporary exponents include Roshan Kuman, Mohan Rao Kalyanpurkar and Durgalal. Apart from the Jaipur Gharana, there is the Lucknow Gharana. Binda Din and Kalka Prasad developed the expressional aspect of Kathak which is the speciality of the Lucknow Gharana. Descendants of Kalka Prasad are Shambhu Maharaj, Lachchu Maharaj and Achchhan Maharaj. Contemporary exponents of the Lucknow Gharana are Munnaal Shukla, Reba Vidyarthi and, of course, the 'Kathak wonder' Birju Maharaj.

Kathak wonder Birju Maharaj

Some of the rising stars on the Kathak firmament include Gitanjali and Neelima Azeem.

The Janki Prasad Gharana of Benaras is another branch of Kathak. Its style is noted for its grace and precision and uses dance syllables exclusively for its rhythm patterns.

The revival of Kathak came along with that of Bharat Natyam and Kathakali in the south in about the third decade of this century. Among those connected with the music for Kathak in recent years are Moinuddin Dagar and Aminuddin Dagar.

Swamy, New Delhi

On The Lighter Side

Talking Politics

Socialism If you have two cows, you keep one and give one to your neighbour.

Communism You give them both to the state, which may give you some of the milk.

Imperialism You steal someone else's bull.

Anarchism Your neighbour shoots one cow and takes the other.

Fascism Your neighbour shoots you and takes both the cows.

Capitalism You sell one cow and buy a bull.

A French theatre critic attended a ridiculous play about a ship sinking in the Atlantic. By the middle of the first act he had had enough. He rose abruptly, turned to the audience, and announced "Ladies and gentlemen, please no panic, women and children first." The spectators, eager for any excuse, rose and fled towards the exit.

To avoid electric shock. Cut off current at main switch before attempting repairs. Don't stick your fingers in the socket and open the electricity bill very slowly.

From the editor of a leading newspaper. It has been brought to our notice that last month we labelled a picture 'Madam Cune' while the photograph was of Margaret Thatcher. However, since the article was about Goldie Hawn, disregard the whole thing.

Arunya Krishna Pattanaik, Pune

Anybody can be a heart specialist. The only requirement is loving somebody.

Being in love is like a sweet dream. Marriage is the alarm clock.

Name of a canteen near the anatomy department of a medical college in Vellore. 'The Hip Joint'.

Two men were discussing a new novel. Finally, one of them, a writer, said "You can't really criticise this book since you have never written anything yourself."

"So what?" said the other, "I have never laid an egg either, but I can still criticise an omelette, can't I?"

Vinay Khanna, Meerut

A mad man proclaimed in the asylum "Wish me and pay suitable regard to me as I am Shiva! All of you should be ready. We shall apprehend our enemies. Anon!"

When the other mad man asked, "How did you know that you are Shivaji?" the former replied, "God came and said it to me."

The latter laughed and said at once "This man is artful. I never said any such thing to anyone."

Know Your Hobby

HANG GLIDING

"I bought a house about the same time I bought my glider. And that was the last time I saw my house. The glider always comes first. You get up there and it cures headaches and it cures worries, and if you're thinking about your life, maybe a lady or something, or a job, you get up there and all that goes away. I've been scared up there, so scared I've cried for my mamma. But if I don't get air for a long time I get crazy. And another thing, I used to be a duck hunter. But ever since I started gliding I haven't been able to kill a bird."

Reggie Jones, an American hang-gliding flier

This is the typical psychology of hang-gliding pilots worldwide. For them, hang-gliding is like finding the fountain of youth, a delicious slice of time when they are up there in the air and all their problems shrink to the size of the people below them on the ground. It's their way of making molehills out of mountains. Indeed, hang-gliders have often spoken of flying in mystical terms, and some have reported a godlike feeling when they are flying high enough above the earth to feel actually separate from it.

It's a fascinating spectacle as hang-gliders—lovely symmetrical things streaked with brilliant colours—take off from high hills and dip, swerve and float in the air at the mercy of the wind and get intimate with the cool blue of the skies and the white ruffle of clouds.

But where there is adventure, there are risks. In 1971, three people were killed in hang-gliding accidents worldwide; in 1973, 10 were killed, in 1974, 50 were killed; in 1978, the deaths reached a high of 86; in 1979, the number of deaths dropped to 63; and in 1980 to 51.

Making molehills out of mountains.

Excited onlookers watch as a hang-glider gets all set to soar above the hills (above), a pilot strapped on to his flying kite (above right)

Despite such statistics, today there are as many as 75,000 people hang-gliding worldwide. Yet to say that hang-gliders must all be dare devils to take to this dangerous sport is an oversimplification. Most hang-gliders fly not because of the risks but in spite of them. Flying becomes so important to a pilot that the risks are studied, understood, accepted, and eventually minimised—though not forgotten—as the pilot perfects his skills.

There are three types of skill. Slalom (zig-zagging) around pylons, pinpoint landing, and endurance flight. Soaring is determined by two kinds of lift, the thermal and the ridge lift. Thermals are rising currents of air that are created when the ground has been heated by the sun and the pilot manoeuvres to stay near the core of a thermal, letting it carry him higher and higher. Ridge lift occurs when wind strikes the face of a ridge and is diverted upward; it is often found in conjunction with thermals. With these lifts, pilots have been known to climb as high as 10,000 feet above their take-off point and to fly for more than 165 miles without touching down.

From the beginning level to soaring, however, may take a year or more. You will begin by attempting a running launch on flat ground after you have learnt how the glider works and steers—and you may rise several feet into the air for a few seconds. Eventually, you will fly, for 20 seconds, as high as 75 feet. Coasting down to the ground or beach from not very high hills is the next step and pilots might ride for four to five minutes. The US Hang-Gliding Association requires, for an

intermediate rating between beginning and soaring, a minimum of 90 flights, 30 days flying time and ability to make 180-degree turns.

After Leonardo da Vinci failed with his flying attempts in the late 1400s, further attempts were made only in the 19th century, the most famous being those of a German engineer Otto Lilienthal, who successfully flew a number of bat-like gliders of his own design. He is now considered the father of hang-gliding. The current hang-gliders are fashioned after the models of Francis M. Rogallo, an aeronautical engineer who was employed by the US National Advisory Committee for Aeronautics in the 1940s.

Reggie Jones could not kill a bird, but he got quite a lark up there in the sky.

What're you waiting for, man?

A.A., New Delhi

TRAINING DARE-DEVILS

The sport in India has been pioneered and encouraged at the College of Military Engineering, where the country's first hang-glider flier, Major Vivek Mundkur, runs training courses for about two weeks. He also manufactures hang-gliders for clubs which are coming up at various places in India. The army is planning, in a big way, to start hang-gliding clubs at the NDA and IMA.

The first public display of hang-gliding was organised in Pune last year in May at the Baner Hills. Later, in September, the same team gave a more thrilling demonstration in Srinagar, where the gliders soared to a height of 3,000 feet, and remained flying over the city for more than 30 minutes.

Says Mundkur: "The material for the fabrication of hang-gliders is imported from abroad but now a small workshop at the College of Military Engineering has started functioning and has produced 25 gliders already. Additionally, four have been imported. The Army Adventure Foundation, under Lt Gen A.M. Sethna, has given its patronage to promote hang-gliding and we propose providing training in hang-gliding on the lines of that imparted to para troopers."

All cannot be paratroopers. But where are you eagles who dare?

P.N. Kurnaria, New Delhi

Pick Of The Month

THE TURIN SHROUD

WHEN JOHN HELLER is praying, he's a Southern Baptist. When he's working, he's a scientist, with no time or patience for hypotheses that cannot be tested, weighed and measured, proved or disproved. The Shroud of Turin should not have interested him one bit. Catholics have venerated the shroud for almost seven centuries as the burial cloth of Jesus. Many scientists have written it off as superstitious nonsense.

Heller is a biophysicist with a medical degree. He has taught at the Yale University School of Medicine, and he knew that the report he was reading, by a forensic pathologist, Dr Robert Bucklin, was medically accurate. What raised Heller's eyebrows was the fact that Bucklin, deputy coroner of Los Angeles, was describing the physical evidence of the death of the man whose image appears on the shroud.

The shroud is a strip of linen, 14 feet long and three and a half feet wide (about four by one metres). On it appears a faint image of a man with wounds through his wrists and feet, wounds circling his brow, his back scored by welts.

Bucklin's report, along with a thermal expert's study that seemed to indicate that the image on the shroud was not paint, and a set of computer-enhanced photographs of the image, troubled Heller. "What are these stains?" he kept asking himself. "And how did they get there?"

So, against his better judgment, Heller joined the hunt for scientific answers about the shroud. His stated purpose was the same as that of most of the other 39 scientists on the Shroud of Turin Research Project: to debunk what they were convinced was a forgery, or at least the product of a thoroughly explicable natural process. "I felt that, given adequate time, adequate instrumentation, adequate research facilities, it was impossible that we would not come up with the answers to two questions: What is the image on the shroud made of and how did it get there? I would have made a book on it, 10,000 to one." He would have lost his bet.

"We failed," Heller said. "The image was not made by the hand

of man, and there is no known mechanism, accidental or otherwise—physical, chemical or biological—which can satisfactorily account for it. After five years and 100,000 to 1,50,000 man-hours of scientific work, it's still a mystery."

Of course, there is a third question. Is this the shroud of Jesus? The scientists did not address that one, and they never intended to. "In science," said one team member, Ray Rogers, a thermal expert, "you're entitled to any hypothesis you choose, including the one that the shroud was made by elves from the Black Forest. But if you don't have a test to examine that hypothesis, it's not worth anything. We do not have a test for Jesus Christ." Three members of the team—the project's founder, John Jackson, a nuclear physicist; Bucklin; and Barne Schwartz, a photographer—are convinced that the shroud is the shroud of Jesus.

Heller said: "I really don't know. Even if the carbon 14 examination dates the shroud as 2,000 years old, most of us probably still will have to say we just don't know." The team hopes to conduct a carbon 14 dating test next spring. Heller's hackles rise when antagonists suggest that he and fellow team members are religious zealots out to prove the authenticity of the shroud. "This scientific adventure was just what science. It had nothing to do with faith," he said. But their work on the shroud did alter the religious convictions of some of the scientists. One of the six agnostics on the team told Heller, "I'm still agnostic, but I have my antennae up now."

When Heller finished his research, he wrote a most readable account of the Shroud of Turin Research Project. Called simply *Report On The Shroud Of Turin*, the book was published recently by Houghton Mifflin Co. He manages to bring to life the personalities of the diverse lot of scientists who came together to apply their expertise to the shroud. Physicists, chemists, botanists, biologists, pathologists, endocrinologists, bacteriologists, computer scientists, radiographers, textile experts, mathematicians—on Heller's pages they collaborate and

collide, wrestle with the inexplicable and risk their professional reputations in a thoroughly human way.

Heller tells how the archbishop of Turin got the scientists' equipment released from customs, where it was being held against the posting of a \$2,50,000 bond. "His Eminence guaranteed the bond from the clerical account. When I later asked what exactly that meant, I was told in simple language that he had hocked the cathedral."

The equipment that almost didn't make it to the team's five-day, hands-on examination of the shroud in 1978 was valued at \$2.5 million. All of it was donated or lent to the project. About \$6,00,000 in cash was raised. Team members donated their time and paid their own way to meetings.

Heller and the rest of the

team are convinced that the shroud image is not a painting and that the stains on it are human blood. Walter McCrone is sure they're wrong. He is an analytical chemist who runs a commercial laboratory in Chicago. He is not a member of the research team. He borrowed the microscope slides the team brought back from Turin, tested them and pronounced the shroud a fake. The "blood" is from oxide, McCrone said, and the image is a painting, made of red ochre pigment and gelatin.

"We bent over backwards to try to find what he said he'd found," Heller said. After more than 1,000 experiments, "examining every particle we could find and testing it chemically, we could not corroborate any of his observations."

Beat Street

IMPRESARIO WITH A DIFFERENCE

AT 32 impresario Yusuf Gandhi of Bombay can look forward to drowning the Indian subcontinent in decibels of loud rock and jazz music. With the Shakti, Hanoi Rocks and Lea Hart tours already under his belt, Gandhi has plans to launch the reunited Yardbirds, Bootleg Beatles, Shakti and Louis Bank's Sangam on the national music circuit.

"There are too many hassles involved in this business," grumbles Gandhi, who wants to promote both local as well as international artists equally. "For one, the 20 per cent disallowance on advertising has almost killed commercial sponsorship of such events. Now, companies would be more selective," he adds. "They would rather sponsor international than local artistes."

Basically a music lover, Gandhi worked his way up through association with various musical shows and groups like the pioneering Indian Music Group at St Xavier's College in Bombay. He shot into prominence as manager of the legendary Human Bondage rock group and was the organiser of the Malavi Youth Festival, near Pune, in 1972, the Indian equivalent of Woodstock.

The main obstacle to bringing down foreign groups, Gandhi maintains, is the Central government regulations which prohibit payments either in cash (both Indian and foreign currency) or

Gandhi (centre). Drowning India in jazz.

kind, save for their accommodation and travelling expenses. "If we could pay them even in our own currency, as they do in most socialist countries, more groups will come down," Gandhi affirms.

So far, most of the groups which have played here were merely passing through on their way to the Far East. Gandhi reveals that there are big acts like Rod Stewart's willing to play here for free, but transporting their entire gear down would put us in the red as we have to keep tickets low.

Last year, Gandhi teamed up with Henry Tham, a Chinese restaurateur, to form Arena Promotions with the avowed aim of turning the country into one big musical arena. Will he be able to pull it off completely?

TO MEND YOUR MIND

Do you ever worry about your memory? Perhaps you go into a room and forget what you came for, go blank on names, mislay things, or there may be something on the tip of your tongue, but you can't remember it. Don't worry. You are absolutely fit. Well-known psychologist Gordon Bower of Stanford University says: "It is the nature of the mind to forget—and the nature of man to worry about his forgetfulness."

Actually, you have a prodigious memory. In a few cubic centimetres your brain stores more information than can be stored in a large computer. Furthermore, it can do things that would baffle any modern computer. It can remember how burning clothes smell, or how strawberries and cream taste. One researcher says that the brain's storage capacity is over a thousand billion pieces of information. With such a capacity, it is not surprising that we occasionally forget.

Memory is an awesome process that has long fascinated enquiring minds. But most agree that there are at least two types of memory. Short-term memory may last only for seconds (you look up a telephone number and remember it long enough to dial). Long-term memory is stored probably for life.

Short-term memory is severely limited. As you read this, you store words in short-term memory, at the end of the sentence you extract meaning and discard the words.

Long-term memory is a consummate wonder, once a bit of information gets in, it is apparently there for life. You may have diffi-

culty if it is not used for 10 years—say, by an adopted Indian in Canada—all knowledge of Hindi may seem to have been lost. But a few weeks in India and he will again be fluent.

However, if a short-term item is encountered often enough, the name of a new neighbour, for instance, it will be moved into permanent storage in long-term memory.

Loss of memory. Memory loss is one of the main worries and irritants, of aging. One of the reasons for the loss could be that after the age of 40, about 1,00,000 brain neurons perish each day, never to be replaced. According to researchers, lack of oxygen is another. Because of hardening of arteries and poor pumping of the heart, sufficient oxygen does not get to the brain, making it difficult to retrieve stored knowledge.

Mending of mind. Can anything be done to improve memory? Research is underway on mind-sharpening. Several drugs have been introduced for the purpose, but they are only mildly helpful. The results, however, suggest that far better ones will soon be found.

The tickle of electricity also activates storage areas and brings back events long forgotten. Breathing pure oxygen under pressure also helps shoot up the memory-test scores.

"Perhaps the best advice," says Professor Craik, "is to keep mentally active by reading, observing, learning. The brain responds to exercise. Memory decline is far less in the intelligent, mentally active persons than in others." So try hard and 'mend your mind'.

Booktalk

STELLAR SPY NOVELIST

You are the bows from which your children as living arrows are sent forth

—Khalil Gibran

Arise, walk through the land in the length of it and in the breadth of it

—Genesis 13:17

John le Carré gets us right into the heart of the matter. Inevitably, this master of contemporary spy novels—David Cornwell alias le Carré—takes us from chilly, cold-war counterespionage to the none-too-quiet clashes of conscience, Kalashnikov rifles and Katyusha rockets in the Middle East. The novel *The Little Drummer Girl*. The subject: the long simmering Israeli-Palestinian conflict.

Le Carré, the creator of the legendary British superspy George Smiley, earlier dealt with the shadowy world of intelligence services in which one tries to out-manoeuvre the other through cunning and conspiracy. His Smiley books—*Tinker, Tailor, Soldier, Spy*, *The Honourable Schoolboy* and *Smiley's People*—became famous as thrillers and overnight best-sellers.

But *The Little Drummer Girl* is not strictly Carré stuff. In this novel a team of brilliant Israeli intelligence agents, headed by Kurtz, is pitted against an elusive Palestinian terrorist who "never sleeps in the same place twice." The man is to be reached through his brother Salim (Michel). Charlie an English ac-

tion. She is the "theatre of the real" by the name of Israeli war-hero Gadi Becker (Joseph), who also impersonates as her Palestinian lover.

The book took the West by storm. For the first time, someone in the West dared to ask as Becker does "What are we to become? A Jewish homeland or an ugly little spartan state?" For the first time, a writer has dared to echo the almost instinctive sympathy of the developing Third World for the Palestinian cause.

Without condoning terrorism, le Carré seems to explain its causes. He seems to say that if the Palestinians kill, it is because they have been killed.

Despite the basic framework of a spy novel, with Charlie as the double-agent, *The Little Drummer Girl* is not like a Bond book. The Middle-East gives the author a wonderful opportunity to explore the moral ambiguities of the situation. Who is the victim and who the villain in the conflict? Who is to blame and who to condone? Questions to which le Carré has no answers. When explaining his plot to Charlie, Kurtz says, "Only those who break completely the human bond Charlie, they deserve to die," referring to the Palestinian bombing of some Israelis. But the last few chapters show that it is the Israelis who have broken these bonds.

It is his exploration of the moral dilemma in a complex set-up (where it is hard to differentiate between the heroes and villains) that raises le Carré to the level of masters of conspiracy such as Greene and Balzac.

Le Carré's style has a sense of urgency and immediacy which is almost tangible. For example, his description of the Israeli air attack on Palestinian refugee camp "The blast of the first bomb threw her against the steel door, though the noise was not as bad as the earthquake that accompanied it and the hysterical swimming pool of screams that filled the black rank smoke on the other side of the playing field." His descriptions are also often tinged with deprecating humour and sarcasm.

The vividness of the scene is possibly due to

le Carré's own visit to Beirut before writing the novel. Le Carré an ardent supporter of Israel had in fact wanted to write a novel of the Israeli heroes fighting the Palestinian villains. But what he saw there left him troubled. His meetings with Palestinian soldiers and leaders changed his whole perception of the situation. And he imparts this perception to his readers, along with some basic information about the Palestinian problem. He admitted in an interview to *Newsweek* that many of Joseph's speeches to Charlie as her Palestinian lover have an unashamedly educative purpose.

Le Carré's plots and characters are not entirely imaginary. It is believed that when he was a diplomat (as David Cornwell), he did some intelligence work for the British Secret Service. This is possibly why his intricate plots ring so true. Cornwell's chequered childhood—plagued by his father's intrigues and conspiracies against law—also played a significant role in making him the stellar spy master that he is.

A S, New Delhi

Looking for a BANK JOB?

You also can secure a well-paid bank job by passing the qualifying examination conducted by banks from time to time. Every year about 25,000 candidates are recruited by banks for which over ten lakh candidates appear for the examination. But only well-prepared candidates can pass the examination. How can you become a successful candidate?

ALPHA, the largest specialised bank recruitment training institute in the country, offers excellent result oriented oral/postal coaching by experts for:

Probationary Officers
Clerical Cadre
CAIIB
RBI A & B Grade
LIC, GIC, etc.

Study materials prepared on the basis of the previous question papers will be despatched to the students at frequent intervals. Test of Reasoning and Numerical Ability/Quantitative Aptitude are made simple. Lessons on bank interview techniques will be given free to the successful candidates.

Every year Alpha's students are securing bank jobs. Why not you?

For detailed prospectus send Rs. 2/- by P.O. or M.O.
